ABOUT SIGHTS.—Norristown, Pa.—*Editor Forest and Stream:* In your issue of the 23d inst. your correspondent "Denemite" closes with the following remark: "That Zimmerman should prefer Capt. Clay's peep sight to the Lyman is to me a little queer." In this "Denemite" has fallen into a somewhat singular error, as in the communication to which he presumably has reference I did not touch upon the sight question at all. As a matter of fact there are no sights that I prefer to the Lyman. For uniformity of results under varying conditions of light, etc., I know of nothing to compare with them.—W. D. ZIMMERMAN.

SMALL BORES.—Will some of your readers who have used 20-bore guns give through your columns their experience with these arms?—W. E. P.

EAST FLORIDA WATERS.

THE Halifax River in East Florida derived its name from Lord Halifax during the English occupation of Florida, 1763-84. It is no river, but a bay or sound of salt water, running parallel with the sea for thirty miles, the inlet being about sixty miles south of St. Augustine. At the same inlet comes in another similar sheet of water from the south, called the Hillsboro' River. This Earl of Hillsboro' seems to have been a favorite, for a river on the Gulf Coast also bears its name.

The Hillsboro' connects with Musquito Lagoon, and that by a canal with the Indian River, and that again with other sounds and bays, forming an almost continuous system of internal navigation from St. Angustine to the southern end of the State. All these rivers, bays and sounds are full of fish of many species, becoming more abundant as you proceed south, till at Jupiter Inlet and Lake Worth, many tropical species are to be found, even in winter, and which do not appear in the Halifax until April or May, such as the cavalli, lady fish, pompano, and the tarpon.

The shores of these rivers are being settled with orange groves, pine apple plantations and villages, most of these with hotels of more or less merit, for the winter tourist. Probably the best winter climate in the United States is to be found on Biscayne Bay, near Cape Florida, in lat. 25°30'. As yet, however, there are few accommodations there for visitors, nor is the region easily accessible. The Halifax and Hillsboro' country is easily reached by railroads from Jacksonville, and affords good fishing; there are good hotels at Ormond and Daytona on the Halifax, besides the cottage of B. C. Pacetti, near the inlet, where anglers most do congregate.

The Ocean House at New Smyrna, on the Hillsboro', has long been known as a favorite resort of sportsmen, and on Musquito Lagoon is the Atlantic House, built especially for this class of visitors.

With these remarks, descriptive of a region destined to be the winter resort of American anglers, we will introduce the reader to the fishing grounds and their inhabitants.

On a bright morning in February, the power of the sun bringing the mercury up to 70°, P. and the writer, C., pushed off from the landing of the cottage near Halifax Inlet, where P. entertains fishermen and anglers. Our skiff was about twelve feet long, flat-bottomed, and broad in the beam, admitting of free movement without danger of capsizing.

The tide being young flood, P. pulled up the river toward the mouth of Spruce Creek, the largest tributary of the Halifax, which comes in a little above the cottage. We pass the small settlement on the left bank, consisting of a store, post office, and half a dozen houses, with a wharf for the use of the steamers plying on the river between Daytona and the Indian River. Until lately this place was known as "Bob's Bluff," it is now called Ponce Park, which name was given it by the late General Babcock, who built the lighthouse near by, and bought land here, meaning to lay out a winter resort, with a hotel. But he was unfortunately drowned, with several others, in coming from a vessel anchored outside, by the swamping of a boat in the breakers, and there is as yet no park, except on the list of U. S. post offices.

Now, at the mouth of Spruce Creek, we come to shoal water where P. runs his boat ashore on a sandbank, and pulls off his trousers. Then he takes his cast net and wades off looking for mullet, which we want for bait.

Presently he stops, and with a dexterous whirl spreads his net on the water. Hauling it in slowly, five or six glittering fish are seen in the meshes. These he puts in the boat, and with another cast secures as many more mullets, eight or ten inches long. "There," he says, "is bait enough for to-day."

We enter Spruce Creek, here a wide stream, and row up on the tide for a mile, then anchor the boat in a deep channel near the shore. I take the stem with rod and reel—the rod, a bamboo bass rod nine feet long, with a reel holding 100 yards of cuttyhunk line—P. uses a hand line, which he casts out, baited with half a mullet, forty yards astern. I bait in like manner, and cast astern also, leaving the bait on the bottom.

The land on both sides of the creek is a low marsh, covered with coarse grass a foot high, with groups of mangrove trees and bushes scattered through it. In the distance a high hamak covered with wild orange trees, magnolias and live oaks.

This word "hamak" is of Seminole origin, and signifies the better quality of land, where hard-wood trees grow, such as live oaks, wild oranges and magnolias, also the cabbage palm, whose tall stem indicates from a distance the hamak. This word is often spelled hammock, or hummock, but the best authorities, I think, use the other spelling.

But to return to the business in hand—after our baits had lain for ten minutes on the bottom, P. began to haul in his line hand-over-hand, "A bass!" cried he, as he played a big fish, which ran hither and yon for five minutes, and then broke water fifty yards away. Soon P. got it alongside and lifted it into the boat with the gaff hook. "A fine channel bass," said he, "about fifteen pounds."

Up to six pounds they are usually called "school bass," the larger ones "channel bass."

Soon I felt a strong snatch at my bait, and a good fish was running off. It gave me good play for a few minutes, taking out some thirty yards of line, and then starting down the tide. I gradually wound up the line, forcing the fish to the boat, when P. put the gaff into it—a bass of about five pounds. Next P. got one of about the same size as mine, and I presently hooked and secured a salt water trout of about four pounds. "That," said P., "is the handsomest fish of these waters." It belongs to the same family as the weakfish of the New York coast, but is a better fish on the table, and very much resembles in shape and color the lake trout of the Adirondack waters, except that it wants the adipose fin. It is quite a game fish, and fights hard. I now felt a bite and striking quickly, my line came back without hook or sinker, cut off by the oystershells on the bottom, for this creek is a great breeding place for that mollusk, and a fleet of schooners could be loaded here. "Them small lines are apt to be cut on the shells," said P., "but here is where the fish are." I put on another hook and in ten minutes I was fast to a heavy fish which took out nearly half my line at the first rush. "You have got a good one this time," said P., "and I am afraid that fine line won't hold him." However, I gave the fish plenty of line, and in ten minutes or so we had it in the boat, a twelve-pound bass, of a bright copper color, derived from the fresh water of the upper part of the creek. Those taken in the salt water are of a lighter shade of red, or golden yellow.

"Here's trouble," said P., as he tried to haul in his line, which gradually moved away with a slow and steady pull. I've hooked a big sting ray, we must up anchor and follow it." So said, and done—the ray towed the boat up against the tide, and it appears that the rays and sharks always do this, while the good fish, like bass and trout, run with the tide. After going one hundred yards the ray stopped and sulked at the bottom, spite of all the force that we could put on the line, which was a very strong one. Then it started again up stream, towing the boat. Fifteen minutes of this tires the ray, so that P. was able to haul it alongside the boat, and to hold its head out of water, while with a heavy knife he gave it many stabs in the throat. All this time the long whip-like tail was striking about, but so much of the fish was under water that it could not reach us, and the loss of blood, which flowed out as with the strokes of a pump, soon weakened it.

"Now, do you want the tail?"

"No," I said, "I have no use for it."

"Some people that come here carry away the tails and stings for a curiosity," said P. "Now the creature is dead, and I will turn it adrift, and perhaps a shark will find it, and then you will see pulling."

So it floated off with the tide, and we resumed our fishing, but got no bites.

The ray was about six feet long including the tail, which was nearly half the length, and perhaps four feet wide; flat, like a flounder, white beneath and dark green or nearly black above, and must have weighed 100 pounds.

Presently we heard a great splashing down the stream, and soon a commotion in the water. "There," said P., "the sharks have got that ray and are tearing it up." It seems, that although the sharks and rays are nearly related, the sharks do not recognize the family tie, and lose no opportunity of devouring their cousins. "I think we will have to move," said P., "the sharks have scared away the fish." So we went up further and anchored at the mouth of a small creek, where we took three or four school bass, and then I hooked a shark about four feet long, which, after some play, cut off my hook.

By this time it was noon, and we took our lunch of canned corn beef, bread and doughnuts, washing it down with the juice of half a dozen oranges. Then we sought a new ground, a wide piece of water with a bottom covered with oyster shells, and here we found the bass plenty and hungry. I had my line cut twice and P. his once by the shells, but we boated eight bass from six to ten pounds in weight. Then, having all the fish we wanted, we returned home.

S. C. C.

A TALK ABOUT TACKLE.

Editor Forest and Stream:

I was delighted with the phillipic of our friend "Veritas," in which he gives a hit at the modern tendencies of anglers to become connoisseurs and collectors of fine tackle rather than observers of fish, of their haunts, habits, tricks in catching them, etc. For it does seem nowadays as if we had more varieties of tackle than of fish, and as if we knew the points of the tackle rather than of the fish. To hear modern anglers discourse, one would infer that trout were not to be taken except with a split-bamboo or a reel with an arrangement of stops, clicks, drags, etc., that is paralleled only by the gear of a racing canoe.

Mind you, I do not decry good tackle, far be it from me, but I do decry these endless discussions about reels with click and two drags, or two clicks and one drag, or drag, click and stop, or two stops and one click, or whether the rod is to be 10ft. or 12ft., and if a bamboo, round or octagonal, or four strips or twelve, or all lancewood, or lancewood and ash, and so on *ad infinitum*. The fact is that tackle making has arrived at such a point of excellence that there is very little choice any way. The only development left in the rod is to develop making them out of steel, so that we will have a rod that will endure bad usage, wet and heat, that will never get set, that will always be in order, that an angler will never be worried about having it gone over every spring, and that will last a lifetime, so that we won't be continually thinking about getting another. In fact, so that when we come in from one fishing expedition we can lay the rod away without a thought more about it and have the comfortable feeling that when we go on the next one we can pick it up and carry it off, knowing it is all right.

I have tried many rods, and in the last four years have used wooden ones, ash and lancewood entirely, and have caught hundreds of trout with them with the utmost satisfaction; and these rods I have made myself. Now, there are numbers of anglers who have the chance to enjoy good fishing and who avail themselves of it, but who are not able to afford the expense of a high-priced elegant split-bamboo, yet who have read about them and seen them and have heard all this talk, which would make a novice infer he could not possibly be a fine angler unless he owned one, and who are thereby consumed with longings. To these I would address a word of caution and of comfort. If you have a good, honest, well-made wooden rod, made on the principles that govern scientific rod making and built for the work to which you put it, you have an implement which is just as good, practically (mind I say practically), as the costliest split-bamboo in the market. If you go to a cheap and flimsy maker you get a cheap and flimsy rod, just as you would a shoddy suit of clothes if you paid five dollars or so for one. If you go to a good hoflest maker and pay his price you get a good honest rod that you may depend on, and if to a famous maker and select the costliest rod, you get your fine rod and also pay a large sum to have that maker's name on the handle, just as if you bought a suit from a fashionable tailor. These rules govern rod making and tackle making just as they do any other business.

I do not decry the split-bamboo. You can cast further with it than with any other rod, and this is only saying that it is stronger and stiffer for the same amount of weight. But these extreme casts are never used in fishing, and you can cast as far and as well with a wooden rod that is made rightly as you will ever have need for. And you will need to be far more careful in your treatment of a split-bamboo than of a wooden rod; there is also a vastly greater chance for permanent injury through neglect of any little accident or wear; there is also a far greater chance to have concealed flaws and defects, through carelessness or accident in the making; it is not near so easily mended if injured, and finally it costs on the average three times, if not more, than a wooden rod of equal merit. And these are disadvantages which no talk nor sophistry can argue away.

Every one breaks a rod now and then who travels and fishes any to speak of. And no matter how rich you may be, you feel far worse to break a thirty-dollar rod than you do an eight dollar one.

I have used a wooden rod, as I have said, for four years past, and during that time I have caught a good many hundreds of trout, perhaps a couple of thousand, with it, and I have never broken it nor had any accident happen to it while hooking, playing or landing a single fish. My fishing with it was where trout were of moderate size, and therefore it was light, 6 to 7oz. Several times it was broken through some accident in traveling or riding in wagons or in a boat, or losing a tip by catching on the back cast in some thicket where I was a bit hasty or careless; but in actual warfare it never gave way, and this fate is that of, or likely to be that of, any rod, whether wood or bamboo. But it had good stuff in it, and I knew it could be depended on in a fight, for I made it myself. I made it to suit my work and my casting, and with it I could put a fly into a three-foot circle at forty feet nearly, if not quite, every time. And looking back I cannot see that a fine costly rod would have done me any more service, or given me any more enjoyment or caught me any more fish. It was simply good enough for the work, and what more could you ask?

Last summer I made an extended pleasure trip from New England, through Canada to Sitka, Alaska, and back. I fished in many waters far and wide, in the rivers of British Columbia, among the Rockies in the Nepigon, the lakes of Western Ontario, and others. I could not take much luggage and I decided to carry only one rod. I did not want to take a fine split-bamboo, for I might lose it, or it might break, and I have had my experience mending broken split-bamboos. I, therefore, for an all-round rod to do such trout and black bass fishing as I expected, bought of Chubb—for I did not have time to make one—a 10½ft., 10oz. all lancewood rod. I got it rather heavier than I generally use because I did not know how large fish I might meet, and I thought possibly in the Rockies I might have to use it for a light bait rod, and in this I was right. It was a good rod and well made, and I used it everywhere with the utmost satisfaction, and brought it home without a scratch. It did exactly what was wanted of it, and no rod could have done more. And it was none too heavy either, for I can assure you that a 4 or 5lb. trout in the clear cold Nepigon with its roaring, rushing current is equal to an eight-pounder in a still lake and more difficult to land.

If I belonged to a fishing club and could take my rod from a shelf and walk down to the shore, step into a boat and cast on a clear lake, I would use a bamboo and no other. If I was going on a trip, had to travel in all sorts of ways, fish in all kinds of places and wanted to take only one rod and make that rod rough it, I would take a lancewood rod. Others may differ from me, but this is the result of my experience.

If a man has a good, well-made reel and wooden rod, as these are made to-day by reputable firms, he has as good implements as he needs, and if he is limited in the amount of money he can spend, I for my part would advise him to get these, and if he has any over above what it would cost to get fancy tackle, let him put it into say more flies and leaders and better ones, and the best line he can get, and some of those many modern conveniences that every angler longs for but not every angler can afford.

One reads of rods that make enormous casts at tournaments. The rods that are all rod and no handle to get the most power with a given weight, and the heavy lines that are used for these purposes, bear the same relation to practical angling that racing yachts and canoes do to those built for cruising. What we want nowadays is more energy directed to improving our tackle from the end of the line down; the rods and reels are durable and good enough as they are, give us more durable and better leaders and flies.

Who has not had the misfortune of finding that a particular fly was the one the trout wanted in some locality, of using up his stock of that kind all too quickly, and not able to get more at the time, being obliged to use some other neither he nor the trout fancied? Didn't he wish they were made of cast iron and would never use up then? It was this sort of thing that made me learn fly-tying, and I never go away without some materials to do it with. Who wants to carry two dozen of every kind of fly if two would do?

This is a problem worthy the attention of inventors in fine tackle. Give us flies made of such durable materials and so well constructed that they will last four times as long as they do now, and the gratitude and money of anglers will be yours.

PERCYVAL.

THE INGLEWOOD (OR MUSQUASH) FISH AND GAME ASSOCIATION.—Last Saturday about twenty-five gentlemen, representing the United States membership of this association, held a preliminary meeting at the Quincy House, Boston. Henry E. Cobb, Esq., chairman, and Ubert K. Pettingill, Esq., secretary. A committee consisting of Messrs. L. S. Brown, H. C. Litchfield, George H. Richards, J. Russell, and B. F. Nichols was appointed to prepare a set of by-laws to submit at next meeting. The club has leased about 40,000 acres, including lakes and streams, in the counties of St. John and Kings, in the Province of New Brunswick. This is considered one of the best locations for the landlocked salmon on this continent. After listening to a graphic description of the picturesqueness of the country by William Cobb, who has visited the locality, the meeting adjourned, subject to the call of the committee.

AN ANGLERS' CLUB.

THE time is about ripe for the formation of a club of Anglers in New York city, modeled somewhat on the Fly Fishers' Club, of London. There is no lack of proper material for the formation of such a club, and it would not be difficult to bring this material together. At present there is nothing of the kind, if we except the National Rod and Reel Association, whose headquarters are in the city, but this association exists mainly in order to hold fly-casting tournaments, and is in no sense a social organization, having no rooms or library, and it has never been able to gather its members to a social dinner, and besides, its membership is not sufficiently exclusive.

In New York there are clubs whose membership is composed of those engaged in a single profession, as the Press Club, and the Lotus (principally of actors), and also numerous clubs of amateurs of various kinds, as the Athletic, the Artists', etc.; as well as the political clubs, all of which are more or less of a social character, and that there is room for a club of anglers there is no doubt. Such a club would bring together a class of gentlemen who have a common bond of fellowship and who would find the meetings a source of interest as well as of pleasure. In our last issue we referred to the financial statement made by the treasurer of the Fly Fishers' Club, of London, and we now give the statement of the treasurer in full:

THE FLY FISHERS' CLUB.

Dr. STATEMENT OF ACCOUNTS, 1887. Cr.

Expenditure.	£ s. d.	Receipts.	£ s. d.
1887.		1887.

1888.—Jan. 1. By Balance brought forward..... 166 17 5

Audited and found correct,
A. W. COOPER.
R. AYRE SMITH.

This shows a balance to the credit of the club of about $834, an increase of $250 over the previous year. The club proposes to raise a subscription to the memory of the late Francis Francis, and $400 has already been received toward this object.

We would like to see a similar club started in New York, not necessarily confined to fly-fishers, for we have among our anglers a large number of clubable men who fish for striped bass and other salt-water fishes, and if the project is favorably received we will gladly render assistance in its formation by receiving the names of gentlemen who may wish to found such a club, and place them in communication with each other.

THE KINEO ASSOCIATION.

THE members and invited guests of the Kineo Angling Association had their annual dinner at Young's Hotel, this city, on Monday evening. The occasion was a very enjoyable one, as the meetings of this association always have been. It was organized at Kineo, Moosehead Lake, a few years ago. It embraces eight active members, all prominent Boston merchants and business men. Mr. W. S. Hills, of the flour and grain trade, was one of the prime movers. Mr. J. B. Thomas, Jr., of the Standard Sugar Refinery, usually acts as commodore. These gentlemen are all enthusiasts in the gentle art. They meet at their annual dinner to talk over previous fishing excursions—usually to Moosehead—and to plan the season's trip. All try to be there together. They hire a little steamer to take them to the points of the lake they wish to visit. They are true anglers and the most courteous of gentlemen, always making it a point to invite respectable anglers who may happen to be at Kineo at the time to help to make up their party. Then such guests are usually invited to the annual dinner, if they are within reasonable distance. These gentlemen are all fly-fishermen, doing but very little trolling or bait-fishing. They make a point of observing the law in every respect. They put off their trips till well into June for the sake of fly-fishing. They are willing to take the chances of mosquitoes and black flies for the sake of the fly on the surface. At the above meeting it was decided that the start from Boston this year should be on or about the 8th of June, to arrive at Kineo about the 11th. The eight active members of the association are W. S. Hills, J. B. Thomas, Jr., J. P. Woodbury, J. F. Nickerson, E. R. Hunnewell, C. E. Lauriat, J. W. Sanborn and F. R. Beal. These were all present, with one exception, at the annual dinner.

BOSTON, Mass.

JOHN J. FLANAGAN.

THE many friends of John J. Flanagan will regret to learn that he dropped dead in Utica, N. Y., on Monday last, while at his work, as city editor of the Utica *Observer*. Mr. Flanagan was a well-known angler and was President of the St. Lawrence Angling Association. He was a popular, jovial man of forty-seven years of age and one who weighed in the neighborhood of 300 pounds.

In early life he paid great attention to a lady who married another, and John remained a bachelor until the lady became a widow with a numerous family, when she married Mr. Flanagan. The children by the first marriage were devoted to "Uncle John," as they called him, and he proved to be a devoted father to them.

Every one who came in contact with him was at once impressed by his genial and kind nature, and his circle of friends comprised all who knew him.

He was active in the protection of fish and game, and was widely known as one of the most honorable of sportsmen.

Fisheculture.

THE MISSION OF THE MENHADEN.

Editor Forest and Stream:

It was said in Maine during the 1876 and 1877 fight against the menhaden fishermen that they were destroying the food of food fish, and if this destruction were allowed it was sure to result disastrously to the shore fisheries. The agitation resulted in a stringent law against the menhaden fishermen. Since its passage no menhaden worth mentioning have been north of Cape Cod, and we are informed on the best authority that the fisheries in the waters where the menhaden have absented themselves from have not apparently been affected either way.

Our observation leads us to the conclusion that there is not a single food fish on our whole coast that depends on the menhaden for their daily food, and if they should totally disappear from Cape Cod to Florida the shore fisheries between these points would, like those in Maine, be unaffected. It is the mission of the menhaden to be devoured by sharks, whales and porpoises; and whenever they are found congregated in large bodies one or the other or all three are usually found in their company destroying them in large quantities. We have taken over one hundred menhaden from the stomach of one shark. Mr. Martin or any one else can find out the facts by observing the food taken from the stomachs of our shore fish, and he, like many others, would be much surprised when he learned the truth.

Mr. Palmer, of New Bedford, made the statement in Boston last winter, before a committee which had a restrictive trap law under consideration, that food fish were growing scarce in Buzzard's Bay and vicinity; but the trap men produced a man from Wood's Holl, who testified that the season before he and his boy with hook and line caught one sugar barrelful of sea bass per day, not failing a day during the season of catching that amount, and that before 1880 he could not have caught a sugar barrelful of sea bass in three months. It is a well-known fact among fishermen that sea bass have been scarce on our coast for nearly thirty years, and that they came on plenty in 1880 and have remained that way ever since.

Striped bass have been absent several years, but were back plenty again last season.

Representative McAdoo, of New Jersey, made the statement this winter, before the House Committee on Fisheries, that food fish were disappearing from the coast of New Jersey, but Messrs. Wm. Jeffers, Risley and Barlow, three dealers in food fish in his State, contradicted him point blank.

It is a popular mistake that food fish are growing scarce on our coast. My observation, which extends over thirty years, leads me to the conclusion that the marked fluctuations which are constantly occurring in sea fish, resulting in periods of extreme plenty and scarcity, are in accordance with a law of nature, and man is not an appreciable factor to explain why they are plenty or scarce.

DANIEL T. CHURCH.

TIVERTON, R. I., Feb. 20.

Editor Forest and Stream:

I am in accord with the legislation now proposed for the protection of fisheries on the Atlantic coast, and trust that it may ripen into a statute. Now is the time for action if our food fishes are to be perpetuated. I can conceive of no reason why they should not be nurtured.

The sophistries and subterfuges resorted to by the menhaden oil men should not be allowed to overshadow the fact that the food fishes are decreasing.

Do these men use such means to bolster up their operations? Let us see. Prof. Goode has stated that bluefish consume enormous quantities of menhaden. Prof. Baird has so stated. The estimates of these savants roll the amount of such consumption up to a royal array of millions. These statements are *ex cathedra*. Now, what says Capt. Church, who has written freely and testified much, and who is a leader among the oil men?

In FOREST AND STREAM, Aug. 26, 1886, he writes thus: "On page 574 of said book ("The Fishery Industries") is an estimate of the amount of menhaden destroyed by predaceous animals (bluefish and bonito at the head) each year. * * * Disinterested men like Baird, Buffon, Huxley and Goode all give their testimony one way after investigating this subject." He further writes: "Less than five years ago large quantities of small menhaden * * * were in Buzzard's and Narragansett Bays * * * and with and feeding on them were quantities of bluefish and squeteague, and from several daily observations it was found *the fish had over ten fresh menhaden in their stomachs* from which calculations were made," etc. (Italics mine.)

He used this statement of the scholars, and the fact which came under his own notice, to show how few menhaden the oil men get in comparison with those devoured by their water enemies.

So far so good. Now for the fallacy. I quote further from the same letter. It is the opening sentence: "In your issue of Aug. 19 a correspondent says it is a fact that bluefish are largely dependent on menhaden for food, *which is not true*" (italics mine). He then goes on with his demonstration. Mark now, he makes this assertion to show that any scarcity of bluefish cannot be possibly due to the wholesale capture of menhaden by himself and others, because bluefish do not depend largely on menhaden for food. Comment is not needed.

Again, the oil men complain that their business will be ruined by prohibiting their operations within the three mile limit. There is no ground for such fear. They intend the inference shall be that menhaden cannot be caught beyond the proposed limit in quantities. Let Capt. Church testify: Report of Commissioner of Fisheries for 1877, part 5, p. 88: "The fishermen usually steam square out to sea, and for the last ten years have found immense beds of them and apparently inexhaustible amounts, three and four miles off shore."

This is not recent testimony, but it is good. Have the haunts of the menhaden changed since then? Capt. Church also answers this question, and he is good authority. Report of Commissioner of Fisheries, imprint 1885, part XI., p. 148: "They are caught from the shore to thirty miles at sea."

With such evidence to the contrary it is safe to say that menhaden oil will not soon become an unknown commercial article.

The three mile limit should be made a law. It suits the oil men now to operate within that line to the detriment of the inshore fisheries. With the law they would then operate beyond the line, and the in-shore fisheries would then be benefitted.

A recent editorial in this paper alluded to some of the wild statements made by the oil men before a committee of the National Rod and Reel Association last month. I say wild, because made in the face of accepted facts, and in contradiction of their own declarations.

The menhaden men know much respecting our coast fishes. They should concede a little wisdom to others. It is by such processes as these that they endeavor to stave off wise and proper legislation. Let us hope they will not succeed.

ARTHUR MARTIN.

WASHINGTON, D. C., Feb. 20.

The House Committee on the Merchant Marine and Fisheries, Feb. 24, agreed to make an unfavorable report upon the bill recently introduced by Mr. McAdoo, of New Jersey, prohibiting the taking of menhaden with purse, pound or weir nets within three miles of the Atlantic coast, and imposing a fine of $1,000 for a violation of the law. The committee has given this bill a great deal of careful attention. The United States Fish Commission and a number of experts, as well as fishermen from the Atlantic coast, have been examined, with a view to ascertaining whether there was any good ground for the allegations that have been made to the effect that the practice of taking menhaden within the three-mile limit was destructive of the food fishes. Mr. Farquhar, of New York, one of the signers of the report, said to a *World* correspondent to-day: "Our adverse report is fortified by the statements of the scientists and experts who have appeared before the committee and by the official reports of the Fish Commission. All agree in the conclusion that bluefish, which it is the object of the bill to protect, do not feed upon the menhaden, as has been supposed. When large numbers of them meet a school of menhaden they frequently attack and kill great quantities of them; but they simply mutilate them and do not feed upon them. Generally speaking, however, the two species are rarely found in the same waters." Congressman Amos J. Cummings has prepared a minority report favoring the passage of the bill, on the ground that fishing for menhaden with seines and weirs is destructive of food fishes, and also that the menhaden constitute the food of the bluefish.

THE DECREASE OF FOOD FISHES.

UNDER the title of "The exhaustion of the food fishes on the seacoast of Massachusetts by destructive methods of fishing," Mr. George H. Palmer made an address before the Committee on Fisheries and Game, of the Legislature of Massachusetts, on Feb. 3, 1887, which we find to be instructive. After an introductory paragraph Mr. Palmer said:

This investigation may be regarded as the continuation of that of 1870. I shall present the matter to you, as I conceive the argument to be, from such reliable evidence as then had been obtained, together with what has since been furnished down to 1873. It will then remain for us to bring before you only such evidence as will be necessary to show you the state of the question as it is to-day, that you may see whether or not further legislation will be required.

We assume that the Report of the United States Commissioner on Fisheries for 1871–72, the Reports of the Massachusetts Commissioners on Inland Fisheries, and the published statistics, are evidence already in the case for the use and benefit of either of the parties, and to be referred to as may be required. There is no question, to a certain extent local in its application, of more consequence and importance than that of the possible exhaustion of the sea fisheries along the shores of this Commonwealth. That a large number of our citizens with a costly apparatus are engaged in the catching of fish, and another and still larger number either are, or would be so engaged, as a matter of business or as a means to a living, would be enough of itself to warrant and demand the serious attention of the Legislature; but, when to that is added the fact that upon the increase or decrease of the fishes largely depends the abundance or scarcity of food, all questions affecting the general subject assume an importance not surpassed by any other. Add to this the long list of the petitioners and remonstrants whose names are before you, and the interest which is so manifest here, and it will be seen of what consequence the matter appears to a very large number of our fellow-citizens who live upon or near the seacoast.

In the early days of our history, fishes of all kinds were in great abundance in our waters, and one, if not the chief, of the inducements which led our forefathers to settle on the rough New England shore was the great supply of edible fish, and the ease with which they could be taken. Our rocky, sandy coast, bleak and inhospitable, could give little promise of early and abundant crops, but our bays and rivers were the storehouses of a never-failing supply of wholesome, nutritious and palatable food. So long as the forests would supply the early settlers with wood for their fires, and the sea yielded up its treasures of fish, if wealth was not easily procured, starvation was out of the question.

Some of the notices in regard to their abundance, are exceedingly quaint and curious. They will be found, as collected by Prof. Baird, appended to the Report of the United States Commissioner on Fisheries, 1871-72. I will read a part of Jacob Steendam's poem in "Praise of New Netherlands," 1661, translated by Hon. Henry C. Murphy:

The lamprey, eel and sunfish, and the white
And yellow perch, which grace your covers dight,
And shad, and striped bass, not scarce, but quite
Innumerable.

The bream and sturgeon, drum-fish and gurnard,*
The sea-bass,† which a prince would not discard,
The cod and salmon, cooked with due regard,
Most palatable.

The black and rock fish, herring, mackerel,
The haddock, mossbanker, and roach, which fill
The nets to loathing; and so many, all
Cannot be eaten.

And thus it happens here, that in the flood,
Which, rolling from the Fountain of All Good,
O'erwhelms weak, mortal man with royal food,
He is forgotten.

You've weak-fish, carp and turbot, pike and plaice,
There's not a pool or tiny water-trace
Where swam not myriads of the finny race,
Easily taken.

Crabs, lobsters, mussels, oysters too, there be,
So large, that one does overbalance three
Of those of Europe; and in quantity,
No one can reckon.

The turquoise, seal and shark; and, in your bay,
The mighty whale and porpoise, sporting, they
The power and wondrous works of God display,
For our beholding.

Like all other subjects which depend upon scientific research, careful and continued observation, and a full collection and complete arrangement of facts, this, certainly, is not without its difficulties. Absolute certainty is not, and cannot be, expected until one thing is done, one experiment tried, which it is the main object of these petitioners to secure. In his report, in 1870 (leave to withdraw), Hon. Nathaniel E. Atwood, of the Cape District, Chairman of the Committee, gives some reasons which led to the report, and afterwards in the Senate, on the 19th of April, spoke at in its support. I shall be led in the course of these remarks to refer both to the reasons assigned and the argument used to sustain it.

Precisely the same conditions are present to-day as in the hearing in 1870. The parties are the same, they are no better reconciled, and the question is the same. The only differences are that evidence has been accumulating since then,

*"Gurnard." Murphy thinks this was certainly the "porgy." As the latter was not known in Europe, Steendam used the name of the European species which most resembled it, (*Trigla hirundo*). It, however, more probably refers to the sea-robin (*Prionotus*).

†The name *Zee-baars* is now applied in Holland to the representative of our striped bass.

newly discovered evidence has been procured, and the evil of which we complained has increased alarmingly upon us. Not only were the food fishes of our seacoast abundant in the early history of New England, but they continued to be so, with one or two individual exceptions, down to about the year 1845. There is no need to waste time to prove that. An army of veteran fishermen, whose hairs are not whiter than mine, could be produced here who could overwhelm you with the exploits of their boyhood days. About that time the pounds and weirs began to be set, and thousands and tens of thousands of the best food fishes in the world were taken in a night. The only capital required was just sufficient to buy a few fathoms of line, a sinker or two, a brace of hooks, and a few clams, to insure a hungry stomach and a basket full of fish. The right to fish was free to all. To thousands upon our seacoast it was not only the means of living, it was life itself. Not only had they the right to catch fish, but the fish were there to catch. And they were fish, too, Mr. Chairman. None of your sprats and stickle-backs. The striped bass, that royal fish, in weight from quarter to half a hundred pounds, not surpassed by even the lordly salmon; the sea-bass, most excellent of fish, whose mouth, when opened, seemed large enough to take in your hat; the luscious tautog, in length almost equal to my arm; and the white and silvery scup, called the "Fair Maid" in Virginia, the sweetest pan fish in the world, a morsel for the gods. Not ambrosia is better food. But alas! now it is not so. The destroyer has been there. The rivalry of the fishermen, the thirst for gain, the never-ending search for that last dollar, are sweeping them away.

The food fishes which it is alleged have become scarce, and which are the subject of this inquiry, are the striped bass, *Labrax lineatus*, (*Roccus lineatus* Gill), sea bass, *Centropristis nigricans* (*C. atrarius* Gill), tautog, or blackfish, *Tautoga americana* (*T. onitis* Gill), scup, *Pagrus argyrops* (*Stentomus argyrops* Gill), and bluefish, *Temnodon saltator* (*Pomatomus saltatrix* Gill). The striped bass is found from Nova Scotia to Florida. Their movements in the spring are to the eastward. They appear about the 1st of May. They are caught to some extent in traps in May, and later with hook and line and shore seines. In the autumn they are going west by the same route they came. In July they weigh from ten to forty pounds. One caught in the Rappahannock River in February, 1867, weighed eighty pounds. One taken by Mr. Josiah Eaton, in 1865, at No Man's Land, weighed over seventy pounds. They feed upon shrimp, crabs, lobsters, menhaden, eels and other fish. Their place and season of spawning, are somewhat undetermined. Some say they spawn out south in the fall. They are shy, and not caught to any extent in the traps, and when caught they frequently escape. The pounds catch up large quantities of their food. Sea bass are caught from Cape Cod to Florida; are taken about the 1st of May. They feed upon fish and crabs. Parts of the menhaden is largly used for bait. Are supposed to spawn in the spring, and are taken both by the hook and line and in the traps. Tautog are found from the Bay of Fundy to South Carolina. Are taken from the 1st of May to the middle of November. Weigh from one to twelve and twenty pounds. They are believed to spawn in the spring, and after spawning they seek their food among the rocks. They feed upon crabs, mussels, barnacles, and lobsters. As to the scup and bluefish, I refer to the Report of United States Commissioner, pp. 228, 235.

These are all excellent food fishes, and within a period of less than forty years have been abundant in all the waters along our shore. That these fishes had greatly decreased in number and become smaller in size down to 1872, is now conceded by all disinterested persons who have any knowledge on the subject. It was admitted by Captain Atwood, in 1870. At the same time it was admitted in the report of the Massachusetts Committee that scup, tautog, striped bass and sea bass have within a few years diminished in Buzzard's Bay. The Rhode Island Commissioners also say that "everybody testified to the gradual diminution of the number of fish entering the bay and river." The Commissioner appointed by the Prrsident of the United States, Professor Spencer F. Baird, especially to inquire into the matter, says, "I have no hesitation in stating that the fact of an alarming decrease of the shore fisheries has been thoroughly established by my own investigations, as well as the evidence of those whose testimony was taken on the subject."

As late as 1872, Hon. Theodore Lyman, in his presentation of the question as viewed by him from both sides, concedes himself and claims that it is conceded that the fish here referred to have become scarce, and adds that if the "government of the States of Rhode Island and Massachusetts have and forecast they will see to it that such observations be made as will determine the questions involved in the issue between the poundmen and the hand line fishermen," (Report of the Commissioners, 1871–2, p. XVIII). Again, that such fish have become scarce is notorious. Notoriety, as evidence, is not, it is true, conclusive, but it carries immense weight with it, and renders the fact stated more than probable. What everybody sees and believes through a series of years, through daily observation and from intimate acquaintance, is more than likely to be true, especially if the affirmative proposition is not denied, except by those whose interest is to deny it. The people may be in error for a time but in the long run they are right, and forty years is a long time for them to be mistaken with regard to a matter in which they are materiallly interested and with which they are brought into daily contact. Then we have before us the annual returns from the pounds, seines and nets, and we find not only the fish were scarce in 1870, but that they have continued to diminish to an alarming extent from that day to this. Witnesses will be produced to establish this fact if further evidence is needed. He will be a bold fisherman indeed who will dare to come here before you and say that he believes the fish here referred to are as abundant now as formerly, or as they were in 1870.

These things being so, the questions are, can this scarcity be accounted for, and how? We think it can, and that it is accounted for by over-fishing. We believe, and shall attempt to show, that the use of pounds, weirs, traps, seines and nets are the engines to which the present deplorable condition of the fisheries is chiefly attributable, which having shown, we shall ask that proper and timely legislation may be had to limit or forbid their use. Other reasons for it will also be assigned. The pounds, weirs and traps began to be set about the year 1845. These constitute the stationary apparatus for catching fish, and I shall use the words indiscriminately to signify such apparatus. Full descriptions of these several devices are to be found, with illustrative drawings, in Report Massachusetts Commissioners 1872, p. 22, and Report United States Commissioner, pp. 260, et seq.

As to nets, all their forms are well known and there is no doubt they have been in use from time immemorial. The fishermen of the sea of Gallilee used and mended them more than 1800 years ago, but, at the call of the Master, straightway they left them and followed Him, and there is no evidence that any disciple of Christ has ever used one since.

[TO BE CONTINUED.]

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Bell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy, Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N. P. R. R., St. Paul, Minn.—*Adv.*

DOG SHOWS.

Feb. 28 to March 2.—Show of Philadelphia Kennel Club. W. H. Child, Sec.

March 27 to 30.—Fourth Annual Show of the New Haven Kennel Club, New Haven, Conn. E. Sheffield Porter, Secretary.

April 3 to 6.—Fourth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5981.**

NEW YORK DOG SHOW.

THE twelfth annual dog show of the Westminster Kennel Club at Madison Square Garden last week was the best that has yet been held. Over 1,100 dogs were entered, and of this number over 1,000 were present. The management of the show and the care taken of the dogs was all that could be desired. Spratts' benching has come to stay, and there is no doubt that it is far preferable to the old style. There is one more improvement that this enterprising firm should introduce, and that is to furnish a trained corps of assistants whose duty it shall be to take care of the dogs and to attend to bringing them into the judging ring. This we presume is practicable, and it would certainly fill a long felt want. The judging this year dragged through two days, and some of the awards were not made until the third day. With so many dogs to handle, especially when the building is crowded, something more than hap-hazard work is required and assistants who thoroughly understand their work are absolutely necessary.

The objection to benching dogs together that are entered in different classes was never more forcibly shown than here, and we were pleased to hear superintendent, stewards and attendants condemn the system often in language more forcible than elegant, and we have good reason to believe that nothing of the kind will be allowed at future shows of the club. The weather during the week was all that could be desired, and the vast building was thronged each day with a crowd of visitors, making it almost impossible for one to examine the dogs in anything like consecutive order. The liberal support of the public, of course, was very gratifying to the management, and several thousand dollars were undoubtedly added to the treasury of the club. So well are the club satisfied with the change of date for their show that they request us to announce that they will hold their show for 1889 during the corresponding week next February. The judging was much the best that we have ever seen at New York, and we sincerely hope that the club will be as fortunate in their selections in the future as they were this year.

MASTIFFS—(MR. W. K. TAUNTON).

The class, taken as a whole, was better than last year, and the English judge took much pains to arrive at correct decisions, and got through his work in fairly satisfactory manner. His one conspicuous and unaccountable blunder was the awarding of champion prize to Homer, who is owned by a prominent member of the American Mastiff Club. This decision was wrong, and the owner of Homer has admitted it was wrong. Ilford Caution was in great form; we have never seen him looking better, or as well, and he should have scored an easy victory, as Ilford Cromwell was not in good trim. Caution's ponderous and well-formed skull, his deep, wide, short and blunt muzzle (the best ever seen in this country), and his great size, are more than a match for Homer. The latter, a good little dog, is better than Caution in ears, loin and in hindlegs, and is quite as good in feet and in bone, but in all other points, excepting coat, the Melrose dog is vastly superior, and should have won with many points to spare. The bitch class also had three entries—Bal Gal, The Lady Clare and Prussian Princess—and the hc. at Pittsburgh bitch, The Lady Clare, scored a very easy win. She was sent into the ring in tip-top condition, and never gave her opponents half a chance to beat her. Bal Gal, like Ilford Cromwell, was not in first-rate condition, in fact all Mr. Hull's entries were out of form. Her defective head would never allow of her being placed over either of the others, but she is a good-bodied, roomy bitch, and has plenty of size. There were nineteen entries in the open dog class, and Minting, who has developed a magnificent dog, was far away ahead of all opposition. To-day he is one of the grandest dogs we have ever seen, and we doubt if there is one to beat him. The competition for the $100 challenge cup for best dog owned by a member of the American Mastiff Club, was shorn of all interest owing to Minting's presence in the ring. It was indeed a bloodless victory, for neither in massiveness of body, beauty of outline, character or in quality, could any of his opponents be compared with him. Moses, that was second at Waverly, occupied the same position here, and had we been judge, would have been very closely pressed by the vhc. Ilford Coroner. Moses is not first-class in skull, and his muzzle should be shorter, deeper, wider and blunter. Eyes a shade too light. Ears rather large. Neck, back, chest, shoulders and loin strong and fairly well formed. Hocks rather straight. Good stern. Feet not quite right. Should have more bone. Moves well and is good in coat and in color. Ilford Coroner should have more volume of muzzle in proportion to the size of his skull. Ears not what they should be. Body strong and stout. He is a better dog than Regulus, placed third. The latter has not improved on his puppy form, and has developed bad temper and a sour expression. He has not grown to thesize he promised. Pharaoh, unnoticed, was unaccountably overlooked. Leaving Minting out of the question he was certainly one of the best in the class. If he was put back on account of size how came Homer, who is very little larger, to beat Ilford Caution? Ajax has a head that would not disgrace a collie. Boss, vhc., got all he deserved. Size, rather than character, is his strong point. Captain, hc., has long, weak muzzle; his best point is neat ears. Debonair, while not in good condition, should have been higher than hc. Friar, vhc., was muchly overrated. He is a red dog with big ears and a very houndy head. Pharaoh, Debonair, Clement, Imperial Chancellor and Ilford Coroner should all have been ahead of him. Clement, c., is a well-built dog, defective in muzzle and eyes, and smutty in color, but he is much ahead of Friar in almost every point. Imperial Chancellor has been an overrated dog. He has long, houndy head, large ears, and is not good on legs. The mastiffs shown at Birmingham must have been a sorry lot when he took third prize. Busker has very poor head; it is much too long, and shows neither voulme of skull nor muzzle. Olaf has very houndy head and bad ears. Harry is a queer-looking animal to be entered in a stud book under the heading of "mastiffs." Constable, a fairly good brindle, owned by the judge, was "not for competition" and "not for sale." Still he had to be registered, and it is believed that his name in the "official" will largely contribute to the mastiff interests of this country. He is defective in muzzle and round in forehead, but is much above average in body, legs and in feet. He will go back to England, but had he to remain with us it is not probable that he would be overrated, as old Cardinal, from the same kennel, was at home. In the bitch class Mayflower, a good-sized daughter of old Beau and Cambrian Princess, just managed to win. She is too long in foreface and lacking in depth of same, and, like her sire, is a bit stilty behind. Her skull should be larger for her inches, and she puts her forefeet down very gingerly, with toes turning inward and elbows outward. Body long, strong and roomy. Chest excellent. She shows strong resemblance to her sire, although not nearly so short in muzzle as he. Daphne, small in skull and shallow in muzzle, must have been closely pressed for second place by Duchess, third prize. The latter, while very heavy in ears, has better head than Daphne, and we think should have taken her place. Daphne is light in bone and defective in feet. Duchess is well known. Ilford Constance, c., is small in skull and defective in foreface. Idalia, unnoticed, while defective in muzzle, should have had not less than hc., and Hebe should also have been noticed. Lady Beatrice, vhc., is too long in muzzle; it is however, a blunt muzzle. Her head markings are not good, she has too much dewlap, and is crooked in forelegs and rather light in bone. Boss Lady Clare was all out of condition; she, however, is not a good one, her head being very defective. Only six puppies were shown in the two classes, and, as usual, Ilford Caution's get were to the fore.

ST. BERNARDS—(MISS A. H. WHITNEY).

The class was almost exactly the same as last year both in quality and quantity, and the judging, as was expected, very much better; in fact, with the exception of one rather peculiar award, Miss Whitney got through her work in a most satisfactory manner, and there was none of the "kicking" which was such a prominent feature of last year's show. We are pleased to see that the W. K. C., acting upon the advice we have always given, has at last been compelled to select competent judges. The experiment has been so highly satisfactory this year that it is to be hoped it will be continued at future shows. Otho and Duke of Leeds were the only rough-coated champions in competition, and Duke of Leeds won, as he should have done last year. Otho beats him in front and beats him handsomely, but behind the short ribs Mr. Hearn's dog is far more truly formed and decidedly stronger. The decision gave satisfaction to everybody—it is a just one. Rhona, who was first in the corresponding class for bitches last year had upon this occasion to make way for Miranda. The Melrose representative was in good condition this time, and was, we think, fairly entitled to the award. Lady Athol was also placed over Rhona, and between these two it is a very close thing. Rhona's undershot muzzle and lack of size were probably the turning points in favor of Lady Athol. All three were shown in condition such as the owners may feel proud of. Without being first-class they are useful looking bitches. Barry II. repeated his victory of a year ago in the open class for dogs. He was fully described in our report and it only remains for us to say that he was in splendid condition and entitled to the prize. He will have had his day by the time he gets into the champion class, as he is not up to the form of Otho and Duke of Leeds. Bosco II., who is well known to every show goer, made a good second. Mrs. McGregor's fairly good dog has been unlucky in meeting dogs that were just, and only just, able to beat him. He may yet win his way to the champion class. Eiger, third prize, was in his right place. Last year he had to make way for a mongrel but this time got his own. Like Bosco II. he is a useful second class dog. Jupiter of Clover Patch, vhc., and fully described in our Newark report, has not fulfilled early expectations. Monk, hc., has not the head of a crack. Rene, hc., well known, deserved another letter; quality rather than size is his forte. Visp II. was well placed with the reserve card; we have already described him. General Butler, vhc., has poor head and expression, but fair size. The Silver King was possibly entered to pack the catalogue; he is in England. The class was not a strong one. In bitches Lady Alice, the winner, must have been very closely pressed. She is defective in head, markings and in tail, and is not a very big one. We shall expect to see her throw good puppies, and the youngsters will be in clover if the owner thinks each one as good looking as he believes Lady Alice to be. Beda, second prize, is an undersized bitch, defective in head properties, but good in color and in body and shown in beautiful condition. St. Bride, vhc., was certainly one of the best in the class, and we thought should have made a good fight for premier honors; she is well known. Empress, third prize, always occupies about the same position. Her markings and head are dead against her chances of success in any but ordinary company. Paleface, vhc., was rather lucky in getting vhc.; her head is very deficient in character, and she is not a big bitch. Millicent II., another well-known one, deserved her vhc. card. Englishmen must send something better looking than Coretta if they mean to win prizes in this country. The class was level but not strong in point of quality.

The smooth-coated division found Don II., Apollo and Hector again in competition for the champion prize. No fear was entertained by the onlookers that Miss Whitney would repeat Mr. Mortimer's blunder of last year, when he gave the prize to Apollo over his far more typical son Hector. We said of the judging on that occasion: "Hector has improved on his puppy form, and while not so large as Apollo, he out-classed him in head, is better in loin and quite his equal in other respects; he should have won with several points to spare. Apollo's houndy head does not improve with age, and heavy work in the stud has weakened his loin and quarters. He does not transmit his hound qualities and is still a valuable stud dog, but we fail to understand how a judge of the bench could place him first in the company he met on this occasion." We do not write in that way unless we feel certain we are right. It did not take Miss Whitney very long to indorse our opinion and it was quite evident to onlookers that the result was never in doubt. Lack of condition cannot be claimed in excuse for Apollo's defeat; he was shown in superb condition, his coat shone like fine satin and he carried a lot of flesh without being soft. Hector on the contrary was not at his best and it was only a very short time before the show that his owner decided to send him. He has been suffering from a gathering in the throat which commenced about the time of the New Bedford show and is not yet thoroughly well. If he can beat Apollo under competent judgment, and when he is not in good condition, what can he do when fit and well? Don II. begins to show age, and is not up to Hector's form in head, muzzle, or in expression. The peerless Leila fairly beat Daphne in the next class, but the latter is a bitch of far more than ordinary merit. She was handicapped in having recently had puppies. Since last shown in this country she has been to England on a visit to Plinlimmon, and her puppies by that dog should be clinkers. Victor Joseph, fully described in our last report of this show, was again a winner in a very poor class. While not a first-class specimen, he was away ahead of all opponents, especially in size and in bone. Petrarch, second prize, is only a third-rater, being very small and not good in loin or in quarters. He has a ring tail. Head fairly good. Barry, third prize, has bad head and his legs are defective; not a show dog. We did not see Wotan. He is a much better dog than Barry. The first and second prize

winners in the bitch class are well known to our readers. Rhona, third prize, is a very poor specimen; in fact, not a show bitch. She is small, bad in color and in head, and has few redeeming qualities. For the place we preferred Flora II., vhc.; but she is not a good one. This was a poor class. Almost all of the puppies had been removed by the time we called to take our notes. We do not know anything of the first and third prize winners in the class for smooth-coated dogs, but Alps, second prize, is not, we fear, a St. Bernard, but a mastiff, and a poor one at that. The prize should have been withheld.

BLOODHOUNDS—(MR. W. K. TAUNTON).

Mr. Brough showed the only entries in this class, and Barnaby, a good specimen, was an easy winner. His head, while not up to the form of, for instance, old Rollo's, is good, and his ears are well set and of good length, but do not hang as close to the face as they ought to. In body, legs and in feet he is much above average, and is a well-bred looking dog, showing much quality. Burniston is a poor specimen. He is flat in head, has poor ears, flat loin, crooked forelegs, and bad feet. We have him down for third prize, and if he won it he certainly got what he did not deserve. Duchess of Ripple is a better specimen; better in head, ears, body, legs and feet. Matchley Venus, while too wide and flat in head and defective in feet, is a fairly good bitch, but not up to the high-class form of many of the bitches Mr. Brough used to exhibit fifteen years ago.

NEWFOUNDLANDS—(MR. W. K. TAUNTON).

This is always a bad class at New York. Tasso, who was first in 1884, again found his way to the front. His head is only fairly good, but he has neat eyes, good forelegs, and well-formed feet, which, however, should be larger. In hindquarters, tail and in coat he is much below winning form, and is not a big dog. Don Pedro, Jr., is very defective in head, light in eyes, straight in hocks, and has a short and badly carried brush, and a very curly coat. Pascha, first at Waverly, is not a good one.

GREAT DANES—(MR. W. K. TAUNTON).

Emperor Nero, first prize, is a dog of good size, but his head is not first-class and his hind parts are defective. Chancellor, second prize, has a better head than the winner, but he lacks size. Neither is first-class by a long way.

DEERHOUNDS—(MR. DAVIDSON).

Mr. Thayer as usual carried off nearly all the honors in these classes, winning in both of the champion classes, first and second in the open dog class, first in the bitch and second in the puppy class. All are well known except the latter, a small but typical bitch. Odin, winner of third in the dog class, looked a fair specimen in the ring; we failed to find him in his stall. Royal, vhc., is a large, well-made dog, with a long and soft coat. Olga, winner of second in the bitch class, is a nicely made bitch of good size, plenty of bone, a fair coat and good legs and feet. Pride of the Heather, c., was all out of condition; when right she will make it very warm for the winners. Three promising puppies were shown: Robin Adair, winner of third, carries his ears badly and is loosely put together.

GREYHOUNDS—(MR. DAVIDSON).

In the champion dog class, Balkis, looking well, was placed over Memnon. The latter should be retired; his mouth is gone and he shows his age at other points. We could not quite follow the judge in placing Mother Demdike over Lancaster Witch. The same judge placed Witch first at Boston last year when not in as good form as here, while Demdike has certainly not improved. Aside from the winner in the open dog class, there was nothing worthy of notice except Hector, who had the most wonderful ears we ever saw on a greyhound; but as they were not greyhound ears he did not score. The four puppies that received notice were quite fair. Highland Laddie, winner of third, we thought about as good as any; he certainly had the best of it in head, back, and legs and feet, and was but little behind at other points.

POINTERS—(MR. DAVIDSON).

The display of pointers was very complimentary to the judge. There were 150 entries, including 14 owned by the club. Among the latter were much the best lot of youngsters the club has ever shown. The quality of the classes all through was much superior to anything we have ever seen at New York. Mr. Davidson is a good judge of a pointer, and the classes were much better handled than they have been at this show for several years. In the champion class for large dogs, Bracket, looking fairly well, was placed over Robert le Diable, the latter obtaining second prize. In the bitch class, Revel III. was alone, the only other entry being absent. Revel was far from being at her best. She was fat and soft, and the cares of maternity have told upon the symmetry of her form, she is also growing throaty. When she was beaten for the special prize for the best pointer, judge and spectators were surprised and disgusted to hear from the lips of her owner profane expletives that no "Gentleman" would utter under any circumstances. In the open dog class first went to Fritz, a well-known winner. We never saw him looking so well. He was perhaps a trifle light in flesh, but as hard as nails and in elegant form. He also won the special for the best pointer. Like his sire, Beaufort, he is not so attractive in appearance at first glance as some of the others, but a close examination shows him to be a pointer, and a rare good one, too; he is too straight behind and might stand better in front, for these reasons we prefer Bracket for the place, although there is not much to choose between them. Lad of Bow, looking fairly well, was a good second, with old Bang, looking his best, third. Go Bang, winner of second in the E. F. T. C. Derby last fall, was only able to secure a c.; he was not at his best. In the bitch class Lass of Bow had an easy win; she is a very nicely put together bitch, weak in head and muzzle, her ears are badly set on, and her tail is not quite straight; she is very good in chest, back, loin, legs and feet. Lady Snow, looking her best, was placed second. Juno, winner of third, is quite a fair bitch, a bit long coupled and not quite straight in front. In the champion class for small dogs old Donald was alone. He was looking well and deserved his ribbon. Queen Bow, the only entry in the bitch class, was absent. The open dog class brought out a brace of good ones. Freedom, winner of first, is a very nice little dog, very good at all points except that he is a trifle short in head and a bit too wide in front. Brake, winner of second, is a fine upstanding dog of very taking appearance. He has few faults and shows lots of quality. He is a trifle short in head and his ears set too high, he is also tucked up in flank and would show to much better advantage were he a few pounds heavier. This would place him in the large class, where he properly belongs. Ned B., winner of third, has improved since last year but is not up to the others. There were several in the class that were just about as good as Ned, no less than four getting the three letters. In the bitch class first went to Queen Fan, the winner here last year. Chicago Fan, winner of second, we failed to find in her stall. Flirt, winner of third, occupied the same position at Waverly last fall. There were several others in the class that are above the average, but we noticed nothing that promises to become first-class. The winning puppies are all promising and taken as a whole they are a better lot than we often see together.

ENGLISH SETTERS—(MR. DAVIDSON).

That Mr. Davidson is a good judge of setters goes without saying, and we are not disposed to criticise his decisions. It is impossible for any one to go through a large class of dogs in the limited time ordinarily devoted to them in the judging ring and grade them just to a hair in order of merit. Where two dogs are very nearly equal, the best judges often disagree as to the relative positions they should occupy on the prize list, and so long as no glaring mistakes are made these differences of opinion in reality amount to but little. In the open dog class Count Petrel, first, and Roger, second—both good ones—were very nearly equal in merit. Roger is rather short in ear, and consequently not quite so taking-looking in head as Count, which was probably the turning point, as in other respects there is not much to choose between them. These two were the pick of the class, and we saw nothing else that promises to make a world-beater, although there were several that are above the average in quality as well as good looks. The bitch class brought out a very nice lot, and the average quality of the class was better than we often see. First went to Haphazard, winner of third here last year. We then said of her that she should have been first, and gave our reasons. Second went to Lady Suffern, looking well. After these came several that there was not much choice between for third place. Mr. Davidson finally decided in favor of Passion, an old favorite of ours. She was looking her best. We thought highly of Glenoma, vhc. She is a bit weak in head, and was shown too light in flesh. Next year, if she goes all right, we shall expect to see her higher up in the prize list. The winning dog and bitch puppies are a very promising pair from the same litter, and are a credit to their sire, Rockingham. Could they exchange heads it would be an advantage to both. While the bitch has a capital head, it is a bit strong for her sex, as that of the dog is a trifle weak for his. Taken altogether, the puppies, although not strong in numbers, were of excellent quality, with scarcely a bad one in the lot.

IRISH SETTERS—(MR. DAVIDSON).

These classes were fairly well represented and a nice even looking lot they were. Tim, looking well, carried off the honors in the champion dog class, as did Laura B. in the bitch class. In the open dog class first went to Kenmore, a nice little dog of good color. He is a trifle plain in head and stands a bit low in front. Otherwise he is fairly good and shows up in the ring for all he is worth. This dog was protested as having been shown here last year in the puppy class as Andy. He was also protested in the puppy class as being over age. The matter is in course of investigation and the result will be made known when a decision is made. The open classes brought out nothing new in the way of prize winners. Only three puppies were shown. Kenmore, the winner in the open dog class, was also first in the puppy class. Second went to Rory O'More IV., a coarse, light colored dog, not a good one. The only bitch shown is just a fair specimen.

BLACK AND TAN SETTERS—(MR. DAVIDSON).

These classes were an improvement upon any that have recently been shown. Royal Duke, the hero of the disastrous Columbus fire, defeated old Argus in the champion dog class. In the bitch class Madge, well known, looking better than we ever saw her, was a bit lucky in catching Rose all off in coat and looking rather seedy, as had the latter been all right the decision might have been different. In the open dog class first went to Beaumont, recently imported; he is a large, well-made dog, with lots of bone, good loin, quarters, legs and feet; his hocks are well bent but not clean; he might be better in tan, and his head, although fairly good, has rather an inexpressive appearance. Gordo, winner of second, is a big, strong dog with a good head; he will probably show up better next year, as he is not yet mature. Pedro, third, is also a large dog, above the average in quality. In the bitch class first went to Roxie, well known; she was looking well; none of the others were close enough to her to make it interesting, although all that received notice were above the average that have recently been shown. Countess of Devonshire, c., was all out of condition and was nursing a large litter. She looks to be a very good one, and will undoubtedly rank higher on the list when shown in proper form. The puppies were a very fair lot, showing a great improvement over those of former years.

FOXHOUNDS.

There was not an entry in the foxhound class. The exhibitors last year lost a large number of young dogs just after the show, and did not choose to risk it again.

CHESAPEAKE BAY DOGS—(MR. DAVIDSON).

A capital workman-like looking team of ten of these useful dogs was shown by the Mr. Pollock of the Palmer's Island Kennel Club. Only two, a dog and bitch, were for competition, the remainder were for exhibition only. The class was by far the best that has yet been shown, all were typical and well worth a long study. The club take a great interest in these dogs, and have offered for next year's show a prize of $100, in cash or plate, for the best specimen of the breed. It is to be hoped that this offer will bring out an entry that will be worthy the prize and a credit to the breed.

RETRIEVERS—(MR. DAVIDSON).

The class for English retrievers brought only one, a moderate specimen, and a mongrel with a decidedly spaniel appearance.

SPANIELS—(MR. WILMERDING).

There were 99 entries in the spaniel classes with only three absentees, although four others arrived too late for the judging. Mr. Wilmerding may well feel proud of the confidence shown in his judgment by his brother fanciers. He handled the different classes very nicely and made no serious mistakes, placing the dogs as nearly right perhaps as was possible with the limited time at his disposal. There were three entries in the Irish water spaniel class; one was a mongrel and one was absent, although he turned up later, which was unfortunate for him, as he was clearly the best. In the champion Clumber class, after a careful examination, the well known Johnny was awarded the prize over equally well known Newcastle, both were looking fairly well but were not quite up to their best. There was only one entry in the open dog class, Duffer, a son of old Trimbush. He is a fair specimen, a trifle light in muzzle and short in body. Tyne was alone, the other two entries arriving too late. They are promising young bitches.

In champion field spaniels Compton Bandit, not in good condition, had an easy win over Little Red Rover. There was no entry in the bitch class. The open dog class was a very good one. First and second went to Mr. Oldham's recently imported Newton Abbot Darkie and Newton Abbot Lord. Darkie is a capital specimen, fairly long and very low, with good ears well set on, good eyes, feet and a nice coat; he carries his tail well and was shown in prime condition. He might be improved in muzzle and length of body. Lord, also a very good one, beats Darkie in length of body, but he is a trifle overshot and looked somewhat tucked up. He will undoubtedly improve in appearance upon his present form. Dash II. came third; he was second here two years ago; he was not looking his best. Shady, vhc., was second at Boston last year; he does not improve. There were two good ones in the bitch class. The winner, Newton Abbot Jubilee, and Bridford Negress, winner of second. The former was in capital form; she is a fine bitch, long and low, with good legs and feet and a beautiful coat; she is bad in jaw, which detracts from her appearance. Bridford Negress appears to be a first-class specimen, but she was heavy in whelp and not in good coat or condition. We hope to see her at her best, when, we think, she will be hard to beat. Bridford Ruby, winner of third, was also in bad condition; she has a good head but is too high on her legs, and carries her tail too high.

Champion cockers brought out Brant and Doc. The former won, but had Doc been in good condition we fancy that the result might have been different, as the judge spent considerable time over them. In the bitch class Juno W. was alone. She was shown in wretched condition and the judge sent her out of the ring, but afterward relented and gave her the prize. The open class for black or liver dogs was a good one, every one receiving notice. The winner, Von Obo, is a bit long for a cocker, but otherwise he is a very good one, with good head, ears, legs, and feet and coat. Jersey II. made it uncomfortably close for the winner; he is a very good one. Master Shina has gone back on his form of last year, but was still good enough to get away with the remainder of the class. The bitches were none of them wonders, although they were a nice even lot. We liked Busy, second, and Riette, third, full as well for first as the winner, although there was not much to choose between them; all of them are fairly good. Bridford Gladys is a small field spaniel with a beautiful head, long in body and low on the leg. Her forelegs are bad and she was shown much too thin. Mr. Laidlaw purchased her and we should not be surprised to find her well to the front at future shows.

There were four reds and one cream in the "any other color" class. All were by Obo II. and out of three different bitches. Can any one tell us why these colors come from blacks? All of them seem to lack somewhat in substance and are not quite right in skull. First went to Silver King, the cream, a good little dog except as noted. In the bitch class first went to a litter sister of the winning dog. She is better in head than the dog and fairly good in body. The puppies were a very good lot; nearly all the winners were also noticed in the open classes.

COLLIES—(MR. L. P. C. ASTLEY).

The collies, taken as a whole, were probably the best lot ever seen in an American show. Scotilla, rather light in color, won, and in Dublin Scot's absence there was nothing in the class within forty points of his form. In the bitch class Flurry II. fairly smothered Lady Ellis. The latter is a nice bitch, but has no business alongside of the Chestnut Hill crack. There were nineteen entries in the open class for dogs, and Bendigo, an overrated son of The Squire and Bertha, was placed at the head of affairs. It is quite probable that he was a good-looking puppy, but he is certainly not a first-class dog, and those who shipped him to America evidently knew what they were about. He was sold before the close of the show, it was said for $1,500, which was about five times more than his value. He is growing coarse in muzzle, and was shown with little more hair on him than is often seen on a smoothcoat. In body, legs and feet he is excellent, and his ears are superb. The standard calls for coat and frill, and assigns 20 points for same, and it is self-evident that a dog not having these essentials cannot be typical. We do not care how many prizes Bendigo won when he was a puppy, he is not a "good one." Roslyn Sensation, second prize, is a very promising puppy, he has a collie's coat, good front, and is well put together. He is not first-class in stifles or in hocks, but the slight weakness he shows may be outgrown. We would have placed him first notwithstanding Bendigo's record, which with us counts for nothing. Doc Hahn, third prize, is probably better now than he ever will be. We fear his head will develop coarseness. Carriage of ears not quite right. Good body, coat, legs and feet. Hocks might be much better. Brush carried too high. David, hc., is a fine young dog defective in head. Gilford, vhc., and Bute, hc., are both faulty in front. Bertha, the dam of Bendigo, was first in the bitch class, and also won the special for best in the show. She has a better coat than her son, but it is not first-class, and we thought her very lucky in being placed over Scotilla and Flurry II. If these dogs meet again in the judge's ring we shall expect to see Bertha behind her kennel companions. Roslyn Vera, second prize, is a rather promising puppy, by Dublin Scot. Dahlia, third prize, is not first-class either in head, ears, or in coat. Lorna Thorpe, hc., is well known. Colina was third in the puppy class a year ago and was fully described in our report. She has not improved on her puppy form. Doonholm, first in dog puppies, is a very promising youngster and a great credit to his breeder. He is good in head, ears and in coat, and much better than average in body, legs and in feet. He was very closely pressed by Roslyn Sensation, and it would be hard to say which will make the better dog. Volunteer, third prize, was much below the winners, especially in head properties. Roslyn Vera, second in the open bitch class, was a good winner in the bitch puppy class. We did not examine the second and third prize winners. Ladybird, in the class for smoothcoats, was far away best. She has fairly good head, good legs and feet, and capital tail. Her shoulders are not right and she is light in bone. Spot, second prize, is not good either in head or ears, and his legs might be very much better than they are. Taffy, third prize, has defective head and ears.

POODLES—(MR. L. P. C. ASTLEY).

Styx first, Brigand second, and the rest nowhere, was the order of things in this class. Mr. Sanford's grand dogs look not a bit worse than they did when imported, and their condition does much credit to their keeper.

BULLDOGS—(MR. LIVINGSTON).

The bulldogs were few in number, but excellent in quality. Mr. Livingston handled them very well. In the open dog class, first went to Merry Monarch, well known, Panther, placed second, is a very good one, and it is a question if he is not better even than Monarch. He is certainly lower on his legs and equally as good as Monarch at other points. The bitch class brought out the recently imported Dolores, a very good one. She had no trouble in capturing the ribbon.

BULL-TERRIERS—(MR. W. E. LIVINGSTON).

Jubilee, well known, had the champion class for dogs to himself, Mr. Dole's good dog Count having died on the morning of the first day of the show. He will not be easily replaced. Maggie May was also alone in the champion class for bitches, and like her kennel companion Count was looking well. Cairo, the great English crack, was first in the open class. He has gone all wrong in head, is very cheeky and cannot beat a good one. Grabber and Tony, second and third, are well known. A nice specimen is Little Dorrit, first in the open class for heavy weight bitches. Her eyes are not good, being too full. Little Flirt, first in the light weight bitch class, should have exchanged places with Venus, second prize. The former is full in cheeks and in eyes, dish-faced, out at elbows, and is not straight in front. She was in poor condition. Venus is by no means a good one, being full in eyes, out at elbows and coarse in tail. She was in good condition and was clearly best in the class. The first prize puppy is not a good one, being defective at both ends.

BASSET HOUNDS—(MR. ASTLEY).

Nemours was the only entry in this class. He was looking well and deserved his ribbon.

DACHSHUNDE—(MR. ASTLEY).

There was a fair showing of dachshunde, with the well-known Rubenstein first in the dog class. Superbus II. made a very fair second. Linda V., in the bitch class, is a very good specimen, with a good head, and much better than the average in skin; she was also fairly good in crook.

BEAGLES—(MR. WAKEFIELD).

The beagles were conceded by all fanciers of the breed to be the best collection ever brought together. A more sorry lot we never saw together, and one could easily believe when the dog class came into the ring that each animal had been selected for the purpose of forming a typical pack. The Beagle Club is entitled to much credit in accomplishing the result obtained, and it is to be hoped that other specialist clubs will profit by the example. Mr. Wakefield proved himself to be an excellent judge by handling them in first-

class style. Nearly all of the winners are well known, and need no description. The winning puppy is the best one we remember to have seen. His muzzle might be improved, but otherwise it is hard to find fault with him. Of course, he is not furnished, but when mature we shall expect to see him leading the pack if nothing befalls him.

FOX-TERRIERS—(MR. L. P. C. ASTLEY).

This was undoubtedly the best class ever seen in America, and the Blemton Kennels showed a team such as few men have ever owned. Lucifer, Splauger and Bacchanal were the entries in the champion class for dogs, and of course Lucifer won. For reasons previously given in these columns we thought Bacchanal fairly entitled to second prize. The corresponding bitch class with Diadem, Marguerite, Richmond Olive and Diana was a hot one. Diadem won, and her victory must be in a large measure attributed to condition. She was a wreck when Hopkins took her in hand, yet he brought her out in great form and Olive's owner had less cause to complain than he had two years ago. Diana has gone all to pieces in legs, and we would have placed Marguerite over her for third place. The open dog class was also a good one, and when we say that Raby Mixer was beaten by a better dog we give an idea of the quality shown by the winner. He stands on shorter legs than Mixer, is better in body and of better size. A grand little dog. The bitch class was also a good one, and Rachel, who we had been told had not a leg to stand on, won, and in our opinion won easily. Her forelegs are not put on as well as they might have been and she is not quite straight in front, but in other respects she is a great bitch—one of the very best we have ever seen. We did not see her in competition with Lucifer and Dusky Trap for the special, but without seeing the dogs together we should say that she was the best of the trio. We like her better than any bitch we have ever seen with the one exception of Dorcas. Her condition was superb. New Forest Ethel made a good second and is a good bitch. We had been told to look for a bitch that could give Rachel many points and a beating and were disappointed in not finding such an one. Ethel is a bit soft looking and at times carries her ears very badly, otherwise she is a good one, but not up to Rachel's form. Oh, no! Blemton Brilliant, third prize, is a white bitch showing good breeding, and Tiara, well known, took the reserve. First, second, third, and reserve in a class like this was a great victory for Mr. Belmont's kennel. Of the very many others shown in the puppy classes only one is likely to be heard of in keen competition and this is Blemton Consequence, a beautiful puppy by Result out of Diadem. If all goes well with this very promising youngster we shall soon be able to say that a fox-terrier has been bred in America. The wire-haired dogs were a seedy lot, not a good one among them.

BLACK AND TAN TERRIERS—(MR. ASTLEY).

Only three were shown in this class. Dick, winner of second, was much the best, but he was out of condition and was obliged to take a back seat.

WHITE ENGLISH TERRIERS—(MR. ASTLEY).

Two very good white English terriers were shown. Diamond Spark, winner of first, is quite good with the exception that he might stand better in front. Lovely, winner of second, is a trifle too wide in chest.

IRISH TERRIERS—(MR. ASTLEY).

The Irish terriers were better than we often see together. The winners of first and second are typical dogs with too much coat. That of the latter if also too soft. Third went to Evictor, a good bodied dog but short in head and lacking character. In the bitch class first went to Breda Tiney, a very good bitch all round with a nice head. Poppy II., second, is a fairly good terrier, a bit cheeky and short of coat.

DANDIE DINMONT TERRIERS—(MR. ASTLEY).

Only three Dandies were shown. Border Wang was placed first over Lady Wallace. The latter is better in skull, coat and body, and should have had the place.

BEDLINGTON TERRIERS—(MR. ASTLEY).

There were seven entries in this class with one absentee, the well known Sentinel. First went to Domino, a nice specimen fairly good at all points. We could not follow the judge in placing Sir George second, his faulty head and poor coat are too much against him in such company. Tees Rock, unnoticed, was clearly entitled to the place, with Elswick Sue a good third, and George, hc., would have been about right.

SKYE TERRIERS—(MR. ASTLEY).

In Skyes, Towzie, well known, was placed first, with Gladstone Boy second. The latter is of good type. Ben More, placed third, is a better dog than either, but his bad condition undoubtedly caused him to be overlooked by the judge. Lochiel, reserve, showed the best coat in the class.

WELSH TERRIERS—(MR. ASTLEY).

This breed has caused much ink to flow in England. There were two shown and one could hardly tell T'other from Which so near alike were they. They are something of the type of the Irish, and are nice, gamy looking terriers.

YORKSHIRE TERRIERS—(MR. L. P. C. ASTLEY).

As usual, this was a very poor class, and there was not a dog in the lot that would be able to win third prize in a good class. Ben, well-known, is but an apology for a champion Yorkshire. Teddy, first in the open class for dogs, was by far the best dog of the lot, but his body color is much too dark, and his head color too light. Mr. Astley was right in withholding first in the bitch class, but his first prize toy is not as good as the bitch he did not consider deserving of first in the other class. Roger is bad in color and short in coat. Monarch is short in coat and very poor in leg and face color. Lady is short in coat, light in tan and also in body color. Toys were a very seedy lot, every one of them being bad in head.

PUGS—(MR. ASTLEY).

The pugs were better than last year. In the champion class for dogs Master Tragedy was withdrawn, and Max, looking well, had a walk over. In the bitch class Bessie, at her very best, was alone. In the open dog class first went to Dude, a very nice, compact little dog. His chief fault is lack of trace. Peter, winner of second, is good in head, eyes and coat. He is smutty in color and stands too high on his legs. Doctor, third, we did not see, as he was taken out sick soon after judging. Mikado, vhc., is a well made dog of good color and with lots of style. He is too large and might be better in ears and toe nails. In the bitch class first went to Daisy. She is a nice size with good eyes, legs, feet and nails, and fair coat and tail. Her skull is narrow and her color is very bad. She should have been content with vhc. Vesta, a much better bitch, was placed second. She is good in head, face, eyes, and trace. She is a trifle smutty and was shown too thin. Tra-la-la, well known, was well shown and clearly entitled to first. Paquette, reserve, should have been third. She is good in skull, coat and nails, and fairly good in trace and markings and tail. She is a bit dish-faced, a trifle light in eyes and a little too high on her legs. None of the puppies were worth mention.

TOY SPANIELS—(MR. ASTLEY).

In the champion class three well-known King Charles were shown; Milwaukee Charlie was placed first, with Duke second and Roscius third. The last two should have exchanged places. In the open class for King Charles first went to Bonny, looking well; she is one of the best we have. King Pippin was alone in the champion class for Blenheims. In the open class first went to Exeter Beauty, with a remarkably short face; she was short of coat. In the Prince Charles and Ruby class the winners are well known. The Japanese spaniels were more numerous than at previous shows; we did not see them out of their cages and will give no opinion as to their relative merits.

ITALIAN GREYHOUNDS—(MR. ASTLEY).

The winners in this class are well known and need no description.

MEXICAN HAIRLESS—(MR. TAUNTON).

Me Too was again to the fore in this class, one of his progeny third, and Nellie, well known, second.

LIST OF AWARDS.

Following are *errata* and *addenda* to the list given last week:

MASTIFFS.—CHAMPION—*Dogs:* Very high com., A. G. Hull's Ilford Cromwell. *Bitches:* Very high com., A. G. Hull's Bal Gal.—OPEN—*Dogs:* Com., L. A. Berger's Clement (instead of Ashmont Brutus), Caumsett Kennels' Pharaoh.

ST. BERNARDS.—ROUGH-COATED—OPEN—*Dogs:* Very high com., W. E. Connor's Fonthill Hector. (H. C. Miner's Pop did not win very high com.) *Bitches:* Miss Louise Geer's Flora III. of Clover Patch. Very high com., Hermitage Kennels' Ruth (instead of Bride).—PUPPIES—*Dogs:* High com., Miss Harriet Bayard Robb's King Cole.

GREAT DANES.—High com. and com., C. Balcolm's Cæsar and Yellow Rose.

DEERHOUNDS.—*Puppies:* 2d, J. E. Thayer's Dora; 3d, G. S. Page's Robin Adair.

POINTERS.—LARGE—OPEN—*Dogs:* 3d, J. H. Winslow's Bang. Very high com., E. H. Morris's Sancho. *Bitches:* Com., J. W. Trantum's Daisy Ranger.—SMALL—CHAMPION—*Dogs:* Clifton Kennels' Donald.—OPEN—*Dogs:* High com., D. G. Hartt's Tramp. *Bitches:* High com., D. G. Hartt's Pansy (instead of Fannie). Com., F. Hoecker's Belle.

COCKER SPANIELS.—UNDER 28LBS.—CHAMPION—*Bitches:* 1st, C. M. Nelles's Juno II.—OPEN—*Bitches:* Com., J. Stacom's Lady Jet.

SPANIELS.—*Puppies:* Very high com., C. M. Nelles's Juanita (instead of Ontario).

COLLIES.—OPEN—*Dogs:* Very high com., J. Van Schaick's Surbiton, and Kilmarnock Kennels' Bute (instead of high com.). High com., Miss C. M. Teese's Chief.—PUPPIES—*Bitches:* 1st, Chestnut Hill Kennels' Roslyn Vera. High com., J. D. Shotwell's Amherst Lassie, Hempstead Farm Kennels' Maggie.—COLLIE SWEEPSTAKES—4th, Hempstead Farm Kennels' Glenyon (instead of J. S. Rogers's Hector Wayne).

POODLES.—BLACK—High com., A. Herman's Tingle Tangle II. (instead of Mrs. R. C. Cornell's Nanki Po.). Com., S. B. Steinman's Nero and Diana.

BULLDOGS.—*Dogs:* 2d, W. M. Daintry's Panther (instead of F. S. Thompson's Rowdy Boy).

BULL-TERRIERS.—LARGE—*Bitches:* 3d, H. D. & J. R. Steer's Queen Bess.

DANDIE DINMONT TERRIERS.—G. G. Cleather's Meg was com. instead of 3d.

YORKSHIRE TERRIERS.—*Dogs:* 2d and 3d, P. Cassidy's Roger and Monarch.

PUGS.—*Dogs:* 3d (instead of 2d), Jas. Mortimer's Dante. Very high com. (instead of high com.), G. W. Fisher's Tom Thumb, and R. B. Sawyer's Chequasset Diamond. A. Wilkins's Baby Bunting was not high com.

MEXICAN HAIRLESS.—2d, S. J. Mayer's Nellie. High com., Mrs. S. J. Mayer's Black Jack.

ADDITIONAL AWARDS.

ENGLISH SETTERS.—CHAMPION—*Dog:* Frank Windholz's Rockingham. *Bitches:* 1st, Frank Windholz's Cora of Wetheral; 2d, Geo. W. Neal's Daisy Foreman.—OPEN—*Dogs:* 1st, C. Fred Crawford's Count Petrel; 2d, L. Gardner's Roger; 3d, J. Reynal's Thornedale. Very high com., Jas. Lindsay's Noble's Boy, Ramapo Kennels' Prince Imperial, Wm. G. White's Forest Planter. High com., Rosecroft Kennels' Prince Foreman, H. F. Schellhass's Belthus, E. W. Clarke, Jr.'s, Premier. Com., E. W. Jester's Blue Prince and Glen Rock, A. J. Kolb's Foreman's Ned. *Bitches:* 1st, E. W. Durkee's Haphazard; 2d, Ramapo Kennels' Lady Suffern; 3d, Rosecroft Kennels' Passion. Very high com., E. H. Morris's Empress Eugenie, Blackstone Kennels' Glenoma, Rosecroft Kennels' Forest Dora, N. Wallace's Jennie III. High com., W. Weston Wilson's Floy, C. Fred Crawford's Fairy Belle, G. E. Scofield's Daisy, Jas. L. Breese's Ruby Buckellew. Com., W. B. Peet's Chautauqua Belle, Rosecroft Kennels' Alice Grey, F. Windholz's Princess Phœnus.—PUPPIES—*Dogs:* 1st, E. W. Durkee's Peveril; 2d, Geo. Jarvis's Boy of Kent; 3d, R. von Ohl's R. V. O. Very high com. and high com., E. W. Durkee's Nahmke and Jex. Com., S. M. Colgate's Guy. *Bitches:* 1st, E. W. Durkee's Gretchen; 2d, E. H. Morris's New York Beauty; 3d, R. Jenkins's Regina. Very high com. and high com., F. Windholz's Nona and Dell.

IRISH SETTERS.—CHAMPION—*Dogs:* 1st, Max Wenzel's Tim; 2d, Frank S. Parrott's Gerald. *Bitches:* 1st, John M. Leekley's Laura B.; 2d, Chas. T. Thompson's Mollie Bawn.—OPEN—*Dogs:* 1st, P. H. Foster's Kenmore; 2d, Chas. W. Roedenburg's Chip; 3d, Jas. B. Blossom's Dee. Reserve, Chas. T. Thompson's Desmond II.. Very high com., Edward Maher's Larry S., Fred P. Jordan's Jefferson. High com., Jas. B. Blossom's Bronx, Louis B. Wright's Glencho's Boy, H. S. Goetchius's Chief II. Com., Francis Larkin's Glencho's Shamrock, Jas. B. Blossom's Kelso, J. B. Wallace's Doc. *Bitches:* 1st, Chas. T. Thompson's Nellie; 2d, John J. Scanlon's Lulu III.; 3d, A. W. Pearsall's Agnes. Very high com., Oakview Kennels' Jessie, Chas. Meddler's Bessie Glencho, Jas. B. Blossom's Lassie. High com., W. N. Callender's Norah, Max Wenzel's Ready, Chas. W. Roedenburg's Norah, Dr. E. C. Kirk's Berna. Com., Chas. T. Thompson's Winnie II., L. and J. Backer's Daisy.—PUPPIES—*Dogs:* 1st, P. H. Foster's Kenmore; 2d, W. N. Callender's Rory O'More IV. *Bitches:* 1st, P. H. Foster's Nelly Husted, Jr.

BLACK AND TAN SETTERS.—CHAMPION—*Dog:* 1st, John K. Green's Argus. *Bitch:* 1st, Chas. S. Fitch's Madge.—OPEN—*Dogs:* 1st, Edwin H. Morris's Beaumont; 2d, J. L. Campbell's Gordo; 3d, Wm. H. Bishop and Walter B. Peet's Pedro. High com., Dr. W. T. Barnard's Bruce. Com., Miss Mary Ames's Ned. *Bitches:* 1st, H. F. Smith's Roxie; 2d, Gilbert Griffin's Jesse; 3d, E. H. Morris's New York Belle. Very high com., J. L. Campbell's Becky Sharp and Dr. W. T. Barnard's Lady Gordon. High com., Jordan L. Mott, Jr.'s, Joan. Com., J. W. E. Clarke's Countess of Devonshire.—PUPPIES—*Dogs:* 1st, J. L. Campbell's Gordo; 2d, Saml. B. Duryea's Midwout Perry; 3d, Julius Von Hunerbein's Buck IV. *Bitches:* 1st, J. L. Campbell's Becky Sharp; 2d and 3d, F. M. Bennett's Thistle and Rothiemay. Very high com., L. Parisette's Jennie II. High com., J. J. Prendergast's Topsy.

BEAGLES.—CHAMPION—*Dog:* Linden Beagle Kennels' Fitzhugh Lee. *Bitch:* Arthur L. Bosley's Lou.—OPEN—*Dogs:* 1st, Somerset Kennels' Bounce; 2d, Somerset Kennels' Potomac; 3d, C. F. Harris's Dandy Jim. Very high com., Somerset Kennels' Goodwood Rattler, Geo. Laick's Laick's Rattler, H. F. Schellhass's Riot, Somerset Kennels' Jupiter. High com., S. Huntington's Glen. Com., J. W. Appleton's Lornax. *Bitches:* 1st, Linden Beagle Kennels' May Belle II.; 2d, Somerset Kennels' Jessie; 3d, F. D. Quinby's Una. Very high com., F. D. Quinby's Dora, H. M. Schellhass's Trinket, Linden Beagle Kennels' Queeny. High com., H. F. Schellhass's Melody. *Puppies:* 1st, C. F. Harris's Dandy Jim; second, E. R. Coleman's Marion B.; 3d, E. R. Coleman's Miss Mame. Very high com., Linden Beagle Kennels' Merle, A. L. Bosley's Gipsey Kate. High com., A. L. Bosley's Louisette. Com., E. Vollmer's Flora.

FOX-TERRIERS.—AMERICAN FOX-TERRIER CLUB STUD DOG STAKES—1st, Blemton Kennels' Blemton Volunteer and Blemton Consequence.—SECOND GRAND PRODUCE STAKES—*Dogs:* 1st, L. & W. Rutherfurd's Warren Discord. *Bitches:* 1st, Blemton Kennels' Blemton Brilliant.

COLLIES.—COLLIE CLUB SWEEPSTAKES—1st, McEwen & Gibson's Doonholm; 2d, Chestnut Hill Kennels' Roslyn Sensation; 3d, Chestnut Hill Kennels' Roslyn Vera; 4th, Hempstead Farm Kennels' Sable Lassie. Reserve, Sans Souci Farm's Doc Hahn.

CHESAPEAKE BAY DOGS.—*Dogs:* 1st, Geo. E. Pollock's Ross. *Bitches:* 1st, Geo. E. Pollock's Polly.

ENGLISH RETRIEVERS.—1st, Thomas Johnson's Bess.

IRISH WATER SPANIELS.—1st, Fred P. Kirby's Jess.

TOY SPANIELS.—CHAMPION—1st, F. Blackwood Fay's Milwaukee Charlie; 2d, A. W. Lucy's Duke; 3d, Wm. Phillips's Roscius.

KING CHARLES SPANIELS.—1st, Wm. Phillips's Bonny; 2d, Peter Cassidy's Charley; 3d, Mrs. A. W. Lucy's Hyllus. Reserve, F. Senn's Champion. Very high com., A. B. Jones's Clifton Belle.

BLENHEIM SPANIELS.—CHAMPION—1st, Miss Mamie Phillips's King Pippin.—OPEN—1st and 2d, F. Blackwood Fay's Exeter Beauty and Exeter Earl; 3d, Wm. Phillips's Grand Duchess. Reserve, J. H. Winslow's Joan of Arc. Very high com., Wm. Phillips's King Robin and Mrs. A. Lucy's Rex. High com., Mrs. Kistemann's Little Daisy and F. Senn's Bunny.

TRI-COLOR AND RUBY SPANIELS.—1st, Mrs. Kistemann's Tilly; 2d, John Kistemann's Ruby; 3d, A. W. Lucy's Princess Alice. Reserve, A. W. Lucy's Roses Red.

TOY SPANIELS.—1st, Mrs. F. Senn's Romeo; 2d, A. B. Jones's Theodora; 3d, A. B. Jones's Little Clifton. Reserve, F. Senn's Baby Bunting. Very high com., Mrs. F. Senn's Juliet.

JAPANESE SPANIELS.—1st, J. C. Davis's Kobie; 2d, Mrs. S. B. M. Cornell's Mancha; 3d, J. McCuldin's Mikado. Very high com., F. Senn's Jan. High com., J. McCuldin's Yung Sing. Com., J. McCaldin's Yum Yum.

ITALIAN GREYHOUNDS.—1st, Mrs. E. M. Surles's Dandelion; 2d, Miss E. M. Van Buren's Fanny; 3d, Mrs. E. M. Surles's Zephyr. Very high com., Mrs. E. M. Surles's Guess. High com., S. J. Held's Nellie, Mrs. E. M. Surles's Freddy IV. Com., Mrs. E. M. Surles's Pompey.

ST. BERNARDS.—ROUGH-COATED—PUPPIES—*Bitches:* 1st, J. S. Sheppard's Dorothy; 2d, Hospice Kennels' Leah; 3d, R. von H. Schramm's Donna. Very high com., W. R. Watts's Beaute. High com., J. Moore's Coomassie II. Com., W. R. Watts's Cleopatra.

ST. BERNARDS.—SMOOTH-COATED—CHAMPION—*Dogs:* 1st, Hospice Kennels' Hector; 2d, L. Daniels's Apollo. *Bitches:* 1st, Hermitage Kennels' Leila; 2d, L. Daniels's Flora II.—OPEN—*Dogs:* 1st, L. Daniels's Victor Joseph; 2d, Jas. Mortimer's Petrarch; 3d, C. Wagner's Barry. Very high com., H. R. Pratt's Don. *Bitches:* 1st and very high com., Hermitage Kennels' Thisbe and Carlotta; 2d, Hospice Kennels' Reka; 3d, T. H. Terry's Rhona. Very high com., L. Daniels's Gemme.—PUPPIES—*Dogs:* 1st, W. S. Diffenderffer's Lord Hector; 2d, A. G. Woodruff's Alps; 3d, W. Pierson's Guardsman. *Bitches:* 1st and 2d, Monastery Kennels' Myrtle and Lady Bonivard; 3d, C. S. Baker's Lady Leeds. Very high com., J. Keevan's Hallowe'en.

SPECIAL PRIZES FOR BEST EXHIBIT.

MASTIFFS.—Kennel of four, E. H. Moore, American Mastiff Club's cups. American bred dog or bitch, J. L. Winchell's Moses. Dog owned by member, E. H. Moore's Minting. Bitch owned by member, G. & H. B. Cromwell's The Lady Clare. American bred dog owned by member, J. L. Winchell's Moses. Bitch, Winlawn Kennels' Daphne. Puppy sweep, J. L. Winchell's Moses.

ST. BERNARDS.—Kennel of four, Hermitage Kennels: Dog or bitch, Hermitage Kennels' Leila. Rough-coated bitch owned by lady, MRS. A. M. Hughes's Lady Alice.

DEERHOUNDS.—Kennel of four, J. E. Thayer.

GREYHOUNDS.—Kennel of four, H. W. Huntington.

IRISH SETTERS.—Best kennel of four, C. T. Thompson. Dog or bitch, Max Wenzel's Tim. Dog with field trial record, Max Wenzel's Tim. Bitch with field trial record, Max Wenzel's Yoube.

BLACK AND TAN SETTERS.—Kennel of four, J. K. Grau.

FIELD OR COCKER SPANIELS.—Kennel of four, E. M. Oldham. Field, E. M. Oldham's Newton Abbot Darkie.

COLLIES.—Kennel of four, Chestnut Hill Kennels. Dog or bitch, Chestnut Hill Kennels' Bertha. Unweaned litter, J. S. Rogers. Bitch in sweepstakes, Chestnut Hill Kennels' Roslyn Vera.

FOX-TERRIERS.—Kennel of four, Blemton Kennels. Dog, Blemton Kennels' Lucifer. Bitch, Blemton Kennels' Rachel. Brace, dog and bitch, Lucifer and Rachel. Puppy, Blemton Kennels' Blemton Consequence. Brace of puppies, dog and bitch, Blemton Kennels' Blemton Volunteer and Blemton Consequence. American Fox-Terrier Club's challenge cup, Blemton Kennels' Rachel.

BEAGLES.—Kennel of four, Somerset Kennels. Dog owned by member A. E. B. C., H. F. Schellhass's Trailer. Bitch owned by member A. E. B. C., A. L. Bosley's Lou.

PUGS.—Kennel of three, Dr. M. H. Cryer. In open class owned by member Pet Dog Club, Dr. M. H. Cryer's Dude.

BULL-TERRIERS.—Brace, F. F. Dole's Count and Little Dorrit.

CHESAPEAKE BAY DOGS.—Brace, G. E. Pollock's Ross and Polly.

CLUMBER SPANIELS.—Stud dog with two of get, Mercer and Hill's Johnny with H. W. Windram's Romp II. and Bess II.

POINTERS.—Best kennel of four, Graphic Kennels. Dog or bitch, C. W. Littlejohn's Fritz. Heavy-weight bitch, Graphic Kennels' Revel III. Dog with field trial record, Graphic Kennels' Lad of Bow.

ENGLISH SETTERS.—Kennel of four, Blackstone Kennels. Dog or bitch, F. Windholz, Cora of Wetheral. White dog or bitch, Dr. A. T. Peet's Persian Queen. Brace owned by one person, F. Windholz's Rockingham and Cora of Wetheral. Dog with field trial record, C. F. Crawford's Foreman. Bitch with field trial record, J. L. Breese's Ruby Buckellew.

DACHSHUNDE.—Dog, L. and W. Rutherfurd's Rubenstein.

ENGLISH BLOODHOUNDS.—Kennel of four, E. Brough.

BULLDOGS.—Bitch, A. F. Nash's Dolores.

THE BOSTON SHOW.

BOSTON, Mass., Feb. 27, 1888.—The grand success of the New England Kennel Club in its bench show last year seems likely to be not only equalled, but eclipsed in the coming show, to be held in this city April 3, 4, 5 and 6. Energy, liberality and independence is the motto of the bench show committee, which consists of Messrs. Fay, Newman, Grosvenor, Moore and Long, all enthusiastic lovers of the dog.

The premium list is a record breaker. Over $4,500 in cash prizes, handsome cups, and sterling silver medals are provided for distribution among the various breeds. Fox-terriers alone are to be awarded $600, including four grand special prizes of $100 each. This should insure a larger entry of fox-terriers than has ever been seen at any previous show in America.

Other sporting classes, such as setters, pointers, spaniels, deerhounds, beagles, etc., are liberally provided for, while the non-sporting classes have been lavishly remembered. Mastiffs will receive in cash prizes $270, besides over $400 in special prizes, among others, one of $25 cash, offered by Mr. William Wade, of Hulton, Pa., for best puppy. St. Bernards, rough and smooth-coated, are donated $330 in cash, and Miss Whitney, who will judge this breed, is likely to have a grand array in her classes. Among other "dark horses" already promised, are two splendid pups by the great English champion Plinlimmon. The dog pup, now only eight months old, weighs 150lbs., and is grandly developed.

From letters on file at the club rooms your correspondent learned that in the spaniel classes a grander exhibit is assured for Boston than has ever been shown in America. Mr. F. H. F. Mercer writes, "The display of Clumbers at Boston will be ahead of any previous show." In cocker spaniels, all the leading breeders have assured the club of hearty support.

The South of Scotland Dandie Dinmont Terrier Club has donated two handsome medals for this breed, one for best dog and one for best bitch, to be judged by the club standard. One of the leading fanciers in this country writes, "I shall have quite a string of Dandie Dinmonts to be shown this spring, and would rather have them compete at Boston than at any other show."

In collies, the prize money amounts to $225. One breeder alone has sent for twenty-five entry blanks.

Local support of the coming show is already assured to even a greater extent than in 1887. The club's action in repudiating the compulsory registration rule is highly spoken of in dog circles in this city, and from letters written by prominent breeders elsewhere, it is evident that the step taken by the New England Kennel Club is approved of generally.

HUBITE.

BEAUFORT.—*Editor Forest and Stream:* I notice that John White, in a Western paper, says that Beaufort ran very poorly at the field trials of 1886. He also says that Tammany is invariably a first-class performer. This must, of course, be true, or White would not have made the statement, and it is now the duty of the A. K. C. to suspend or disqualify the judges at these trials for allowing Beaufort to be the runner up while Tammany was left a good distance in the rear. Therefore I move that the three judges thus having been "guilty of misconduct in connection with field trials" (see Rule 23) be disqualified from competing at any dog show or field trials in this country.—CHAS. H. MASON.

THE ST. BERNARD CLUB.

A MEETING of the St. Bernard Club of America was held Feb. 21 at the Hoffman House, K. E. Hopf, of Arlington, N. J., in the chair; J. W. Dunlop, of Utica as secretary pro tem. Present: Miss A. H. Whitney, Lancaster, Mass.; Mr. and Mrs. Albert Reuter, Woodlawn, N. Y.; Miss A. G. Chandler, Lancaster, Mass.. R. J. Sawyer, Menominee, Mich.; G. J. Geer, Summit, N. J.; Geo. M. Elwood, Rochester; S. B. Macfarlane, Philadelphia; Alex M. Hughes, Valhalla, N. Y.; E. H. Moore, Melrose, Mass.; H. R. T. Coffin, Glens Falls; Thos. M. Burke, Bridgeport; John P. Barnard, Boston; Lorenzo Daniels, New York; J. S. Sheppard, Montgomery, N. Y.; A. E. Rendle, New York; Jas. H. Long, Boston.

On motion of Dr. Sawyer the club was organized by nineteen present. These, added to fifty-four members who had sent in their application, made a total membership of seventy-three. It was decided that the name of the club should be the St. Bernard Club of America, and the following officers were elected: Miss Anna H. Whitney, President; K. E. Hopf, R. J. Sawyer and E. H. Moore, Vice-Presidents; W. A. Joeckel, Secretary and Treasurer. The board of governors, to consist of fifteen and five to constitute a quorum, was completed by the election of the following as governors: Thos. B. Lee, Toledo, O.; E. W. Burr, Kansas City, Mo.; H. W. Walbridge, Peterboro, N. H.; Geo. J. Geer, Summit, N. J.; Jas. W. Dunlop, Utica, N. Y.; H. R. T. Coffin, Glens Falls, N. Y.; W. S. Diffenderffer, Baltimore, Md.; S. B. Macfarlane, Philadelphia; Lorenzo Daniels, New York; Geo. M. Elwood, Rochester. A committee of five was appointed to draw up a constitution and by-laws. Adjourned.

A second meeting was held Feb. 22, at the Hoffman House. There were present 18 members, including F. Schwartz, of Bridgeport, Conn; W. H. Joeckel, of Hoboken, N. J., and W. S. Diffenderffer, of Baltimore, Md. Miss Whitney resigned the presidency and K. E. Hopf was elected by acclamation, Miss Whitney being made vice-president.

The constitution as submitted by the committee of five was adopted. The initiation was fixed at $10, annual dues $5, payable in advance Nov. 1. It was resolved that the minutes of the two meetings be printed and forwarded to all members. It was decided to make application for admission into the American Kennel Club, Board of Governors to appoint delegate.

The standard, as accepted by the International Congress, held at Zurich in June, 1887, and as translated by K. E. Hopf, was adopted.

A committee of three was appointed to attend the immediate incorporation of the club, consisting of K. E. Hopf, Geo. M. Elwood and Jas. Mortimer.

It was also voted that the regular annual meeting of the club be held between Jan. 1 and June 1, 1889, time and place to be designated by the Board of Governors.

Lorenzo Daniels (P. O. Box 1991, New York city) was elected corresponding secretary.

Four applications for membership were received and referred to the Board of Governors.

Adjourned to regular annual meeting.

The following is the adopted

ST. BERNARD STANDARD.

SHORT-HAIRED (SMOOTH-COATED) ST. BERNARD.

General character.—Powerful, tall (upstanding), figure erect, strong and muscular in every part, with powerful head and most intelligent expression. In dogs with a black mask the expression appears more stern, but never ill-natured.

Head.—Like the whole body, very powerful and imposing. The massive skull is wide, slightly arched and sloping at the sides, with a gentle curve into the very well-developed cheek bones.

Occiput only slightly developed. The supra-orbital ridge is strongly developed and forms nearly a right angle with the horizontal axis of the head. Between the two supra-orbital arches, and starting at the root of the muzzle, runs a furrow over the whole skull; it is very deep between the supra-orbital arches and strongly defined up the forehead, becoming gradually more shallow toward the base of the occiput. The lines at the sides, from the outer corner of the eyes, diverge considerably toward the back of the head. The skin on the forehead forms somewhat deep wrinkles, more or less distinct, and converging from the supra-orbital arches toward the furrow over the forehead; especially in action they are more visible, without in the least causing the expression to become dark. The slope from the skull to the muzzle (stop) is sudden and rather steep.

Muzzle.—The muzzle is short, not snipy, and the depth, taken at the root (at the stop) must be greater than the length of the muzzle. The bridge of the muzzle is not arched, but straight, and in some good dogs slightly broken. From the stop over the entire bridge of the muzzle to the nose runs a rather wide, well-marked, shallow furrow. The flews of the upper jaw are strongly developed, not cut at right angles, but turning with a graceful curve into the lower edge, and are slightly overhanging. The flews of the lower jaw must not be pendant. The teeth, in proportion to the conformation of the head, are only of moderately strong developement. A black roof to the mouth is desirable.

The *nose* is very substantial and broad, with well dilated nostrils, and, like the lips, always black.

Ears are of medium size, set on rather high, with very strongly developed burr; they stand slightly outward at the base, then drop with a sharp bend to the side and lie closely to the head without a fold. The flap is thin and forms a rounded triangle, slightly elongated toward the point, the front edge lying closely to the head, whereas the back edge may stand away from the head somewhat, especially when the dog is listening. Ears lightly set on, which at the base lie close to the head, give it an oval and too slightly marked appearance, whereas a strongly developed base gives the skull a squarer, broader and much more expressive appearance.

Eyes set more to the front than the sides, are of moderate size, brown or nut brown, with a sagacious and good-natured expression, set moderately deep. The lower eyelids do not as a rule fit close to the eyeballs, and form toward the inner corner an angular wrinkle. Eyelids which are too pendant and showing conspicuously the lachrymal glands, or a red thick haw, are objectionable.

Neck.—The neck is set on high, very strong, and in action is carried erect, otherwise horizontally or slightly downward. The junction of head and neck is distinctly marked by a line. Neck very muscular and rounded at the sides, which makes it appear rather short. Clearly noticeable dewlaps, but too much development of the same is not desirable.

Shoulders sloping and broad, very muscular and powerful, withers strongly defined.

Chest well arched, moderately deep, not reaching below the elbows.

Back very broad, slightly arched in the loin only, otherwise perfectly straight as far as the haunches, sloping gently from the haunches to the rump, and merging imperceptibly into the root of the tail.

Hindquarters well developed. Thighs very muscular.

Belly showing distinctly where it joins the very powerful loins, only slightly drawn up.

Tail.—Starting broad and powerful directly from the rump, is long, very heavy, ending in a blunt tip. In repose it hangs straight down, turning gently upward in the lower third. In a great many specimens the tail is carried with the end slightly turned to one side (as in all former Hospice dogs, according to old pictures), and therefore hangs down in the shape of an *f*. In action all dogs carry the tail more or less turned upward. But it dare not be carried too erect, or by any means rolled over the back. A slight curling over of the tip is sooner admissible.

Forearms.—Very powerful and extraordinarily muscular.

Forelegs.—Straight, strong.

Hindlegs.—Slightly bent in the hocks, and, according to the presence of single or double dewclaws, the feet turn outward more or less, which, however, must not be understood to mean cowhocked.

Feet.—Broad, with strong toes moderately well closed up, and knuckles rather high. The single or double dewclaws set on low, so as to be almost on a level with the pad of the foot, giving a greater surface, and preventing the dog from breaking so easily through the snow.

There are dogs which have on their hindfeet a regular developed fifth toe (thumb). The so-called dewclaws (Wolfsklauen), which sometimes occur on the hindlegs, are imperfectly developed toes; they are of no use to the dog, and are not taken into consideration in judging.

Coat is very dense, broken-haired (stock-haarig) lying smooth (flat), tough, without feeling rough to the touch. Thighs slightly bushy. The tail at the root is covered with longer and more dense hair, which gradually becomes shorter toward the tip. The tail appears bushy, not forming a flag.

Color and markings.—White with red or red with white, the red in all its various shades; white with light to dark barred brindle patches, or these colors with white markings. The colors red or light brindle and dark brindle are of entirely equal value. The following markings are absolutely necessary: White chest, feet and tip of tail, noseband (white muzzle) and collar; white spot on the nape and a blaze are very desirable. Never self-colored or without any white. Faulty are all other colors, except the very favorite black shadings on face (mask) and ears.

Height at shoulder of the dog (measured with the Hound measure) ought to be 70 centimetres minimum (27.56in.); of the bitch 65 centimetres (25.59in). The bitches are throughout of a more delicate and finer build.

As faulty are to be considered all variations not in accordance with these points.

THE LONG-HAIRED (ROUGH) ST. BERNARD.

The long-haired dog is perfectly similar, with the exception of the coat, which is not "stock-haarig" (broken-haired) but moderately long, flat to slightly wavy, but which ought never to be either rolled or curly, neither ought it to be shaggy. On the back, especially from the region of the haunches to the rump, the hair is generally more wavy; this is moreover also slightly noticeable in the short-haired dogs, even in those from the Hospice.

The tail is bushy, well covered with moderately long hair. Rolled or locky hair on the tail is not desirable. A tail with parted hair or feathered is faulty. Face and ears are covered with short and soft hair; longer silky hair is allowable at the base of the ears, in fact, this is nearly always the case. Forelegs only slightly feathered; thighs very bushy.

Faults are especially all such formations as indicate a Newfoundland cross, such as swayback, disproportionately long back, hocks too much bent and spaces between the toes with upward growing hair.

No scale of points has been adopted.

PHILADELPHIA DOG SHOW.

PHILADELPHIA, Feb. 28.—*Editor Forest and Stream:* The Philadelphia Kennel Club's sixth annual show which opened this morning promises to be the most successful show given under the auspices of the club. There are 463 entries and the quality in a number of the classes is high. Unfortunately it became known that several of the cracks were entered, and a number of exhibitors anticipating defeat kept their dogs at home. This will be a lesson to the club, and next year the names of dogs that are peerless in their class will probably be kept a secret. Mr. John Read is superintending and it goes without saying that the show is well managed, and that courtesy and civility are extended to all. The judging was completed at 6.30, and, therefore, I am able to send you a complete list of awards, including specials. With the exception of a few bad blunders in the non-sporting division the judging is fairly well done, and there is less "kicking" than is usually heard. The elements are in their best humor, the attendance is better than I have seen at any other show in this city, and unless something unforeseen should happen the Philadelphia Kennel Club has most satisfactory results in store for it. Following are

THE AWARDS.

MASTIFFS.—CHAMPION—*Dog:* E. H. Moore's Minting. *Bitch:* No entry.—OPEN—*Dogs:* E. H. Moore's Ilford Coroner; 2d, L. R. Berger's Clement; 3d, S. Swain's Clito. Very high com., C. B. Johnston's Leo Victor. High com., J. I. Strather's Welsh. Com., C. Porter's Joe. *Bitches:* 1st and 3d, E. H. Moore's Duchess and Lady Beatrice; 2d, C. Porter's Boss's Lady Clare. Very high com. and com., L. A. Berger's Nell and Ashmont Cleopatra.—PUPPIES—*Dogs:* No entry. *Bitches:* 1st, A. Boyd, Jr., Phyllis; 2d, withheld. High com., G. Hare's Venus III.

ST. BERNARDS.—ROUGH-COATED—CHAMPION—*Dog:* Hospice Kennels' Otho. *Bitch:* E. H. Moore's Miranda.—OPEN—*Dogs:* 1st, W. J. Ehrich's Barry II.; 2d, Chequasset Kennels' Monte Rosa; 3d, Miss S. T. Cassidy's Brian Borru. Very high com., E. H. Moore's Centaur and Hospice Kennels' Alvier. *Bitches:* 1st, E. H. Moore's Corrette; 2d, Hospice Kennels' Palefacc; 3d, G. Erb's Bonnie Gipsey.—PUPPIES—*Dogs:* 1st, withheld; 2d, W. Pierson's Guardsman. Very high com. J. T. Hall's King Charles. *Bitches:* 1st, withheld; 2d, Hospice Kennels' Leah. Com., E. H. Moore's Daisy.- SMOOTH-COATED—CHAMPION—*Dog:* Hospice Kennels' Hector. *Bitch:* Hospice Kennels' Daphne.—OPEN—*Dogs:* 1st, Alta Kennels' Victor Joseph; 2d, W. Piersen's Ivan; 3d, Dr. W. H. Martinet's Leo IX. Very high com., Wotan and Chequasset Kennels' Chequasset Norman. *Bitches:* 1st, Hospice Kennels' Appollonia.—PUPPIES—*Dogs:* 1st, Chequasset Kennels' Chequasset Norman; 2d, W. S. Diffenderffer's Lord Hector. *Bitches:* No entries.

NEWFOUNDLANDS.—1st, K. Johnson's Don; 2d, E. H. Morris's New York Lass; 3d, Associated Fanciers' Queen Cole.

GREAT DANES.—*Dogs:* 1st, C. A. Bredenburg's Koloss; 2d, N. G. Hirsh's Leo V. *Bitches:* Prizes withheld. Very high com., Associated Fanciers' Frau.

DEERHOUNDS.—CHAMPION—*Dog:* J. E. Thayer's Chieftain *Bitch:* J. E. Thayer's Wanda.—OPEN—*Dogs:* 1st and 2d, J. E. Thayer's Highland Laddie and Robber Chieftain. *Bitches:* 1st and 2d, J. E. Thayer's Theodora and Pride of the Heather. Very high com., T. B. Hirons's Maida. *Puppies:* 1st, W. W. Silvey's Lady.

GREYHOUNDS.—CHAMPION—*Dog:* No entry. *Bitch:* C. D. Webber's Mother Demdike.—OPEN—*Dogs:* 1st, Abbott Kennels' Middleton; 2d, C. D. Webber's Stormy Day. Very high com., A. Kemp's Captain. *Bitches:* 1st, E. Loeb's Saturday Night. *Puppies:* Withheld.

POINTERS.—LARGE—CHAMPION—*Dog:* C. H. Mason's Beaufort. *Bitch:* Clifton Kennels' Clover.—OPEN—*Dogs:* 1st, J. H. Winslow's Bang; 2d, Clifton Kennels' Sachem; 3d, Naso Kennels' Jimmie. Very high com., E. H. Morris's Sancho. *Bitches:* 1st, J. H. Winslow's Golden Rod; 2d, Barnes Bros.' Devonshire Countess; 3d, J. W. Tantrum's Daisy Ranger.—SMALL—CHAMPION—*Dog:* J. R. Daniels' Donald. *Bitch:* Clifton Kennels' Juno S.—OPEN—*Dogs:* 1st, Dayton Kennels' Count Croxteth; 2d, Clifton Kennels' Naso Boy; 3d, E. R. Coleman's Banker. High com., E. W. Clark Jr.'s Rap. *Bitches:* 1st, T. H. Terry's Queen Fan; 2d, J. H. Winslow's Brunette; 3d, Stratford Kennels' Wanda. Very high com., S. D. Riddle's Ruby. PUPPIES—*Dogs:* 1st, Don Quixote Kennels' Don Quixote II.; 2d, E. R. Coleman's Banker. *Bitches:* 1st Naso Kennels' Lass of Naso; 2d, J. M. Baker's June Devil. NOVICE CLASS.—1st, Stratford Kennels' Wanda; 2d, S. D. Riddle's Ruby. Very high com., J. M. Baker's June Devil.

ENGLISH SETTERS.—CHAMPION—*Dog:* Blackstone Kennels' Royal Albert. *Bitch:* No entry.—OPEN—*Dogs:* 1st, E. W. Jester's Glen Rock; 2d, J. J. Snellenberg's Count Henricks; 3d, I. N. Cochran's Count Belton. High com., E. W. Clark, Jr.'s, Premier. *Bitches:* 1st, J. L. Breese's Mavis; 2d, E. Maher's Countess Blitz; 3d, very high com. and com., Rosecroft Kennels' Fanchette, Forest Dora and Passion. Very high com., B. Ridgway's Alphonsine. High com., Delaware Fall Kennels' Idylwoof.—PUPPIES—*Dogs:* 1st and 2d, withheld; 3d, R. von Ohl's R. V. O. *Bitches:* 1st, J. B. Mahoney's Sleeping Beauty; 2d, E. W. Jester's Dreamy Glen; 3d, P. C. Ohl's Victoria's Nanna.—NOVICE CLASS—1st, Rosecroft Kennels' Fanchette; 2d, E. W. Jester's Blue Prince.

IRISH SETTERS.—CHAMPION—*Dog:* No entries. *Bitch:* C. T. Thompson's Mollie Bawn.—OPEN—*Dogs:* 1st, C. T. Thompson's Desmond II.; 2d, E. Maher's Larry S.; 3d, A. B. Huey's Puritan. Very high com., Mrs. W. D. Marks's Smuggler and T. P. Campbell's Dick Swiveller. High com., T. M. Hilliard, Jr.'s Ulster Chief and A. W. Stevenson's Chief S. *Bitches:* 1st, C. T. Thompson's Mollie II.; 2d, Dr. E. C. Kirk's Berna; 3d, Associated Fanciers' Lady Fawn. Very high com., Oakview Kennels' Jessie. High com., C. T. Thompson's Winnie II. Com., Taylor & Davis's Peggy O'More and C. Smith's Elchoeen Jessie. *Puppies:* Absent.—NOVICE CLASS—1st, withheld; 2d, P. C. Madeira's Dandy.

GORDON SETTERS.—CHAMPION—*Dog:* W. Hammett's Royal Duke. *Bitch:* H. F. Smith's Roxie.—OPEN—*Dogs:* 1st, E. H. Morris's Beaumont; 2d, S. G. Dixon's Little Boy; 3d, J. L. Campbell's Gordo. Very high com., J. W. Baker's Don Pedro. High com., E. G. Webb's Dash. *Bitches:* 1st and third, G. Griffen's Jessie and Royal Duchess; 2d, J. L. Campbell's Becky Sharp. PUPPIES—*Dogs:* 1st, J. L. Campbell's Gordo. *Bitches:* 1st, J. L. Campbell's Becky Sharp; 2d, R. W. Wehrle's Nellie Duane.

FOXHOUNDS.—*Dogs:* 1st, withheld; 2d, E. W. Jester's Pilot. *Bitches:* 1st, withheld; 2d and high com., E. W. Jester's Biz and Lill. High com., Associated Fanciers' Countess.

ENGLISH RETRIEVERS.—Withheld.

IRISH WATER SPANIELS.—1st, Lieut. F. W. Stockey's Barney O'Connor; 2d, F. P. Kirby's Jess.

CLUMBER SPANIELS.—CHAMPION—F. H. Mercer's Johnny.—OPEN—No entry.

FIELD SPANIELS.—CHAMPION—*Dog:* C. M. Nelles's Little Red Rover. *Bitch:* No entry.—OPEN—*Dogs:* 1st and 2d, E. M. Oldham's Newton Abbot Darkie and Newton Abbot Lord; 3d, E. H. Morris's Beau. Reserve, H. Wyle's Dick McBride. High com., G. M. Shaw's Jersey Boy. *Bitches:* 1st, C. M. Oldham's Newton Abbot Jubilee; 2d, E. H. Morris's Bridford Ruby; 3d, A. Laidlaw's Queen.

COCKER SPANIELS.—CHAMPION—*Dog:* American Cocker Kennels' Doc. *Bitch:* C. M. Nelles's Juno W.—OPEN—LIVER OR BLACK—*Dogs:* 1st, C. M. Nelles's Mike; 2d, American Cocker Kennels' Dixie; 3d, Mrs. J. M. Sullender, Jr.'s, Dick. Very high com., G. M. Shaw's Jersey. *Bitches:* Equal 1st, American Cocker Kennels' Midnight and C. M. Nelles's Busy; equal 3d, American Cocker Kennels' Queen Obo and G. H. Whitehead's Lady Pluto. Very high com., Barnes Bros.' Hazel Obo. High com., Mrs. J. H. Winslow's Peggie Bowley and Abbott Greyhound Kennels' Miss Ladybird. Com., Associated Fanciers' Moress.—ANY OTHER COLOR—*Dogs:* 1st, A. Laidlaw's Robin; 2d, Abbott Greyhound Kennels' Dandy. *Bitches:* No entry. *Puppies:* 1st, American Cocker Kennels' Miss Topsey; 2d, E. M. Oldham's Sambo W.; 3d, Mrs. J. M. Sullender, Jr.'s, Dick. Reserve, G. M. Shaw's Jersey. Very high com., W. M. Crozier's Lark. High com., C. M. Nelles's Juanita and Monk, and J. H. Winslow's Soubrette. Com., E. H. Morris's Lady.—NOVICE CLASS—1st, C. M. Nelles's Juanita; 2d, E. H. Morris's President.

COLLIES.—CHAMPION—*Dog:* Chestnut Hill Kennels' Scotilla. *Bitch:* Chestnut Hill Kennels' Flurry II.—OPEN—*Dogs:* 1st, reserve and high com., Chestnut Hill Kennels' Roslyn Sensation, Roslyn Sweyn and David; 2d, McEwen & Gibson's Alloway; 3d, W. P. Hahn's Doc Hahn. Com., S. Melvin's Bruce. *Bitches:* 1st and 2d, Chestnut Hill Kennels' Flurry III. and Spoiled Miss; 3d, O. H. P. Scott's Lady Neph. Very high com., W. Turner's Wild Rose o' the Thorpe.—PUPPIES—*Dogs:* 1st, Chestnut Hill Kennels' Roslyn Sweyn; 2d, McEwen & Gibson's Doonholm; 3d, Sans Souci Farms' Little Comet. Very high com. and high com., A. H. Hinman's Dandy and Glenloche. *Bitches:* 1st, McEwen & Gibson's Bonnie Doon.—NOVICE CLASS—1st and 2d, Chestnut Hill Kennels' Roslyn Sensation and Flurry III.

SMOOTH AND BOB-TAILED SHEEP DOGS.—1st and 2d, Chestnut Hill Kennels' Lady Bird and Spot.

POODLES.—BLACK—1st, L. A. Biddle's Berri.—WHITE—1st, withheld; 2d, F. P. Kirby's Bosco.

BULLDOGS.—CHAMPION—*Dog:* J. E. Thayer's Robinson Crusoe. *Bitch:* J. E. Thayer's Britomartis.—OPEN—*Dogs:* 1st, J. H. Sanderson's Sandy; 2d, C. R. Snowden's Cribb; 3d, C. D. Cugle's Tostig. High com., W. Weighiman's Crib III. *Bitches:* 1st, A. F. Nash's Dolores; 2d, C. D. Cugle's Soudan. *Puppies:* 1st, T. O. Guyert's Gypsy Girl.

BULL-TERRIERS.—CHAMPION—Absent.—OPEN—LARGE—*Dogs:* 1st, Associated Fanciers' The Baron; 2d, J. S. Merritt's Young Count. *Bitches:* 1st, G. House's Duchess of York; 2d, L. Briesacher's Miss Nora. Very high com., J. P. & W. W. Gray's Countess. High com., T. C. Harris's White Violet.—SMALL—*Dogs:* No entry. *Bitches:* 1st, F. F. Dole's Little Dorrit. *Puppies:* 1st, T. S. Harris's Meg Morrilies; 2d, J. O. Fellows's Count Dick.

BASSET HOUNDS.—1st, W. W. Silvey's Monko.

DACHSHUNDE.—1st, L. & W. Rutherfurd's Rubenstein; 2d, Associated Fanciers' Hilda.

BEAGLES.—CHAMPION—*Dog:* Somerset Kennels' Bounce. *Bitch:* A. L. Bosley's Lou.—OPEN—*Dogs:* 1st, Somerset Kennels' Jupiter; 2d, A. L. Bosley's Chimer; 3d, Associated Fanciers' Little Prince. Very high com., Oakview Kennels' Tony Weller. High com., C. F. Judson's Racer, Jr. Com., Holbrook Beagle Hunt's Banker. *Bitches:* 1st, Somerset Kennels' Jessie; 2d and very high com., E. R. Coleman's Marion B. and Miss Mame; 3d, A. L. Bosley's Thorn II. *Puppies:* 1st, Mrs. J. O. Fellows's Royal Krueger; 2d and 3d, E. R. Coleman's Marion B. and Miss Mame. Very high com., A. L. Bosley's Gipsey, Kate and Louisette. High com., Holbrook Beagle Hunt's The Rambler.—NOVICE CLASS—Equal 1st, Mrs. J. O. Fellows's Royal Krueger and Somerset Kennels' Stinger.

FOX-TERRIERS.—CHAMPION—*Dogs:* 1st, Blemton Kennels' Lucifer; 2d, L. & W. Rutherfurd's Splauger. *Bitches:* 1st, Blemton Kennels' Diadem; 2d, J. E. Thayer's Richmond Olive—OPEN—*Dogs:* 1st, Blemton Kennels' Dusky Trap; 2d, L. & W. Rutherfurd's Warren Discord; 3d, J. E. Thayer's Roby Mixer. Com., Ass. Fanciers' Richmond Tyrant and W. T. McAlee's Trumps. *Bitches:* 1st, 2d and 3d, Blemton Kennels' Rachel, Verdict and Blemton Brilliant. Very high com., J. Parkinson's Jess.—PUPPIES—*Dogs:* 1st, L. & W. Rutherfurd's Warren Discord; 2d, withheld. *Bitches:* 1st, Blemton Kennels' Blemton Brilliant; 2d, J. Parkinson's Jess. Com., J. R. Trissler's Mabel Belmont.—WIRE-HAIRED.—Absent.—NOVICE CLASS—1st, L. & W. Rutherfurd's Warren Discord; 2d, Blemton Kennels' Blemton Brilliant.

BLACK AND TAN TERRIERS.—*Dogs:* 1st, withheld; 2d, R. Stucky's Sir Wallace. *Bitches:* 1st, F. P. Kirby's Safety.

IRISH TERRIERS.—1st and high com., Chestnut Hill Kennels' Breda Tiny and Breda Jim, 2d, J. F. McFadden's Dennis; 3d, G. D. Fowle's Greymount. Com., P. C. Ohl's Bedad.

DANDIE DINMONT TERRIERS.—1st, Hempstead Farm Kennels' Border Wang.

SKYE TERRIERS.—CHAMPION—W. P. Sanderson's Jim.—OPEN—1st, Dr. M. H. Cryer's Gladstone Boy; 2d, W. P. Sanderson's Bess; 3d, S. Burr's Daisey. Very high com., N. V. Ketchum's Teddie. High com., J. Howard's Skye.

YORKSHIRE TERRIERS.—*Dogs:* 1st, W. W. Silvey's Leo; 2d, withheld. *Bitches:* W. W. Silvey's Fannie.

TOY TERRIERS.—1st, Mrs. A. J. Whitman's Flossie W.; 2d, D. F. Bridleman's Prince.

PUGS.—CHAMPION—*Dog:* Dr. M. H. Cryer's Max. *Bitch:* Dr. M. H. Cryer's Bessie.—OPEN—*Dogs:* 1st and 2d, Dr. M. H. Cryer's Dude and Othello. *Bitches:* 1st and 3d, Dr. M. H. Cryer's Vesta and Clio; 2d, F. P. Kirby's Daisy. Very high com., Associated Fanciers' Duchess. *Puppies:* 1st, Mrs. Jean J. Strather's Au Jo; 2d, Associated Fanciers' Bradford Rowdy.

KING CHARLES SPANIELS.—1st, W. W. Phillips's Roscius; 2d, F. F. Dole's Nell. Reserve, J. H. Winslow's Society Girl. Very high com., J. E. Diehl's Prince Rupert and Beauty.

BLENHEIM SPANIELS.—1st, J. H. Winslow's Joan of Arc; 2d, W. W. Phillips's Grand Duchess.

ITALIAN GREYHOUNDS.—1st and 2d, Annie M. Kramer's Lillie and Romeo.

MISCELLANEOUS.—1st, 2d and 3d, P. Lawrence's Welch terriers Which and T'ther and Airedale terrier Pin.

DEATH OF "STONEHENGE."

DR. J. H. WALSH, who for more than thirty years was chief editor of the London *Field*, died Feb. 12, at the advanced age of 78. Says the *Field:*

"Mr. Walsh was born in 1810; and we remember his mentioning, a good many years ago, the fact that several old friends in the coursing world, including Mr. Marjoribanks and Mr. J. Gibson, Mr. Borron and Mr. W. Randell, were all born in the same year. Mr. Walsh was educated for the medical profession, became a fellow of the Royal College of Surgeons, and carried on practice for about a quarter of a century. He always had an intense love of sport, and his residence in the country enabled him to combine it with his professional duties. He rode well to hounds with the Heythrop when Lord Redesdale was M. F. H., as well as with the Worcestershire; he kept greyhounds, entered them at coursing meetings, and trained them himself; he broke his own pointers and setters, and, what is far less common, also trained hawks; he coached the crews of a local rowing club, and his medical knowledge enabled him to train his men into sound condition, without endangering their health, as was too commonly the case in former times. This medical knowledge likewise stood him in good stead in the management of his own stable and the treatment of disease in his own kennel. In the management of dogs he become especially an adept, and his knowledge of canine pathology was such that few veterinary practitioners could compare with him in former days, when the diseases of 'the friend of man' were thought much less deserving of attention than at present. He was fond of handling the gun as well as of working his dogs, and his practical experience with the former may readily be supposed to have had some influence upon his writings in after days, seeing that, owing to the bursting of his gun, he lost a great portion of his left hand, the thumb and forefinger being entirely carried away; and this disaster occurred long before nitro-compounds had any connection with sport.

"The literary career of Mr. Walsh commenced in connection with his profession. At one time he was editor of a medical journal, and he afterwards wrote a work on domestic medicine and surgery. But it is with sport that his name is chiefly connected, and in this he turned his wide practical experience to good account. In 1853, under the pseudonym of 'Stonehenge'—that landmark of coursers on the Wiltshire Downs—he brought out his work on 'The Greyhound.' This treatise on breeding, rearing, and training greyhounds for public running, was based upon articles he had written for *Bell's Life*, then in the full tide of its prosperity; and, with occasional corrections and additions to bring it abreast with the time, it has remained the standard text-book of the subject up to the present. Three years later appeared 'British Rural Sports,' which may be said to treat of the whole cycle of sport in these islands, and, among other things, placed the breeding of the thoroughbred horse upon a much more intelligible and sound footing than it had been theretofore. From that time to now sixteen editions of this popular work have been called for; but of late years it has not been exclusively written by himself, as he obtained the assistance of some members of his staff to treat upon special subjects. In 1856 he also originated the 'Coursing Calendar,' which, when more than fifty half-yearly volumes had been issued, was put under the control of one of the most faithful among his lieutenants. About the same time Mr. Walsh became an occasional contributor to the *Field*, and at the end of 1857 he accepted the editorship. He brought out 'The Shot Gun and Sporting Rifle' in 1859; 'The Dog in Health and Disease' also in 1859; 'The Horse in the Stable and the Field' in 1861; and 'The Dogs of the British Islands' in 1867. In the two books last mentioned he also had the assistance of other writers. Except in the preparation of new editions, his activity, so far as books were concerned, was lulled until 1882, when the first volume of 'The Modern Sportsman's Gun and Rifle' appeared—this volume being devoted to shot guns; while the second volume, treating exclusively of rifles, appeared two years later; and thus his bede-roll of sporting books is completed, though there were manuals of domestic economy and cognate subjects which it is unnecessary here to dwell upon.

"Of Mr. Walsh's energy in the conduct of this journal, our readers—especially those of ripe years and retentive memories—are well able to speak. How he gathered around him many an able coadjutor—some, alas! gone long ago—is known chiefly to other men who are left behind. But his personal doings can hardly be passed over without record, for the special information of those of younger years who read these lines. Little time was spent, after he came into office, before Mr. Walsh instituted the first *Field* Trial of Guns and Rifles, which was carried out in April, 1858, in the Ashburnham Grounds at Chelsea, adjacent to the then famous Cremorne Gardens. This trial wound up a long-fought controversy as to the comparative merits of breech-loaders and muzzleloaders. But the muzzleloaders did not succumb without another kick, and in July, 1859, the second gun trial was held in the pigeon-shooting grounds of the old Hornsey Wood Tavern, now incorporated in Finsbury Park. In 1866 the third gun trial took place, at the Lillie Arms, Brompton. With one exception, all the guns were breech-loaders, including about a score of pin-fires, a dozen central-fires, and two which allowed either kind of cartridge to be used.

"In 1875 the value of the choke-bore system received elucidation in another gun trial, held within the grounds of the All England Croquet Club at Wimbleton, of which club Mr. Walsh was an active promoter. Many who well remember the leading features of that trial will probably not bear so clearly in mind the fact that the business did not end with the competition of choke-bores and cylinders. The 'wear-and-tear' trial of 7,500 shots, from three guns, to show what effect continued shooting had upon the constricted muzzle, was a far more tedious performance to carry out. It extended over six weeks; and Mr. Walsh, riding over from his residence at Putney, was not unfrequently present on the croquet grounds by seven o'clock in the morning, when a hundred rounds from each gun were fired into the pits, then six rounds from each were fired at the target, and records taken for publication in the *Field*, the whole proceedings being carried out under his personal supervision. Again, in 1878, he was equally energetic in his endeavors to make clear what were the respective merits of Schultze and black powder; and besides conducting the actual competition, he carried out numerous experiments with a view to ascertain what was the relative amount of strain upon the barrel produced by the nitro-compound under different conditions of loading, as well as what gave the best results with respect to pattern and penetration. One of the consequences was that light pressure with Schultze was found to produce better shooting than the tight ramming that many people advocated; while tight wads to prevent escape of gas, and the general system now known as the *Field* loading, also resulted. Other experiments led to his invention of the *Field* force-gauge; which gives results so much more reliable than the paper pads that had previously been in use. In 1879 another gun trial was carried out with a view to determine the relative merits of 12-bores, 16-bores, and 20-bores. Finally, in 1883 he instituted the rifle trial at Putney, in order to demonstrate, not only the accuracy of shooting of Express rifles at the target, but also to ascertain, by careful measurement, what was the height of the trajectories of weapons differing in bore, and the charges used therein.

"After this, trials of another character came on. There were the trials to ascertain the cause of so many breakages in guns; the testing of powders by the lead cylinder method, and the demonstration of effects produced upon nitro-compounds by drying them, or giving them a fine black priming, or using extra strong caps for their ignition: then further trials, showing the extra strain set up in barrels of small bores. Then followed the affair of the proof-powder, which led to a trial of another character, viz., the Birmingham Proof-House Guardians vs. Walsh. After the last-mentioned business a letter was received from an old and valued correspondent—one, by the bye, who does not always agree with editorial opinions on shooting subjects—saying: 'I have just been reading your evidence in the libel case, and cannot refrain from writing to congratulate you; for, although the case has gone adversely on mere technical law-splitting, all who read it cannot fail to see that the rights of the case are on your side.' As soon as the legal aspects of the business were over, Mr. Walsh held out a conciliatory hand, with a view to get the Proof-House Boards to join with him in endeavoring to provide something substantial for the security of life and limb among the community of sportsmen. They made, beyond doubt, very considerable advances, and he gave generous commendation in these columns, nearly eighteen months since, on what they had done up to that time. They did not, however, promise all he sought for; but eventually he had the satisfaction, in the first week of the present year, of announcing improvements which are far beyond anything that seemed possibly obtainable a few years ago. And it was a great source of gratification, in his concluding days, to find that he had really accomplished something which is likely to prevent sportsmen in the future from being maimed as he himself had been in the past. The various kinds of apparatus which he used in his gunnery experiments—the force gauge, the machine rest, the different pressure-testing machines—his breech-loading gun and safety bolt, *et hoc genus omne*, besides his tricycle (one of the first that came into existence), and other matters too numerous to mention—all of them had their working models first made by himself, before they were put into the hands of professional engineers to construct.

"As a legislator on matters connected with sport, Mr. Walsh has done good work in his time. He was one among the original founders of the National Coursing Club, and the framers of its laws; the same with the All England Croquet Club, and the Lawn Tennis Club, which was first its annex and afterwards its supplanter; he had a good deal to do with the early dog shows and field trials, and was one of the original committee of the Kennel Club."

AMERICAN KENNEL CLUB.

A MEETING of the American Kennel Club was held last Thursday, with the following delegates and proxies present: Messrs. Donner (Westminster), Peshall (New Jersey), Collins (Hartford), Terry (Fox-Terrier), Watson (Hornell), Schellhass (St. Paul), Vredenburgh (American Field Trial), Obl (Cincinnati), Taylor (Detroit and Wisconsin). Mr. Wm. A. Child was re-elected President; Mr. J. H. Terry, Vice-President, and Mr. A. C. Vredenburgh, Secretary and Treasurer.

The constitutionality of the compulsory registration amendment of Rule 2 was approved by a vote declaring it the sense of the meeting that the rules were of the nature of by-laws and could be amended by the executive committee.

The meeting adjourned and a meeting of the executive committee followed, Mr. Grosvenor (New England) being present. To the roll call, when it come to the Hornell Club, Mr. James Watson, the regularly appointed delegate, answered.

It was voted that the Hornell delegate present be not recognized, as the club had been requested to send another representative, the objection to Mr. Watson being that he was connected with the *American Kennel Register*. After a dignified protest against the committee's narrow policy the Hornell delegate withdrew.

Rule 2 was unchanged, but it was voted to give free registration of dogs entered in the *A.K.R.* previous to January, 1888. The stud book committee for the year are Messrs. Peshall and Schellhass. Amendments to constitution and by-laws may be made hereafter by a two-third vote of a two-third representation of the members or by vote of the executive committee, sustained by a mail vote. A committee on protests was appointed and the Farley protest referred to it. The protest against the award of the pointer champion prize at New York did not come before the meeting. Augusta, Stafford, Winsted, Atlanta, the Beagle and Collie clubs were admitted to membership and the resignations of the New Haven and New England clubs were accepted.

KENNEL AND CHAMPION PRIZES.

Editor Forest and Stream:

The Bostonians are again to the fore in their premium list. They have recognized the beneficial effect of offering a number of kennel prizes, and, with their usual promptitude, have acted on the idea. May good luck attend them.

It seems strange that managers of shows have for so long overlooked this mode of adding to the number of entries, as it will assuredly have this effect. For instance, an exhibitor purposes entering one or two of his best dogs at a show, but on looking over the premium list finds that a kennel prize for four or more is offered. The chances are that, in the hope of winning it, he will make up the requisite number from dogs that he had not at first intended entering, thereby doubling the number of entries in his case. Many a man will think to himself that there may not be another kennel entered and that he will have the field to himself. There is a great deal of *kudos* in winning the kennel prize at a good show. It betokens an even quartette, as it would take a cracker to pull three poor ones through in hot competition. The new departure is sure to be a success.

By the way, has no one any opinion, one way or the other, on second champion prizes? Do let us hear from those interested. By making the champion classes more attractive to exhibitors larger entries in them will be got together, and in consequence the show will be a greater attraction. Who would not rather see ten qualified champions gathered together in the classes for their breed than a hundred in the open class?

I observe the following in the Boston list: "In competing for kennel prizes the dogs must be owned by one exhibitor." Surely this does not mean that dogs owned by legitimate partners cannot compete. That would be a great injustice.

CEE.

ST. PAUL CLUB.—The annual meeting of the St. Paul and Minnesota Kennel Club was held last week, and the following officers were elected for the ensuing year: President, H. T. Drake; Vice-President, Channing Seabury; Secretary, W. G. Whitehead; Treasurer, J. W. Stevens; Board of Directors, H. T. Drake, C. Seabury, W. G. Whitehead, J. W. Stevens and W. P. Hilliard. A vote of thanks was passed to E. F. Warner, the retiring president.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

SOMERVILLE, Bosson.—A dog has had the distemper and it has left him with a weakness in his hindlegs; it is hard work for him to stand; he is 8mos. old. Ans. Keep the bowels open with teaspoonful doses of syrup of buckthorn and the following:

℞ Ferri et strychnin citrat.....grs. xxiv.
Fit pil No. 12.
Sig. One three times daily hidden in a morsel of meat.

Rifle and Tray Shooting.

C J Crabtree	4	5	8	9	6	6	9	10	7	8—72
F E Nichols	8	7	7	6	5	7	6	6	8	9—69

AMHERST, Mass., Feb. 18.—The following scores were made at the Amherst Gun Club's rifle range, Feb. 18, Mr. Adams using fixed ammunition in a Maynard rifle:

H Adams	10	10	8	7	9	8	10	10	7	5—84
A F Bardwell	7	6	7	10	10	8	6	8	5	7—74
W C Johnson	6	6	9	10	10	7	3	8	3	7—69

HAVERHILL, MASS., RIFLE CLUB.—The club had a very pleasant meet and good weather conditions on Washington's birthday, with the following best scores, 200yds., off-hand, standard target:

J Busfield	7	7	10	10	10	8	8	9	6	8—83
J F Brown	6	8	8	10	10	8	6	8	10	8—82
C H Poor	9	7	7	10	10	8	8	6	9	5—81
S E Johnson	8	9	9	8	7	4	10	10	6	7—78
F Merrill	5	10	5	7	8	5	10	10	7	6—73
P Munroe	5	5	6	7	7	4	7	8	8	7—64

OWENSVILLE, Ind., Feb. 21.—The Owensville Ballard Rifle Team; nine of the members met on range, standard target, 200yds.:

G Witter	7	6	10	10	7	9	7	8	7	8—79.
	9	5	7	5	9	6	4	10	9	9—72
	7	6	9	7	9	10	6	6	7	5—72—224
J Montgomery	6	3	4	3	5	10	8	6	5	5—55
	6	4	9	6	6	7	9	8	10	9—74
	10	10	8	4	7	6	8	9	7	7—76—205
W Roberts	5	7	10	4	6	5	5	7	8	5—62
	4	2	4	9	5	4	2	6	4	10—50
	7	9	7	10	6	9	6	6	7	10—77—189
R Speck	4	4	5	8	5	7	2	6	2	6—49
	5	9	8	4	6	4	4	6	4	6—56
	6	3	10	6	9	4	7	5	6	3—59—164
J Stone	4	5	7	7	4	6	7	6	9	9—61
	8	7	7	7	6	5	5	3	9	8—65—126
J Daugherty	10	6	7	6	6	4	10	6	4	8—67
W Gentry	2	10	5	9	6	7	5	6	3	3—67
McGrade Daugherty	2	6	5	5	5	8	7	6	5	6—55
Chas Sumners	3	9	7	4	4	5	6	6	7	3—54

G. Witter won the medal.

TORONTO, Feb. 22.—Two rifle matches were shot off at Uxbridge to-day between the Orillia and Scarboro' Rifle Associations. Eleven men on each side. Ranges 100 and 200yds. The first match was shot on the Scarboro' target and the second on the Orillia target, resulting in a victory for Scarboro' in both matches. Below are the scores on the Scarboro' target, out of a possible 60 points at each range:

Scarboro'.	100.	200.	T'l	Orillia.	100.	200.	T'l
J Walton	49	38	87	W W Woods	47	52	99
J W Kennedy	57	45	102	W Paine	49	47	96
J F Davidson	51	55	106	T Reid	50	45	95
T Hood	50	36	86	H Vick	53	29	82
J Chester	56	46	102	C Crocket	51	23	74
J Clark	59	46	96	W Tuskey	46	6	52
A McPherson	53	46	99	A Stewart	50	33	83
A H Kennedy	55	42	97	T Millichamp	46	48	94
R Canning	57	45	102	C Wood	54	34	88
G Chester	53	30	83	R Strathearn	60	47	107
S Rennie	59	40	99	G Whiten	56	45	101
	599	468	1058		562	409	971

On the Orillia target out of a possible 50 points at each range Scarboro scored 754 and Orillia 741.

WILMINGTON, Del., Feb. 22.—There was a fair attendance today at the shooting at Healdmor Rifle Range. There was shooting at both 100 and 200yds., and as the firing points are on the same line within the shooting house at this range it enabled the marksmen to enjoy simultaneous shooting at both distances. Among the visitors from Philadelphia were Capt. Wm. Kirchner, Lieut. T. Hayes, J. C. Roberts and Sergt. J. J. Mountjoy. The following scores were made on a standard American target:

At 200yds.

H Simpson	9	8	10	5	9	9	8	7	7	5—77
J E Seeds	7	8	8	9	5	4	6	6	8	5—66
J J Mountjoy (mil)	9	8	8	9	7	3	2	10	5	2—63
J W Geyer (mil)	4	7	4	2	6	7	10	5	5	5—55
G W Howard	3	7	8	5	4	6	7	6	3	9—58
C J O'Brien	3	6	6	7	5	3	8	6	2	3—49

At 100yds.

H Simpson	10	9	8	10	7	10	7	8	7	7—83
J S Jefferis	9	9	7	7	8	8	8	9	9	9—83
J J Mountjoy (mil)	6	8	7	7	8	9	7	10	10	7—79
J W Geyer (mil)	7	6	7	9	9	9	10	8	9	5—79
J E E Seeds	6	6	10	7	7	8	9	10	6	6—75
W Kirchner (mil)	10	9	7	7	6	6	9	7	6	5—72
J C Roberts	6	9	8	7	7	6	6	7	8	6—71
J H May (mil)	9	10	8	10	3	7	9	3	5	6—69
T Hays (mil)	3	7	9	5	5	7	4	3	5	2—50

BOSTON, Feb. 25.—The attendance of shooters to-day at the Massachusetts range was small, owing to the unfavorable weather, and those that did attend took the early train for home, the snow and high wind being too much for them. This week Messrs. E. J. Gihon, M. G. Witham and J. W. Babbitt each won the silver medal in the State militia match on the following scores:

E J Gihon	23	22	22	21	J W Babbitt	21	21	21	21	
M G Witham	22	11	21	21						

Rest Match, 200yds.

B G Barker	8	11	12	12	11	8	10	11	7	8—98
S B Gardner	11	11	9	6	10	8	8	7	12	11—93
W S Hill	9	8	10	9	9	9	7	12	9	8—90

Off-Hand Practice Match, 200yds.

A C Adams	10	9	10	10	6	5	7	9	7	8—81
A Loring	8	4	7	7	10	7	8	10	9	7—75
W H Hawley	8	10	7	6	7	9	5	7	10	5—74

THE REMINGTON SALE.—The Receivers of the Ilion plant of the late Remington Company announce the sale of all the property on March 7. The announcement is for the sale of "All the real estate and the buildings thereon, comprising and constituting the plant or manufactory of the said corporation, together with the water power and privileges, water-wheels, steam engines, boilers, shafting, gas and steam pipes, fixed and movable machinery, tools, and fixtures, parts of fire-arms and ammunition, of sewing machines and of electric light apparatus, finished and in process of manufacture, patterns, model of sample arms, letters patent, licenses thereunder and office furniture. The plant is adapted to and has been used for the manufacture of military and sporting arms and ammunition, sewing machines and cabinet ware, and electrical light apparatus, and other lines of iron and steel goods, it being the world known corporation, E. Remington & Sons, and being one of the most extensive and complete manufactories of the kind in the world. The capacity is ample for the production of 1,000 military fire-arms per day, besides sporting arms, ammunition, sewing machines, etc. It is one of the oldest established businesses in the country, its products are favorably known all over the world, and it is the intention to dispose of it as an entirety with all its franchises and with work in process, so that the purchaser may continue the business without interruption." The former sale was not ratified by the court and this sale is subject to the same vise power.

SPRINGFIELD, Mass., Feb. 25.—The Armory Rifle Club made the following scores at 500yds. on the Blunt target to-day:

F R Bull	5555525555—50	F G Southmayd	5455554544—47
T B Wilson	5454554455—47	L T Farnsworth	5555554544—47

SPRINGFIELD, Mass.—The four riflemen who make the weekly test of arms manufactured at the National Armory at Springfield have recently been ordered to use the regular army (Blunt's) target in making their tests. Early last month F. R. Bull made the following scores in 30 consecutive shots, using this target at 500yds. distance:

F R Bull	5545555455—48	5555555555—50	5455555545—48

Later, with the thermometer at zero, a good light, but a tricky fish-tail wind, the following scores were made at the same distance and the same target:

F R Bull	5555555553—50	E G Southmayd	5554555554—48
T B Wilson	5555555545—49	L T Farnsworth	5555555454—48

The Blunt target is elliptic, the bullseye is not as wide by 4in. as the Creedmoor target, but the length is 3in. greater. The rifles used were completed on the day the scores were made, as is the rule in these tests.

SAN FRANCISCO, Feb. 19.—The riflemen turned out in good force to-day, and the ringing report of the rifle resounded on both sides of the bay. At Harbor View the California Schuetzen Club held their monthly bullseye cash prize shoot, and the San Francisco Turner Schuetzen Club their monthly medal shoot. Twenty shots were allowed to the members in each club, and some very good scores were made. The matches commenced at 10 o'clock and continued until after 4 o'clock, when the scores were added up, the winners being, California Schuetzen Club, A. Barrier 433; Cadets, A. Ehrenphort 219½. As a rule, however, it was a poor day for some of the crack shots and several of them went home without prizes. Following is the score of the San Francisco Turner Schuetzen Club: O. Burameister 55, R. Finking 54, J. Utschig 53, Philo Jacoby 53, H. Brown 50, L. Theirback 50, C. Sagehorn 48, A. Utschig 47, T. Attinger 47, W. Glinterman 43, A. Hagedon 40, T. Acker 40. The two medals, which are awarded to the one making the first best shot and the one making the last best shot, were won by Messrs. Finking and Brown respectively.

The regular monthly shoot of the Second Artillery National Guard, continued from the 12th inst., was held at Shell Mound Range to-day. Those making the highest scores were: Champion class, J. C. Carson 45, 49—94. First class, none. Second lasse, O. Noite 41, 35—75. Third class, G. Hult 38. Fourth class, R. D. Cunningham 29. A preliminary match was shot to-day between Companies A and F, of the Second Artillery, 6 men to the team, 5 shots with the pistol and 10 with the rifle. Considering that this was the first time that F Company had used the pistol in a match and A Company the rifle, the scores were good, though some of the best men in each company fell below their averages.

NEWARK, N. J.—The Howard Rifle Association has just been organized by the election of the following officers: P. A. Berger, Pres.; V. W. Roemer, Vice-Pres.; Geo. Lutz, Rec. Sec.; Geo. Winterholt, Fin. Sec.; F. X. Derivaux, Treas. The society has about twenty-five members, a fine rifle range, 75ft. in length, and a club room on the southwest corner of Springfield avenue and Mercer street. It meets for practice every Thursday evening.

NEW JERSEY GALLERY CHAMPIONSHIP.—The first of a series of matches for the championship of New Jersey, between John Coppersmith, of the Essex Amateur Rifle Club, of Newark, and M. Dorrler, of the Greenville Rifle Club, was shot at the Essex range on Monday evening, Feb. 20, and was witnessed by a large number of riflemen of New York, Jersey City and Newark. Each man is to shoot 200 shots, and the one scoring the highest aggregate is to be declared the champion. The second match will be shot at the Belvidere House, Greenville. Coppersmith was defeated by the following score on the first half:

Dorrler	116	116	116	117	116	113	119	116	118	110—1157
Coppersmith	114	114	115	112	113	116	116	114	117	114—1145

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

SPRINGFIELD, N. J., Feb. 22.—Union Gun Club, first holiday prize shoot, 20 entries, 15 bats, 10 American clay birds, 5 traps, 18yds. rise, N. G. A. rules, 7 prizes:

E D Miller	1111111111011	1111111111—24
Johnson	0111110111111011	1110111111—21

E Sickley	1100111111111110—12
A Sickley	1100111000600010— 6

General sweepstakes all day; 1,650 birds shot, embracing Ligowsky clays, American clays, Lockport bats and blue rocks. Very large attendance. Hot coffee and lunch on the grounds, which, with the warm club house and pleasant surroundings, gave all a very enjoyable day. Next match March 5; regular club shoot.—CHAS. H. JOHNSON, JR., Secretary.

A LIGHT IN THE DARKNESS.—Atchison, Kan.—*Editor Forest and Stream:* There is always room for improvement. This improvement has been made by a member of our local gun club. It is an improved target, with an illuminating attachment, that can be used by day or night as required. The attachment can be placed on the target in an instant, and the target will not be hindered in its flight or broken. It looks very pretty when sprung from the trap into the air, forming a perfect circle of fire. When hit the circle is broken and rays of sparks fly in all directions. Those who have examined it and shot at it pronounce it a very desirable improvement, which will prove very convenient in tournament shooting, because with it they can finish the shoot even if darkness sets in. Without the illuminating attachment those shooters who have to shoot last, it is often the case, are under a disadvantage. By using this illuminated attachment they have equal chance, as fair for one as the other, for the target will be in plain view and show distinctly when broken. In extremely cold or wet weather indoor shooting can be enjoyed by having a suitable building made for the purpose, darkened for day shooting. The marksmen may stand in a position where the light reflects, or have lamps so arranged so as to obtain the sight of the gun if so desired. No targets have as yet been manufactured as it is a late invention, although a bird has been designed with other good qualities than those mentioned, for which a patent has been applied for. At a trial shoot the illuminating attachment was used on the Peoria blackbirds and Cleveland blue rocks on dark and moonlight nights with very good results. They were broken right along, although it was a new way of trap shooting to all of us.—M. N.

ALLOWAY, N. J., Feb. 22.—A return match at live pigeons, was shot here to-day between teams of the Salem, N. J., Gun Club and the Cinnaminson Gun Club, of Riverton, N. J. The match was shot under the rules of the Riverton Gun Club, use of both barrels, 30yds. rise, 50yds. boundary; teams of 10 men, 11 live pigeons per man. The birds were an extra good lot, a large number falling dead a few feet out of bounds:

Salem Team.		Cinnaminson Team.	
J Acton	1011001010—5	Dr Marcy	1011111011—8
J Houss	1110111101—9	W Thomas	0110110101—7

BOSTON, Feb. 22.—The fourth shoot in the tournament for the Boston Gun Club prizes was quite largely attended at the East Boston club's range to-day. Throughout the day the members and several visitors from suburban clubs played havoc with the clay birds and several very high scores were run up.

CAPITAL CITY GUN CLUB.—Washington, D. C.—*Editor Forest and Stream:* Our club having reached an independent position, we decided to erect a substantial shooting house and put our grounds in first-class shape for the coming season. This we have done, and we are proud of having as good a ground and as complete arrangements for the comfort of our members as any club in the country. At our invitation the Westminster Gun Club, of Maryland, joined us in our house warming on Feb. 22. Two informal team contests between the two clubs, as well as some sweeps, were indulged in with the following results. We hope this meeting may result in many similar ones, finally promoting some central organization of trap shooters of Maryland, Virginia and the District.

Team match No. 1, 5 traps, N. G. A. rules:

Westminster.	Blue Rocks.	Clays.	C. C. G. C.	Blue Rocks.	Clays.

Woodbridge	1110101001— 7	Winesatt	1011011011— 7

Ties divided.

Blue rocks, sweepstakes: Mills 5, Cunningham 4, Wertsner 3, Wagner 4, Wiliar 5, Wilson 4. Mills won first, Wagner second. Blue rocks, same conditions: Mills 4, Wertsner 3, Wilson 3, Cunningham 4, Wagener w. Cunningham won first, Wilson second. —TIM BERDOODLE.

DUNELLEN.—The advertised classified sweepstake shooting match for a $300 guaranteed purse on the grounds of the Middlesex Gun Club at Dunellen, Feb. 22, brought out a large number of pigeon shooters and spectators. The weather was fine and the birds furnished by President Robinson, a good lot. Promptly at 11 o'clock 13 contestants faced the traps and commenced a trial of skill with the trigger. The scores below will show that some good shooting was done, and the Middlesex Gun Club must be awarded the palm for furnishing as fine an entertainment for pigeon shooters, as came off in the State on Washington's Birthday. Everything passed off pleasantly and quietly. Before, during and after the event of the day (the above-mentioned sweepstake) there were trials of skill at inanimate targets and live birds by those who did not care to enter the big match. Among those present and participants were "Uncle Billy" Siegler, of Montclair, N. J., winner of the first money in the great Long Branch tournament last week; "Pop" Hughes, of Jersey City; genial Fred Quinlan, of New York; Al. Bailey, of Asbury Park, President of the Matawan Club; Gus Manitz and Harry Quad, of Orange Valley, N. J.; Heritage (Old South Paw), of the Jersey City Heights Gun Club; Geo. Heft, Germantown, Pa.; J. B. Seifrund, Philadelphia, Pa.; H. Harris, Delair, N. J. As usual, our good-natured German fellow citizen, Charley Smith, was the life of the crowd. "Bless the Dutch" was frequently heard when he made a good kill, and it is doubtful if there was a person on the ground that did not regret his losing his twenty-fourth bird, which fell dead a couple of feet beyond the back dead-line. This shoot has demonstrated the fact that the Middlesex Gun Club can draw a good crowd of good shooters on their grounds at any time. The members know how to cater to those who attend, and make them feel at home. In the near future there will be a team race between members of the club, in which the champion female shooter, Miss Annie Oakley, will participate. Mr. Williams, of Elizabeth, acted in a perfectly satisfactory manner as referee. His decisions were at all times just. Messrs. Heft and Thomas pulled the traps with fairness. The ever courteous and respected Vice-President of the Club, Mr. S. G. Smith, was not present, in consequence of severe sickness. His presence and his 12-gauge Parker was sadly missed. Messrs. "Warry" Squires and J. Neighbor catered to the crowd in a satisfactory manner, by serving them with eatables. Conditions of match, 25 live birds each, $32.50 entrance fee:

Quinlan (29)	2101120122211210120221211—21

WORCESTER, Mass., Feb. 22.—Worcester Sportsmen's Club tournament at Coal Mine Brook Range. They entertained as guests E. W. Yerrington and F. G. Garfield, of Norwich, Conn.; O. R. Dickey and C. V. Nichols, of Boston; M. Knowles, of Lowell; H. W. Eager, G. N. Wheeler and Joseph Beaudry, of Marlborough; A. F. Burbank and C. Johnson, of Whitinville. The principal event was a 100 bird race. The totals of each man were as follows:

O R Dickey	83	E W Yerrington	66
W S Perry	81	Jos Beaudry	64
H W Eager	79	A B Franklin	63
H G Wheeler	78	F C Donsereau	64
W L Davis	74	W R Dean	w.
Geo Sampson	73	F G Garfield	w.

The club had many visitors daring the day, and a large number were served with dinner in the club dining room. The club is in a flourishing condition and have a good name. They hold their annual meeting March 7.

KINGSTON, N. Y., Feb. 13.—Messrs. J. H. Decker and D. C. Overbaugh met at the Kingston Gun Club grounds to shoot at 5 live birds each. Mr. W. P. Van Buren acted as scorer. They also shot a match at 25 glass balls. The birds were a very lively lot, fast flyers:

Live Birds.

Overbaugh, 12-b, 25yds	11111—5
Decker, 10-b, 28yds	20121—4

25 Glass Balls.

J H Decker, 20yds	1111111101111011111111111—23
D C Overbaugh, 18yds	1000011011011010111111—16
W P Van Buren, 18yds	1010100101011010000111101—13

KINGSTON CITY GUN CLUB.—Rondout, N. Y., Feb. 22.—Kingston City Gun Club shoot, 15 clay birds and 10 Macombers, 18yds. rise:

J H Decker	0011011111111111111111111—22
O Hoveling	0111001100111101011111—16

D C Overbaugh	0111001111010110111111101—18

PASSAIC, N. J., is to have a gun club. A meeting to organize will be held next Saturday evening.

NEW YORK ASSOCIATION.—Auburn, N. Y., Feb. 25.—Any organized gun club may join the Association by presenting its name and the regular fee of $10 at the next regular convention, which will be held in Auburn, N. Y., in June, 1885. Any club that has at any time been a member of the Association but which has been dropped for neglecting to pay dues, may omit paying dues and can again become members in the regular way. All shooters will stand an equal chance in the coming State shoot by reason of the new way of classifying all entries, which was adopted at the Utica convention last year. Yours truly, CHAS. E. KERR, Sec'y.

NEWARK, N. J., Feb. 22.—A pigeon match between two prominent New York hotel men, at 50 birds each, Hurlingham rules, and $250 a side. There was a large assemblage of friends present, and a considerable amount of money changed hands. The birds were a lively lot, but the shooting was not up to expectation:

Mr Kuhmast	1111111101110100101100100001101101011—27
Mr Purdy	1101100001011011000000111001101030100011011—22

Sweepstake, open to all, miss and out, 20 entries. John T. Waring, Jr., and A. Hedden, with 10 straight birds each, divided the money, the pigeons having been all disposed of.—W.

SHEEPSHEAD BAY, L. I., Feb. 27.—A glass ball match took place to-day on the private grounds of Mr. J. B. Voorhies:

J B Voorhies	1011101111110—11	W B Voorhies	0010'1'0100001— 6
J Kouwenhoven	0110110011101— 9	E E Bennett	1110010000000— 4
AW Battersby	1100011011011— 9	E Heffner	00000000 — 0
R Williamson	1110081010010— 7		

PHILADELPHIA, Feb. 22.—The North End Gun Club is rapidly becoming the rival of the well-known Riverton Gun Club, and if the plans mapped out for the future are put into execution, it will probably absorb the active part of the latter organization. These plans include the renting of a large tract of land, and the erection of a handsome club house at a cost of $2,500. The club will encourage all kinds of shooting, and also have a 200yds. rifle range on the grounds. One day in the week will be known as Ladies' Day, when the fair sex will be welcomed by a reception committee. It is also proposed to hold two annual tournaments, and to organize a team open to meet any regularly organized club team in the world. The team match was between Messrs. Wm. M. Pack and Wm. Wolstencroft, against George Elmer and James Wolstencroft. The conditions were 18yds. rise, and the targets were 25 clays and 25 bluerocks per man. Messrs. Pack and Wolfstencroft shot in brilliant style, and won as follows:

	C. B. R.			C. B. R.
Pack	20	23—43	Elmer	20	21—41
W Wolfstencroft	22	23—45—88	J Wolstencroft	19	21—40—81

Referee, Mr. Walter Sterling; judges, Wm. H. Pack and H. Battersby. Appended is a recent shoot for a record of Mr. Wm. M. Pack, at 100 blue rocks, 3 traps, 16yds. rise, 12-gauge Winchester gun, 32yds. Schultze wood powder, 1¼oz. No. 7 shot:

Wm M Pack	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—20
"	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—20
	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—20
	1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1—19
	1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—19—98

NEW YORK CITY, Feb. 22.—A large pigeon shooting match under Hurlingham rules, for a valuable gold cup, came off to-day between the Washington Heights and Algonquin clubs, on the grounds of the former, at 170th street and the Kingsbridge road. The score was as follows, each at 10 birds: Washington Heights: Kepple 6, Desbrow 10, Russell 6, Dux 8, Davidson 6, Terwilleger 9, Terhune 5, Rox 7, Glasier 9, Fountain 8, Wagner 6, Snook 3, Sauer 5; total, 88. Algonquins: Griswold 8, Mate 6, Ring 6, Gasside 6, Gordon 6, McClane 7, Brenner 7, Dunseib 6, Hanna 6, Ludley 4, Van Tassell 7, Ranguisky 7; total, 82.

CAMDEN, Feb. 22.—The pigeon shooting match between Miss Annie Oakley and J. W. Graham to-day attracted considerable interest. The contest was at 50 live birds, under the Hurlingham rules. The weather was beautiful and the large crowd present enjoyed the sport. In the betting Graham was a slight favorite, but the young lady had numerous supporters. The birds were fast flyers, and the contestants, who were in the best of condition, had to empty a second barrel very often to bring the pigeons down. Miss Oakley had splendid command of the gun, and some of her shots were applauded by the spectators. Graham did well in the early part of the match, but fell off toward the end. The score was:

Oakley	47	Graham	45

BABYLON, L. I., Feb. 17.—At the Kennel Club grounds to-day the pigeon shooting match between Mr. Handy, of the Riverton Club, of Philadelphia, and Dr. Knapp, of the Kennel Club, was won by the former. The conditions were to shoot at 100 birds, 30yds. rise, 50yds. boundary. The score was: Handy, 76; Knapp, 74.

BAY RIDGE, N. Y., Feb. 22.—The Active Gun Club held its monthly shoot at Bay Ridge to-day. The following were the scores made at 9 birds: F. Beinert 5, R. Morris 3, P. E. Roche 5, R. Lambert 6, P. H. Quinn 5, E. Burck 4, Frank Buech 7, M. Quinn 4, R. Worth 5, T. J. Donovan 8, Joe Rayan 6.

NEWARK, Feb. 24.—An international pigeon match for a purse of $200 took place to-day at Erb's grounds, at Newark, between four well-known snap shots. A large number of sporting men were present and considerable money was placed on the result. The birds were an uncommonly good lot. Gus Wells and S. Castles, Jr., 25yds., Wm. Green and Chris. Reinhart 30yds.: Castles 11, Green 8, Wells 12, Reinhart 11. A number of sweepstakes were held after the match, in which Castles, Reinbart, Class, Hedden and Manitz took part.

SANDUSKY, O., Feb. 22.—The Union Gun Club shoot for two gold badges took place at Zistel's to-day, commencing at 10 o'clock, and the last blue rock was broken about 5:30. Huron seems to have had the lion's share of the crack shots, but several of the Sandusky marksmen made most enviable records: Valentine 16, Higgins 21, J. Starr 24, Lea 17, McCormick, 18, Dennis 15, Chandler 23, Welker 16, Wcaver 22, Benschoter 24, Zistel 17, Hinde 20, Hart 24, Doerflinger 21, Marshall 22, D. Deyo 22, Warden 24, B. Deyo 19, Dodeste 22, Steerlein 13, Mastern 19, Stenk 14, Spencer 20, Welsh 12, Ebing 16. The gold badge A was won by Chas. Hart, of Huron, and C. B. Chandler, of the same place, captured the badge B.

The Union Gun Club, composed of local organizations here, at Monroeville, Clyde, Bellevue, Norwalk and Huron, has been organized as follows: Pres., Wm. Warden, of Huron; Treas., Wm. K. Marshall, of Sandusky; Sec., R. Valentine, of North Monroeville.

KANSAS CITY, Feb. 16.—The regular monthly medal shoot of the Kansas City Gun Club was held to-day at Sportsmen's Park near the blue. There was a large attendance and the sport was first-class. The scores were hardly up to the usual average, but the birds were almost all rapid drivers. The medal was won by the veteran trap shot, Mr. Drury Underwood, who made a clean score, killing 10 straight birds. The following is the score: Medal shoot, 10 live birds each, 3 at 27yds. rise, 3 at 30yds. and 4 at 31yds.: J. Underwood 6, J. E. Riley 8, G. Youman 7, A. B. Cross 4, J. Williams 6, W. S. Haliwall 6, F. Deuser 8, W. J. Behr 8, F. J. Smith 6, D. Underwood 10, M. Dunlap 5, W. H. Knotts 4, J. Savage 5, J. Allendorf 7, J. Bolen 6, D. W. Williams 9, C. Ditsch 9, W. Suck 8,

LOS ANGELES, Feb. 19.—The second monthly shoot for medals of the Los Angeles Rod and Gun Club was held to-day at Boyle Heights. The new grounds selected are picturesque and admirably adapted to trap-shooting. Nearly all the "shootists" are deserving of credit, as the general average shows an improvement over previous efforts. The complete scores are as follows:

Live birds, Hurlingham rules, 5 ground traps, 30yds. rise, 80yds. boundary: Unger 10, Walker 6, Jordan 8, Maxwell 9, Holbrow 5, Holton 6, Willard 9, Foster 6.

Ten single blue rocks, 18yds. rise: Unger 8, Walker 7, Jordan 6, Maxwell 9, Holton 6, Willard 8, Foster 3.

Five pairs double blue rocks, 15yds. rise: Unger 9, Walker 5, Jordan 2, Maxwell 9, Holbrow 3, Holton 5, Willard 8, Foster 5.

CLEVELAND, Feb. 16.—It has been many a day since the old Union shooting grounds in Brooklyn Village, saw as large and distinguished a turnout of Cleveland knights of the shotgun as that which assembled there this afternoon to participate in the opening of the new Kirtland Club House. The Kirtland members were out almost to a man, and many of the most prominent trap-shooting experts of this city were there as visitors. The East End Club sent three delegates, Paul North, H. J. Martin and "Magyo," notwithstanding the fact that the badges of that club were being contested for on the East End's grounds at the same time. The Cleveland Club was represented by C. F. "Knight," W. "Roberts," H. L. "Lee" and W. Tremblyn. The new club house was of course the center of attraction, and the Kirtland members received many well deserved compliments for the enterprise their club is showing. The day overhead was all that could be desired and the shooting was very fair, considering the excitement which divided the attention of the shooters between sociability and the traps. Twenty blue rock pigeons were shot at from 3 traps, at 18yds. rise. The Kirtland's badge went to that "old reliable" Kirtland member, C. M. Roof, with 17. Paul North led all the visitors' scores by breaking the same number of birds. Although it was late in the day when the club shoot ended, a sweepstake started and it soon had 25 entries at 50 cents each; 6 blue rocks, from 3 traps, and 18yds. rise were the conditions. "Roberts" won first money, North, Bell, Tamblyn, "Lee," Davis and Pretchell tied for second money, Pretchel and Bell broke 6 straight in the shoot-off, dropping the whole field and dividing the money. Hebbard, Forrester, Newell, Phillips, Wood, Bennett, Closse, Myers and McGuire tied for third money on 4 out of 6. Closse and Forrester shot out everybody in the shoot-off and then divided.

All the East End members who attended the regular shoot of their club at the Cornell street grounds this afternoon, were out for fine scores, and the shooting was of the best. The conditions of the approaching East End-Cleveland match as to the number of birds, traps and rise, 25 birds, 5 traps, 10yds. rise, governed the shoot. One 22 score, two 21s, and one 20 were among the records of the afternoon. Nine East End members were entered to the badges, and one visitor from the Cleveland Club joined in the shooting. The first badge was won by Henry Phare on a score of 22, and I. N. Sherman secured the second badge, breaking 21 birds. Blue rock pigeons were the targets used. After the badge contest was decided, practice shooting was indulged in until late in the afternoon. The score of the badge shoot follows:

I E Burns	1110110101011111111101111—20
I N Sherman	1111101111010111111111110—21

W J Garbison	1111011110101011111101 0—19

NEW YORK, Feb. 22.—The Bergen Gun Club, of Cherry Hill, held its first monthly meeting to-day. A large number of the members participated in the shooting and several remarkable scores were made. Clay-pigeons were used, each marksman shooting at 20 pigeons at 18yds. The score: G. Thomas, Jr., 12, J. J. Blauvelt 18, H. Banta 11, H. Hausholder 11, C. Freideman 10, E. Post 13, J. Hartman 14, A. Wilson 18, J. Lozier 18, F. Blackledge 13.

JEANNETTE GUN CLUB.—Five hundred people gathered at Verbank's Sea View Park, New Dorp, S. I., on the afternoon of Feb. 21 to witness the shooting match of the members of the Jeannette Club of New York. The conditions were 25 birds each, 30yds. rise, to be governed by Hurlingham rules. The prize was a purse of $200, which was won by Charles Meyers, the champion shot of Yonkers, who killed 17.

Canoeing.

EARLY CANADIAN CANOEING.

THOUGH it was from England and not from Canada that canoeing as a pastime was introduced into the United States, it is to the latter country that the historian must look for the origin of modern canoeing. The decked canoe used in America to-day can be readily traced back through the Nautilus and the Rob Roy to the primitive decked paddling canoes, light, long and narrow, used at least thirty years since on the Thames and Isis, boats propelled by a double blade. Though it was from these canoes that the idea of the traveling canoe was first suggested, they were used solely for pleasure, and never, so far as we can learn, for cruises, short or long, until about 1865, when MacGregor first made the canoe famous and gave the first impetus to canoe cruising and racing. Long before this, however, the canoe was in use on the lakes of Canada for much the same purpose as it is employed to-day, for racing, cruising, and exercise afloat, and also very largely for hunting and fishing. In the FOREST AND STREAM of Dec. 29, 1887, our correspondent "Retaw" contributed a most interesting history of the development of the open Canadian canoe, and we are now able to supplement it with further particulars of the first canoe races. The following information was collected by a Canadian canoeist several years since, but has never been published. While the names of MacGregor and Baden-Powell are known and honored wherever canoes are paddled or sailed, there is a third name, little known, but well worthy of a place with the others as the first to perfect and introduce the fascinating and ever popular craft, that of Strickland. The Stricklands, of Lakefield, Ontario, were not only the first to introduce and improve the open canoe, but for many years they were recognized as the most expert both in the construction and use of the boats, as the following records will show. The following letter, though not written for publication, contains so much that is interesting that we reproduce it entire:

Under date of November, 1882, the writer, Robert A. Strickland, says: "The first log canoe I can remember was one made by my father, Col. Strickland, somewhere about the year 1836, called the Black Snake. In the year 1842 my father made another log canoe in which I helped, this canoe was about 16ft. long by 26in. beam, it was called the Red Rover, and was the admiration of every one that saw it. It was looked upon as being superior to the birch canoe for sport, as it was just the thing to spear fish out of by jack light, and for duck and deer hunting, as it went through the water making little or no noise. In the year 1854 my brother, Geo. Strickland, and myself made a log canoe which was a great improvement on our former canoes, being 18ft. long and 25in. beam, it was both fast and steady. Just about this time a party who lived some five miles up the lake made a log canoe, and I suppose they thought it was superior to ours, as we received a challenge from Matt Young and A. Edmonson, the owners of the canoe, to paddle a mile race on Katchewahnoonkah Lake the next day, at 11 o'clock, and if we did not turn up we might consider ourselves beaten. We won the race very easily, beating them by over 100yds. This seems to have given a taste for canoe racing, for we had a regatta every year for several years. My brother and myself made a large number of canoes during these regattas, among some of the best being the Northern Light, 18.6×25; Shooting Star, 19×21; Sinclair, 27×18; Lance, 31×17; Lightning, 33×17; Meteor, 17×25. The Swift, 21ft. long by 25in. beam, was without doubt the handsomest canoe we have made; it was made out of a butternut tree, weighing less than 40lbs., it took the first prize at the Hamilton Provincial show, in the year 1860, and was much admired by the Prince of Wales. The Meteor was my own favorite hunting canoe, it was so light that I have often carried it a mile without resting, and it was from this canoe that the Gordon canoes were modeled. I consider that the Gordon canoes are as perfect a shape as we can have for general amusements. The present Gordon paddle is of the same shape as those we always made."

The following reports of canoe races are from the Katchewahnoonkah *Herald*, of 1856. The size of this primitive journal is in no way proportionate to the length of its name, being limited to one or two sheets of plain blue foolscap each week. Further, it is written, not printed, and in these days of enormous circulations and sworn affidavits it is refreshing to find a paper whose circulation each week was but one; in fact, in spite of its imposing title and the motto "Et libros et amicos non plurimus fuœro sed optimus," it is but one of the little sheets used in isolated localities, passed from house to house, each reader adding his share to the news. Though in no way connected with canoeing, the following specimens of this backwoods journalism are worth reproducing:

"Dear Mr. Editor: I am very sorry to hear of a new disease that has made its appearance in our clearing, the symptoms at present are not very alarming, but will no doubt become so if not speedily checked. I have not yet heard any particular name given to the disease, but should think 'seven day ague' would be applicable, because it invariably comes on of a Sunday morning immediately after eating a hearty breakfast. The symptoms are heaviness, inclination to sleep, and a total prostration of the system. I am very sorry to hear that our esteemed friend H—— P——, Esq. was the first to be attacked with this singular complaint, whereby he has been hindered from attending divine worship on several occasions. We understand that the most effectual remedy yet found is to lie down on the sofa, take two pipes, one glass of grog, and read a novel for an hour or two. Sleep invariably follows, which generally enables the parties to feel well enough to join his friends at the dinner table on their return from church. We trust this disease will spread no further, and we hope to see our friend next Sunday well and in his accustomed seat at church. I remain, Mr. Editor, yours faithfully, LANCET."

Then follows this editorial notice: "We are exceedingly sorry of being the cause of pain to any one, but we are compelled now to do that which we are afraid will cause grief throughout the whole clearing; the Katchewahnoonkah *Herald* will be discontinued for one month from this week, as we are going to take a holyday. If any gentlemen will take the trouble of editing it we will hand over all our printing apparatus to them for a month, and will engage to send them weekly articles for insertion. We trust some enterprising gentlemen will accept our offer, so that we may not be deprived of our Monday morning's amusement. Any person who may apply before Wednesday next will receive all necessary information.—EDITOR."

We find on the next page this announcement: "Katchewahnoonkah regatta, under the patronage of the ladies of the clearing. Prizes, flags worked by the ladies. Races to come off on Friday, June 20, at 3 o'clock P. M. Course, from Mr. Beatty's landing to Mr. Warren's bay, and back.

"First Race—La Belle Katriua, D'Arcy and Bartée; Lady of the Lake, Band and Beatty.

"Second Race—La Belle Katriua, D'Arcy; The Mohawk, Beatty; Black Witch, Bartée; The Emily Jane, Band.

"Third Race—The Fanny, H. Pearce; The Lily, E. Leigh.

"Fourth Race—The Roaring Billy, Bartée, Band and Leigh; La Belle Katriua, D'Arcy and Pearce.

"Fifth Race—The White Nigger, T. Allen; The Black Witch, W. Strickland.

"Sixth Race—The Fanny, Robert A. Strickland; The Lily, G. Strickland.

"Seventh Race—The Ark, Samuel Strickland, Esq., and Band; La Belle Katrina, Bartée and D'Arcy.

"Eighth Race—Hurry scurry for single canoes."

From the above it would appear that Mr. Pearce had sufficiently recovered from his dire disease before mentioned to be able to paddle several canoe races on a week day, from which we may infer that however their canoes may differ, canoeists in 1856 did not differ greatly from those of a generation later. Perhaps there may be some connection between the name of one of the leading canoes and the following, from a later issue:

> "She is gone from our clearing, she is lost to our forest,
> Her smiles disappearing when we needed them sorest.
> At home reappearing, she'll bring joy and no sorrow,
> But to us comes no cheering, no Katy to-morrow."

The results of the regatta are given in the issue of June 30, the editor having renounced his intended "holyday" or else having found an efficient substitute. "We are very glad to see that at length some feeling of sporting has broke out in this clearing, as last week we were observers of a very capital boat race that took place on the lake, opposite Mr. Beatty's house. The different prizes were well contested for by the various paddlers, and most extraordinary feats of strength and endurance were exhibited during the afternoon. The grand race of the day was cleverly won by Mr. F. Bartée, in his Black Witch, but as he was three canoe lengths ahead of his competitors, the running was altogether between the Mohawk and the Emily Jane, the former gaining by a full canoe's length. La Belle Katarina, of which such great things were expected, was far behind, owing to its inability to round the flagboat, and the wind, which was blowing toward it to shore. We hope and trust that in the next races which we shall have the pleasure of advertising she may be more fortunate and do credit to her patroness. A very well contested race was that between T. Allen, Esq., and W. Strickland, the latter winning by a half a length, though at first he carried weight. Another one equally so was between E. Leigh, Esq., and H. Pearce, the former, however, winning; but we must say that from Mr. Pearce's short residence in Canada the way he paddled did him great credit, and we feel convinced that after another year's practice he will be one of the best paddlers on the lake. The hurry-scurry was very characteristic, and was won by R. Strickland, Esq., though we cannot say quite fairly, as instead of turning his canoe, he merely turned himself at the rounding point, paddling at first stern foremost. Mr. Band's plan of walking down quietly to his canoe, thinking the others would be blown, amused us, as the former canoes were around the buoy before he had turned his preparatory to leaving shore. As these races afforded so much amusement to the ladies of the clearing, we only hope they may be continued, as it is not only a healthful exercise, but is a great recreation after the hard work of agricultural pursuits."

"Sporting Intelligence.—Katchewahnoonkah Regatta. First race, La Belle Katariua, Leigh and Bartée; second race, Black Witch, F. Bartée, E. Beatty, Esq.; third race, Black Witch, W. Strickland; fourth race, Lily, E. Leigh, Esq.; fifth race, Roaring Billy, Band and Bartée, owing to a foul; sixth race, Lily, George Strickland, Esq.; seventh race, The Ark, W. Armstrong and W. S. Band; eighth race and hurry-scurry, R. Strickland, Esq., E. Leigh. On Wednesday the 23d Mr. D'Arcy's "Vale of Lakefield" hounds will meet at Harriot's at 9:30 A. M. to run a drag. On Friday the 4th inst. a cricket match will take place between the Peterborough club and that of Coburg." Another regatta followed shortly after, an account of which is given in the *Herald* of July 21, as follows: "Mr. Editor: An account of the second regatta of the season may not be unacceptable to your readers. The day was extremely hot, but with a light breeze on the lake. The scene on the shore was beautiful in the extreme, the numerous elegant dresses of the ladies mingling with the fancy dresses of the gentlemen, presenting a conglomeration of gorgeous and splendid colors such as rarely, if ever before, were witnessed on the shores of Katchewahnoonkah Lake. An arbor erected of boughs was prepared for the ladies, under which, reclining on the greensward, they looked most beautiful. We were happy once more to see our worthy rector's brother among us after his long illness; his loud and manly cheer more than once made the air ring again. We must not omit to mention that our worthy rector sported those colors which in his younger days he had so often brought in victorious at Cambridge in the same splendid style that he did on this occasion. He looked 'so nice,' in fact, as we heard a fair one say, 'a perfect duck.' The racing did not commence quite at the time stated, owing to the obstinacy of the buoy, who would not keep his head above water. At length five single canoes appeared at the starting post. At the start Mr. Beatty went off with the lead at a tremendous pace, closely followed by Mr. D'Arcy. At about 300yds. from the buoy Mr. R. Strickland and Mr. Bartée began to creep up, and the race commenced in earnest to see which would be first around the buoy. Mr. Strickland was first, Bartée second and E. Beatty third. The race back was against a stiffish breeze. Mr. Bartée and Mr. Strickland kept together until about half way home, when the latter gentleman went ahead and Mr. Bartée was unable to overtake him. The second race was between two juvenile paddlers, W. Sherwood and H. Bartée, and caused much amusement. Mr. Bartée kept a straight course up to the buoy, while Mr. Sherwood was surveying the Smithtown shore, but the latter gentleman being much the faster paddler succeeded in finishing his survey and was up to the buoy as soon as Mr. Bartée. After rounding they started for the winning post, but whether Mr. Bartée thought it would not be fair unless he also took a survey of Smithtown or was afraid of a foul we cannot say, but the moment after rounding he put ahead for the shore and started at a pace which, if it had only been in the direction, must have taken him in a winner by many lengths. The third race was between the Rev. P. S. Warren and Mr. Pearce in a skiff, G. Strickland, steerer; and E. Leigh and H. D'Arcy in a canoe. After a good race the skiff came in a winner by about two canoe lengths, much to the surprise of all. The fourth race was to have been between our gallant Colonel (Strickland) and J. Read, D.P.S.O.E., etc., but Mr. Read being taken suddenly ill, his assistant, V. M. Clementi, D.P.S., nobly came forward and said he would take his place; but the gallant Colonel was too experienced a paddler for him and came in a winner easily. The fifth race caused great excitement, being for a red flannel shirt, presented by F. Warren, Esq., for double canoes. Six started; the race from the beginning was between G. Strickland, in his new canoe, and R. Strickland, in Mr. Warren's, the former winning easily. The sixth race was the best one of the day, between E. Leigh and E. Strickland. They kept well together until about half way back, when Mr. Leigh went ahead, and a most tremendous spurt was put on by Mr. Strickland. He gained on him, but the distance from the winning post was too short, and Mr. Leigh was declared the winner by about half a canoe's length. The seventh race was T. Allen and H. Pearce against W. and F. Strickland, the latter gentlemen winning easily, owing to the bad steering of their adversaries. The eighth and last race was E. Leigh and R. Strickland against J. Strickland and W. P. Band. It was a good race, but the two latter gentlemen were too strong for them and so finished the racing after a most pleasant day, without one angry word or single dispute; all were satisfied, both winners and losers. After the prizes had been delivered to the winning gentlemen they all adjourned to the Rev. P. S. Warren's and partook of a hearty tea, the evening being passed most pleasantly in smoking and singing.

The following accounts of later regattas are from the *Peterborough Review*, the first being in July, 1857:

"We publish for the information of our readers a more full account of the regatta at Katchewahnoenkah Lake, than it was in our power to give last week.

"First Race—Purse $12. Double birch canoes: Pahmitchawan, J. Dunlop, W. Armstrong; Nishnawbah, J. Irons, J. Jacobs. Won by the latter easily. Time 10m. 43s.

"Second Race—First purse, $20; second, $10. Double log canoes: Water Lily, H. and W. Strickland; Mohawk, E. Beatty, J. Buckley; Shooting Star, R. A. and G. Strickland; Grace Darling, W. Armstrong, F. Lee (drawn); The Dasher, W. R. Band, F. Bartée. Shooting Star first purse, time 9m. The Dasher second purse, time 9m. 20s.

"Third Race—Purse $12. Single log canoes: Wood Duck, J. W. Edwards; Rice Bird, R. Knox; Mohawk, E. Beatty (drawn); Shooting Star, G. Strickland; Water Lily, E. Leigh; The Wirbell, H. Pearce; Grace Darling, J. Caddy. Won easily by the Shooting Star. A good race between the Grace Darling and Wirbell for the second place, won by the former.

"Fourth Race—Purse $6: Mohawk, E. Beatty, J. Buckley; Water Lily, H. and A. Strickland; Rover, R. Knox, J. Wayland; Flirt, J. Buckley, P. Nolan; Whip-o-Will, F. H. D'Arcy, J. Caddy (withdrawn). Won by Mohawk, time 9m. 50s. Flirt second.

"Fifth Race—Prizes, silver cup and gold studs, given by the ladies of Upper Douro: Black Duck, F. H. D'Arcy; Grace Darling, W. Armstrong; Minnie, J. Stewart (drawn); Dasher, A. Denistoun; Wirbell, H. Pearce; Water Lily, H. Strickland; Wood Duck; J. W. Edwards; Shooting Star, G. Strickland; Mohawk, E. Beatty (drawn); Rice Bird, E. Leigh; Jumping Judy, Indian. Won with ease by the Shooting Star. Shooting Star first, time 10m. Grace Darling second, time 10m. 50s.; a good race for third place between Wirbell and Water Lily.

"The course was ½ mile out, round two buoys and back. Owing to a strong side wind the race was not so good as it might have been. In the first race more was expected of the Pahmitchawan from the well-known capabilities both of the canoe and her steersman, but the latter, not having sufficient lasting qualities, was easily distanced by the Indians. In the second race the Shooting Star, although its bowman had to be lifted into the canoe, took the lead and kept it the whole time. A good race was maintained up to the buoy between the Mohawk and the Dasher, in rounding which the latter took the lead and maintained it to the last. In the third race the Shooting Star again won easily by many canoe lengths, as it did also in the fifth race. Although the Mohawk in the fourth race had an unfortunate start, it won well. After this race the Jumping Judy claimed a foul against the Mohawk, which was soon decided by the judges in favor of the latter. This, fortunately, was the only case of the kind during the day. The quick manner in which the Shooting Star was built does great credit to Mr. G. Strickland, who only commenced the rough log on Friday afternoon, and by the Wednesday following she was ready for launching. The owner also of the Wirbell well deserved to be a winner (though at this regatta fortune did not favor him) owing to the rapid manner in which he built this, his first canoe, and also for the plucky manner in which he always paddles. The numerous attendance of the fair sex from Peterboro and its neighborhood who honored Douro with their presence on that day, not only gave the ground an attraction which it would not otherwise possibly have possessed, but also animated the competitors with a rivalry far greater than the mere prizes themselves could have inspired, and we can only conclude our remarks by saying that we trust the time is not far distant when those who contended may be all winners in that double race, where the ladies themselves are the prizes."

[From the Peterborough Review of Sept. 25, 1857.]

Wednesday, the day announced for the commencement of the regatta, dawned gloomily and the bright anticipations of pleasure were considerably damped by the appearance of the weather. It was a cold, bleak morning, with every appearance of rain. Notwithstanding this quite a large number of persons assembled on the ground at the appointed hour, where had been erected tents and refreshment booths.

First race, Indians in birch bark canoes.

For the second race, single log canoes, there were seven entries made, but only six canoes appeared on the course; the Snowdrop, paddled by Peter Whalen; Flapper, by Jas. Waub (Indian); Northern Light, by George Strickland; Meteor, by Robert Strickland; Gleam, by Jas. Caddy, and the Belle of Peterboro, by W. Anderson (Indian). The boats were all well built, and the contest promised to be a keen one.

The race was an admirable one throughout, and the prize was finally and honorably won by Northern Light, the Meteor second, and the Snowdrop third, both coming in most creditably. The distance, 1 mile with turn, was made in 9min.

Third race, Indian's birch canoes, single.

The fourth—double log canoes—was decidedly the race of the day. Seven canoes were entered: Dasher, paddled by Band and Bartée; Snowdrop, by P. and J. Whalen; Teal, by Franklin and Waub (Indians); Northern Light, by R. and G. Strickland; Meteor, by W. and P. Strickland; Arrow, by Jas. Caddy and an Indian, and Flying Cloud, by Crow and Crawford (Indians). The start was well made, and for a few seconds it was difficult to determine which was ahead. Presently the Flying Cloud and Northern Light shot ahead.

The race was now between the Northern Light and Flying Cloud for first place and the Northern Light and Arrow for second; and the excitement on shore was intense. Northern Light seemed to close upon the leader at every stroke, but the fates were against him, and Flying Cloud was declared the winner by about a length and a half. Right hearty cheers greeted the Indian paddlers as they came in. The distance was made in 8m. 10s.

The fifth race, with sculls, was less interesting than the others.

The second day, Thursday, was as fine an autumn day as ever dawned, and the ground was at an early hour crowded with persons anxious to see the sport. The Port Hope brass band was present. The competitors for prizes were in good time for their work. The water was calm and beautiful, the ladies numerous and drawing—in fine the *tout ensemble* was all that could be desired for a gala day. Good as was the sport of the first day, that of the second was still better.

The entries were as follows: First race, single canoe—Snow Drop, H. Caddy; Comet, J. Stevenson (our canoe builder of to-day); Flapper, Jas. Waub; Shooting Star, F. Bartée; Meteor, R. Strickland; Gleam, Jas. Caddy; Wood Duck, J. W. Edwards (elder brother of ex-Com. Edwards); Belle of Peterboro, W. Armstrong.

Second race, double birch canoes.

Third race, double log canoe—Dasher, Teal, Shooting Star, Meteor and Arrow.

Fourth race, single canoes: prize silver cup—Snow Drop, Comet, Flapper, Northern Light, Shooting Star, Meteor, Gleam, Belle of Peterboro.

Fifth race, consolation.

The results were as follows:

First race—First, W. Armstrong; second, R. Strickland.

Second race—First, Gleam; second, Wirbell.

Third race, time 8m.—First, Shooting Star, G. Strickland; second, Arrow, J. Caddy.

Fourth race—First, Belle of Peterboro, W. Armstrong; second, paddled by G. Strickland, and Meteor, R. Strickland, a tie.

RICE LAKE REGATTA, SEPT. 17, 1858.

"The regatta came off on Friday last, according to announcement, but owing to the high wind that prevailed and the roughness of the lake, was not so successful as under more favorable circumstances it would have been. A number of the boats did not venture out at all, others ventured only to be swamped, while some of the races had to be abandoned altogether. * * *

"First class canoes, two paddlers—But two started, the Flying Cloud, paddled by Armstrong and Stevenson (the canoe builder), and the St. Clair, by R. and G. Strickland. The former unfortunately swamped. The prize was carried off by the St. Clair.

"Second class canoes, single paddler—The St. Clair, paddled by George Strickland, and the Blythe, by J. Caddy, the former coming in first.

"Third class canoes, Indians—The Flying Cloud, paddled by James and Henry Crow, and the Otter, by John Rice Lake and Hiram Copway. The latter swamped, thus giving an easy victory to the Flying Cloud. There was a large number of persons present, the Cobourg brass band being on the ground."

[Note.—Rice Lake Regatta.—In this regatta the Stricklands had a very long canoe, very narrow and very low on the sides. They had an oiled cotton cover from stem to stern, with holes cut for

the paddlers and aprons to tie round the body—an early instance of a covered canoe. The waves frequently dashed up to the faces of the paddlers. In the Indian race the canoe that was swamped was paddled ashore, about a quarter of a mile, by its crew, who managed to hold it without turning over under the water, and thus worked themselves along while up to the armpits in the water.]

PETERBORO REGATTA, SEPT. 7 AND 8, 1859.

(From Review, Sept. 9 and 16, 1859.)

The regatta advertised in our columns for some weeks came off on Wednesday and Thursday. The weather was good and an immense crowd of persons assembled to witness the races:

First Day.—First race, double birch canoes—First, Kenah Quin, D'Arcy; second, Traveller, T. Irons; third, Chemong, John Rice Lake.

Second race, single log canoes—First, Belle of Peterboro, Armstrong; second, Teal, R. Pearce; the Snow Drop, D'Arcy; Lance, G. Strickland, and Blythe, H. Caddy, not placed.

Third race—First, Kenah Quin, F. H. D'Arcy; second, Traveller, T. Irons; Chemong, T. Crow; Beaver, John Rice Lake.

Fourth race—First, Lance, R. Strickland; second, Blythe, H. Caddy; and third, Sinclair, F. Bartée.

Fifth race, private match—First, Kenah Quin, D'Arcy.

Sixth race—First, Swift, R. Strickland; second, Blythe, H. Caddy; third, Belle of Peterboro, W. C. Armstrong.

Hurry-scurry—Crow first, Strickland second.

Second Day.—First race, single log canoe—First, Teal, R. Strickland; second, Belle of Peterboro, Franklyn (Indian); Lance, G. Strickland; Gipsey, Herald (the builder at Rice Lake).

Second race, single birch canoes—Indians.

Third race, boys under 16.

Fourth race, double-log canoes—First, Lance, R. and G. Strickland; second, Northern Light, Nethercotes; third, Belle of Peterboro, two Indians.

Fifth race, Indian women—First, Antelope, Mrs. Irons and Betsey Crow; second, Ware, Mrs. R. Naugan and Mrs. H. Crow.

Sixth race—First, Gordon, [now canoe builder at Lakefield] in Northern Light; second W. Burke in Teal, four others competed.

Seventh race, Indians.

Eighth race, single log canoes—First, Blythe, G. Strickland; second, Gipsey (owned by Herald), Franklyn, Taylor, third.

Ninth race, private match, Indian vs. white men—First, Swift, H. and J. Crow; second, Lance, R. and G. Strickland.

[In the advertisement of this regatta there is a race announced for board canoes single or double. It does not appear from the published result that there were any board canoes entered, the log being then the faster as it was very long and narrow. The advertisement contains this provision: "All paddlers will be compelled to sit or kneel while paddling." It was not unusual to stand in a hard race.]

The Peterboro' Boating Club was organized in May, 1872. The members were almost exclusively canoeists, but as it was intended to get rowing boats and go in for rowing as well as paddling, the title Boating Club was adopted to cover both. There would be then probably at least 25 or 30 canoes owned by members of the club. Regattas were held during that and the following years and the membership and the number of canoes rapidly increased. A small club boat house was built in 1872. A challenge cup was established for paddling. In these regattas the Stricklands again distinguished themselves. The regattas in 1872 and in some subsequent years lasted two days each. In 1875 the club bought a piece of land and erected the present boat house. It contains racks for 60 or 70 canoes, and gymnasium and dressing rooms up stairs. The old boat house is still used by some members, while others keep their canoes in private boat houses. The present membership is between 90 and 100.

The earliest board canoes were built by John Stevenson at Peterboro in the year 1856 or 1857. The idea was to get something light for portaging when hunting. Basswood was used. The first attempt was comparatively clumsy, but soon the idea was adopted of building them on a solid model, leading to a neater and better finish. In 1877 Mr. Edwards built a canvas canoe. It could not compete with the splendid racing log canoes then built. These were finely finished and wonderfully light. In 1858 Stevenson took a board canoe to Rice Lake regatta. It was 18ft. long and 17in. wide, and the day being terribly stormy it could not be used. Stevenson gave up building for a time, and Wm. English took it up and has since carried it on. Thos. Gordon followed in Lakefield and Herald at Rice Lake, the latter adopting the plan of making the inside smooth. Stevenson adopted the "cedar rib" canoe in 1879 or '80. The general idea in all these canoes is the same, although the experienced eye can generally detect the maker by a glance at the canoe in the water. They are all open and use the single paddle. Such a thing as a covered canoe or a double-bladed paddle is practically unknown (1882). The Gordon and Stevenson models most resemble each other. The English canoe is generally looked on as probably the fastest under paddle, the Gordon as the best sea boat and handier. The chief merit of the Herald lay in its being smooth inside and so easily kept clean. Its disadvantage is that its two thicknesses of wood help to rot each other. The model is not generally considered good; it is too crank. The Stevenson "cedar rib" is ahead of the Herald in being smooth inside and having only one thickness of wood. It is, besides, much steadier. For lightness, cleanliness and beauty it bears the palm, while in model for an all-round boat it is hard to say where you would improve on it.

English and Herald both sent canoes to the Centennial Exhibition and received medals. English also sent to Paris Exhibition in 1878 and again received a medal. He has shipped to all quarters of England and various parts of Europe, to Australia and South America. He also does a large home trade, and ships a considerable number to the northwest. All of the builders send to England—Stevenson probably most of all during the last two years.

Perhaps some of our Canadian readers can supply more particulars of the construction of the log canoes, as will be seen from Mr. Strickland's letter the dimensions of some are extraordinary.

CRUISING CANOES.

Editor Forest and Stream:

The Canadian cruising canoes may bear to have something more said about them, so I will, if you please, offer a few comments on the letters that have appeared on these subjects.

As to the origin of the Canadian canoe, I think if your correspondent "Retaw" will look into it a little further he will find that the dugouts from which he considers it to have been evolved, are modeled on the birch bark canoe. There are a good many of these old dugouts on the chain of lakes above this, and their lines and sheer are identical with those of the birch bark; as "Retaw" says they do not resemble the dugout of the lower province; nor, indeed, any other dugout that I know of, and I have seen a good many of the species. I think the probability is, that the original designers of the craft, not having the necessary material, or perhaps skill, to make a frame canoe, found it simpler to hew one out of the solid log, taking their idea of what a canoe should be like from the canoe of the country, though not perhaps of their immediate vicinity. If they were not influenced by the birch bark, it would be indeed a singular coincidence that they should have produced from their "inner moral consciousness" a boat so exactly resembling it.

As skilled labor and improved material became available, light board canoes built on the same lines replaced the dugouts; so I think we may continue to hold our belief in the origin of the Canadian canoe from the birch bark; it is the grand-daughter, not the daughter. I had thought that the relative advantages of the single and double blade had been set at rest some time ago. As far as one man's experience goes, I have used both for a great many years, and while I prefer the single blade for fishing and shooting, the double I find undoubtedly both faster and easier for a long as well as for a short cruise. With more than one in a canoe I think the single blade is preferable. Now, as to the great question of the encouragement of cruising canoes. That the A. C. A. can encourage a certain model by its rules and races, is true only to a limited extent. It cannot force an unpopular type of canoe to be adopted, or a popular one to be rejected. I do not believe, for instance, that the abolition of the 75ft. limit race would have any effect on the number of Pecowsics that would attend the next meet. Apparently, the popular canoe is one that will win sailing matches, and that can be used for an occasional fifteen or twenty mile cruise on the waters in the vicinity of the canoeist's domicile, where sailing is generally practicable. I quite agree with Mr. Claphan that a larger boat than that at present allowed by the rules of the A. C. A. would be far better for this sort of work and will be likely to come into use, with or without the approval of the A. C. A., but this is beside the question), so the honors of the regatta are divided among these. A cruise in company would present many difficulties, unless the number who participated in it were small. A ballot would be a somewhat unsatisfactory way of settling which was the "best cruising" canoe.

A genuine cruising race, that would test a great many of the qualities of a good all-round cruising canoe, could easily be arranged; but would it be popular? It ought to be something like the following:

Distance about 25 miles (12 or 13 out and home), part of the way on open water (to test seaworthiness), with two or three portages or carries of one-half a mile each. Conditions: Go as you please, sail, or paddle, or paddle and sail. Each competitor to carry a load in his canoe weighing 65lbs. (to represent an average cruising kit), canoe and load to be carried round the portages by separate journeys. Canoes to be 16ft. or under in length (a canoe over that length being presumably unhandy) and not under 50lbs. in weight (a safe limit, below which strength might be supposed to be sacrificed to lightness; though undoubtedly good strong canoes of from 50 to 40lbs. are made).

Were such races to become popular, a type of canoe would be produced after a time different from either the Vesper, the Notus or the Pecowsic. The question is, how many entries would there be for such a race?

Perhaps some of your cruising correspondents will give their opinion on the matter. C. M. DOUGLAS.

LAKEFIELD, Feb. 19.

PRESENT TENDENCIES OF CANOEING.

Editor Forest and Stream:

As a centerboard is objected to in the cockpit, why is it that an incentive is offered to place it there by allowing it to come to the top of the coaming, while another man, who has his board under the deck, is not allowed as much by three inches (*i. e.*, the extra height of the coaming). The rule to be attacked is the 18in. drop allowed. As races are sailed now, a man can place a board as he pleases and get 24in. drop, and nobody is the wiser. NESTA.

[The suggestion was intended to apply to the case where the point of the coaming extends over the deck, and consequently over the trunk. The disadvantages of a very high coaming are so generally understood that no one would take 5in. in order to gain a little width of board where it is of the least use. Can "Nesta" give any instances where the rule as to depth has been violated?]

Editor Forest and Stream:

Your suggestions fill the bill exactly, and I hope they will, in every particular, be adopted by the executive committee. It is time such a stand was taken. IDLEMERE.

Editor Forest and Stream:

I was very much pleased to read in last week's paper the invitation you extend to canoeists to discuss the subject of racing and cruising canoes; and I am sure if this discussion is largely entered into, some plan will be brought out to help the Association in the difficulties that confront it.

It must be apparent to every one that the policy of the A. C. A. up to the present time has been to the development of the racing canoe and the encouragement of racing canoeists. As a result of this policy, together with the energy and perseverance of Pecowsic, Notus, Lassie and others, the almost perfect racing canoe has been evolved.

Now, while I am a confirmed cruiser and would not sacrifice the cruising qualities of my canoe for all the mugs in creation, still I love canoe racing and would not for one moment underestimate the debt canoeing owes to the racing element in it. But, Mr. Editor, the growl of the cruiser is heard. He says, and to me he says justly, that if the Association had only encouraged his element of the sport as it has the racing element, if it had only in some way brought into competition the cruising canoe and the cruising canoeists, the result would have been that the perfect cruising canoe would also have been evolved and canoeing much more benefitted.

Now, as I understand it, the purport of this discussion is to bring out plans and ideas for the accomplishment of this result, and my object in participating in it is to ask, why will not a race in which the crew of each canoe shall be confined to the cockpit be a step in the right direction? This suggestion has already appeared in your columns, and it struck me that if such a race was added to the programme at the next meet, it would not only be interesting, but also satisfactory to the cruising element.

Still there are many plans that will be suggested by this discussion. I am glad to see that Com. Gibson is already moving in this direction, and something will undoubtedly be done in the matter. If the Association will set to work to encourage the cruising element in canoeing as it has the racing element (and which it still ought to encourage), we shall have not only the finest canoe models and the most expert sailors, but the staunchest, best equipped and most comfortable canoe. ESSEX.

ATLANTIC DIVISION MEET.

Editor Forest and Stream:

A site that I think is most admirable for a meet of a large number is located on the Delaware River, about one-half mile above Delanco steamboat landing. Delanco proper is on the West Jersey R. R., about two hours' ride from New York city. There is a splendid beach of about a mile in length, almost straight, but is only about 40ft. wide when tide is up. As to the camping ground, it is the most perfect of all on the river, as many campers and canoeists can testify. The river is about three-quarters of a mile wide and would be a good sailing ground. Should your committee decide to visit this site or to learn further of it, I shall be pleased to get such further information as you may desire.

PHILADELPHIA, Pa., Feb. 20. J. A. BARTEN.

OTTAWA C. C.—*Editor Forest and Stream:* A general meeting of the Ottawa C. C. was held on Feb. 15 to discuss the plans submitted by the committee of management for the floating of the club canoe house, the present position of the building having proved very unsatisfactory on account of the accumulations of sawdust in the bay, at the head of which the house is situated. After the relative merits and demerits of a raft of cedar logs, pine logs or barrels, and floating the building on scows had been discussed, we decided on adopting the last mentioned plan. The next subject debated was which division of the A. C. A. our club belonged to. When the Northern Division was being formed last year a resolution was passed by the club that they were in favor of the formation of the new division if sufficient members of American clubs could be induced to join the division to prevent it becoming a purely Canadian one, the members of our club being afraid that possibly sectional feeling might be aroused, which would of course destroy the main object of the association. The vice-commodore of the Northern Division has, however, managed to convince us that there is no danger of this, so the following resolution was unanimously passed: "*Resolved*, That the secretary of the club be instructed to write to the proper officer of the Northern Division expressing to him the desire of the club to be included in the Northern District." Several members of the club have expressed their intention of attending the Northern meet if they can get away from business at the proper time.—FRANCIS H. GISBORNE, Sec'y O. C. C.

THE COMING MEETS.—*Editor Forest and Stream:* Your suggestion of a spring meet for Hudson canoeists on Staten Island for Decoration Day is very good. Coming as it does this year on a Wednesday, is rather bad, but perhaps quite a number can arrange to have Tuesday and Wednesday in camp, and, if a suitable camp spot can be found, I think you can count on a number of Passaic canoeists being on hand. I am in hopes you will hear from some of the N. Y. C. and Brooklyn Canoe Club members, I feel sure that they can point out some desiraole place.—GEORGE W. COX. *Editor Forest and Stream:* Regarding the proposition to hold the meet of the Atlantic Division at Lloyd's Neck or Oyster Bay, allow me to say that both are good, the latter perhaps best in point of convenience of access, that portion of the bay known as the "Island" at the extreme entrance containing shade and water. I am acquainted there, and have no doubt as to your getting use of grounds. Our club had proposed to meet at Norwalk Islands, July 16-23, and would be glad to exchange calls, if your division is so near as Lloyd's Neck. We cannot have our meet earlier, owing to the college races.—ROBT. P. WAKEMAN (Southport, Conn.)

WINTER CANOEING.—Buffalo, Feb. 22.—*Editor Forest and Stream:* The following entries on the bulletin board of the Buffalo C. C., may be interesting to many canoeists: Dec. 25, 1887, 3:35 P. M., Terror gone to Canada under sail. Dec. 25, 1887, 3:50 P. M., Sunbeam gone to Canada under paddle. Feb. 19, 1888, Sunbeam and Terror gone to Frenchman's Creek (1 mile below club house on Canada side). This is the shortest winter closing in the history of the club; from Dec. 25, 1885, to March 26, 1886, being the next in order. Has any American club as far north as this a better record?—PERCH.

MAYFLOWER.—Rear Com. Morgan has had under consideration the question of changing Mayflower to a schooner, and has ordered a new sail plan from Mr. Burgess. A similar change in Volunteer has also been under discussion, but it is very doubtful whether either yacht will be altered this year. There is very little racing left for them as singlestickers, while there is every promise of good sport among the large schooners, and yachtsmen would gladly see both placed where they properly belong, as neither will be needed for an international race.

3. Cor. Marblehead Cham. Sweep.

TWO TIMELY WARNINGS.

TWO rumors are now afloat which, though neither has yet assumed definite shape, should lead the New York Y. C. to consider soberly and earnestly its present position and the course it has chosen. The first of these reports is based on the following extract from a letter to Mr. W. E. Conner from Mr. G. L. Watson, as follows:

"I think it not unlikely that some of you may be required to defend the American Yacht Club cup this coming season, as Sir William Pearce is building what is likely to be a very fast yacht in his yard at Fairfield. She is about the length of the Atalanta, very sharp, and will have great power; and though I do not know that he proposes challenging, I shall be much surprised if he does not. I am building some steam yachts, but nothing of any high speed, our owners here preferring comfort and large accommodations to speed."

Sir William Pearse, the head of the firm of Elder & Co., ship builders, was the owner of the large steam yacht Lady Torfrida, which he lately sold; a fact which lends color to the above rumor.

The second rumor, as yet only floating in the air with no one to vouch for it, is withal so well within the bounds of probability that it is worthy of careful consideration by the parties most interested. It is to the effect that a movement is on foot in Boston to build a first-class keel cutter from Mr. Burgess's designs, and to take her to England to meet the British racing fleet. No one can doubt, after the last three years, that Boston has the brains, the money and the spirit to put through such a venture successfully, and with every chance of winning. That such a step, following Puritan, Mayflower, Sachem and Volunteer, would put Boston firmly and permanently at the head of American yachting, in the place that New York and the New York Y. C. has always held, must be clear to all; and in spite of all that Boston has lately done for New York, it is not to be supposed that she has no eyes for her own interests. Year by year the racing as well as all the honors have gone to Boston, and it rests only with her yachtsmen when, by some such move as that proposed, she will seat herself firmly in the first place and leave New York nowhere. Only lately she has strengthened her position and weakened her rival's by adding the Hatch's suicidal attempt to lock up the America's Cup from competition. Now, with that safely out of the way, Boston has a clear field for international laurels without the necessity of sharing them with New York.

The other danger is hardly less serious. In spite of the annual whine over the vast expense of the Cup races to the New York Y. C., it requires a very slight knowledge of arithmetic to show the added income due to an increase of membership from about 400 to 600, and $50 initiation and $25 annual dues, and this increase has actually taken place since Genesta first challenged. The importance of an international contest in building up a club has been clearly proved, and with a most costly trophy now ready it will be strange if the new American Y. C. does not make a very strong effort to capture the benefits that would follow an international race of steam yachts. Certainly no love for the New York Y. C. will interfere to prevent it; quite the contrary, for money and labor would be freely given to place the new club ahead of its older rival.

None need suppose that because the discussion of the deed of gift has ceased for a time, or because no action was taken at the last meeting of the club, that the opposition to the action of the officers and the committee is dead. On the contrary it is growing quietly but none the less steadily, and when it does break out, though it may not be for some time, perhaps not until some such an event as is foreshadowed above shall have awakened the body of the club, there will be a day of reckoning for those who have betrayed the trust placed in them.

SOMETHING IN PROSPECT.

Editor Forest and Stream:

A rumor is taking shape that Boston is to build a keel cutter and that Mr. Burgess is to do the designing. This is almost too good to be true, but let us hope the scheme of crossing the ocean and beating John Bull at his own game may soon become an accomplished fact. Nothing could be more instructive or exert greater influence upon the yachting fleet of the future.

Hitherto the cutter in English hands has never received a fair show. Like a certain political party, the English could be counted upon to spoil a good case through lack of clear perception. In 1885 Genesta came out with alterations made the last moment before quitting England, so that she was an untried vessel and, as subsequent events have shown, about ten minutes slower than she might have been—just the difference between winning and losing the races against the Puritan. In 1886 Galatea tried for the Cup under jury rig and had her pains for her trouble. In 1887 Thistle was sent over and was woefully left in beating to windward through palpable lack of lateral section. A series of blunders, in which the cutter got no show.

We already know from American experience that on a small scale the cutter or loaded keel vessel is at least as good as the centerboard sloop, and fortunately we need no longer look to English cutters for further proof among craft from 70ft. down. But, thanks to English

this side of the Atlantic henceforth expect the issue between the leading types to be fought to its end by American cutters designed and sailed for all there is in that type which was original with the English but which has now been transplanted to American shores. That the big cutter will come out ahead as the small keel craft have already done is the firm belief of an

AMERICAN.

A WINTER CRUISE IN THE SOUTH.—III.

FRIDAY morning, Jan. 20, we made sail out of East Bluff Bay at 7 o'clock. Wind, W., fresh; thermometer, 40°. Ran E.N.E. about two miles to get a good offing; then headed the Monarch north once more, with the promise of a quick and pleasant run. The day was bright and gradually increased in warmth, until at 1 o'clock the thermometer stood at 60°.

We ran first for Gull Shoal Buoy to get our course, passed it at 8:15 and Long Point Shoal Light at 10:30; then making line of brush beacons which mark the deep channel for about five miles up to Roanoke Marsh Light, we passed the light at noon.

Lying in our old anchorage in Roanoke Marshes was the schooner Ocean Bird, which runs most of the fish caught in the pound nets here up to the railroad at Elizabeth City. The crew of the schooner recognizing us, saluted, which we answered by dipping the colors.

Shortly after noon we passed the schooner yacht Rebecca M., of Philadelphia, Capt. Frank Collum owner, bound south for Florida. We heard from her afterward. She went out Hatteras Inlet and was hove to in a gale she met outside for three days, but escaped serious damage.

Soon after we passed a black sloop yacht, also bound south, but could not ascertain her name.

We carried a good wholesail beam wind all the way up from East Bluff Bay, which sent us along at the rate of seven knots, a remarkably steady wind for a westwardly one. Most of the small craft in sight carried reefs. One schooner of about 20 tons came out of Oyster Bay and tried to give us a tussel, but gave it up after half an hour, in which time we gained a mile, and trimmed down for Croatan Light.

Roanoke Island, which we ran along the west side of, made the prettiest view we had on the cruise. The bright sun shone on the sandy shore until it almost made us believe the winter was over. The western side of the island has a bluff of sand 10 to 30ft. high along its whole length; on the top of the bluff are a large portion of the houses of the inhabitants. Some day when this section is well populated this shore will become one of our best winter resorts. The eastern shore of the island is a low marsh overflowed at very high tides, and almost uninhabitable. The one road is from one to two miles back of the western side and runs north and south from one end of the island to the other; it is pretty well built up. From this road small private roads run off to the farmhouses on either side.

Between Roanoke Island and the seacoast is Roanoke Sound; there is a very narrow channel through it for vessels drawing 5ft., but it is very little used, and a stranger could not find it, even under the most favorable conditions. Croaton Sound, however, on the west, is a splendid body of water. During the war the Confederates sunk vessels and drove iron-shod piles in the best part of the channel, so that it is best to follow the buoys. Most of these obstructions have been removed, but near the northwest point of Roanoke Island several still remain. They are marked by a can buoy on the south and a pile beacon on the north, both to the east of the obstructions.

Rounding these buoys we started sheet and working the slue through the shoal at upper end of Roanoke Island passed the red sea buoy into Nag's Head at 1:30. We then set course for a pile beacon which would give us bearings to enter Shallowbag Bay, but found it down, as was likewise the inside buoy, although two of the piles were standing, which sufficed for us.

The tide was about average height, which gave 5ft. of water in mid-channel into the bay, and as we drew 4ft. 9in. it was close work; the inevitable brush beacons were, of course, plenty, but what they marked was beyond our power of finding out. We dragged mud all the way in, and stopped once but came off easily, and dropped anchor off Manteo, the only town on Roanoke Island, at 3 P. M., logged 59 miles in 9 hours.

We had been wonderfully favored with fair winds so far on our trip. From the time we left Roanoke Marshes, bound south, until we reached Manteo we had not dropped our centerboard, except as before written, to mark shoal water; but a change was impending, as the dark clouds which were beginning to bank up in the north showed.

We went ashore and purchased supplies and found the only wideawake storekeeper we had seen since leaving Norfolk. The general store was well supplied with everything useful, indicating prosperity on the island. In fact all the town showed thrift and enterprise, that is, of course, considering the country; and there were even houses which had been given a coat of paint, of course not wastefully, but still it was paint, because you could lean up against it and not look like a miller after a hard day's work.

There was a natty looking schooner lying at the head of the bay, trim and neat as a Yankee fisherman. We were informed that she belonged to a widow, who also owned a small toy-like steamer that lay up on the marsh, and likewise the biggest fishing net on the island. The steamer was used to cast the net and the schooner ran the catch to Elizabeth City twice a week.

There is a steamer trades into Manteo twice a week, which carries the mail. The mail is still further distributed by a clinker-built boat which has two water-tight mail boxes built into her, alongside the well. When she is not needed by the mail man she is used for fishing.

Shad by the way were already being caught, not quite up to our Delaware River shad, but they had the same number of bones. Perch were plenty, good and cheap. We lived on perch for two days. We had decided to find some of the ducks which we had been informed bedded so thick in these waters that a man could walk on their backs from shore to shore, so, Saturday morning at daybreak saw Capt. Tom and myself in the yawl, nosing around among the bunch of islands lying in Roanoke Sound, between Roanoke Island and the beach. But we saw no ducks and no ducks saw us, barring a few blackies and a couple of brant. We concluded that liars were abroad in the land, and we sailed back. We came across traces of geese in plenty, but none in the flesh.

As we rounded the southern point of Shallowbag Bay on our return, we saw the gig, with the steward and two ladies in it, beginning to cross the sound, here about 3 miles wide, to Nagshead on the beach. A heavy sea was already beginning to roll up, and the heavy black clouds fast scudding along out of the N.E. looked threatening and ominous. We endeavored to attract their attention, to get them to return, and failing, started after them, but our heavy yawl was no match for the light rowing gig, and we were quickly left behind. Foreseeing that they could never get back with the storm that was brewing after them, we made haste to reach the yacht, and getting her under way, we started for Nagshead, and although dragging the mud all the way out of the harbor, fortunately kept in the channel and at 9:30 dropped anchor to leeward of the pier at Nagshead, in 6ft. of water; then having a few minutes for breathing, went below, and found my sister-in-law and the baby the only tenants of the cabin, half dead with fright. Knowing that the steward and the ladies were at Nagshead, and supposing Capt. Tom and myself would not return until late, she did not know who was getting the boat under way, unless as she explained, it was pirates trying to run off with them. And now for the reason of the escapade; there was of course a woman at the bottom of it. Mrs. Y. desired to send a telegram home, and finding the only way to get it off was to go to the Life Saving Station and telephone it to Kitty-hawk where there was a telegraph station, from which it would be forwarded, induced my wife and the steward to accompany her to the station.

They all had enough of it, for by the time they were half way across the ladies had to sit in the bottom of the boat, and every sea covered them with spray, making them bail constantly.

After getting everything shipshape I started ashore to see how the ladies were faring. There was such a sea running that the yacht was dipping the end of her bowsprit every few minutes, although we were under the lee of the pier. This made landing difficult; but it was accomplished after performing a few acrobatic feats, and walking up to the store I found Mrs. W. awaiting me there. Having seen the yacht start off and having experienced enough for one morning, Mrs. Y. and the steward had started for the station, two miles down the beach.

We found Nagshead somewhat different from a Northern watering place. There were in all a hotel and about thirty houses, all destitute of paint and the hotel on the point of being overwhelmed by sand. There was a bank as high as the building to the north of it and a fence perhaps 40ft. high had been erected to stay the growth of the hill in that direction, but in vain, for the fence was already overwhelmed.

It was bitter cold and the fine sand was flying so that it stung our faces like needles as we walked down to the sea. The beach is here half a mile wide, and a narrow-gauge track connects the hotel with a pavilion by the sea. Walking down this track we came to the main part of the town. Scattered along the beach were perhaps two dozen houses, nearly all destitute of paint, all weather-beaten and uninhabited; in the rear of each cottage was either a pig pen or a horse shelter; it was sometimes difficult to define which was which. How a horse could be driven through this fine sand I cannot imagine, but there were the hay racks and signs of a horse's presence.

The surf was grand, breaking out on the shoals a half mile from shore, and along the beach queer forms of shell abounded. Notwithstanding our anxiety about the strugglers, we could not refrain from gathering them, and before we made sail nearly a barrel full were snugly stowed away on board.

Seeing no signs of the truants we returned to the store at the head of the pier, and snugging up to the stove laid out to obtain some information regarding the place. We were told that in summer the hotel and cottages were crowded, but that in winter only the care-taker of the hotel and his family, a very pleasant Northern lady and two children, remained in the hotel, while the rest of the population consisted of one man, one woman and three boys.

During the summer a steamer runs over from Elizabeth City daily, but in the winter communication is limited to the mail boat twice a week and few small craft as were driven over in search of a shelter inside the pier.

We purchased among other things at the store what looked like a pipe made by the ancient mound builders, so rough and uncouth was it; but we were told that it was a regular article of commerce and a favorite with the people thereabouts. The bowl was made in South Carolina from the very coarsest clay, and no attention whatever was paid to cleaning off the burrs made by the joints in the mould, while a hundred colors glittered in the light. It was furnished with a stem made of a cane found in the vicinity, and the clerk kindly cut me off several of various lengths from his stock on hand. Anticipating a pleasant smoke, I began to put in a stem, which was about four feet in length, and had the pipe ready to fill. I was informed by the assembled population, who were watching my efforts with considerable amusement, that it was first necessary to burn the pith out of the cane with a red hot wire. Not feeling equal to the task of boring a crooked hole four feet long I gave it up, and concluded to keep the pipe as a curiosity, which I think it is. Every man down this way smokes, and nearly every one cuts his own cane and makes his own pipe.

Shortly before 3 o'clock Mrs. Y. and the steward turned up with red faces from the cold wind and sand and with their pockets full of shells. The life-saving people had tried to detain them until the weather moderated, and offered them food and such other courtesies as lay in their power; but, of course, they were anxious to get back to the boat.

The wind was now blowing a gale, making the task of getting aboard the yacht dangerous, and it was only accomplished after getting well wet through and performing some rope-walking feats.

The natives advised our getting lines out and laying inside the pier, which would afford shelter as long as the wind stayed in the north, but in the heavy puffs which every now and then swept down on us we noticed the wind had a little west in it. And should it veer a little more we would be unable to hold our ground. So we looked around for a harbor. Dead to leeward of us was Shallowbag Bay, a good harbor provided we could get in. The north wind was rapidly driving the water down into Pamlico Sound, so that there was already 3in. less water in the bay than when we left in the morning, and we didn't fancy getting stuck in that kind of a hole. Twenty miles to the west of us, giving a beam wind, was Alligator River in Albemarle Sound, while if when we got into Croatan Sound we found the wind too heavy, we could always run 8 miles south to Roanoke marshes. And again, if the wind fell a little after we got out in the sound we could lay our course across Albemarle Sound into North River, where we were aiming for; so we concluded to get out while it was still daylight.

Putting two reefs in the mainsail and jib and getting our preventer stays up, we got under way at 4:30. The way the Monarch struck out was a caution; she had more sail than she could carry properly, but we had to go. The water is only 8ft. deep the whole length of Nagshead, some 8 miles, and the speed we were going churned the sand and mud up on the bottom and threw a wave at the quarter which was higher than the rail. We made the 8 miles from the pier to the black beacon at the head of Croatan Sound in a trifle over 40m.

Just as we flew past the beacon there was a crash, the jib flew up to the masthead, the jib stay came running back alongside the yacht, the jib-boom, some 22ft. long, went sailing up in the air and came down astern of the yacht and stuck up in the sand, while the mast swayed backward.

CHAS. L. WORK.

CHICAGO YACHTING—A WINTER REGATTA.

IT has taken a decade or two of experimenting in the direction of yachts for Chicago to learn what her possibilities are in the way of yachting. For a season or two, owing largely to the energy of a few members, the Chicago Y. C. seemed to have been put firmly and squarely on its legs—sea legs—races were organized, prizes of such value offered as to induce foreign yachts to compete, and the yacht-loving few of the city began to hope that yachting had come to stay. But our yachts have been sold or taken to other waters, the Chicago Y.C. has practically disbanded and the attempt made by a rival club for existence has been dreary and feeble, because of the loose rules governing the admission of members.

The fact of the matter is that although the dangers of Lake Michigan are the greater than of other open bodies of water (public opinion to the contrary), harbors in the neighborhood of Chicago have been few indeed. They are improving, however, and before very long there will be, perhaps, all that we can hope for in this line. Going south, for example, good shelter for boats may be had 12 or 15 miles off. Going north, at Evanstown, distant 11 miles, a pier offers a good lee. At Highland Park, a dozen miles further, a long pier has recently been built. The Government intends building a regular harbor a couple of miles further than this, at Highwood, the new army post. Ten miles still further comes Waukegan Harbor, ample for yachts of small tonnage at present, and within a year or two, for vessels of any size, and so on, with Kenosha and Racine, a harbor may be found at short intervals all the way to Milwaukee.

A cause for the bad name that Lake Michigan has had given it is the unsuitable character of the boats that have been used on it. The skimming dish, in its most extreme proportions as developed from the requirements of harbor sailing, has been pretty thoroughly tried on these waters. With a westerly wind this is well enough, and the boat not unsuitable for the water, it being then smooth, but with an easterly wind the character of the water is completely changed, and we find ourselves "on the open sea" with a boat which perhaps yesterday was all that we could have wished for, but to-day entirely unsuitable.

Some fine yachts have been owned in Chicago, but there has been no interest in racing, for nothing has ever been matched closely.

It is claimed that there are but two types of boat at all suitable for Chicago waters; first, something non-capsizable and sea-going, that may hope to live wherever vessels may live; the other so small and light that it may be pushed through surf and taken out of the water wherever necessity overtakes it.

Last season some enterprising spirits, with a better appreciation of the possibilities and probabilities of the circumstances, organized what they have called the Corinthian Y. C. of Chicago, and decided on boats with a length of 18ft. No time allowance is given, and complete latitude with regard to character and amount of rig is allowed. Generous prizes are offered, and five races, two a month, are sailed for them. Each boat receives a certain number for its place in each race, and these are added at the end of the race, and prizes given in accordance. A favorable feature of this system is that it will foster the best all-round boat, since such may hope to make the best average showing. Of the five races three of them are to be sailed to windward or leeward and return, the other two on triangular courses. Provision is made (in the event of such weather as to make outside sailing hazardous) to prevent disappointment by a race inside the harbor. This, with the many laps, will encourage smartness of handling. Last year, in addition to the series of five races, about five informal contests were indulged in, succeeding fish dinners, etc., held at some miles from the city. A repetition of last year's programme has been laid out for the coming season. The fleet last season numbered only seven or eight boats, but in one or two of its races invited competitors made the number something over a score of sails.

It is reported that five 18ft. boats are positively to be built for this club between now and June, and as many more members are making up their minds. Everything in the way of type is being talked of, except the extremely narrow cutter; outside ballast with a wine glass midship section. Everything between deep draft and extremely shallow, and one or two are going to try what can be done with an exaggerated canoe.

The crew in the races is limited to five. The ballast is fixed, and all to be below the floor. The rules necessitate at least half decking, and, barring the fact that one-third of the overhang is charged for in measurement, the rules and laws are judicious and wise. Should this club have more than an ephemeral existence, a few years may teach from what it does, more than is now known on the subject of 18ft. racers, sailed with limited crews and stationary ballast. Nothing shows the present interest in this matter here, nor promises so favorably the coming indulgence of this interest as the success of an experiment tried by the Waukegan firm of builders, R. J. Douglas & Co. For a couple of months past there has been a permanent regatta in progress on dry land, adjoining the Board of Trade building, in Chicago. A very large room has been taken on the ground floor of one of the finest office buildings, beautifully decorated, and crammed rather unpleasantly full of boats. A 12lb. canoe, a 10ft. canoe, and a couple of 26ft. steam launches give the extremes of what may be seen here. Twenty varieties of rowboats, in all grades and styles of construction and a variety of models, several sailboats, four or five launches, hunting boats, combined row and sailboats, canoe yawls, a large variety of rigs, and an excellent show of fittings in the way of hardware, spars, oars, sculls, sweeps, paddles, tents, etc., together making such an attractive show as has rarely invited the water-loving public's attention.

The place has become rather a rendezvous for dropping into and talking water sports, and the manager of the exhibit states he has had as many as 1,500 people in a day looking at what they have to show. It is not surprising, since an exhibit of this kind is interesting, not only to practical sailors, but to a large class who from lack of taste or timidity never go aboard a boat, but admire them as things of beauty.

To Messrs. Douglas & Co. are due the thanks of those interested in boating on Lake Superior, for they have at least awakened a real live interest in the subject months before the seasons would have done so, and if they produce right along as good and fine work as the boats in their exhibit show, their success as builders will be assured.

LAUNCH OF THE NAROD.—On Feb. 22 the steam yacht Narod, built by Theo. Durand for Mr. J. G. Doran former owner of the steam yacht Angier, was launched from Englis's old shipyard, at Greenpoint, Long Island. The Narod (Doran) is a modern craft, 120ft. over all, 18ft. beam, and 7ft. draft. The owner has been guaranteed a speed of 18 knots, but there is nothing in the model to justify such claims, and if she jogs along at a dozen miles she will be doing very well indeed. The yacht is flush decked, with a long pilot-house forward and a very high companion at the extreme after end. From the latter the owner's quarters are reached, the crew and cook being forward. She will be propelled by a Wells balanced engine, quadruple expansion, of 500 H. P., with a 4ft. 6in. wheel. The rig is the ordinary two-masted schooner. Fortunately, the launch passed off without any such mishap as attended the launch of the Norma several years since, but the risk of launching a vessel of this sort with a large number of persons, many of them ladies, on deck, is a very serious one, and apt some day to result fatally.

NEW YACHTS.—The centreboard sloop building at Englis's yard for Capt. Williams, is now in frame. She is 53ft. over all, about 46ft. l.w.l., 17ft. beam and 5ft. draft. The oak frame is heavy enough for a 90 ft. schooner, but as she is not for racing the weight will be of little consequence. She will carry all her ballast inside.... A compromise yacht is now building in Greenpoint for C. S. Chard, East River Y. C. She is 31ft. over all, 26ft. l.w.l., 12ft. beam, 5ft. draft, with 2½ tons of iron in keel, and will be sloop-rigged.... The Burgess steel steam yacht is for Mr. O. B. Sensing, of New York.... D. J. Lawlor has designed a steam yacht, to be built of steel for a New York owner, to be 101ft. l.w.l., 20ft. beam, and 6ft. 9in. draft.... At City Island, Picograss is busy with the frames of the new Auchincloss yacht. She is laid down and moulds made.

HUDSON RIVER ICE YACHT CLUB.—We have received a copy of the club book for the present year. The officers of the club are: Com., J. A. Roosevelt; Vice-Com., J. C. Barron; Sec., E. P. Rogers; Treas., Archibald Rogers; Meas., Chas. Van Loan; Regatta Committee, J. A. Roosevelt, H. Livingston, W. G. Morse, W. H. Storms, J. R. Roosevelt. The club has now 65 active members and a fleet of 32 yachts, all but one sloop-rigged. The largest yacht, Avalanche, is 49ft. 2in. over all, 26ft. 7in. from rudder post to center of runner plank, 26ft. 8½in. beam, and carries 825 sq. ft. of sail. Unfortunately, the weather this winter has been such that no regattas have taken place, though the yachts have been in use for sailing and scrub races.

LOOK OUT, BOSTON.—Already the papers are making matches between the three new Boston steam yachts, but in naming the victor they leave New York entirely out of the count. Mr. Burgess' and Mr. Frisbie's productions only aspire to a mean 15 miles or so, but New York puts her pride on a craft guaranteed to make 18 knots. Wait until she comes alongside these presumptuous bean pots and proves to them that New York can still build fast yachts.

CRUISING.—Coronet, schr., Mr. R. T. Bush, is fitting out for a voyage to San Francisco.... Mohican steam yacht, Wm. Clark, arrived at Nassau on Feb. 16, and sailed four days later for Port au Prince .. Gitana, schr., W. F. Weld, sailed from St. Augustine for Boston on Feb. 22.... Montauk, schr., J. E. Brooks, was spoken on Feb. 22, 15 miles north of Havana.... Wanderer, schr., Mr. G. W. Weld, sailed lately from New Bedford on a southern cruise.

VIVID-WIZARD.—A series of matches between these two yachts, the former owned by Mr. W. A. Wolff, the latter lately purchased from Vice-Com. Colt by Mr. Ernest Staples, is reported as arranged for next June; the first, twenty miles to windward or leeward and return from Scotland Lightship; the second, over New York Y. C. course, and the third, if necessary, over a triangular course outside of Sandy Hook.

HULL Y. C.—Officers, 1888: Com., H. E. Converse; Vice-Com., John J. Henry; Rear-Com., R. S. Whitney; Fleet Capt., L. Stewart Jordan; Sec., Wm. A. Cary; Assist. Sec., Frank C. Brewer; Treas., Chas. C. Hutchinson; Meas., Ambrose A. Martin.

MARGUERITE.—It is reported that Capt. Haff, of Volunteer, will command Mr. Burden's new schooner.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

G. W. T., Toronto, Canada.—Have rabbits fur at birth, or is the young absolutely naked? Ans. The young of the true rabbit (*Lepus cuniculus*) of Europe are naked at birth. Those of the gray "rabbit" of America, (*L. sylvaticus*) which is really a hare, are born with fur. So both may have been right, according to the species which they had under discussion.

C. K., Davenport, Ia.—As "Hallock's Gazetteer" is out of print, can you give me the name of a book that gives names and natural history of the fish found in the waters of the United States? If so, let me know the price. Ans. If you want only the fishes caught for sport, we can send Norris's "American Angler's Book," $5.50, or Frank Forester's "Fish and Fishing," $2.50. These are general works. If you want a book containing all known fish in America get the "Synopsis of the Fishes of North America," by Jordan and Gilbert, published by the Smithsonian Institution. This is a technical book, dealing with species only, not mentioning habits nor modes of capture.

G. N. B., Billings, Mont.—Will you please inform me whether the grizzly, cinnamon, brown, silver tip and range bears are distinct species each, or how many? I have no work to refer to at present, but have always understood that they were one and the same species of bear, varying only in shades of color, size, etc. Ans. We reprint from a back number: In North America there are three species of bears—namely, the polar bear (*Ursus maritimus*), the black bear (*U. americanus*), and the grizzly bear (*U. horribilis*). The first of these is never found within the borders of the United States. The second is characterized by short claws upon his front feet, not much if any longer than those on the hind toes. In color he varies from glossy jet black through dark and light brown to pale yellow. He is found throughout North America at large. In shape he may be short or long, stout and poly-poly, or slim and slab-sided. The third species, the grizzly, has long claws upon his front feet, much longer and stouter than those behind. He is larger than the black and occupies the western half of the continent. He may be of almost any color of the rainbow, and for each color there is a local name. In California, and in the mouths of well-informed people generally, he is a grizzly wherever he is found, but in Idaho, Colorado, Wyoming and parts of Montana he is a "cinnamon," a "range bear," a "gray bear," a "silver tip" or a "bald face," according to the ignorance of the man who sees him or his hide. He is, however, just as truly a grizzly as his California brother, and he can be distinguished always by his long fore claws. Color is absolutely valueless as a specific character in the grizzly and black bears.

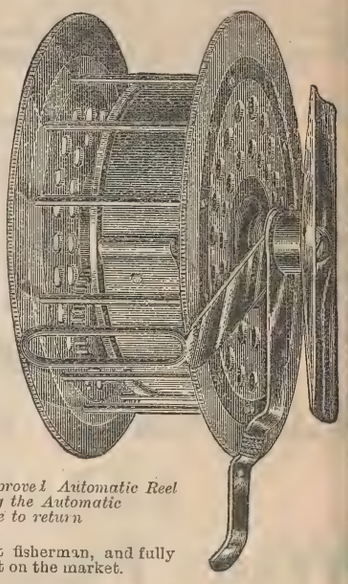
A. G. SPALDING & BROS.,

MANUFACTURERS OF AND DEALERS IN

FISHING TACKLE OF A HIGH GRADE.



The Bray Fly Book.

The Bray Fly Book was first introduced by us during the season of 1886; it is the perfection of a fly book, and has given the best satisfaction of anything of the kind we have ever seen, and no angler has ever used it who is not enthusiastic in its praise. In this book the flies may be as quickly attached as thrown into an ordinary envelope, and at the same time perfectly secure, while they may be as readily detached; the snell regardless of its length is at all times kept perfectly straight (the advantage of which every angler will quickly appreciate), and each fly stands out so that one can see in an instant his entire assortment and select the one he desires. The book is made of good material and in the best possible manner.

THE Improved Automatic Reel.

PERFECT AT LAST.

In calling the attention of the public to the Automatic Reel as manufactured and sold in 1888, we wish to point out the improvements made in its construction, and to emphasize the advantages we claim for it; advantages hundreds of expert fishermen have testified to.

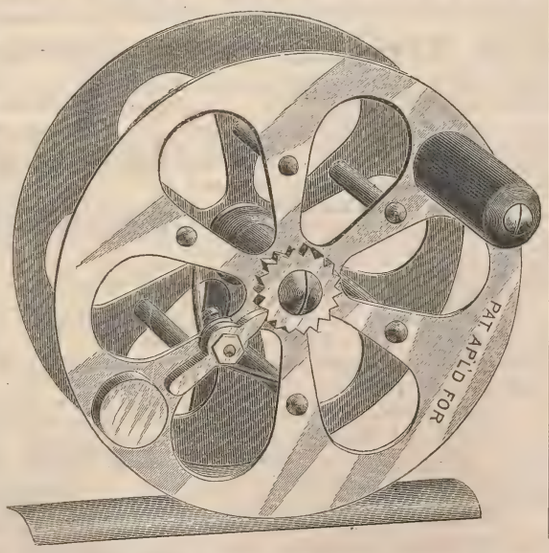
With regard to improvements, besides two sizes of Reels, Nos. 1 and 2, which are made of metal in three different styles for each size, Brass, Nickel and Bronze, we have also manufactured a new Rubber "Automatic," about 1 ounce lighter than the metal, and regard it as our best Reel, and of the same sizes as No. 1 and No. 2. All of these Reels are made from first-class stock, and are exquisitely finished.

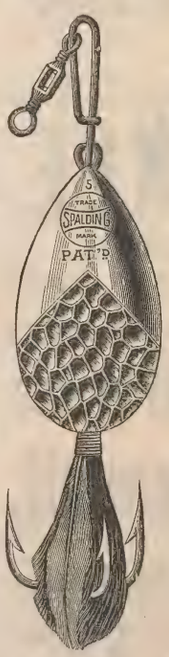
The mechanical parts having been thoroughly reconstructed, are far superior both as to strength and durability, at the same time retaining all the required activity and sensitiveness when in use, and in fact perfect in all its wearing parts. Each part of the reel being so constructed that any part thereof may be duplicated in case of accident at a trifling cost

We guarantee that with our present Newly Improved Automatic Reel when once used, no fisherman after giving the Automatic Reel a thorough trial will ever venture to return to the old style Crank Reel.

Every Reel is separately examined by an expert fisherman, and fully tested to its fullest capacity before it is put on the market.

The Spalding Premier Split Bamboo Rods,





With Patent Serrated Waterproof Ferrules, are built with Special Reference to Uniformity of Spring and Durability, and have no equal. We guarantee them to be absolutely perfect. The reputation they have gained is a guarantee of their merits.

The "Gogebic" Trout & Bass Reel.

In presenting this line of Reels to anglers, we call attention to the moderate price and practical value over the majority of reels, as are pointed out in the following description:

They can be changed at will from trout click to free running bass reels. The large diameter of spool makes the multiplication equal to any quadruple reel made, and the open side discs permit of a free circulation of air, which dries line quickly on spool, and is of practical value in keeping any line in prime condition, thereby preserving it from rottenness, which often occurs on the old style closed disc reels where line is left on wet.

THE NEW SPALDING Combination Bait

We consider one of the most attractive Baits in the market. It is Hammered same as our regular Hammered Bait, and made of three colors, Gold, Silver and Red, arranged as follows: The Hammered part Silver, the part above Gold, and the inside Red. It is in the water the brightest Bait made. Made in ten sizes the same as the Hammered.

The T. B. Mayell 6-Strip Hexagonal Split Bamboo Rods.

Mounted with the Improved Shouldered or Swelled End, German Silver Ferrule, Milled and Solid G. S. Reel Seat. Makers' name on each Rod. For those desiring a First Class Split Bamboo Rod at a moderate price we would respectfully call attention to the Mayell, which is built in first class, workmanship style, and is in every respect a rod which we can recommend as A 1.

CANVAS CANOES;

AND

HOW TO BUILD THEM.

By PARKER B. FIELD.

The directions are as plain and explicit as possible for the construction of a canoe 13ft. 6in.× 27in. at an expense of not to exceed $7, while the simple operations are within reach of the skill of any careful amateur. No technical terms are used and the successive operations are carefully described in detail, each step being made clear before proceeding to the next. Illustrated; paper, 48 pages; price 50 cents.

THOS. H. CHUBB,

The Fishing Rod Manufacturer, Post Mills, Vt.

WOODCRAFT.

By "NESSMUK."

A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain and intelligible English. The chapters are written to teach the amateur to journey through the wilderness with ease; to sleep on a fragrant elastic bed and pillow at night, instead of abrading his vertebræ against roots and stubs; to go light; to keep warm and dry; to cook plain, wholesome meals; to come out of the woods refreshed and comforted; to get a dollar's worth of recreation for every dollar spent. It is the thing that thousands of novices are looking for, because it gives them just the advice and practical information they want. Then there are hints as well for old campers, who will be surprised to see how much "Nessmuk" can tell them; and stories anecdotes, and a never-failing supply of mother-wit for the entertainment of all who can appreciate a good thing told in camp or in print. Cloth, 160 pages, illustrated. Price $1.00.

TO ADVERTISERS.

Hereafter it will be necessary that all advertisements which are to appear in FOREST AND STREAM *of any week, shall be received at this office not later than the afternoon of Monday of that week. To this rule no exception can be made.*

IN BEHALF OF THE PARK.

A BILL for the enlargement, government and proper protection of the Yellowstone Park is now before Congress. It has been favorably reported from the Senate committee to which it was referred, and there is reason to hope that in a very short time it may come up before the Senate for action.

This bill represents the combined wisdom of those most familiar with the Park and most interested in it, of men who work for the Park because they know that it is a possession enormously valuable to this country, and that on its preservation depends the development, almost the habitability of a vast area of the Northwest. Perhaps there are some points about which all these men are not agreed. Perhaps one man would like to see the bill changed in one particular and another in a different point, but they have sunk their individual differences of opinion. Being intelligent, caring intensely and disinterestedly for the protection and improvement of this reservation, they see that the two points of overwhelming importance at the present time are (1) the enlargement of the Park, and (2) the establishment within its borders of a government, an authority which shall have the power to punish offenders against the regulations of the Interior Department, and to protect the property and persons of those who may visit it. These two essential points are satisfactorily covered by the present bill, and for this reason, if for no other, it should become a law. The bill contains a number of other wise provisions, and as a whole is wisely drawn.

There seems no reason to doubt that it will pass the Senate without difficulty, just as did a similar bill, against which but eight votes were cast at the last session of Congress. Whether it will be opposed in the House is not known. Its importance, viewed from an economic standpoint, should recommend it to every practical man who has the country's good at heart.

And now, what are our readers going to do to assist in the passage of this wise and most important measure? Every sportsman desires to have the great game which inhabits this Park saved from the extinction which is so surely impending for each species, unless rigid protection is afforded it here. Every man who has traveled, or expects to travel, wishes to have the natural wonders found within the Park preserved from defacement and destruction. Every citizen who has his country's good at heart will be anxious to help forward the enactment of a measure which will aid in developing an unsettled country and will add, in the course of a few years, many millions to the material wealth of the country.

In another column will be found a form of resolution in which are briefly set forth some of the reasons why this bill should pass. It is hoped that every reader of the FOREST AND STREAM who is also a member of a gun club, game protective society or association of any kind, will endeavor to have the body to which he belongs pass these or similar resolutions and send copies of them to the Congressmen and Senators from the district in which he lives. We have also prepared blanks and forms of these resolutions in the shape of a petition, which will be sent to any one who may apply for them for circulation and signature among his neighbors.

We propose to publish from time to time in the FOREST AND STREAM the names of all signers of these petitions, and those who take the matter in charge are requested to send us the names of the signers as fast as they come in.

The prospects for the passage of this bill were never as bright as they are to-day. Never before were so many people alive to the importance of saving this reservation from the dangers which threaten it. If the readers of FOREST AND STREAM, who more than any other class of our people are interested, will bestir themselves in the matter, we believe that the bill can be carried through.

SNAP SHOTS.

THEY are discussing the census of deer in the Adirondacks, and one and another declare the exact number existing there. Hunter and Guide Warren Humes, of Harrisville, in Lewis county, says there are just 60,000, and if floating were abolished they would increase to 100,000 in five years. He has the wolves down to exactly 100, while the bears are 2,000. Mr. Humes is probably right; he has at least an impregnable position from which no one can rout him, for all he has to do is to stick to his count, and no statistician can prove him in the wrong. It is one of those things about which nobody knows anything, and anybody can safely profess to know everything. Some months ago a New York gentleman who had been out to the Western game regions was credited with having counted all the buffalo on the continent, and he had them ciphered down to exactly 700; he now reports their number at 437.

The New York State Association for the Protection of Fish and Game will hold its annual convention at Auburn next June. Some years ago we pointed out that as this body was purely a trap-shooting society it would conform to the eternal fitness of things by a change of name, eliminating the protection portion of its title. Nothing would be lost by the change, but much would be gained. Some such name as the New York Trap Shooting Association would more truly represent the character of the association, and would not subject it to the embarrassment which occasionally attends the wearer of a misleading name. This hint is not intended as any criticism on the present membership of the association, and there is no call for the Niagara contingent to wax indignant about it at this time. It is hoped that the desirabilty of a change will be considered at Auburn next June.

In Helen Gray Cone's story of "Hercules: a Hero," in the *Century* for March, one of the leading characters, who is by no means a hero, goes shooting with a breech-loading gun; and his unlettered host is made to speak of it as a "britch-loader." This mode of indicating the pronunciation implies that the author of the story thinks that breech is not correctly pronounced with the short sound of *i*—britch; but Webster says that it is. The Imperial Dictionary, an English authority, on the contrary, gives it as "brech," the *e* long. There is excellent authority in current good usage for either. The word breech is a singular form developed from the plural breeches. Breeches, an article of male attire, is commonly pronounced britches, and it was pronounced in the same way hundreds of years ago, for the word occurs in "Dampier's Voyages" (1695), where it is spelled "britches," and there is abundant evidence in Dampier's pages that he spelled words as he heard them pronounced. If his ships and his crews had been fitted out with breechloaders, he would have spelled it "britchloaders."

This is a great year for the bench show giving clubs The New York show brought out an unprecedented lot of dogs, the greatest collection ever gathered under one roof in this country. Philadelphia had more entries than ever before, and it is reported that the exhibition was a financial success. Boston has up to date three times as many entries as were in for the corresponding period last year, and the indications are that it will share in the show prosperity of 1888. All this goes to prove that the taste for fine dogs is increasing; more people are engaging in dog breeding; the quality of dogs is improving so that more owners have specimens which they are willing to put on the bench; and the public by increased patronage of the shows testifies to a growing appreciation of the several breeds. Take it all in all, this is a great year for dog shows in America.

Our Albany correspondent reports that Mr. Verplanck Colvin's Adirondack Survey enterprise is in straits because of restricted appropriations. This is a tremendous pity. We do not profess to know anything of the value of Mr. Colvin's work in the woods, but his printed annual reports have afforded much mildly thrilling literature adapted to use in young ladies' seminaries. Verplanck's interminable recitals of tenderfoot adventure might reasonably be expected to go on, like the Adirondack brooks, forever, if the appropriations held out; to cut him off short is a fine example of parsimony wedded to cruelty.

Business is business; sometimes it is easily practicable to combine business with play; but it takes a real genius to get advertising for his wares out of an outing. A New York man has done it, as witness this paragraph from one of the daily papers:

——, of —— & Co., the Sixth avenue druggist, has gone to Florida with his family for rest from overwork in his business, which has been rapidly increased from one of simple retailing to that of large manufacturing. He will go direct to Green Cove Springs, where he will be met by a yacht, and will amuse himself with hunting, fishing, &c.

Thirty different bills relating to game and fish have been presented for the attention and more or less intelligent action of the Senate and the Assembly at Albany. They range in quality from fairly good to thoroughly bad. Some of these days a system will be devised by which no bill will be favorably considered by the Legislature unless it shall first have been approved by the sportsmen of the State, their will expressed through a duly authorized representative.

The Committee on Agriculture of the Massachusetts House of Representatives has reported that it is "inexpedient to legislate on an order relative to bounties for destroying birds and other animals injurious to crops." This wise action is largely due to the efforts of Mr. H. A. Purdie, of Boston, who appeared alone before the committe and brought to its notice the investigations of Dr. B. H. Warren and others into the question of the food of rapacious birds.

Capt. A. H. Bogardus announces his retirement from the field of trap-shooting. He has won his honors and worn them long. Advancing years bring dimness of sight and dull the edge of ambition. The Captain retires on his laurels; but he has a son, Henry, aged ten, who is his father's pride as a youthful shot and some day may be heard of in contest for high honors with the gun.

A large stuffed eagle, seven feet and one-half inch from tip to tip of wings, will perch on the helms of the victorious party next November, in Olney, Ill. It was shot last week, and has been set up at the expense of the Logan Republican Club and the Democratic Club, the ownership to be decided by the results of the Presidential election.

THE ROCK CLIMBERS.

XI.—THE RETREAT.

SOMETIMES forces are routed; sometimes they withdraw or retire for a better opening. The word "retreat" is broad enough to cover either maneuver, and I use it without prejudice to future tactics.

By counting back on the calendar I make it Oct. 25, at 1 P. M., when Jack and I left camp with a small pack mule and a quantity of blessings. This reference to the calendar is needed because, as I had lost my watch key and all count of week or month, time had fallen into a tangle which could only be strung into order by much figuring.

Camp had been pleasant. Altogether too pleasant; for a succession of elemental battles without and an abundance of good food within were making us sedentary, if not lazy and unduly fat. But I had to go, for, though my own reckoning was lost, I felt sure that somewhere in the business world almanacs were still consulted, and ignorance is ill-received as an excuse for broken engagements. Besides, there was a crumpled rose leaf in my lot. I am a follower of St. Paul, being obliged for my health's sake to take each day a certain fixed quantity of spirit, and the lack of this necessary medicine is severely felt.

This seems a simple matter to provide for, and so it is in most places; but our chosen hunting ground lay between the Indian police on the one hand and the red tunics of Canadian prohibition on the other. Whisky dealers were criminals, and he who drank liquor from the purest motives was liable to fine, imprisonment, confiscation and all the horrors of the law.

Now mind, here is no cavilling at the righteous and necessary statute which forbids whisky among the Indians, nor do I pretend to question the propriety of Canada regulating or stamping out the liquor trade in her Northwest territories. This is but a dry relation of personal fortunes, relieved by allusions to local history, and even a judge, when not on the bench, may be allowed to have an extra judicial sympathy with law breakers, while every American is entitled to his share of broad Yankee charity for the weak and the wicked.

Of course this repression makes smuggling profitable, and has a tendency to make drinkers sots. When a Canadian, I am told, gets hold of a bottle, he goes around the corner of the house and, thinking he may never get another chance, doesn't stop his draught till the bottle is empty.

Geography is tinged by the business. I ascribe, perhaps on too scanty grounds, the name of the thriving "Whoop up" to a fit of drunkenness. "Stand off" is certainly so called because a band of smugglers, cornered by the mounted police, took to the brush and proposed to stand off the Dominion, did, in fact, stand off their pursuers.

When illegal profits came up to a thousand dollars a barrel, as was said to be the case sometimes in the Indian trade, a man could well afford to follow the example of an acquaintance of mine who started his six-horse wagon laden with nine barrels of whisky, and furnished with a whipper on each side, at full speed across country, up hills, down cut banks, through creek and slough, as the crow flies, till he reached his goal.

The danger of the trade was full of attraction to men of nerve. Of many exciting incidents that come to one's knowledge, some must be suppressed from motives of personal confidence, but the tragedy of Calf Shirt happened so long ago, and is so well known as to be fairly public property. It well illustrates the savage brutality of the place and time.

A trader, named, for the purpose of this narrative, Jacobs, had a post among the Bloods. His log house was built of two thicknesses of timber, one inside the other, with a little space between. Hollowed in there, was a niche in which was set a barrel thus made invisible. Inside on the floor stood a small keg, from which the liquor sold was drawn, and the connection between the keg and the barrel was hidden from the eye.

Now this keg possessed to the Indian mind the qualities of the widow's cruse. The bibulous tribe had failed to dry it. It was "medicine." A vessel of supernatural capacity. Calf Shirt, chief of the tribe, wanted that keg.

Calf Shirt was a brute among savages. His "bad eminence" was feared and hated by his subjects. Of his three squaws all were mutilated. He bit off the lip of one when she lifted her face in obedience to his command to kiss him, and the others had been victims of similar mayhem. One day Jacobs was alone in the post when Calf Shirt entered, drunk and determined but in no haste. His arms were crossed and in the right hand, which rested on his left elbow, was his cocked revolver, which as he leaned against the counter pointed at Jacobs. There were several pistols in the store scattered about the piles of blankets but Jacobs could not get one without making a motion that would have betrayed him, and given the signal to Calf Shirt to open fire. While this dangerous position was being maintained, the Indian drunkenly deliberating on his next step, the trader's cook came in. Jacobs spoke to him in English, a language unknown to Calf Shirt, telling him to get a revolver at once. The cook stepped behind the counter and seemed to busy himself among the pile of dry goods. He finally got the pistol but was stopped from cocking it by Jacobs, who feared that the significant noise would start Calf Shirt shooting.

The dilemma was solved for the moment by Calf Shirt himself, who turned and walked out. Evidently the Indian thought himself out-generaled. The truce was short. In the back room of the post were a lot of men playing cards, half-breeds and others employed by the trader. Many of these men had squaws for wives, and soon one of these women came running to tell that Calf Shirt, in an access of fury, had sworn to kill all the whites and was coming with a Winchester to do it. The party moved to the front room. In a moment the door opened and Calf Shirt stepped in. The whites fired at once and the chief, with sixteen holes in him, turned, grunting his death-song, and walked away. About thirty yards from the house was a depression in the ground. The Indian, with failing strength, fell when his foot went into the hole. He had dropped his rifle, but half turning on the ground he emptied his revolver fruitlessly at his enemies and died.

Let my one example suffice. Not all the encounters with Indians, however, were blessed with cheap success, and one may hear men tell of occasions where the natives "wooled them plenty" as they say.

At Lethbridge I had, for sanitary purposes, bought two gallons of whisky at a great price. Naturally the quality was inferior and the bottles were corked with combinations of rag and stick, little attractive. Some bottles were smashed in transit; we stopped over night in a snow storm at the house of a philosopher, who, partly by my want of attention, drank three bottles before we left in the morning, and some of the liquor, too, was used up in a way which by comparison I can almost call legitimate, but all was gone. Need I say that business engagements became pressing?

We left with the southwest wind at our backs growing momently stronger and warmer, and coming in heavy swirling gusts. The snow, little by little, ceased to crackle beneath our footsteps. Soon it became good material for snowballs, and before we got clear of the mountains it was really melting a little.

It was creditable to me, and I record the fact in haste, that the change in weather pleased me. My friends at least would profit by a kinder sky than had been spread over me.

It was on the second day out that the rolling foothills became more prairie-like and finally flattened down to the ordinary ground swell. On the way we met a porcupine. He sat up as we rode to examine him, quite master of the situation. His black monkey-like face framed in long yellow hair gave him the look of an old Indian. He satisfied his curiosity about us in a few minutes, and then began waddling over the prairie again digging his supper. We stayed that night at the Mormon settlement, a speck of neatness, order and industry refreshing in that slipshod land. Jack, whom no exertion tires out of his cheerfulness, went whistling at his tasks, and soon the animals were fed and the beds were ready.

A fragment of one of Jack's songs runs in my mind. It recites the alas! short adventures of an early immigrant. The unpretending melody, the name so obviously invented for poetic purpose and the simple directness of the verse struck me. Here it is:

"One night he ran against a knife
In the hands of old Bob Kline,
And in his bloom went up the flume,
In the days of '49."

I have heard that Mormon women were ignorant, blinded foreigners. Some of them may be so. My experience is small. But where we stayed the wife of the house was as bright and capable as possible. I have not met her superior, no not in Israel nor in New England.

A degree of family affection seldom met with, a piety sincere and open, and industry and neatness of a rare type marked the household. The wife delighted us with an excellent piece of burlesque acting and sated us with Graham gems and domestic butter that can only be compared to "manna in the wilderness," for those who have no personal experience of manna admit the principle that "the unknown is magnificent."

And the fine old Englishman who accompanied me next day told me how well he had settled three of his sons in Utah and what he was going to do for the fourth! I confess to getting a dose of Elijah Kimball's prophesies and a batch of miracles all too recent to inspire respect. Your miracle must have "some relish of the saltness of time" to go down easily.

Well, puppy dogs and Mormons are near my heart, and probably I do them more than justice. Time will tell.

Far in the southwest the enduring menace of the cloud bank still hangs to the necks of the mountains. Their snowy ridges peer above, all dominated by the dark gray profile of the towering Chief. Farewell to these rugged friends. Perhaps even their harsh behavior was meant as a rude caress. They rest in memory glorified by sunset clouds.

My span is more than run, yet I would like to say a word about the Canadian Pacific Railroad. The scenery of the Selkirks is finer than that along any road I know of, except the Central Pacific at "Cape Horn." Even Chief Mountain would be but a brother among sovereigns in the group that gathers around the glacier. The dining cars are as good as ours, and stay with you much longer at a stretch. The eating stations are of that subdued elegance which I have, perhaps wrongly, called Eastlake, with oiled wood, maroon panels, and what not; and some of the cars have a bath!

Now, I have met but one sleeper with a bath, and in that tub the porter had piled his personal bundles, and stated that the cold made it dangerous to use water. By a grim demeanor and a proud brow I imposed on that man, and he told me in the morning that the bath was ready. Whether people without my personal gifts can get a bath I can't say.

My bloodless campaign is over. My gun rests and rusts. But my memories of the trip are all pleasant, as his must be who has for companion one whose rifle misses only enough to give its unnumbered successes the pleasure of a delicately small uncertainty, and whose friendship never misses at all. H. G. Dulog.

A DREAMLAND STRIKE.

An old man sat in his easy chair,
His papers around him lay,
Eyes closed in sleep and free from care,
His thoughts were far away.

His good old wife in sweet voice read
A sketch of wood and stream,
Then ceased, and softly speaking, said,
"He hears, but in a dream."

From moving lips a placid smile
Played o'er his furrowed face,
"Go on," he said, "another mile,
I'll tell you just the place.

"I know it well, the high rocks near,
The overhanging vine,
A little further on, my dear,
There's sport for rod and line."

Still smiling, musing in his sleep,
"Not far—there in the west—
Where yon great hills their vigils keep—
There we—shall be at rest."

Then suddenly: "Now, back away!
Great Cæsar, see him spin!
See how he flings the tinted spray!
Now, now John, lift him in!"

Roused in his sport, and wide awake,
"Ah! that was something like;
A glorious dream of woods and lake,
Withal a splendid strike!

"With flash and gleam he went and came,
And bent my old bamboo,
And fought for life, for he was game,
A good five-pounder, too!"

Good souls, when you've at last read through
These tales of lakes and streams,
May every hope of life come true,
And happy be your dreams.

Jerome Burnett.

PILGRIMAGE OF THE SAGINAW CROWD.

III.

THE place for the day's expedition was decided upon while the horses were being driven in from the pasture and saddled for use. The Doctor and City Official were to ride to the ford of the Ute (pronounced by the natives You-tchay) just below the horse pasture and about half a mile below where the uncertain waters of Prairie Creek join the sluggish flow of the Ute on toward the Cimarron.

Ed and Brooks were to take Mose and strike the Ute a mile or so above the ford at the Whistler ranch, while George and myself were to take Nip and Old Bob and do our duty by the shores of the placid Prairie Creek, striking it as far toward its head as we could while the other party was getting to the agreed starting point. These streams, like most of the creeks or little rivers of this country are narrow threads of muddy water in places but two or three yards wide, in others, reaches as many rods. The banks are invariably rough, steep and rocky, while the timber, consisting of walnut, oak, hickory and pecan, is but a narrow belt of verdure hugging the edges of the sinuous water course. Back of the timber is either the loveliest rolling prairie under the sun, or a little bunch of scrub oak and chaparal, and then the green pasture land. Deer, turkeys and quail are fairly abundant along the water courses, and by striking them about as far up as would make a good day's tramp and carefully hunting toward the fork, and then to the ford where the Doctor and Fred were on guard, we hoped and expected to drive some of the larger game to one another besides filling up the time shooting quail.

At last the poor half-cared for animals, by courtesy called horses, appear. The Doctor and Fred mount and take their departure in one direction and the rest of the party clamber into the hack, as the twelve-year old driver, Charley, with a plentiful evacuation of tobacco juice calls the ordinary two-seated platform spring wagon. The horses, this morning, seem to know they have not far to go and start without the usual balk. Reube is not destined to have his seven days on quail, for Brooks has meat in his eye this morning and not "training *vs.* breaking." We leave him tied to one of the trunks on the

allery howling, and between howls endeavoring to chew
p something, this latter feat he successfully accom-
lishes later in the day to the infinite disgust of Mrs.
avidson, as her dancing pumps will need patching be-
re the season's gaieties are under way. We are off,
ittle down the hill, ford the "creek by the house," and
infully the horses tug us up the steep hill on the
posite side. With visions of a former balk in this same
ot before us, two of us lighten their load by jumping
t. When the top is reached we bowl along at quite a
veiy gait over the lovely level greensward for a mile or
ore. We open the gate and pass through the wire
the horse pasture, and a little further George and I
ave the hack and strike it afoot across lots for the ground
e are to begin on. The boys are lost to sight over the
ill beyond. We have not gone far before we hear them
nging away, and we know that they have run into
ail by the roadside. They tell us that night that after
peated bangings (which we heard and were much bless-
g our hard luck over) seven birds were brought to bag,
good beginning for the day.

After trudging through the heavily dew-laden grass,
r I should judge a mile, we strike the little creek, and
ter waiting awhile for the boys to reach their grounds,
e start down stream, George taking one bank, I the
her. Little Nip hunts close to me this morning and
ith not too much ambition to tire either of us, but old
ob is chuck full of his usual store of vim and go and
kes in every inch of the ground for 300 yards on either
le of the ravine. Ahead four woodducks in radiant
umage spring into the air, out of shot, and dart down
e creek ahead of us. I sing out to George that we will
t them next time, and such proves to be the fact, as later
I make two (though I do say it) most extraordinary
ots, stopping a duck each time with No. 8s, as I get but
nap-shot a good way off with only a shadow of the
ds vani-hing through the scrub oaks.

It is warm work for us and warmer for the dogs, but
they make a break for the water and take a good swim
ery little while, they are able to do fair work. We
ar an occasional shot from the boys coming down the
e, and are not idle ourselves, as we have made good
les in two coveys that old Bob has found, and which
ve been carefully worked out after scattering by Mis-
ss Nip.

The noonday sun is hot over head and we must be near-
g the forks where Ed and Brooks promised to wait for
should they get there first, when suddenly Miss Nippy
all awake. For some time she had not taken much
erest in the proceedings, but now, what ails the dog?
ith nose up she is quartering the ground at a rapid gait
om the water's edge to the prairie edge of the post oaks.
r here the ground is quite rough and covered with small
orns, just the spot for turkeys. Suddenly she stops,
decided which way to turn, and before I have time to
ll out for George, up gets a big turkey from a bunch of
een tangle on the hillside, fifty yards ahead. I sud-
nly realize that I have only three-quarters of an ounce
No. 8 in my little 16-bore and curse my luck. The
rkey flies straight for the cover along the creek ahead,
d as he crosses in front of me, I pull on him well to the
ont and have the satisfaction of seeing him drop all of
neap. I shout my good luck to George across the ravine
d tell Nip to fetch, but as the turkey is thrashing
ound at a great rate, she can't get hold of him until
d Bob takes a hand, and proudly half drags and half
rries the bird to me. Miss Nippy thinks she has done
and says so as plainly as a dog can, which is plain
ough for me. She shakes herself, jumps up on me, and
ves vent to several loud yawns, or youws. I now
agine that the other boys must have gotten a flock of
rkeys scattered at the forks and this one was skulking
er here, so I am on the lookout for more. After cau-
ning George I send Old Bob down into the creek bed,
d at once up jumps a big fellow before he had time to
p, out of my reach, but goes directly over George not
enty feet high, but Mr. George has disregarded my
ution and is sitting down with his gun between his
gs, lighting his pipe. He tumbles over, bangs his gun,
d never touches him, though he swears feathers flew
the second shot. We all of us do this on principle,
d no one can contradict the assertion. After talking
e matter over, we concluded that this bird had gone
ross the river and there was no use following him at
esent.

Expecting to meet the boys and not knowing whether
ey had gone to the ranch or were still above us, we sat
wn on the banks where the two streams joined and
aited developments, first to wait for the boys to join
, and next we wished to see if any turkeys would call.
ter sitting in this way about twenty minutes and not
aring anything, I took up a turkey call and gave a few
lps. Nothing was heard, but the silence of the prairie
ck of us and the woodlands ahead. Again it was
peated with like results, and about discouraged, after
tting a few moments I tried it again, when away off
the other banks of the stream I heard a yelp in re-
nse. Soon I had them calling all around me, and they
emed to be coming in my direction, when with a bow-
w-wow, the dogs gave notice of the approach of some
e through the sumac, and sure enough there was
orty sent from the house on horseback to hunt us up.
e others had come in and had had their dinner and
re waiting for us at the ranch to finish the day's hunt
another direction. Of course the dogs' barking had
erfered with the turkey calling. We got Shorty off
m his horse, and all quieted down, and waiting a little
ile soon had the turkeys calling again, but the oppo-
ion from an old gobbler on the other side that could
I louder than myself, made the flock, instead of join-
me, join him, and majestically move over the hill in
distance.

We crossed over, and Shorty on his pony circled around
ahead of them and succeeded in getting them scat-
ed. When they are frightened this way and skulking,
y lie to a dog like a quail, and it is fine sport to hunt
m over points. But about four out of six I always
ss, because I get so excited that the birds seem bigger
in all outdoors, and where my shot goes I do not know.
is proved to be the case to-day and three or four good
ts were missed. However, among us we secured
ee turkeys, and sent Fred back for the boys to come
on the other side of the stream and hunt along its
nks, as we were certain turkeys would be found there.
ey joined us an hour afterward, but with poor success.
George and I were walking along the back of the river
couraged, and giving up all hope of finding any more,
when suddenly I looked down below us and saw Old Bob as stiff as a rock pointing toward an old clump of leaves just beyond me. Calling out to George to watch out, that there was a turkey there to a dead certainty, I started toward him when up rose a gobbler of huge proportions, and started directly over the river. Our guns both cracked at the same time and he tumbled over, striking in mid stream. Bob was told to fetch him and he swam out to him and took hold with a vim, but with the turkey's floundering and flopping and the weight of the bird, and the running water, the chances were very much in favor of the dog's being drowned unless he let go of the bird. Under and over they went. Every time he would attempt to raise him, the turkey would flop in his death struggles and sink the dog out of sight. Miss Nippy stood on the bank whining, and recognizing her companion's trouble plunged in and swam to him and and took hold of the bird's wing, and side by side they swam to the shore.

This ended the day's sport as far as we were concerned, and we were very well satisfied, having had a long tramp, and a very comfortable bag.

The other, however, got into a very large covey of quail, and we heard them banging away like a Fourth of July fusilade, and of course thought they would come in with a bag full, but it seems their marksmanship was poor, and when counting the birds at night we found that George and I had discounted the others.

A funny thing happened to the party on the other side of the river this afternoon. As they were riding along with guns loaded with fine shot, not ten feet ahead of Brook's horse, up jumped a fine deer, and without standing on ceremony bounded over the prairie and disappeared. No one thought of shooting, but all of them wished they had had buckshot or a rifle or something of the sort. After much talk and hilarity on the subject they moved ahead, but had not gone more than thirty feet when the performance was repeated, a deer jumping out from under the nose of the Doctor's horse, and going away with the same freedom as the other. This happened to us several times while we were at the ranch, but we were never prepared for them and did not have any luck.

The only way to do is to make a business of hunting deer and nothing else; then you will have your rifle ready and not be bothered with fine shot, when once within shooting distance.

Each day's hunt was only a repetition of the one just described. The City Official rather beat us on elegant and artistic shots, but in the bottom lands it was so hot the dogs could not work well, and the quail were sure to pitch into some miserable tangle where it was impossible to get more than one or two shots at them, and we finally concluded, after shooting three or four days, that we had had enough of the quail.

We had expressed a desire to more closely examine a turkey buzzard. We knew it was against the law to kill one, but we were anxious to know more about them, and finally concluded that we would kill just one in the interest of science, though we did not break the law as the sequel will show. Going home one afternon from a long jaunt down the Cimarron, we noticed above us a long and continuous flight of these black noiseless birds, sailing one after another in the same direction. George cracked away at one of them and I did also, but somehow or other it seemed to have no effect upon them, for they really must have been a long way off, but in this clear atmosphere a bird of ordinary size will look very near when really it is out of gunshot. The City Official picked up my 16-bore with the remark that he would show them how it was done and pulled on one that was sailing overhead. It doubled up like a jack-knife and fell near us. Of course we supposed it was a dead bird and gingerly pulled out three or four of the large symmetrical quills from the wing and examined the bird, and where about to throw it one side as a dirty piece of rubbish, when without a word of warning it suddenly gave a flop and sailed off, seemingly as well as ever. It was like the Irishman's toad, "Be jabbers, but you would be a fine bird had I not shot your feathers off."

We had a hearty laugh over this incident and congratulated ourselves that we had gained the information desired and not broken any law.

We reached the ranch that night in good spirits, having had an excellent day's jaunt, and we were ready for the homeward journey on the morrow. The boys concluded that it was best to divide up the party, and after packing up our baggage, each being supplied from the generosity of Shorty with a box holding half a peck or so of the nicest pecans any one ever tasted, we prepared to say "good-bye" to this pleasant spot. WM. B. MERSHON.

THE WAYS OF WOLVES.

Editor Forest and Stream:

When a litter of suckling wolves is discovered by the hunter, they receive him with no more concern than if they were dog pups. They can be handled and tickled at will, and they will not snarl nor try to bite. Like dog pups, their breath has a peculiar smell, as if they had been eating mild onions. When they are old enough to frisk around the bed, they show a little amazement at the hunter's approach, but are not vicious. The spirit of fight seems not to come to them till the male parent has led them out on a hunting excursion and taught them a few valuable lessons. Then when the hunter would handle them he must be cautious, as they growl and snap very viciously.

But vicious as they are at first, it is remarkable how readily they yield to kindness. When they learn that the hunter wishes to be their friend, they surrender their whole heart, and will meet him more than half way. They will love him just as any other young dog will, and he can have a rough-and-tumble play with them as with young dogs. So far as I can observe, their temper is altogether as amiable as that of the young dog. They learn their names just as readily, and are as brisk in responding to the call-off. The first dogs of our ancestors were of course wolves, and I perceive that they had no trouble in making these new and valuable friends. I presume that Adam's sons were the first who tamed and trained the wolf; furthermore, I judge that Nimrod, that mighty hunter before the Lord, rarely went afield without a pack of tamed wolves at his heels.

It is observed that most dogs have a strong fondness for the social warmth of a fire; the hound particularly being so fond of it that he will sometimes lie down by a fire on the hottest days of summer, seeming to enjoy its warmth very much The tamed wolf has the same fondness; so much so that it will be your constant fire-side companion if you will let him. If you will build a fire in your yard, ten to one he will go and toast his shins by it all a summer day; and I fancy that this singular fondness for the sociable fire was a powerful charm in leading him to the companionship of man. He would not have it in the society of wolves alone, and therefore when he got a taste of it it is not remarkable that he had no more taste for the society of wolves. When a wolf is tamed you cannot drive him off from you. The wild wolves may howl never so lonely near him, but he simply seems to have a scorn of them and their ways. He seems to turn up his nose at them as the slaves of the rich planters of the South used to turn up their noses at the "poor white trash." Having found what he thinks is better, he can by no means be tempted to leave it. He is a picture of great contentment.

Nor do I think it would be difficult to tame the grown wolf. The cowboys of Texas sometimes ride them down and catch them with their lariats, and when they are not immediately killed by these rough riders, but kept a little while and treated with some kindness, they become quite docile, permitting any one to stroke them gently about the head. But I have never known a serious effort to tame the fully grown wolf.

I never knew but one tamed wolf to project the long howl, and he seemed to do it solely out of a spirit of mischief making. He was a frequent companion of some ladies on their walks, and in some way he learned that he could give them a great but harmless scare by howling. Therefore, every now and then at a favorable opportunity he would let fly, and when the ladies squeaked and screamed he would appear to burst almost with the fun of the thing. This wolf grew so fond of this experiment that he seemed to watch out for passing ladies, and would hide himself near their way in order to give them a most unexpected and startling salute. But as to this latter part I report it from hearsay, the person who gave it firmly believing it.

They have some very evil ways in their taming which sometimes demand severe and repeated correction with a switch. They are exceedingly fond of poultry, and will soon destroy an entire hen roost if not watched. They also show great cunning in stealing a hen. For instance, they have been known, when supplied with a piece of bread, to go off with it to a secluded place in the yard, where they will crouch flat on the belly with the forefeet stretched out before them. They will then crunch the bread so as to have a great many crumbs lying quite near the mouth and all around it. A chicken will soon be attracted, which, when observing, the wolf will shut his eyes and appear to fall in profound sleep. However, he never was so wide awake. The foolish chicken draws nearer and nearer to the fatal mouth. Suddenly the wolf seizes it and kills it before it has time to squeal. To devour it, feathers and all, is but the work of a moment. It is hard to whip this chicken-stealing propensity out of the wolf, and some people become tired of them on this account and kill them. An old farmer, living a mile or two from where I write this, had a pack of seven tamed wolves, with which he considered himself the greatest man of the country, being a great hunter; but as each wolf must have a chicken nearly every day, the women of his family finally took offense and caused them all to be killed. They have the same weakness as to ducks and turkeys, but will not kill pigs and sheep, as wild wolves do.

The wolf may be set upon other animals like the dog, but he sets out to kill, and will most surely do so if let alone. The dog is content to seize a hog by the ear and hold him, but the tamed wolf will take by the throat and kill. They make excellent deer dogs, rapid in pursuit and of great endurance, but when they catch the deer they will eat him if the hunter comes not up very soon. But dogs must be taken with them on the chase, as they give no mouth, and their pursuit is silent and swift like the arrow. Therefore, without the noisy hound the hunter would soon be utterly lost from his pack. An old hunter who has practiced them much assures me that their scent is keen and unerring, but when the game is once in sight they abandon the nose and depend entirely on the eye. The dog follows straight after the flying game, always on its track; the wolf once in sight, heeds not the track, but shoots ahead by the shortest route possible. For this reason, when the dog and wolf hunt together, the wolf is quite sure to get there first.

In old days there lived in Texas a numerous tribe of red men called Tonkaways, now reduced to a handful living on a strip of land reserved for them by the Government in the Indian Territory. It is common report in Texas that there was a close friendship between these red men and the wild wolf, so much so that the wolf freely entered the camp of the Tonks and sat down with them at the social board. This pleasant relationship continued, as is said, up to the last moment of the residence of the Tonks in Texas, which occurred only a few years ago. Here in this country where I write, the Tonks lived many years, and the tale is more heard here than elsewhere. Yet I have seen no person who could testify personally to the fact, though fully believed by many. Perhaps some of the army officers in the Indian Territory will inquire of the few remaining Tonks concerning this strange tale, and give us the result of the inquiry. I hope so. As for myself, from my knowledge of both the red man and the wolf, I do not regard it as an absurd tale, or unreasonable. N. A. T.

TEXAS.

COMING OF THE BIRDS.—Salem, Mass., Feb. 29.—Bluebirds (*S. sialis*) have been here for over a week, though the past forty-eight hours' cold wave must make them feel decidedly blue. Cherry birds (*A. cedrorum*) are found in flocks now, and the "pussy" willows started smart last week. Specimens of the great horned, barred and Acadian owls have recently been shot, and a few quail are surviving up to date. Robins seen frequently in our pastures, but not yet in city limits.—X. Y. Z.

BIRDS AND SPECIMENS.

WASHINGTON, D. C., Feb. 19.—*Editor Forest and Stream:* It was with mingled amusement and contempt that I read the letter from "O. O. S." in your issue for the 16th, entitled, "Killing Rare Birds." There are men, and there are men, yet it does seem that in this advanced stage of learning people should understand what they are talking about before making their opinions public. "O. O. S." laments the killing of a number of specimens of the evening grosbeak (*Coccothraustes vespertina*), and states that "Wilson, Audubon, and Coues can tell all (?) about American birds," (the question mark is mine). According to this doctrine, seeing that Wilson, Audubon, and Coues have studied our birds, no one else ought to study them, but instead accept their accounts. What sort of science is this? It certainly shows that "O. O. S." is entirely unfamiliar with his subject; that he is no scientist is only too apparent. For his own instruction, however, as well as for all sympathizing sentimentalists let me say that despite Wilson, Audubon, and Coues, the evening grosbeak is very little known, and that for some time to come any information upon the species will be thankfully received by ornithologists.

In regard to another point, our friend lays great stress upon Wilson and Audubon, as though he considered them prime authorities. Well, they are to a certain extent, but he certainly must be unaware of such men as Baird, Brewer, Ridgway, etc., and of their works; otherwise he would know that while his favorites figured only some four hundred species, modern science has increased our fauna to over one thousand species, over six hundred more than the number of Wilson and Audubon. If in accordance with the doctrine of "O. O. S." the study of birds had stopped with these naturalists (to say nothing of what Dr. Coues has done), where, pray, would our ornithology be to-day?

Further, I should like Mr. "O. O. S." to know that with a species there is, as a rule, a wide variation between individuals; variation too extensive to enter into the description of here, but regarding which a complete series of specimens is needed to discover all the forms. I cannot at present lay my hand upon the article to which he refers, but congratulate that gentleman on having secured a number of the birds in question, and would further state that were I to meet with a flock of the grosbeaks I should not cease to collect until I had secured a sufficient number to represent the species.

One thing further. "O. O. S." appeals to the AUDUBON SOCIETY to check this "slaughter." Here again he is in the wrong. The AUDUBON SOCIETY is a splendid organization; no true naturalist lives but heartily sympathizes with it, but as to what scientists may deem wisest to do it certainly has no voice, and if such a body has no right to interfere with the doings of our naturalists private individuals most assuredly ought not to object.

And now in conclusion let me say that the old adage, "Be sure you are right, then go ahead," is especially applicable here. "O. O. S." may gain the favor of a number of sentimentalists by entertaining such opinions, but the voice of the would-be sensationalist is only ridiculed by men of scientific attainments. I am sorry that I have taken up so much room in your paper; the fight is not really my own, but being an enthusiastic worker in ornithology I cannot see an attempt made by a co-laborer to advance our knowledge condemned by an outside party and remain silent. EDWIN M. HASBROUCK.

RATTLESNAKE'S FANGS.

Editor Forest and Stream:

While dissecting the head of a rattlesnake recently, I was surprised to find eight fangs, four on a side. The first pair were of usual hardness, but the remaining three pairs were quite fossil; so much so that I cut through several with my scalpel. They were of a pinkish color and filled with liquid, which may have been the alcohol that the head was preserved in. The first two were filled with the oily poisonous matter, and upon pressing the membrane about them back toward their base, several drops were forced out through the tiny opening in the tips. Is this an unusual number of fangs for *Crotalus?* They measure ¼in. in a straight line from base to tip, and the snake, which was taken in the foothills of the Sierra Madre Mountains, Mexico, was 3ft. 5in. in length. A pair of fangs in possession, taken from a 4ft. rattler in Florida, measures ¼in. and are a little more curved than the preceding ones.

I have been much interested in the articles relating to reptiles, especially snakes, that have appeared from time to time in the FOREST AND STREAM, and I think no subject in the natural history columns is more instructive.

JOHN C. CAHOON.

[The rattlesnake, like many other venomous snakes which belong to the suborder Solenoglyphe, are provided with incipient or embryonic fangs lying behind those in use, which stand ready to move forward and take the place of the later when these shall have been shed, broken off or in any way worn out. When a new fang comes into use it becomes firmly attached to the maxillary bone.]

DR. JOSEPH B. HOLDER.

DR. JOSEPH B. HOLDER, Curator of Invertebrate Zoölogy, died at his home, 57 West 125th street, on Tuesday, Feb. 28. He was born at Lynn, Mass., in 1824, was educated at the Harvard Medical School and afterward practiced medicine at Lynn. In the year 1859 he was sent to the Dry Tortugas as naturalist and physician, and there began the study of invertebrate zoölogy. During the war he served in the army as surgeon. In 1870 he came to this city, and has since occupied the position of Curator of Invertebrate Zoölogy in the American Museum of Natural History. He was a member of the New York Academy of Sciences, the Society of American Naturalists, the American Ornithologists' Union, the Harvard Club, and the Linnæan Society of New York. Besides having revised and adapted Wood's "Natural History of the World," he was the author of "Fauna Americana" and a frequent contributor to *Harpers'*, FOREST AND STREAM, the *Century*, *Scientific American*, and other periodicals. Dr. Holder was greatly interested in bird protection, and was a member of the Bird Protection Committee appointed by the American Ornithologists' Union. His death was due to apoplexy.

A WHITE WOODCOCK.—New York, Feb. 27.—*Editor Forest and Stream:* While hunting near Lakeville, N.Y., last August, Charlie Chase and I in going through some very thick crib brush, started a bird, white in color, which flew and lit in a bush not 10ft. ahead of us. We started toward the bird, when it flew again and lit on the ground; when it raised a second time Charlie shot and killed it. On picking it up it proved to be a white woodcock. After killing it we hunted over the patch, which was not over twelve rods wide by twenty-five long, and killed eleven more. We showed the bird to any number of hunters, one in particular, George Crum, of Saratoga, who has hunted twenty years, and he had never seen nor heard of one being shot.—G. S. A.

WERE THEY GROUSE?—*Editor Forest and Stream:* A four-line paragraph a few weeks since speaks of some one in the East importing from Virginia some quail and "fifty pheasants" for breeding purposes. Does the writer mean by this ruffed grouse? If so, how in heaven's name can they be trapped in Virginia when it does not seem possible anywhere else?—JAY BEEBE (Toledo, O., Feb. 20).

RECENT ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN.—Received by Purchase—Two llamas, male and female (*Lama peruana*), one white-nosed coati (*Nasua nasica*), one white-lipped peccary (*Dicotyles labiatus*), one pair rose-bill parrakeets (*Platycercus eximius*), one pair gray-headed parrakeets (*Agapornis cana*), one yellow-headed conure (*Conurus jendaya*). Received by Presentation—Two raccoons (*Procyon lotor*), one jack-rabbit (*Lepus callotis*), one duck hawk (*Falco communis*). Born in Garden—One red kangaroo (*Macropus rufus*) and one brush-tailed kangaroo *Petrogale penicillata*).

THE BOONE AND CROCKETT CLUB.

THE membership of the recently organized Boone and Crockett Club comprises the following named gentlemen: President, Theodore Roosevelt. Secretary, Archibald Rogers.

Regular Members.—Albert Bierstadt, Heber R. Bishop, Benj. F. Bristow, J. Coleman Drayton, D. G. Elliott, Geo. Bird Grinnell, Arnold Hague, James H. Jones, Clarence King, W. H. Merrill, Jr., Thomas Paton, John Jay Pierrepont, W. Hallett Phillips, E. P. Rogers, Elliott Roosevelt, John E. Roosevelt, J. W. Roosevelt, Rutherford Stuyvesant, W. A. Wadsworth.

Honorary Members.—Bronson Rumsey, Lawrence Rumsey, W. D. Pickett.

The constitution is as follows:

Article First—This club shall be known as the Boone and Crockett.

Second—The objects of the club shall be—

(1) To promote manly sport with the rifle.

(2) To promote travel and exploration in the wild and unknown or but partially known portions of the country.

(3) To work for the preservation of the large game of this country, and, so far as possible, to further legislation for that purpose, and to assist in enforcing the existing laws.

(4) To promote inquiry into, and to record observations on the habits and natural history of the various wild animals.

(5) To bring about among the members the interchange of opinions and ideas on hunting, travel and exploration on the various kinds of hunting rifles, on the haunts of game animals, etc.

Third—No one shall be eligible for membership who shall not have killed with the rifle in fair chase, by still-hunting or otherwise, at least one individual of one of the various kinds of American large game.

Fourth—Under the head of American large game are included the following animals: Bear, buffalo (bison), mountain sheep, caribou, cougar, musk ox, white goat, elk (wapiti), wolf (not coyote), pronghorn antelope, moose and deer.

Fifth—The term "fair chase" shall not be held to include killing bear, wolf or cougar in traps, nor "fire-hunting," nor "crusting" moose, elk or deer in deep snow, nor killing game from a boat while it is swimming in the water.

Sixth—This club shall consist of not more than thirty regular members and of such honorary members as may be elected.

Seventh—The committee on admission shall consist of the President and Secretary and one regular member to be elected by ballot. In voting for regular members three black balls shall exclude. In voting for honorary members six black balls shall exclude.

Eighth—The club shall hold two fixed meetings a year, one to be held the second Wednesday in January and to be called the annual meeting, the second meeting to take place on the first Wednesday in April following the annual meeting.

Ninth—This constitution shall not be changed, save by a four-fifths vote of the members present.

NEBRASKA.—Salem, Richardson Co., Feb. 18.—We had some pretty severe weather here this winter, but quail came through all right as the snow was too damp to drift when the blizzard struck us. If the birds are left alone for a few seasons we will have a good start again. Prairie chickens did not seem to suffer much this winter, and the pot-hunters have not slaughtered many on account of their being so wild. I saw the first robin on the 15th of this month. Bluebirds have been with us most of the winter. No ducks yet as the waters are not open enough. —J. F.

THE CROZET ISLAND CASTAWAYS.

EARLY this year the *Sun* printed a very extraordinary and romantic story of the means successfully employed by some shipwrecked sailors to inform the world of their perilous plight on a little island almost within sight of Antarctic ice. The story came from official sources in France, and was to the effect that the French Government had been informed by the British Ambassador in Paris that word had been received from the Governor of West Australia that on Sept. 22 last a dead albatross had been found on the beach at Freemantle, around whose neck was fastened a small piece of metal, on which had been scratched in French:

Thirteen shipwrecked men took refuge upon the Crozet Islands. Aug. 4, 1887.

The story excited some incredulity. The Crozet Islands are hundreds of miles south of Madagascar, far out of the ordinary track of ships. Whalers are about the only vessels that visit this vast southern waste of waters. It was indeed a wonderful series of fortunate events if castaways on these far-off islands had found a winged messenger, which unconsciously exerting in their behalf his far-famed powers of endurance on the wing, had carried their tidings over thousands of miles of sea with few opportunities to rest on the way, and had finally dropped dead, probably of exhaustion, on the shores of a civilized land.

Considering the source from which the information was derived, the French Government promptly decided that there could be no doubt that this albatross, with its important message, had been found at Freemantle, which is one of the larger towns in southwestern Australia. The French Minister of Marine at once sent orders to the commander of the naval division of the Indian Ocean to despatch the transport Meurthe as soon as possible to the Crozets to search for the castaways. The strange story was published in the Paris newspapers, and the next day a communication came from the commercial house of Bordes & Son of Bordeaux, saying they had reason to fear that the thirteen sailors on the Crozets were the crew of their three-master Tamaris, which had sailed many months before for New Caledonia, in the Pacific. She was some time overdue. Her owners had expected her to take a course not far from the Crozet Islands, and her crew numbered thirteen persons. This information gave additional interest and probability to the story. The British Government decided to take part also in the search, and her Majesty's ship Thalia, which was about to leave England for Australia, was ordered to go out of her course to call at the Crozet Islands.

It is now possible to give the sequel of this romance of the sea. The French transport Meurthe, returning from her search early this year, reached the bay of Diego Suarez, in north Madagascar, on Jan. 6. On that day her commander wrote a report of his voyage. He said that the first of the four Crozet Islands at which he touched was the little island of Cochous. He found no human beings there, but plenty of evidence that the island had recently been occupied. Traces of recent camp fires, and biscuit boxes and other débris, comparatively fresh in appearance, were scattered around. A heap of stones had been piled up to attract attention, and in this heap was a sheet of paper on which this communication had been written in French with a lead pencil:

The iron ship Tamaris, of Bordeaux, with thirteen men in the crew, went ashore on the island of Cochous during a heavy fog. Some time after she got clear and floated off, but three hours later she filled and sank. The crew escaped in two small boats to the island, taking with them one hundred kilogrammes of biscuit. The crew have lived on Cochous Island nine months, and their food being exhausted, they are about to set out for Possession Island.

SEPT. 30, 1887.

Possession Island, which is also one of the Crozet group, is eighty miles from Cochous. The Meurthe at once went to that island, but found no trace whatever of the shipwrecked men. Then she went to East Island, another island of the group, where she found some American whalers that had been there for some weeks. They had neither seen nor heard anything of the castaways. All the other islands in those waters were visited without result. It is firmly believed that the unfortunate men were lost in the perilous passage by small boats to Possession Island, though there is a bare chance that they were picked up by some American whaler.

Of course the 230lbs. of biscuit with which the men reached Cochous Island was only a small part of the provisions they required during their nine months' sojourn there. At least one other crew has been shipwrecked on the Crozets, and it subsisted until rescued on penguin flesh and eggs and fish. In this way doubtless the men of the Tamaris eked out their food resources, and it is not probable they would have starved had their patience held out a little longer until relief came. They probably thought that at Possession Island the chances would be better that some whaler would discover them. They knew there was not one chance in many thousands that the "man-o'-war" bird to whom they intrusted their brief message would carry it safely and quickly thousands of miles to the civilized world. They little dreamed that eight days before they set out from the desolate rock where they had lived so forlornly the bird they sent skimming over the waters had finished his wonderful flight and had told the world of their unhappy situation. Few stories of the animal kingdom equal in pathetic interest that of this strong-winged bird, whose happy fulfilment of the mission intrusted to him set two nations at work to rescue men in sore distress.—*N. Y. Sun.*

TOO MUCH RED TAPE.—Rogi, Austria, Feb. 11.—*Editor Forest and Stream:* Having read with pleasure the FOREST AND STREAM from time to time, I think perhaps a note from over the sea would be acceptable. We are here on the edge of the Carpathian Mountains near the Hungarian lines. Wolves, hares and roe deer are the varieties of game, but it is too much trouble to get a privilege to shoot here. You must first pay a license fee to own a gun, and then another to shoot it.—J. G. B.

SHEFFIELD, Ill., Feb. 25.—Geese, robins and bluebirds appeared the first of the week. One flock of geese stopped to sample some rye in a neighbor's field. I took a .32 Winchester, and getting behind a hedge tried to "make a sneak" on them, but they, thinking I had dishonorable intentions, quickly bid me good day. The swamps are filled up with water, but there is nothing to use for blinds. The fire last fall licked up everything.—WALTERS.

MOUNTAIN SHEEP AND GOATS.

CHICAGO, Jan. 30.—*Editor Forest and Stream:* I spent three days in the early part of November on Mount Ki-icht-hutl, in the Cascade Range, hunting Rocky Mountain sheep, and found them more plentiful than I supposed it possible to find them anywhere on the continent. We could frequently see four or five bands at once within a radius of a mile, numbering ten to thirty each and in one band we counted over fifty. We saw about twenty different bands while there. Two of us killed eight and could have killed fifty in the same time if we had been disposed to slaughter.

They were in a much more accessible country than I have ever known sheep to inhabit elsewhere. This mountain, like several others in the vicinity, is a series of open grassy parks, separated by beautiful groves of fir and pine from its base to its summit, so that one may easily ride all over it. Several mountains in the vicinity are said to furnish as good sheep hunting as this, and goats are also very plentiful on some of the higher and more rocky peaks. Mule deer are abundant everywhere in this region; so numerous in fact as to interfere seriously with the sheep hunting. We counted seventy-two in one day without hunting for them in the least.

These mountains are drained by Ashanola Creek, a tributary of the Simil-Kimeen River, and lie near the boundary line between Washington Territory and British Columbia. They are most conveniently reached from the States by way of the Northern Pacific Railway to Spokane Falls. Thence a wagon or horseback ride of 185 miles through a picturesque and interesting country, and over a good road, will land the hunter at Loomis & Waring's ranch, where headquarters may be made and all baggage and supplies not absolutely necessary for immediate use should be left behind. A good pack trail extends from there to the hunting ground, about 45 miles further. A guide, extra saddle or pack animals, tent, cooking utensils, and all necessary camp supplies may also be had there at reasonable prices. Any business man in Spokane Falls will instruct strangers as to the route to Loomis & Waring's ranch, and I will cheerfully give any further information desired by any brother sportsman as to this the great game range.

SIMLHICON.

FLORIDA QUAIL COVERS.

ROME, Ga.—*Editor Forest and Stream:* I note in your issue of Feb. 23 that Mr. Pepper, who is spending the winter at San Mateo, Fla., says that it is the worst hunting country that he ever saw. Now, how men's ideas do differ. I have shot over fifteen or sixteen of the States, and some four of the Territories, and for quail, as he calls them, Florida affords the best hunting ground that I have ever seen. I have hunted considerably over the State during two never-to-be-forgotten winters, and unless I shall have the good fortune to again go there I never expect to run on such good quail shooting. It is true that in the "flat woods" the birds will generally pitch into the nearest "bay head," but I have sometimes hunted for days without a single mishap of that kind.

Seated in a buckboard, with a quiet horse that will stand wherever he is left, a small camp outfit in the buckboard behind the seat, a good companion and a couple of wide ranging dogs (for most of the shooting in Florida no others are of the slightest account), with plenty of ammunition, you are fixed for fun. Equipped in this fashion it was my custom to take frequent trips of three or four days' duration, and every one of them is marked with a white stone. With such a conveyance you can go almost anywhere, but it is rarely necessary to learn the beaten road. The dogs ranging ahead and on either side for a distance of 200yds. are in plain sight. Directly one of them slows up, walks very carefully for a few steps, and then stiffens; turn off from the road, drive to within 40yds. of the dogs—for by this time the other has probably come up and is backing the first—leave the horse standing; all ready! up go the birds, and if some of them are not grassed it is clearly the fault of the shooter. But the birds have been carefully marked down and are followed up, and fine sport is had as they get up singly or in twos or threes, until no more can be found, when you retrace your steps to the wagon and drive on to repeat the same experience with variation all day. Frequently in working up the scattered birds a second covey will be found, or even a third, and in this way I have frequently been absent from the wagon for two or three hours.

Pleasant camping places, with plenty of wood and water—those indispensable adjuncts of camp life—are numerous, and for pure and unadulterated enjoyment without too great fatigue, let me commend the sportsman to Florida. EF SE.

NORTH CAROLINA LARGE GAME.

A CORRESPONDENT from Washington, who has read "Hallock's Gazetteer," makes inquiry in regard to game in this State. I beg to say that there are more deer in the county of Onslow, which is situated on the coast, than in all the counties west of the Blue Ridge. There are bears also, besides ducks, geese and—oysters. If your correspondent wishes to make his visit in September or October, he will find the climate in the mountain far better than on the coast. But if he has borne up under the malaria, which the Potomac Flats and the sewers of his city can breed, he need not fear the swamps or the mosquitoes.

A good location for him would be the base of the Hog Back Mountain, in Transylvania county, near the head of the Toxaway River, a tributary of the Savannah. That is cis-montane. Or he may go near the head of the French Broad and try the Balsam Range. In either case, he should go to Hendersonville and get transportation from that point. The former is about forty miles and the latter thirty from the railroad. At either place he can get good air and good water, besides, if so disposed, can take a few mountain trout. He might also get a deer occasionally, and possibly a bear.

Onslow county can be reached either from New Berne, Beaufort or Wilmington. My advice would be to wait until a heavy frost before trying that section.

Some correspondent of a sporting paper writes that he hunts grouse with a gun charged with No. 12 shot. I am a skeptic as to the killing power of any weapon with projectiles so small that at 35yds. there will be any momentum sufficient for game of the size which he names. At Bob White I find that No. 8 is small enough after the middle of November, though if the bird is not more than 25yds. off No. 10 will be effective. But I cannot be made to believe that a ruffed grouse or a pinnated grouse can be stopped by No. 12 when they get off so far as 40yds., even if 10drs. of powder are used. At all events, I never owned a gun which would do that sort of work. WELLS.

ROCKINGHAM, N. C.

HUNTING ON SUNDAY.—Beebe, Ark.—When we lived on Bull Creek we got our drinking water from a spring that gushed out of the creek bank. We had the chills that fall, and sometimes we had our chills the same day, and as we lived alone then, it was a lonesome time for us. Anybody who has had the real old ague chills knows how hungry they get on the well days—hungry for something new to eat. One Sunday morning I took the water bucket and started for the spring. When I got to the creek bank I saw a green-headed duck sailing about. I forgot that it was Sunday, and, dropping the bucket, went back to the house for my shotgun. When I got back my duck was still there. There was also a big fox squirrel barking at me from a stub on the other side of the creek. I thought, "A squirrel will be better than a duck to make us some broth;" so I crossed over on a log, scaring away the duck as I went. The squirrel was rather shy and kept dodging around the stub. At length I got behind a little bush and threw a sod over into the brush beyond the stub. The squirrel dodged around on my side and in another minute he was my meat. I picked him up, and, recrossing the log, filled my bucket with water and went to the house. There I found Mr. Burns, one of our neighbors. As I dropped the squirrel on the floor, Mr. Burns said, "Well, I won't tell of it, if you did shoot it on Sunday." Not till then did I remember the day and realize that I had laid myself liable to the law. However, it was too late to undo the deed.—A LADY CONTRIBUTOR.

MR. GEORGE S. MARSH, formerly of the Northern Pacific, is now general passenger and ticket agent of the Milwaukee, Lake Shore & Western Railway, with headquarters at Milwaukee, where he will post his friends as to shooting and fishing resorts.

MAINE'S GAME INTERESTS.

Editor Forest and Stream:

"Special" has hit them; they flutter, those Maine newspapers. The *Industrial Journal* is badly hit. It takes a whole column to reply and to define its position. It calls "Special" some pretty hard names, all of which is not worth replying to. The *Journal* says: "We sincerely desire that the fish and game interest of Maine shall be fostered, protected and developed, not for the benefit of a favored few, but for the good of all. We want to see a system of real protection in operation, even at the expense of less law. The policy of the past has been worse than useless, and a better one ought to be adopted before it is too late. We believe that an efficient system could easily be devised and maintained, but never till its promoters recognize the defects of existing methods, and cease to attribute their failure to the ignorant, lawless and vicious character of the people." In this paragraph is a plain confession of all that "Special" has asserted concerning that paper; that the *Industrial Journal* is avowedly hostile to the enforcement of the existing fish and game laws of Maine. It declares that the policy of the past has proved worse than useless. In another paragraph it also declares that these laws should be "elastic;" that they must be enforced in a "liberal spirit." Otherwise they "will prove tyrannical." Laws elastic and liberal! That is the style of law desired by the *Industrial Journal*. How elastic and how liberal? Elastic laws are good. They will stretch a good way, and in the hands of a putty-faced officer they could manage to cover almost any case of poaching that might come under his observation. With "elastic" and "liberal" laws the fish and game of Maine could be fostered, protected and developed, fostered just as the hawk fosters the brood of chickens, against the time of another meal. As to protection and development, it would be just as the wolf protects the flock of sheep, finally developing them all into its own belly.

At the top of the column, the *Industrial Journal* says that it was "the first to urge the importance of wise and stringent laws," but a little way further down in the same article it declares that it is now in for "elastic" and "liberal" laws. It would have the game laws wise and stringent and at the same time elastic and liberal. They should be full of "policy," and allow of the getting of the game to the sportsman's home after he has killed it. In fact the nature of the crime should be decided entirely by the nature of the case. The length of the sportsman's pocket should have a good deal to do with the elasticity; it should then and there stretch to its utmost capacity. It wants a law that shall be in repute with those who break it, and a law that shall "lead" and not "drive" the class of people that it is designed to affect. Well, commend the *Journal* to the lawmakers of the land. They all along have been making a grand mistake. It is elasticity that is wanted, not force. The law should be at the thief forever. The murderer should be hung with an elastic rope that will stretch to the ground, and then let him go home and about his business, after the fuss is all over. An elastic law in the woods of Maine would be exceedingly desirable. In fact it is just what all the breakers of the game laws have been so clamorous for during the past five or six years; or at least since the enforcement of stringent laws have been attempted in that State.

But the *Journal* says that the enforcement of the existing game laws has been a failure. Such is not the truth. Under the present laws there has been an increase of the more valuable game fishes in that State, as witness the increase of salmon in the *Journal's* own city, Bangor. Under the same laws there has also been a most wonderful increase of deer in the forests; an increase in caribou, and something of an increase in moose. The present system of law in that State has stopped the shipment of game to the Boston market; whereas, during the November, December and January of the winter of its enactment, over 800 deer found their way to that market from Maine. For such reasons the law which prevents the sportsman from out of the State from getting his deer home, was enacted. The Maine game laws are not all that could be desired, but they do not need elasticity. Their enforcement may not have been as perfect as could be asked for, but it has been because the gingerly policy of the State in the matter of money has not permitted of such enforcement. The *Industrial Journal* says that the Legislature quietly "repealed" a little obscure clause in the law. It means, though it does not say so, that the force of the enactment was to deprive the Fish and Game Commission of about all means—money—for the enforcement of the law. It might have said in so many words, that the Legislature quietly took the fines from the wardens, who work to enforce the game laws, and gave the money to the county where the poaching is done. Hence, the wardens are doing little or nothing.

SPECIAL.

Editor Forest and Stream:

In looking over your issue of Jan. 12 I was particularly interested in an article written by "Special" on Maine large game, but I do not think he was severe enough on pot-hunters, law-breakers, and the inefficiency of game commissioners to execute the laws in and out of season. I went on a six-weeks' hunt up on the Kennebec last fall. I went to Maine because I wanted to kill a moose, but last fall was poor for hunting large game, owing to dry weather, absence of snow, and scarcity of game. Even with one of the most experienced guides and hunters on the Kennebec to assist me in finding game, I failed to get the moose, and only succeeded in killing and trapping a limited amount of smaller game. My hunt was rather tame, but I enjoyed it all through, as I met with very kind people and made some very warm friends. I also learned much of the true inwardness of hunting in Maine in the open season and heard a good deal about hunting big game out of season.

Yes, gentlemen, the number of moose legitimately killed in Maine last fall was rather small, and no doubt the record given as "ten or twelve" by "Special" is nearly correct. But who is to keep the record of the pot-hunters and game stealers out of season? This talk about game being on the increase and Maine becoming a "paradise" for game and sportsmen is all bosh as long as the pot-hunter is allowed to kill with impunity both in and out of season. "Special's" record of moose killed out of season last year is entirely too low if one-tenth part of what I heard on the Kennebec and in the vicinity of Spencer and Pierce ponds is true. I was informed by several reliable men that they knew of one man in that vicinity who had boasted of killing over a dozen moose himself last year and had sold the meat to lumbermen and boarding houses, as beef. He went after them on snowshoes and killed most of them in February and March, 1887, when the snow was so deep in the woods that the poor creatures could not go out of their yards. It was further alleged that this same notorious pot-hunter would spot all the moose in season he could, so that he would know where to find them when the snow should be deep in the spring; he even went so far as to start them out of their yards and drive them into localities contingent to lumber camps for his illegal slaughter in the spring; and then he made his brags about it to more modest hunters.

I heard a great deal about running moose down on snowshoes, and at first I thought it must be a great feat and I almost trembled for fear that if a snow should come I might get left; and as I count considerably on my running qualities and endurance I felt some anxiety about the mortification I might have to

The Protection of the Yellowstone National Park.

Whereas, In March, 1872, a tract of the public domain on the headwaters of the Yellowstone River was, by the wisdom of Congress, set aside as a National Park for the benefit and enjoyment of the whole people, and

Whereas, Sixteen years have elapsed without the enactment of any laws for the preservation of this Yellowstone Park from injury at the hands of trespassers, or for the protection of those visiting it from lawless and criminal acts, and

Whereas, The forests of this Yellowstone National Park protect and keep ever full the sources of streams which irrigate and render fertile a territory covering more than 600,000 square miles—a region as large as the Thirteen Original States with Ohio, Indiana, Illinois, Michigan, Wisconsin and Iowa added, and

Whereas, The development of this territory and its adaptability to agricultural pursuits depend altogether on the continuance of this water supply, which would be endangered by injury to these forests, and

Whereas, This Yellowstone Park is the last refuge for many species of American large game which have elsewhere nearly become extinct, and contains natural wonders which ought to be cared for and protected, Therefore be it

Resolved, That we, the undersigned citizens of view with grave misgivings the unprotected condition of this National Reservation, and see with anxiety the dangers to which its forests, its great game and its natural wonders are exposed, and

Resolved, That all the members of Congress from this State are respectfully but earnestly urged to use every possible effort to secure for the Yellowstone Park proper protection and an adequate form of government by the immediate passage of the Bill recently favorably reported from the Committee on Territories, known as **Senate Bill 283**, "A Bill to amend sections twenty-four hundred and seventy-four and twenty-four hundred and seventy-five of the Revised Statutes of the United States, setting apart a certain tract of land lying near the headwaters of the Yellowstone River as a public park."

Secretaries of clubs and associations, and all others interested, are urged to secure signatures to the above petition and forward to the representatives at Washington. Copies of the petition on blank forms will be furnished by us and sent to any address. See instructions in editorial columns.

stand. But fortunately for me the snow did not come last fall and I was saved. The guide informed me that hardly ever was there snow enough for such "doin's" or snowshoeing moose before the holidays, but he said "toward spring is the time when the snow is deep and solid." Is it such great prowess after all when there are three or four feet of solid snow to go find a yard of moose or caribou and butcher them in their yards, or while the poor brutes are floundering in the snow trying to save their lives? But that's the way most of the hunters get their "beef" up in Maine. My guide was a perfect gentleman and as true a sportsman as ever lived and lamented the fate in store for what few moose were left in that section.

One day in November it was proposed to go to Moxie Mountain to hunt caribou, as they were generally known to be plenty there. But a gentleman kindly informed us that a certain pot-hunter or game stealer out of season had put his dogs out on the mountain and chased them all off so the sportsman would be likely to find them and that they might be saved for snowshoeing. A pretty how-de-do.

We found in an old lumber camp near Pierce Pond quite a number of old deer hides and other evidences that there had been a party of "spring hunters" there last year who had killed considerable game. They made no secret of it either and that in defiance of the law. But there was no person to prosecute or execute the law; and that is what is wrong, I fear, all over the State.

We found fish about as scarce as moose, and about the only animals that were left in a flourishing condition were bears, and we found them too tough to kill with any ordinary shooting. As the Yankee says, "There has been some bad doin's up on the Kennebec and Dead rivers." And if the commissioners or proper authorities would take the trouble and go into the vicinity of Bingham, The Forks, Paslin Pond, Somerset county, they might hear stories about "spring hunting" moose, caribou and deer that would open their eyes. But candidly, it does not seem to me that they are after the pot-hunters or they could certainly easily catch and punish them according to law, even if the butchers do swear it was "beef" they sold the boss, and the boss swears he purchased it for beef, and all the boys in camp swear they ate and thought it was beef.

I think that as the game law now is and is executed it protects the pot-hunter (instead of the game) to kill in and out of season for the lumberman and boarding-house keeper of Maine; and this might just as well be so understood all over the country, so that honest sportsmen would not be duped in spending their money on a "wild goose chase" in Maine after moose. Only "ten or twelve" killed, and out of this number the "sportsmen from outside of the State" only killed what could be counted on the fingers of one hand (so says "Special"), for a whole army of hunters in that vast forest of Maine, and the commissioners are able to say game is on the increase. Oh, what a "paradise" for game and sportsmen, truly.

Will the FOREST AND STREAM be kind enough to inform the writer if a hunter has a right to ship his legal share of game killed in season out of the State of Maine? BLACK FOX.

PENNSYLVANIA, February, 1888.

Editor Forest and Stream:

As my name has been used in your paper many times by "Special" and "Old Tug," and it seems that anything they could think of to injure me they have written, and it has been often remarked to me that they were doing me a great harm, I would like to use your columns to see if I can explain to your readers who I am and what I am trying to do. I wish to have your readers understand our game laws, or rather the manner in which they are enforced.

In the first place, I am spoken of as a famous landlord. I am not a landlord, but I have as good a site for a hotel, that would be well filled if there were a good landlord with it, as there is in Maine, and I want to sell it. I will explain how I happened to be called a landlord. I am a hunter and guide. A few years ago I was guide for one of Boston's first lawyers. He wished to build a house for himself and his friends in some good locality for fish and game. We explored the Rangeley Lake region, the head of the Kennebec waters and the Penobscot waters, and chose Nicatous Lake. I made arrangements for a lot of land and he set me to work, and he was to foot the bill. After I had expended several hundred dollars he skipped from Boston and left me to settle the bills myself, which has been a hard matter for me to do with my small means. A good hotel is much needed there, as it is the best hunting ground in Maine, excepting for moose and caribou.

They speak of my being of game-warden-defying fame. I do not remember anything of the kind, but I believe that not only I myself but many others should have been so for the treatment we have received, which I will give an account of in some of the particulars. The fall after the passage of the law that did not allow any one person to kill more than three deer, and after I got through guiding, I thought I would send my three deer to Boston. I shipped them by express, and when they arrived at Bangor a game warden entered the car and took away the deer without any warrant or process of law, and did what he pleased with the deer. At another time I was carrying home from Moosehead Lake a pair of moose antlers, that were legally my property; and some one telegraphed to Com. Stilwell that I was coming on the train with a pair of moose antlers. Stilwell sent a warden to Oldtown to arrest me. When I arrived there he stood on the platform and told me he had a warrant for me and my horns. The warrant for me was for transporting them. He took me before one of our trial justices, selected for the occasion, and fined me $40 and costs. I appealed to a higher court, and while I was arranging the papers with the judge, the warden took the horns and skipped for Bangor; and did not have any warrant for them as he had stated. When this case came up for trial in the higher court it was kicked overboard. I then went to the officer for my horns. He told me he had not got through with them. I then went to Stilwell, the Game Commissioner, who had sent him after me and the horns. I asked him about my horns. He laughed at me and said he had not got my horns.

I afterward shipped some deer and caribou heads that I had preserved for mounting, and they were taken from the express company by the same party. I sued the express company for them and it was tried in Boston. I will here state what the express agent at Bangor told me. He said that the game commissioner had given the company a bond that if the company would allow them to go aboard their cars and take away whatever they had a mind to, if it made any trouble they would back it, and they fought my case against the express company and put me to all the trouble and expense that was possible for them to. It was tried before a judge without a jury. And what a funny decision! The judge decided that I had a right to ship the goods and that the seizure at Bangor was an illegal one, and then he gave the case against me. I think that the game commissioner helped make that decision, for he has said that he should back his wardens if it took every dollar of the appropriation. I understand the general laws of the United States to plainly say that when a common carrier receives goods to transport, if they do not deliver them to their place of destination the company is responsible for them unless a legal seizure has been made. This kind of business has been going on all over the State, and I cannot look at it in any other way than as stealing and highway robbery.

Many people have been led to believe that it is against the law to ship game. There was such a law passed, but it was found to be unconstitutional, and the next Legislature repealed it. But what is the law now? Whoever carries or transports from place to place the carcass or hide of any such animal or any part thereof during the period in which the killing is prohibited, forfeits $40.

What do our courts with experienced judges say to that? Look at Maine's report of 1876, where this same warden I have been referring to got a non-suit, where he took B. L. Young, of Greenbush, for transporting deer in February. Young proved that the deer were legally killed. The question was whether if game is legally killed during the time when it is lawful to do so, it is a crime to carry or transport the hides or carcases from place to place in this State during the time when it is unlawful to kill them. Justices of the Supreme Judicial Court say "we think not," and they go on and explain why, and then say, our conclusion is, "that the transportation of deer or any part of them from place to place is no violation of the statute, when they have been legally killed, and that the words 'such animal' mean one that has been illegally killed."

Another method, which our wardens have resorted to, has been the distributing of strychnine all through the State for the purpose of killing dogs. It has not only killed dogs, but "fur animals, domestic animals, etc." "Old Tug" and "Special" have boasted of pounds of strychnine being used. Our respectable officers don't have anything to do with the game laws for some reason, which I think is to be found in such proceedings as I have mentioned.

I am an old hunter and an experienced guide and I am working for the interest of the sportsmen as well as of myself, and I cannot see the motive of being slandered in the manner I have by those strychnine men who exceed their authority in every respect, except it is because I am in favor of sportsmen using dogs to help them get a deer. I say they cannot practically get them in any other way.

In the vicinity of Hancock and Washington counties there are tracts of burnt land where it is very open and occasionally affords a sportsman a chance to get a shot at deer on a still-hunt; but all to the north of those open lands it not practicable for a sportsman to still-hunt deer, and I don't know or have I learned of any sportsmen going into the woods north of those counties and still-hunting a deer. All the accounts of game being still-hunted in the northern part of the State are of what has been done by the natives and guides. Sportsmen will not go into thick woods to hunt deer. I would like to have a list furnished showing how many deer have been shot in the past four years by sportsmen north of the territory of burnt land. That list would show the great benefit of trying to preserve our game for sportsmen to still-hunt, and then have our natives kill it by the thousands in the deep snow, as they are doing every year, with little or no attention paid to it. Our present law, with the officers we have, is worse than no law, and they can't enforce it. I would like to have a good fish and game law, that would be for the interest of the State, and I would help enforce it. What is for the interest of the State is for my interest also. JONATHAN DARLING.

THE ALBANY GAME LAW MILL.

[Correspondence of Forest and Stream.]

ALBANY, March 5,—There are plenty of game bills in both houses of the Legislature; but no definite action has been taken by either of the game committees so far. It is likely that something may be done this week. It is high time, because there are five game bills in the Senate and twenty-three in the Assembly.

Assemblyman Thompson has introduced a bill which provides that a State bounty of two cents each shall be paid on the English sparrow.

Assemblyman Brownell has introduced a bill to make the deer season in Hamilton county from Aug. 1 to Dec. 1; hounding to be permitted between the same dates.

The death of Mr. Carpenter, of the working force of the Forest Commission, has made a very great difference in regard to the appearance of the report of the Commission for the year. Mr. Carpenter was so well versed in the art of woodcraft and also in the working up of details in the office—a combination we rarely meet in one man—that his absence is most severely felt. Much that had been intrusted to his care for the forthcoming report is now obliged to be taken from the very beginning; and the result is that the report is very much behindhand. It should have been presented to the Legislature before this time; but the chances are that it must now be put off till near the end of the session, and possibly altogether. In the latter case it may be that we shall have no report this spring, and instead of it there will be a larger and fuller report covering two years, which will be made public early in January next.

The Commission feels hampered by the fact that the fish and game protectors are appointed by the Governor without any consultation whatever with the Commission. Appointments of this sort must, more or less, partake of a political nature, and thus they cannot be for the best interests of all the parties concerned. If the manner of appointing the protectors cannot be changed, the Commission thinks that they should report to it and be under its control.

Assemblyman Hunting proposes to protect the robin by making Section 6 of Chapter 427 of th Laws of 1886 read as follows:

The English or European house sparrow (*Passer domesticus*) is not included among the birds protected by this act; and it shall be considered a misdemeanor to intentionally give food or shelter to the same. The crow, henhawk, owl and blackbird are not protected by this act."

Assemblyman Saxton's bill extends the time of rabbit shooting from Feb. 1 to March 1.

A bill introduced by Mr. Sheehan makes it lawful to have in possession and to sell at any time pike-perch, sometimes known as yellow pike, lawfully taken from waters outside of this State.

Assemblyman Hadley has introduced a bill—similar to his bill of 1886 which did not pass—to authorize the Governor, upon the recommendation of the Commissioners of Fisheries, to appoint a superintendent of fish and game protectors, to hold office for three years and to have an annual salary of $2,000, with traveling expenses not to exceed $1,000. The protectors are to report monthly to the superintendent, and he is to file his report with the Governor, all reports of expenses to be filed with the Comptroller.

Verplanck Colvin, superintendent of the Adirondack Survey, has sent in a report stating that the surveys have been impeded by the deficiency of means, the appropriations of 1887 having been vetoed. The change (suggested by the Governor) of the survey to the control of the State Engineer is not regarded with favor, this survey having been, as it remains, independent since the survey was created in 1872. Further appropriations to continue this accurate work are urged, and the complaint is made that the printing of the last annual report has been so full of difficulties as to be a great annoyance and to deprive the people of the information that they ought to have.

SCHULTZE POWDER FOR RIFLES.

Editor Forest and Stream:

In order to shoot a rifle successfully it is absolutely necessary to practice. Many who are now indifferent shots would become experts were it not for the difficulties attendant upon practice. The range is at too great a distance and the weather is not always pleasant, or the time is not available. Indoor shooting is frequently out of the question because of the noise and smoke. The writer had practiced some in a cellar with black powder, but it was necessary to open doors, even with very small charges, in order to get rid of the smoke. Even with this precaution the smoke was a source of great annoyance.

Shortly after the appearance of the article on Schultze powder in the FOREST AND STREAM, a quantity of this powder was obtained and experimental practice begun. The rifle used was a Winchester repeater, model 1873, .38cal., 40-180 cartringe, barrel 26in., Lyman rear and front sights. At the present writing over 350 shots have been fired at a target. Having in view the statement in the article alluded to above, that a strong primer was necessary, I attempted to overcome the supposed deficiency in the Winchester primer by mixing black powder with the white. This being unsuccessful the attempt was made to use 5grs. of Schultze, equal to 10grs. of black powder in bulk, with no black powder. A part of the discharges were perfect, the bullet going near the spot aimed at, while many fell from a few inches to a foot or more, the discharge being very imperfect. For a long time the cause was a puzzle. At first the primers were supposed to be at fault; but after a time it was noticed that the bullets fell in upon the powder occasionally, and as the shell is bottle-necked, of course the gases had a chance to escape around the bullet. When this occurred the explosion was very slight and imperfect. A wad of tissue paper upon the powder was used with very unsatisfactory results, as it caused much smoke by taking fire and the discharges were still imperfect. At last the experiment of crimping the shell about the bullet resulted in a perfect success. Since its adoption shot has been perfect. A pair of cutting nippers was used, making four slight indentations which held the bullet firmly in one of the groves.

The conclusions arrived at through the above experiments are that it is absolutely necessary to confine the powder, that the Winchester No. 1 primer is sufficient if the powder rests upon it that it is not objectionable on account of smoke and that fouling and cleaning are reduced to a minimum. After thirty shots the fouling was apparently not more than after five. After firing several shots of black powder a few shots of Schultze would remove the whole of the fouling. No experiments with a full charge have been made by the writer, although a few shots were fired with apparently satisfactory results. For shooting under cover with very small charges, however, it has more than met his expectations. With this powder and a little management, every rifleman might have a shooting gallery of his own.

AUGUSTA, Maine. JAMES W. NORTH.

THE "ATLANTIC" ON THE "SHOP."

UNCLE LISHA'S SHOP; Life in a Corner of Yankee Land. By Rowland E. Robinson. (Forest and Stream Publishing Co., New York). Twenty-two sketches of home life in Vermont, as it was a generation ago. The sketches are continuous in so far as they deal with the same characters who meet for the most part in the shoe shop of Lisha Peggs, and the incidents relate chiefly to hunting, whether bears, foxes, coons, or bees. So much for the mere external features of the sketches. It would be a mistake to think that the book belonged in the category of threadbare New England dialect fiction. Mr. Robinson has the art of a story-teller, and the gift of portrait-painting; and when now and then he touches upon the tenderer side of this homely life, he does it with a sure hand. The compactness of his style is remarkable, and his eye for picturesqueness in nature is keen and sympathetic. The book is racy, but very close to the soil. It is long since we have seen so masculine a treatment, and in spite of the Yankeeism of speech and phrase, the book impresses one as singularly fresh and genuine.—*Atlantic Monthly for February.*

Camp-Fire Flickerings.

"That reminds me."

230.

WHEN my brother and I were boys we used to trap a good bit, and generally had a nice pile of fur to dispose of in the spring. In those days muskrat skins brought double what they do now, and we were always on the lookout for their "pipes" and dens.

Our great ambition was to get an otter, but as they were scarce and wild it was a long time before we found a den. One day we stumbled on a fresh hole in the bank, and laid our plans to capture that particular otter or any other who might be visiting round.

The governor would not allow us to buy an otter trap for fear of our dogs getting into them, so we got six or eight muskrat traps and chained them to various stakes and a log or two, having first set them in the entrance of the den. We did not expect these little traps to hold an otter very long, but we thought we might get a shot at him before he could shake them all off. So at dusk we took our stand on a spot commanding our traps and awaited events. We stood there in the cold for a long time, with guns well loaded, and nearly frozen stiff.

Clank, clash, rattle, suddenly went our traps, and two excited boys prepared to shoot, but it was too dark to see under the shadow of the bank, so as things were quiet, I broke back to the house for a lantern. I also armed myself with a sharp butcher knife, as I had heard otters were very savage when cornered.

Getting back with the light, it was hung on a convenient bush, and as the chains all led into the hole it was agreed that I was to pull the otter out, while my brother kept him covered with his gun. Holding my knife in readiness for instant use I gave a yank and away came the traps, and fast by foot, leg and tail was a fat 'possum. We sold out next day. SANGWILLAH.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

Angling Talks. By Geo. Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Anglers' Book. By Thad. Norris. Price $5.50.

Secretaries of gun clubs and others who are interested in the protection of the Yellowstone National Park are invited to co-operate with this journal by securing signatures to the petition printed elsewhere. See instructions on editorial page.

SUNAPEE LAKE.

NEWPORT, N. H., Feb. 22. An article under the above caption, in FOREST AND STREAM of Jan. 26, over the signature of "Swirl," catches my eye, and I am impelled to volunteer the desired information, as I have been lucky enough to have "been there," and can direct him how to get there from Worcester, Mass., where his communication is dated.

Forty-six miles over the Worcester, Nashua and Rochester R. R. will bring him to Nashua Junction, Boston and Lowell stations, where he will have to change cars and buy a ticket to Newbury, 69 miles northwest of Nashua, and 109 miles from Boston, on the Concord and Claremont branch of the Northern R. R.—"Northern Division" of the "Boston and Lowell System" of the Boston and Maine R. R., to tell the whole story. He will reach Newbury, if the train is on time, either at 12:24 noon, or 4:52 P.M. The tourist coming up or down the Connecticut River will strike the Concord and Claremont at Claremont Junction, where he will change cars, leaving the Junction either at 7:30 A. M., or 3:35 P. M., arriving at Newbury either at 8:37 A. M. or 4:52 P. M. Steamers connect with all regular passenger trains at Newbury, and will drop him most anywhere about the lake, during the season of summer travel.

There are several hotels and numerous boarding-houses about the lake, partly furnished cottages to let, and in some places tents all pitched, while "far from the madding crowd" are delightful camping grounds. This article is not inspired by the owners of any of these places, but upon receipt of stamped directed envelope I will put your correspondent in a way to obtain all necessary information. Address P. O. Box 379, Newport, N. H.

Sunapee Lake is about nine miles long and from one-half mile to three miles wide, with an area of 6,000 acres, containing several islands, three of considerable size. The bottom is rock and sand, and the waters deep and cool, the temperature at the bottom in the deepest parts being but little affected by summer suns, conditions favorable to the trout family, which come reluctantly from its congenial depths. The sueface, of course, warms up in July and August, but clearer, purer water cannot be found. As drinking water Dr. Quackenbos attributes to it specific qualities for the bowels and kidneys and uses no other while at the lake. The only visible feeders of the lake are a few mountain trout brooks, while the overflow, Sugar River, drives the wheels of numerous mills and factories in its impetuous course of twenty miles to the Connecticut. The bottom is, therefore, held to be very springy, and, indeed, the lake has been termed one vast spring. It nestles among the hills and mountains over a thousand feet above sea level. On account of its picturesque scenery it has been styled "The Loch Katrine of America," and a local bard, in Scotland born, has linked them together in gifted verse. FOREST AND STREAM may have published the poem in full, but I must quote these lines:

> "Sweet Granite 'Katrine' of this mountain land,
> Oh jewel, set amid a scene so fair;
> Kearsarge, Ascutney, rise on either hand,
> While Granthan watches with a lover's care,
> And one dark 'Ben' to Croydon sends in glee
> A greeting o'er thy silvery breast, Lake Sunapee."

"Swirl" and his companion. I take it, are just the ones to enjoy the beauties of this charming spot, as I and my companion have enjoyed them, tenting under the fragrant pines, and I'll warrant will feel repaid for a visit this summer, even if they take no more fish than I did on a certain day last summer.

But there are fish enough there, if they will only catch on. The lake is actually teeming with the gamiest fish in the world. The efforts to restock its waters have been well directed and attended with marvelous success. The Fish Commission have earned the everlasting gratitude of anglers, as well as of owners of real estate about the lake, who profit by the boom. Trout are taken in large numbers every year, but I never saw one jump into a boat, or willingly leave his cool retreat below, and I never knew any one to catch so many that he would not be glad to try it again the next day. In the tanks at the State hatching house I have seen the *Salmo sebago* (landlocked salmon) weighing 10lbs. or 12lbs., and in the same tank the *Salvelinus fontinalis* (common brook trout) and the newly-named *Salvelinus aureolus* (golden trout) nearly as large, with many specimens of the latter two weighing from 3lbs. to 5lbs. On their spawning beds in the fall I have seen scores of the *aureolus* so indifferent to approach that only the law prevented one from actually dipping them up in landing nets. The landlocked salmon are not taken so freely as the others, but I have seen a few heavy weights taken by patient anglers, and any quantity of the brook and golden trout weighing from 2lbs. to 6lbs. These things have come within my observation as a newspaper man, and it is needless to say that I was lured on to the fishing grounds.

I sat all day in the scorching sun fishing in sixty to eighty feet of water, without so much as a nibble. But I knew the trout were down there all the same, because I had the evidence of my own eyes at the hatching house and on the spawning grounds the previous season, and because I saw one after another landed, after a gallant fight, in neighboring boats; and I shall be just fool enough to sit there a full week next summer, with or without company, until I am rewarded for it, for I have known a greenhorn who didn't know a fly from a sinker to pull away from the ground with three or four trout weighing together a dozen pounds, as the reward of two or three hours' fishing, while the experts around brought up only the shiners that they let down. I have also seen a 3lb. *aureolus* so tangle up three long lines in ten minutes that three men and a boy couldn't disentangle them in a day, when I would have been glad to have sacrificed three lines for one half as large rather than go home empty-handed. When one of these fellows starts off with a line in sixty feet of water it is fun alive, and there is excitement all through the fleet until he is safely dipped into the boat ten minutes or half an hour later, and sized up by his satisfied captor.

But Sunapee was famous for its black bass long before anybody thought of sinking for *Salmo* and *Salvelinus*, and it is a pretty hot day when an ordinary fisherman can not take enough to satisfy him in one way or another—if not by fly throwing, then by trolling a spoon hook along the shore, or sinking with hook and worm over the rocky shoals. For myself there is sport enough in trolling alongshore when it takes all my strength to pull against the waves, while my companion pulls in half a dozen weighing from a half pound to a pound and a half. I have caught them weighing 3lbs. and have seen those that weighed between 4lbs. and 5lbs.

Black bass are protected by law "between the thirtieth day of April and the fifteenth day of June," and trout and salmon "between the thirtieth day of September of any year and the first day of May next following (except that lake trout may be taken with single hook and line only during the months of January, February, March, and April). Neither can be taken at any time "in any other manner or with any other device than the ordinary way of angling with a single hook and line with bait, artificial fly, or spoon." The penalties are sufficient and the authorities watchful enough to make poaching unprofitable, much to the satisfaction of anglers in quest of legitimate sport or a savory meal. To prevent the depletion of brooks by hirelings who would thrive by catching small brook trout for city hotels, the Legislature of 1887 imposed a penalty of fifty dollars upon every person having in his possession over ten pounds of "brook or speckled trout," and five dollars per pound for each pound in excess of ten pounds, the whole string liable to be seized and forfeited to the prosecutor. Technically this law would apply to the large specimens of *fontinalis* taken from the lake; but such was not its intent, and I do not apprehend that "Swirl" would get into trouble if he should take one of the mammoths weighing over ten pounds, though it might trouble him some to actually get such a trout into his possession. Come up. FRITZ.

If the writer who signs his communication "Colquhoun" will send address, we will be glad to print the paper.

TACKLE.—*Editor Forest and Stream:* Anent the subject of fishing tackle, permit me to say that "Percyval" has hit the traditional nail once more on the head. For the all-round rod for the all-round man there is nothing so far like the all-round lancewood. "Percyval" mentions the steel rod. Some time since there was mention made in your columns of a steel rod the "Horton." Are there any men, readers of your journal, who have used this rod sufficiently to pass an opinion on it? If so, will they confer a favor on the writer, and I doubt not others, by coming to the front with their criticism? The fishing season cometh on apace, and just as like as not there are numbers of fishers who find it necessary to purchase a new rod who would be induced, if the steel rod is an unqualified success, to invest in one. Remarks are in order. Will those who have used the automatic reel please add their testimony *pro.* and *con.*—O. O. S.

THE WA-WA-YANDA FISHING CLUB, of New York, has elected officers as follows: President, County Clerk James J. Flack; First Vice-President, Edward Kearney; Second Vice-President, Martin B. Brown; Third Vice-President, Alderman James J. Mooney; Treasurer, George Jeffreys, and Secretary, John Burke. A resolution was unanimously adopted calling on New York Congressmen to aid in the passage of Congressman McAdoo's bill to prevent the wholesale destruction of game fish along the coast by the use of drag nets and steamers. A. L. Ashman was selected as Chairman of the Executive Committee.

THE HACKENSACK.—A New Jersey law forbids taking striped bass and white and yellow perch from the Hackensack River except with hook and line. The netting has been very destructive.

"FISHING IN THE POTOMAC."

Editor Forest and Stream:

There are writers and writers, as there are fish and fish. But when a praticed and entertaining writer attempts to tell what he doesn't know about—good fish and fishing, he makes a "mess" of it (if I may use a modern classic term). In other words, "a little knowledge is a dangerous thing"—even when it concerns "Fishing in the Potomac," under which title Mr. J. H. Connelly has lately contributed to your clumns a readable but misleading article.

Fact and fancy, fancy and fact—that's the summing up of the whole matter. Mr. Connelly's stay among us was short, and disappointing—in many ways—but doubtless he has come as near the truth as most others do who take information hurriedly, and second or third hand, or who get knowledge through their inner consciousness and a spyglass. Any tyro in fishing hereabouts—even among boys who never cast any line but one to their best girls—know vastly more of Mr. Connelly's subject than he does. It is clear he never spent any time in fishing hereabouts—unless, indeed, off the wharves of Alexandria; and even there he seems to have had no luck. Possibly he did once wander away to the bridge over Hunting Creek, close by Alexandria, to see the "coons" catch catfish, but "only this and nothing more." We sympathize with him; we even pity him. In his case, as in love and war, "it might have been" is the true refrain that sounds sadly over the lost past. He might have had fishing and fish, but he would not. He might also have concealed his want of experience, by abstaining from displaying his ignorance, along with his great facetiousness, in FOREST AND STREAM, but he would not.

Without myself pretending to a complete knowledge of the subject, I may yet humbly venture to show—very briefly—that Mr. Connelly knows far less, just enough to lead him astray.

According to him, the Potomac consists of two parts—one below the Great Falls, the other above them. The former is about 133 miles in length and all but fourteen miles is tide water. The latter—the part above the Falls—is about 370 miles long, and adding the larger tributaries, like the Shenandoah and Goose Creek, Mr. Connelly has performed the feat of making the little word "above" spread itself over about 500 miles of the finest bass waters in the United States! The great ductility of that word had never before been demonstrated, perhaps, so another philological wonder and benefactor have been added to the lists!

But after intimating there is indifferent bass fishing in all that region, he says nothing more about it! As if one were to ignore all of Byron above his worst part—his club feet! or all of New York city "above" the Battery! But we dwellers on the Potomac would not complain—least of all would this review ever have been written—had Mr. Connelly displayed even a fair degree of knowledge of the lower Potomac, the part to which his article is devoted. He clearly shows that he knows nothing of the fine bass fishing below the Falls, *i. e.*, between Little Falls and Great Falls—at the Feeder, McQuade's, and the Broad Water, etc.—but he knows of a railroad to Great Falls! of which we benighted and disfranchised denizens of the capital never heard before! He seems never to have heard of the great catches that have been made of bass and roach (striped bass) in the beginning of the season, at Little Falls (I have myself known hundreds taken in a single day there); but it is true this generally lasts only a short time. Rockfish are caught in the season in the whole tide water of the Potomac; excellent catches are made in some seasons at Alexandria, and I have never known any day in the regular season when the water was clear, that rockfish could not be caught almost anywhere in the river proper below the Falls, or its bays and tributary "creeks."

Mr. Connelly throws the dust of ridicule and doubt on the assertion of Washington regarding the fish found in the Potomac in his day. And, as if to cap the monument of his own ignorance, he actually does this on no other ground than that what is not now a fact never could have been. In other words, if Mr. Connelly learns little or nothing about fish and fishing in the Potomac in this time, Washington could have known nothing of them in his! What Mr. Connelly did not find at Alexandria, in his brief sojourn, in 1887, Washingtan could not have known in almost a lifetime spent on the same stream in the previous century.

And as if this were not enough, this audacious and logical correspondent goes on to assert as facts what every one else, even in Alexandria, must know to be false; for Mr. Connelly seemed to have heard of bass fishing at Occoquan Falls and above them and only a short distance below Alexandria. Bass are even occasionally caught in Hunting Creek, still nearer that city. (If this be doubted, let Mr. Connelly consult Mr. Moore, of Alexandria, as to his experience last season.)

Mr. Connelly asserts there are no carp here! He does not know that monster carp are caught opposite Washington and below, the season through. To be sure, they are not yet so abundant as herring sometimes are in a barrel, but they are sufficiently numerous to induce fishing for them, and are increasing rapidly.

Another astonishing error of your correspondent is due to his ignorance of the fact that the so-called "tailors" are nothing less than the renowned bluefish. Yet he says they and "spots" are "tolerable pan-fish, in the taking of which no real angler can find any sport". It will be a mild surprise to fish epicures to learn that spots and bluefish are only "tolerable" to the palate, and to anglers that catching the latter is no "sport"!

Mr. Connelly evidently never went down the river at all to fish for "tailors" nor sheepshead, nor drum, nor, indeed, anything else, yet these and other kinds of fish are caught, in season, in large numbers, in the brackish water of the Potomac, and anglers from the capital and Baltimore resort to Piney Point, Leonardtown, and various other places to catch them. I must even confess that, for one, I enjoy rod fishing for "spots" (Cape May goodies, as they are called along the Jersey coast), for they bite quickly and warily and pull hard when hooked. Nor am I so aristocratic as, like Mr. Connelly, to despise good perch fishing. And in a creek not far from Alexandria, I can any day find him half-pounders, white and yellow—often "two at a time"—till his arms ache from the labor of pulling them in. Perch fishing has indeed its advantages, among which I reckon these; first, that it takes little time and money to reach the ground, and, second, that one is almost always sure of reasonable success, which can not so often be said of most other kinds of fishing.

We are sorry—very sorry—Mr. Connelly did not fall in love with our dear "Potomac herring"! but even went so far as to throw big Latin names at him! Now I have an ichthyological dictionary and the U. S. Fisheries Reports at my right hand; but I will not descend to Latin when I mean a simple, ordinary herring! Whatever his faults, herring shall be at least kindly addressed by his ordinary title, for I'm not sure he ever had a dictionary in which to hunt up any others. We are all of us weeping also over the mud in the Potomac, and pray for the day when there shall be few "big rains," and the big steam dredges shall stop stirring up the river bottom in the process of improving the "flats" opposite the capital. We also bemoan the "shoaling" of the Potomac, and especially that the ancient port of Bladensburg is closed to East Indiamen and other vessels like the Great Eastern; but when it comes to the nets set for over 100 miles, from Alexandria to Pt. Loukout, we fairly rage and gnash our teeth! But then, if, as Mr. Connelly would have us believe, there are few fish and "no decent fishing in the Potomac," what in the name of Izaak Walton and the truth are all those nets set for? Do men set nets for fun? In our ignorance we had always supposed it was for fish! But it can't be in this case, for the random visitor who knows, says it isn't so. Evidently, there is a mistake somewhere; and I hope and believe it is not in POTOMAC.

WASHINGTON, D. C., March 3, 1888.

DIAMOND POND AND SUNAPEE TROUT.

CHARLESTOWN, N. H., Feb. 25.—*Editor Forest and Stream:* The letter of "C. D. C." in FOREST AND STREAM of Feb. 18, comes in very *apropos* with my letter which precedes it. I was not aware that both red and white-fleshed trout were taken in the Diamond Ponds, having never taken any of the white-fleshed variety myself, but as I have said, I have never taken any in the Upper Pond or "Little Diamond," as it is called.

The last time I was there, three years ago, was on the 4th of July, and I then whipped the Upper Pond without success for three hours, early in the morning, with a companion, who is a well-known expert with the rod, but neither of us got a rise. My friend had taken some very large trout the week previous, with the fly. The outlines of one of which, which weighed 2½lbs., I saw on a piece of birch bark.

He got disgusted at our want of luck, and started through Dixville Notch, for the "Middle Dam," while I went down to the Lower Pond, and caught a fine basketful of the red-fleshed trout, or "bluebacks," as I think them, with bait, in about ten feet of water.

I never thought to inquire if the large trout of the Upper Pond were in any way different from those of the lower one, which I have taken with both fly and bait. Those with the fly being usually taken about sunset, near the shores, but I have never seen any difference in those I have caught. Now I have always supposed that the color of the flesh was influenced materially by the food, but if, as Mr. Chase says, he has taken both varieties in the same waters, it goes to indicate the existence of two entirely distinct species. The flesh of the red variety is not a salmon color, but a full deep red, like a raw beefsteak, and answers to the European charr.

Possibly Mr. W. C. Prime, who speaks of Diamond Ponds in his delightful book, "I Go A-Fishing," may throw some light on the matter. Should I be able to go to the Diamonds this summer, I will send specimens to Dr. Bean for analyzation, and I wish Mr. Chase would do so, as he is much nearer the ponds than I am, and may be able to control his time, so as to hit the proper season, more certainly than I can. I have always been too late or too early for the Upper Pond. Should these two co-existent varieties be proved, it is in favor of the theory of two long-established varieties in Sunapee, but at the same time I do not feel convinced yet, mainly from the very great differences, not only in color but in conformation, which are reported in the case of the Sunapee "conundrum," and which look much more like a hybrid than an original variety.

My first acquaintance with a Sunapee trout was far more than fifty years ago, when a 3lb. specimen was sent to my father while I was getting my early education at brook-trout fishing in the neighboring streams, and I well remember my juvenile astonishmeat at the sight of a trout of such gigantic and unprecedented size.

The first time I ever visited the lake to fish was about 1844, when, being at home on my summer vacation, I joined a party of young folks who went out to the lake on a three-days' fishing and picnicking excursion, under the pilotage of the late Edmund Burke, of Newport, N.H., then Commissioner of Patents.

We were told on reaching the lake that we were too late for the trout, which could only be taken with long lines in deep water, and had to content ourselves with catching perch near the shores.

The stock of trout had got very much reduced twenty years since by constant netting, clubbing, and shooting on the spawning beds, and Dr. Fletcher, of Concord, who was then Fish Commissioner, caught the "black bass fever," and stocked the lake with bass, which he caught in Lake Champlain, and brought over. Luckily for the trout, he had the wisdom to stock it the same time with fresh-water smelt from Lake Winnepesaukee, and the latter have furnished ample food for both, even if their habits were not so different—the trout taking to deep water when the bass come up into the shallows, and the latter being quiescent in the spawning season of the trout. When Mr. A. H. Powers and myself were appointed Fish Commissioners in 1876, both of us being natives of Sullivan county, and he then living at Grantham, close to the upper end of the lake, our first thought was to stock the lake, as a natural trout water, with landlocked salmon, which we immediately began to do, and in '78 or '9, having an offer from Commissioner Stanley, of Maine, of 25,000 "blueback" eggs, we at once accepted the proposition, hatched the eggs at Plymouth, and placed 10,000 (I think) of the young fry in Sunapee.

Now, if this plant was moderately successful, it has furnished a pretty good basis for the new variety, and if the new fish has not developed from these, there is still the possibility, as suggested by Dr. Quackenbos, and mentioned in my last, of a hybrid between the male trout and the female salmon; selecting this mode of statement, in-

asmuch as the eggs produced from such a hybrid would not be likely to be too large for the female.

With regard to the nomenclature, I have already said that I do not think *aureolus* appropriate or descriptive, and it seems to me as great a misnomer as *Micropterus salmoides*, for the large-mouthed bass. Besides, the tendency among naturalists now is to discard formerly accepted varieties, and *Salmo symmetrica*, as applied to the Winnepesaukee trout, *Salmo amethystus* and *Salmo confinis* have all been relegated to simple *Salmo namaycush*, adapting the Indian name, and the *Salvelinus agassizi*, of Dublin Pond or Monadnock Lake, fails to hold its own as a variety distinct from *fontinalis*.

If this be an original *oquassa* derived from the native stock, or the plant from the Rangeley, let it stand *oquassa*, if it be a hybrid call it "Sunapee," and let us also have the Indian "Winninish" for the jaw-twisting "landlocked salmon." There is still another large trout in New Hampshire to be investigated, viz., those found in Dan Hole Pond, in Taftonboro', which Mr. Hodge thinks may be found to support his theory of the entirely new variety in Sunapee, and it is to be hoped that he will be able this spring to secure some of these for scientific examination. Your correspondent, "Bay State Feller," does not make Sunapee Lake quite large enough; it is nearly nine miles long by two wide at its greatest breadth.

Newbury Station is the most accessible point to go to, from either Concord or Claremont, after the boats commence running in May. SAM'L WEBBER.

LAKE WHATCOM.—Of Lake Whatcom, near Bellingham Bay, Washington Territory, a writer in the Portland *Vindicator* says: "The waters of the lake abound in fish of two kinds, the first being similar to the trout found in all the lakes on the sound, weighing one-quarter of a pound to six pounds. The other is unlike any fish known on the Sound. It is about ten inches in length, and its body resembles that of a trout and its head is like a dog-fish salmon. In October they come out of the deep waters of the lake and go up the small streams to spawn, beating themselves to pieces on the rocks and snags in their endeavor to get up the stream. Along this rock-bound coast seems to be the home of the trout, being sheltered from rough winds and the cliffs casting its shadow for several hundred yards into the lake. On throwing a fly upon the smooth surface the water seems alive with fish. As many as 175 have been taken along this shore by one person in a day's fishing.

THE TARPUM.—On the back of a photograph of this fish, sent us, is printed: "My tarpum or Grande Ecaille, *Megalops thrissoides*—Silver King. One of ten, taken in Senable Bay, Florida, in March, 1886, captured with my ordinary striped bass tackle, a bamboo rod, 5ft. long, weighing but 14oz., a 'Star rubber reel,' a No. 9 striped bass line 900ft. long, the tensile strength of which is only 20lbs., a mullet bait, and, time of capture 1¼ hours, with a pursuit of 2½ miles. Length of fish, 6ft. 3in. Weight, 130lbs. This is probably the most phenomenal catch in piscatorial history, when the weight of the fish taken and the tensile strength of the line with which it was captured is considered. Capt. Dunning, 10 East 129th street, New York city, U. S. A."

FLOATING FLIES.—Cossayuna, N. Y.—*Editor Forest and Stream:* In your notice of Halford's "Floating Flies and How to Dress Them," you say, "We do not remember to have seen them mentioned by our Eastern tackle dealers." I can bear this out; they are as yet unknown practically in this country, and I further quite believe with you that they are well worth a trial. My object in writing is to offer a sample of these flies, tied by myself, to any of your readers who care to write me. I graduated in dry-fly fishing on the self same stream as Mr. Halford (the Itchen, England), and know precisely the style of fly he writes so charmingly about.—J. HARRINGTON KEENE.

THE RENOUS SALMON CLUB, of New Brunswick, to which we referred a short time ago, has been re-incorporated under the laws of New York. The officers are: President, Emile Hurtzig; Vice-President, Robert B. Forsyth; Secretary and Treasurer, Frederic D. Storey, all of New York. These, with Herman Behr, of Brooklyn, and Charles A. Bramble, of New Brunswick, form the Executive Committee. Their advertisement will be found in another column.

MR. H. C. LITCHFIELD, formerly of Appleton & Litchfield, Boston, has severed his connection with that firm, and is now engaged in the manufacture of the well-known Nichols bamboo fishing rod, the Bray fly-book, and a new reel. He is doing what he can to help anglers take in the "big ones" with neatness, accuracy and dispatch. The firm name is H. C. Litchfield & Co., 302 Washington street, Boston.

WEAKFISHING IN FLORIDA.—Mr. Nelson Merrill, who is a brother of Major H. W. Merrill, is now at Trabue, on Charlotte Harbor Bay, Florida, with Mr. Wm. C. Prime, the author of "I Go A-Fishing." He reports that fly-fishing for weakfish, or trout as they are there called, is practiced successfully from the pier near the hotel.

Fishculture.

Secretaries of gun clubs and others who are interested in the protection of the Yellowstone National Park are invited to co-operate with this journal by securing signatures to the petition printed elsewhere. See instructions on editorial page.

THE DECREASE OF FOOD FISHES.

[Continued from page 107.]

THESE pounds, as you will be told, are set very early in the season, as soon as the ice is out and the weather will permit. Prof. Baird reports that in 1871 there were forty-three in Narragansett Bay, thirty-five in Buzzard's Bay and on the Elizabeth Islands, and fifteen in Cape Cod Bay. In 1872 nine more had been added to Buzzard's Bay. Those prior to 1872 are shown upon the map accompanying his report.

In 1876, reports were sent in to the Massachusetts Commissioners from 17 only. In 1878, fifty-two; 1879, fifty-three; 1880, sixty-six; 1881, sixty-four; 1882, eighty-five; 1883, eighty-seven; 1884, ninety-three; 1885, eighty; and in 1886 only fifty-nine sent in reports. About 1850 it began to be noticed that the fish were diminishing, as is shown from the evidence collected by Prof. Baird, and they continued gradually and annually to decrease, as the testimony will show. Here then are two coincidences, the setting up and increase of the traps, and the decrease of the fish and the decline of the fisheries. When a certain event takes place or a certain state of facts is ascertained, immediately followed by another event or state of facts relating to the same subject matter and in the same localities, we naturally connect them together. We begin to believe that the one is dependent upon the other, and the more so the longer this relationship is found to exist, until at length we are forced to the conclusion that the latter is not only contemporaneous with, but that it is consequent upon the former. A cause has produced an effect. A continuing and increasing cause has produced a continued and increased effect.

This is the line of reasoning which led men first to suspect that the setting of the weirs was the true cause of the scarcity of fish, and the continuance and increase of the weirs being always followed by the constant decrease of the fish, has forced upon us the conclusion that these formidable engines which, early in the season, capture vast multitudes of fish, have made them now become alarmingly scarce. And this is of the more force when we reflect that no other cause is known to exist which did not exist before the traps were set. Knowing what we do of the fecundity of fish, we should naturally suppose that, unless interfered with in an unusual way, the number of fish and their size would be about the same year by year. Reasoning forwards, therefore, we should say that whatever hinders or prevents the natural increase of fish would tend to exhaustion. Reasoning backwards, if we find fishes of any genera becoming annually scarcer, we should say that something had occurred to prevent their natural increase.

It is known that the most of these fishes come early in the season into the shoaler waters near the shore to spawn, and the traps are already set to take them, and they do take them in vast numbers, as the returns will show. In the years 1884 and 1886 more than four million edible fish were reported to have been caught, and in the latter year one-half of the pounds sent in no report. It is not possible to overestimate the magnitude of the loss occasioned by the capture of such a vast number of breeding fish. It would amount to immediate and absolute annihilation but that some few come in too early for the traps, or in their migrations manage to escape them. Not enough do so, however, to keep up the supply. If the object had been to destroy these particular fishes because they were nuisances, the ingenuity of man could not have devised a more effectual method. Captain Atwood not only does not attribute the decrease of fish to the trappers, but he commends them in that they are producers. In what way they are so I could not at first make out, but more study of the matter satisfied me that they have been the producers of more mischief and destruction than any class of men since the landing of the Pilgrim Fathers.

Up to about 1860 the catching of these fish gave employment to thousands of hand-line fishermen, with their smacks and boats, and furnished a cheap and wholesome food to all the inhabitants upon the seashore. The supply was always equal to the demand. When, however, the railroads began to provide easier means of transportation, when ice came to be used to retard decomposition, when fish came into more general use as one of the ingredients of fertilizers, and an increasing population made a market for larger supplies, devices more or less ingenious were provided to supply the increased demand. Then traps, pounds and weirs came into use, and have increased to such an extent that the hook and line fishermen caught fewer and fewer each year, until now hardly any of the fishes in question can be caught with the hook and line. As a consequence, the men so employed have been obliged to abandon the business. Several theories have been advanced by the defenders of the weirs to account for the scarcity of fish, to which I beg leave briefly to allude.

We are told that if these fish do not come into our bays as plenty as formerly we are to suppose—

1. That there are some conditions necessarily wanting.
2. That for some unknown cause they have disappeared.
3. That the waters have been rendered impure.
4. That their food has become scarce.
5. That other fish have destroyed them, especially the bluefish.

The first of these suppositions originated in Rhode Island, and was promulgated in the minority report of the committee on fishes of that State. It is the most ingenious and comprehensive guess of them all. It covers the whole ground, and settles the question. Some condition are necessarily wanting. They are, that these fishes, having come into our bays to spawn, are captured by the traps, and so their natural increase is stopped. The time and opportunity to deposit their spawn are the conditions which are wanting, and the weirs alone prevent them. What happens to the eggs after they are deposited, what risks the little fry hazard, what numbers become the food of other fishes, will happen any way, but nothing can be shown which captures or destroys our breeding fish before spawning except the engines which are constructed by the ingenuity of man and used by him to satisfy his avarice or greed. If you have killed your hens before they have laid, there is an end to your poultry, and it is no answer to say that even if the eggs were laid, some would not hatch, some of the chicks would die, the hawks would kill some and the rats more. Enough would still survive to keep up your stock.

2. That from some unknown cause they have disappeared. The Massachusetts Committee, in their report, say that it does not necessarily follow that when fish leave a locality they have been driven away by over-fishing. Nor do we claim any such thing. We do not claim that they have been driven away at all. We say that they have been caught up by unseasonable fishing and have become scarce. When this theory of disappearance was first advanced, we could not, any of us, say that it might not be so. Now, what are the ascertained facts about the disappearance of fish? Captain Atwood gives the names of a few species which have disappeared or changed their location, which he had noticed "during a long life of pratical experience in the fisheries." He argues that, because some fish have disappeared or changed their locality, these fish of which we are speaking may have disappeared.

In view of this the Massachusetts Commissioners inquire: How then do the facts stand? "Here are four important fishes of different genera, of different habits, eating, to some extent, different food; and these fish suddenly agree in diminishing, and that diminution is, in some cases at any rate, contemporaneous with the start of trap and weir fishing." In such a case, on whom does the burden of proof lie? Most certainly it lies with the advocates of trap fishing to show that this method does not diminish the fish (Report 1871, p. 74). Precisely the same line of reasoning is to be followed here that was taken by Rimbaud in his review of the report of the English Commissioners. Captain Atwood fell into the error of "compounding under the common name of 'fish' of all the vertebrate class taken by fishermen." Rimbaud shows that a classification is necessary. "A classification founded not on anatomical characters but on habits and localities."

Rimbaud makes four divisions. For our purpose only two are needed: 1. Wandering fishes, the most of which are surface fishes. 2. Bottom fishes. The difference chiefly to be borne in mind is this: That whereas the wandering fishes appear on our coast only when migrating, and then in vast but uncertain troops, the "latter are especially domestic, and dwell and multiply on particular localities along the coast." According to such classification, the chub mackerel and the shad belong to the first division, of which there is no doubt they appear and disappear for no assignable cause. They come, they are gone, is all that can be said about them.

Now, what are the ascertained facts about the disappearance of fish? for dimunition is not disappearance. There is a law apparent even in the going and coming of these inhabitants of the waters, dependent upon the instincts and habits of fish. It is this that the change is then sudden and entire. In the list of fishes of which Captain Atwood says they have come and are gone, this peculiarity is not noticed by him. When he laid aside the evidence and alluded to the changes he had noticed in fifty-one years, he names no species that disappeared or changed locality gradually or partially. They went all at once, and when they came back they came in legions. There had been a total disappearance of scup previous to 1793. In that year they returned, and were afterward abundant. The Spanish mackerel, he says, although plentiful for many years, has long since disappeared. I have not (he says) seen a single specimen for the last twenty years. So in 1840, the shad appeared in large quantities, and in 1842 they disappeared. Some sixty years ago, he says, the squeteague was vastly abundant, and was absent a great many years. The flat fish almost wholly disappeared, and seemed to be nearly exterminated in the waters north of Cape Cod, only a few being seen. But the striped bass have, he says, diminished, and so he says that all agreed that scup, tautog, sea bass and striped bass have within a few years diminished in Buzzard's Bay. Of these fish, it will be noticed that while they are not wandering but domestic fishes, not only have they become fewer in number, but smaller in size, which would not be the case if they had disappeared. Whatever cause would be sufficient to make the large fish go away, would have the like effect upon the smaller specimens.

The pounds and weirs, as reported since 1883, took 8,841,093 scup, 24,408 striped bass, 210,071 tautog and 724,512 other edible fish, (Mass. Report, 1886, Table 8, p. 90.) These eight or ten million fish evidently had not disappeared. What reason is there to suppose that others of the same genera had done so? The support for such a theory is very slight at most. We do know what the weirs have done. We do not know that any have disappeared, but if they have, here are two causes for the scarcity of fish, one of which we can and should control, and the other we cannot. I think a distinction should be made between disappearance and change of locality. There is no question but that the scup, which is a schooling fish, change their grounds, not so far as I can learn, however, but that they can be tracked. If they cannot be found in the upper part of our bay, they may be at Saughonnet Point; if not to be got at the bottom, they may at certain seasons be found on the shores. By disappearance I understand that the absence which cannot be tracked or explained. Sometimes we catch no tautog in a place where heretofore we have found them, when by going to another ledge of rocks they bite freely, as we say. Early in the spring we find them about the rocks near the shore and around the wharves; later we seek them further out on the ledges, and still later, in the autumn, we catch them at the wharves again. Then they go into winter quarters.

3. As to the impurities in the water, this manner of accounting for the diminution of fish is hardly worth a thought and I dispose of it by quoting the language of Capt. Atwood, who says: "But in the great sea man cannot pollute its waters by anything he can do."

4. Scarcity of food. Upon this point I refer to the article of Mr. Lyman (Mass. Report, 1872, p. 35). Prof. Baird disposes of it by stating that the dredging showed the food of these fishes existed in great abundance, and that there was not the least danger that it would fail. Certainly it will not while the fishes which subsist upon it are diminishing. The long list of invertebrate animals of Vineyard Sound and adjacent waters is before you, only the names of which it would take hours to read. The same authority says: "As a general result, it may be said that so far from their being any scarcity of invertebrate life in the waters during the summer of 1871 as compared with earlier years, its actual amount was such as to strike with astonishment every one of our party engaged in the inquiry. The validity, therefore, of the assumption of diminution of food may be denied in the most positive terms" (Report of United States Commissioner, 1871-2, pp. xxi., 295).

5. The ravages of predaceous fishes, especially the bluefish. There was a time when this question presented difficulties not easily to be met and overcome. The United States Commissioner says: "It is a pelagic or wandering fish, going in immense schools, and characterized by a voracity and bloodthirstiness which, perhaps, has no parallel in the animal kingdom. The fish seems to live only to destroy, and is constantly employed in pursuing and chopping up whatever it can master. As some one has said, it is an animated chopping machine. Sometimes among a school of herring or menhaden, thousands of bluefish will be seen, biting off the tail of one and then another, destroying ten times as many fish as they really need for food, and leaving in their track the surface of the water covered with the blood and fragments of the mangled fish."

Again he says: "I ascertained by a careful inquiry into the number shipped by the dealers along the shore that about a million and a quarter could be estimated as the number captured along through Vineyard Sound and on the coast from Monomoy Point through Long Island and sent to market in 1871. Any one who has seen these fish will judge not one in a hundred is taken. If, now, we admit the presence of 100,000,000 bluefish in these waters referred to, we may form some estimate of the number of fish destroyed by them. To estimate twenty per day as the number destroyed, if not devoured, by each bluefish, is by no means extravagant when we bear in mind my own examination and the testimony of others. If, therefore, 12,000,000,000 are eaten in one day, the number destroyed off the New England coast in a season of 120 to 150 days can easily be estimated." (18,000,000,000,000.)

"Indeed, I am quite inclined to assign to the bluefish the very first position among the injurious influences that have affected the supply of fishes on the coast, yet with all this destruction by the bluefish, it is probable that there would not have been so great a decrease of fish as at present but for the concurrent action of man" (Report, p. xxiii). See also Captain Atwood's remarks to like effect (Massachusetts Report 1871, p. 68).

Mr. Lyman, in view of all this, merely says: "On the whole it will be perhaps pretty near the truth to say that although the bluefish blindly destroys almost everything that comes in his way, his main food is the soft fishes and mollusks, such as menhaden, mackerel, alewives and squid" (Massachusetts Report 1872, p. 35). This is the only notice Mr. Lyman takes of this element of destruction, except to say that the bluefish theory is an old one, but new in its application to scup. It is not claimed by Prof. Baird, destructive as he has shown the bluefish to be, that his victims are to any considerable extent the edible fishes, about which we are now inquiring. He has found scup in the maw of the bluefish, but not in great numbers, while as to the tautog and the others it is not claimed by anybody that they constitute any portion of their food.

It will be shown that the traps capture vast numbers of the softer fish, which are food of the bluefish, and so force him to attack anything he can find. So this theory entirely fails to show that the bluefish was accountable to any great extent for the scarcity complained of. That Captain Atwood should not have felt very kindly disposed toward this "Animated Chopping Machine," which not only depopulated his bay of nearly all other species, but depopulated his village and his home, is not to be wondered at, but it was

not expected that the "man who probably knew more of the habits of our cold temperate sea fishes than any one in the country" would have attempted, by the most fallacious reasoning, to make an old theory adapted to certain genera of fish apply to all, of whatever genera, that had become scarce. Among the changes which he had noticed, there was another change just beginning to be felt, which, if he had known or could have foreseen, he would have been forced to say that the bluefish theory would not do at all, and we should not be here to-day to ask for legislation to protect the fisheries.

Sixteen years ago it was agreed by all that the bluefish were abundant all along our coast. Since that time they have decreased rapidly year by year, until last season hardly any were to be found. It is a fitting tribute which we pay to the magnanimity, as well as the learning of Captain Atwood, when we say that if he was here with us now he would tell us that he had been obliged greatly to modify his views on the subject of the fisheries by reason of the changes which have taken place since the hearing in 1870. His great enemy, the bluefish, would worry him no more. In proof of this, we refer you to the published tables, and shall produce witnesses who will satisfy you on that point.

In 1878 the returns from 52 pounds, 28 seines and 99 nets gave as the catch 599,156. In 1884, 88 pounds, 28 seines and 63 nets report the number to have been 245,673, a decrease of 353,394, and the number of pounds had increased 41. The decrease from 1884 to 1885 was 111,816. In 1886 there were returns from 60 less of the fisheries, so that no comparison can be made; but as far as the figures are given they show a decrease of the bluefish from 1885. (See Mass. Report 1886, p. 38, and tables). The Sconticut Neck traps and seines in Fairhaven show a still more marked decrease. The reports give 25,592 in 1878 from 9 pounds, while 15 pounds only give 5,635 in 1884.

The reasoning is this: If a million bluefish consumed 1,000,000,000,000 other fish in a season, the decrease of a quarter of a million of bluefish must have saved 400,000,000,000 of them from destruction. If the bluefish was the cause of the decrease of other fish, either directly or indirectly, we should naturally expect that when the cause had ceased to exist the effect would in like manner stop. This line of reasoning was submitted to Prof. Baird, who replied that the "arguments in regard to the decrease of fish are evident, and in every way worthy of consideration" (letter of Sept. 6, 1886). Thus every one of the reasons which have heretofore been assigned as the cause of the decrease of the fishes referred to, are shown to have little or no effect, and nothing now remains to account for it except the agency of man, with his ingenious and destructive engines. It seems as if He who said: "Let the waters bring forth abundantly of the moving creatures that hath life, for use of man," ordained that he should have them to use only so long as he regarded the laws which regulate their increase and continuance, and that man and man alone is able to prevent the fulfilling of that law of production which He established at their creation.

Wonderful is the fecundity of fishes; more wonderful still that nothing can prevent their multiplication or hinder the operation of the law which adjusts the balance of the forces, but that which destroys the parent fish in advance of her period of spawning. The United States Commissioner, in an exhaustive review of the entire field of inquiry, regarded the pounds and weirs, in conjunction with the ravages of the bluefish, as the true cause of the scarcity of our edible fish. The bluefish has since gone, so that nothing remains but the destructive apparatus of the fishermen. The fishes continue to grow scarce, and the possible has become the probable exhaustion of the fisheries. If these things are so; if in this review we have fairly stated the facts which have been ascertained, have been guilty of no logical fallacies, but have drawn only just conclusions from well established premises, it would seem that we hardly need do more, and that it is the duty of the Legislature to interpose by the strong arm of the law against the further use of destructive apparatus for catching fish.

This evidence, which is all before you, comes not from the testimony of ignorant fishermen alone, but is the result of investigations of scientific men; men of profound knowledge, who have carefully studied the habits of these fishes and the means employed to capture them. All the fishes of the sea, those silent witnesses whom nobody could bribe, no prejudice could bias and no interest could affect, have been summoned to the bar and made to disclose the secrets of their origin, their life, their increase and their growth.

[TO BE CONTINUED.]

THE MENHADEN QUESTION.

Editor Forest and Stream:

I read with much interest the letter of Capt. Babson on the menhaden question, also your comments on the same. In this locality few will be found to agree with Capt. B., and his learned authorities, that the efforts of man do not diminish the supply of fish very materially.

Fifteen years ago we could catch menhaden by the hundred barrels in any of the creeks and coves of Buzzard's Bay, and I have seen a seine swept in Onset Bay and many barrels of these fish caught. At any time in the bluefish season one could catch menhaden enough for bait by simply darting an oelspear into a school of them. Where are they now?

Some years ago it became unlawful to seine them above Bird Island, but the guano works at Wood's Holl continued to get them from somewhere, and the fish grew scarcer and scarcer every year. Was this because the bluefish ate them so voraciously? I do not think so. I think that menhaden spawned in the coves and tidal rivers of this bay, and that I have seen large schools of the young fish in September, and I have no doubt but that they spawned in the Chesapeake as well. They were there from March to September, in 1877, and were incessantly pursued by the seiners in the employ of the many "chum works" or oil factories. Nearly every creek from Mob Jack Bay to the Potomac had its guano works. Whether the chum is a benefit to the land is still a mooted question. I have visited many of the fish pounds in the vicinity of Cockley's Creek; these traps, and the mode of fishing them, were fair samples of the operation as conducted in all bays, creeks, and rivers that flow into the Chesapeake. An idea of their number may be got from the fact that there were more than twenty different traps owned at Cockley's Creek, and these twenty were set between the Dammaron Marshes and Smith's Point.

In FOREST AND STREAM for August, 1882, I gave a description of the method of taking the fish from these traps, but I gave no account of the quantities of "taylor" (bluefish), "trout" (squeteague) and other fish that were too small for market, but were not too small to make manure of. Nothing that entered those deadly pounds was wasted(!) *i. e.*, thrown back to live. In our bay the same rule held good, farmers enriched their pockets if not their land by the quantity of refuse fish they could save for manure. These pounds have been restricted in Buzzard's Bay, and I think that the laws of Virginia have put a partial stop to the terrible waste that obtained there.

We did not know that the markets of New York were glutted with bluefish last year. Those of Boston were not, and bluefish at the market at Onset Bay (two hours from Boston) were worth as high as 20 cents per lb. during the season, and they were often sold at a dollar apiece. It will hardly pass to assume that the bluefish is a "pirate" for the summer tourist only.

In this town are owned some fifty boats that in bluefish time are all busy trolling for them, and the writer hailed one of these boats on a certain 19th of May with "How many?" "One hundred and twenty" was the reply. This was the second day of their arrival and they were worth 10 cents per lb. A simple calculation will show that the industry was worth following. It is also pertinent to add that gill nets were not allowed that season. As for the twine and net industries I think that they would soon die a natural death if there were no laws to prohibit indiscriminate seining. Which has priority of right, the seine or hand line, the gill net or split bamboo, are questions in fishing ethics which I will leave to the columns of FOREST AND STREAM for settlement.

In the Agawam River are to be found some of the finest white perch that grow. The law gives them full immunity from seines, but its enforcement does not, and a few weeks ago some unknown persons slipped a net into one of the deep holes and drew out a number of barrels of fine fish which went to the markets of New York. The river is patroled nightly by persons on the watch for seiners. The hand line or rod fishermen all say that seining makes the perch very wild and that they will not bite after a net has been put into the river.

A three mile limit might not be as beneficial to the menhaden as a law protecting them in the spawning time, and I should think would be far more detrimental to the guano and oil manufacturers. Some able and general legislation is needed for the protection of menhaden as well as other fish.

In regard to lobsters, if any gentleman who is interested in their protection will visit South Plymouth, or Manomet, Mass., hire a dory with a man to row it, and ask the man to get him some bait for cod fishing, he will get some information concerning the way in which the short lobsters are returned to the sea. I am told that the same peculiar manner is observed at Cuttyhunk.

We have one fish pirate in our waters that no law reaches. I refer to the red-breasted merganser or common sheldrake whose catch of fish is beyond computation. Of twenty-two examined by the writer, more than three-fourths were crammed with young tautog, and their ability to catch them is only equaled by that to hold them when caught. A person not acquainted with this bird would hardly credit a description of the contents of one's gullet. I have taken a frost fish eight inches long out of one, and a tautog five inches long and two inches wide from another. The sheldrake has a snake-like elasticity of throat to enable him to swallow. I think that they catch more tautog in Buzzard's Bay than all the smackmen.

WALTER B. SAVARY.

EAST WAREHAM, Mass., March 2.

Editor Forest and Stream:

After reading the articles in FOREST AND STREAM of March 1, for and against menhaden fishermen, I wish to give the facts of an encounter of my own with some menhaden fishermen.

One afternoon last August, while fishing in the surf off the south side of Long Island, I saw the men from a steamer out with their nets. Wishing to obtain some menhaden for bait, I pulled out to where they were fishing. When I reached the fishermen I found it was mackerel, not menhaden, they had caught. The fishermen told me to help myself, which I did liberally, and the next morning enjoyed the fish for my breakfast.

The finding of these fishermen catching mackerel, confirmed the following statement often made to me by men who had worked on the fishing steamers: "The steamers do not confine themselves to menhaden, but when short of a cargo, pick up any kind of fish they can get."

When enjoying those mackerel for breakfast, it was hard to think that thousands of them were being pressed at some factory. Is there any law against the use of good food fish for making oil? Judging from the uneasy action of the captain of the steamer when we came up with them, I supposed there must be some such law. I am very sorry that the name of the steamer has escaped my memory.

WM. E. QUIMBY.

MARCH 2.

THE NEW HAMPSHIRE HATCHERY BURNED.—The hatchery at Plymouth, N. H., was burned on Wednesday last, Feb. 29, and all its valuable contents were destroyed. At that time it contained over a million of eggs and fry of the different species of salmonidæ, but fortunately the eggs of the landlocked salmon allotted to the station had not arrived from Maine. The hatchery was used not only for the State of New Hampshire, but for Massachusetts also, and was superintended by Col. Elliott B. Hodge, who is also one of the New Hampshire Fish Commissioners. On the day of the fire Col. Hodge was in Boston attending a meeting of the New Hampshire and Massachusetts Commissioners, and the place was in charge of an assistant. A temporary hatchery will be immediately provided for the landlocked salmon eggs and such other work as may be necessary to be done this season. The loss is a heavy one, which cannot, however, be estimated in money, and will cause a break in the work of stocking the waters of the States for which it was operated.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 25 cents.

Secretaries of gun clubs and others who are interested in the protection of the Yellowstone National Park are invited to co-operate with this journal by securing signatures to the petition printed elsewhere. See instructions on editorial page.

FIXTURES.

DOG SHOWS.

March 20 to 22.—Inaugural Show of the Rensselaer Kennel Club Troy, N. Y. Alma M. Ide, Secretary. Entries close March 10.

April 3 to 6.—Fourth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 17 to 20.—Fourth Annual Show of the New Haven Kennel Club, New Haven, Conn. E. Sheffield Porter, Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5981.**

TO THE QUEEN'S HOUNDS' TASTE.—Spratts Patent (America) Limited send us the following letter from Queen Victoria's huntsman, which speaks for itself: "Royal Kennels, Ascot, Feb. 6, 1888: Gentlemen—I am very pleased to say that your patent meat dog biscuits continue to give me every satisfaction. I think I can speak with some experience of them, as they have been solely used in the Royal Kennels for the last ten years. Yours truly, FRANK GOODALL."

IN QUEST OF LIGHT.

NEW YORK, Feb. 25.—*Editor Forest and Stream:* Will you be good enough to put me in the way of finding an explanation of a certain experience which I have had? The circumstances are no doubt as old as the institution of dog shows, and I probably reveal my ignorance by my question, but it seems to me who am not *au fait* in canine matters, that the situation ought not in the true interests of dog breeding to be, as is, I believe, the case, a constantly recurring one. Remember I approach the subject with an almost infantile simplicity, like a theoretical politician, puzzled by inconsistencies. A year ago I found myself able at last to indulge to a limited extent my passion for dogs and to breed them under favorable conditions in the country. I thought I would be more proud to say that I had bred a winner than that I merely owned one. I studied the points and characteristics of the breed I preferred and found I could understand each separate point, but doubted my power to distinguish the best one, the second best, etc., of a group of animals of the kind I was to raise. Now, said I, this is the function of dog shows. Men of ability to unerringly discriminate as to these points and to rank the dogs are selected as judges. I will procure dogs, as good specimens as I can, and I will be guided in my breeding operations by information drawn from the highest tribunal available. I bought a dog and a bitch to begin with. The dog had won among others five first prizes in England, some of them in the very home of his breed and under the auspices of the proper specialty club, in two instances taking the club's cup. Previously to my buying him he had won four firsts in this country. He is now four and a half years and looks as well as he did when I first saw him winning on the bench. The bitch had never been shown when I bought her, but she seemed to be typical and is of the best blood. Last season I showed my dogs. I was not greedy to win, but I was greedy to learn and was willing to ungrudgingly give the *pas* to dogs better than my own. In fact I was almost anxious to meet such that I might study them and learn the type, for I knew my own dogs were not perfect, as indeed dogs never seem to be in all points. The day of trial came and the dogs I was studying faced the judge in the ring. This article is in no way personal, and no hint of intentional injustice is suggested, but for the sake of probability that the judge knew what he was about, I will say that he was from the land where my dogs are native and best known. A recently imported dog which we will call X, with a fresh win in England to his credit, took first. My dog took second and my bitch he. I studied the winner. A second dog show at the same place was held. My two animals were on hand. I had some well-grown puppies by this time to weed out, and was anxious to increase my knowledge before doing so. My dog was as fit as the preceding year; the bitch was better in coat but otherwise the same. X, the winner of the year before, was also there. The judge was a new one, and like his predecessor, came from England. Two dogs not shown the previous year were put first and second respectively, and my bitch third. There was no vhc., hc. and c. given. The inference naturally is that in the class no animal, barring the first three, deserved so much as a card of commendation. Now this left absolutely unnoticed X and my dog who were first and second last year, and put the hc. of that same show over both. Nothing in the condition of these dogs visible to the naked eye in my mind justified this, especially as the judge gave second to a dog whose coat was, as to condition, the worst of the lot. I am not a dissatisfied exhibitor in the sense that I can tell the judge what he ought to have done. I am simply flabbergasted. Two children could not have given two judgments which, taken together, would have been more irreconcilable and irrational. The two decisions vietiate each other and are collectively absurd. In this last judging, specimens of dogs that I cannot help feeling are typical of their class, have been branded as unworthy to be shown.

I shall continue my climb toward the temple of canine science, which I suppose must exist, but I would rather in so doing understand this paradox than pass it by. I shall still show perhaps, but it will be for other reasons than the chance of a decision in the ring favorable to myself. It will be, for one reason at least, that I may get the opinion of your valuable paper, which, so far as it has gone in the instances under consideration, has been the same as I was led to form from other sources of information before reading your criticisms.

At present I am in a *désillusionné* state as to ring judging that is very painful. As the facts of the case appear on their face, the conclusion to be drawn is too horrible to contemplate. By mixing a little hypothesis with these facts I could draw a variety of conclusions, but that I may not blunder too much in so doing, I beg of you to furnish me with an element which, added to the circumstances given above, will enable me to explain to inquiring friends why they should respect the verdicts of a kennel club. Of course I suppose that a system of guessing, by which a correct estimate of quality was made, if only in the ratio of three to two, would in the long run improve a breed, but does it not seem as if something better than this could be done? Why are the judges not put on their mettle and required, as sometimes in England, to write their opinions? Why should their minds be star chambers when they judge? If they followed a methodical system an exposition would be easy and by valuing points great accuracy would be insured. Why should the judges, "whose decisions are final," be so irresponsible and autocratic? Is the human mind in such swaddling clothes now as in the days of the Delphic oracle, and ought not the reign of hocus pocus and rule of thumb to be a thing of the past?

LUX FIAT.

TROY DOG SHOW.

WE have received the premium list of the inaugural dog show of the Rensselaer Kennel Club, to be held at Harmony Hall, Troy, N. Y., March 20, 21 and 22. The club was organized for the purpose of holding a dog show for the benefit of the Soldiers and Sailors Monumental Fund, and consequently the premiums offered are not large; the managers trusting that in view of the worthy object for which the show is held dog owners will generously support their efforts. We have just received a letter from the secretary informing us that the outlook for a very successful show is most flattering, and that entries are coming in far beyond their anticipation. The entries close on Saturday, March 10, and should be made to Alma M. Ide, Troy, N. Y. In addition to regular prizes there are many specials, $10 for best mastiff kennel of three or more, tower clock for best dog, silver cup for best bitch. For St. Bernard kennel, $15; best dog, harness; bitch, $5. Best collie dog, $5; bitch, $5. Best English setter, $5; best dog, collar; bitch, collar. Best Irish setter, $10; $15 meerschaum smoking set for brood bitch and three of her progeny, and $5 for best of the progeny. Best pointer, $10; also medals and terra cotta figures for other pointers. Foxhounds, beagles, bull-terriers, fox-terriers, Irish and rough-haired terriers, Skyes, Yorkshires and toys, pugs, specials of $5. King Charles and Blenheim, $3, etc., etc.

JUNO, a Laverack setter of excellent pedigree, owned by Dr. A. N. Roussel, a dentist at 143 Stuyvesant avenue, Brooklyn, now rejoices in a gold-filled tooth. Dr. Roussel noticed a defective tooth in the dog's head and determined to fill it. Juno was persuaded to take a seat in the chair while the doctor drilled out the cavity and filled in the gold. The dog stood it like a major and looked up gratefully when the work was finished.—*New York Times.*

PHILADELPHIA DOG SHOW.

THE Philadelpia dog show has come and gone, and our prediction that it would be the most successful exhibition of the kind ever held in the Quaker City has been verified. Before 10 o'clock on Wednesday night there was money in the club's cash box to meet all expenses, and every dollar taken in on Thursday and Friday will represent "balance on hand." The club has had hard luck in many attempts to hold successful shows and everybody seemed pleased that the patient waiter had at last reaped a well-earned reward. Of the 463 dogs entered for competition about 80 were absent, but had they been on hand they could not possibly have taken the prizes; the quality in their respective classes was too hot for them and the committee was not of the sort to bar competition to let them win. So they stayed at home and by their absence the show was benefited in point of quality if not in quantity. Spratts Patent did the benching and feeding and no complaints were reported. It only remains for us to express our thanks to the committee and to everybody connected with the management for their courtesy and kindness. This we do most cheerfully and sincerely.

In more than one instance we may find it necessary to criticise severely, but we shall not do so without being sure of our ground or able to defend our position and prove the justice of our statements. S ying a decision is wrong is not showing why it is wrong. The man who does not know why a decision is wrong certainly has no moral right to say it is wrong. Such style of criticism disgusts rather than instructs and it is usually the outcome of malice. Take the report of the New York show in a Chicago paper as an illustration of malice and gross ignorance. We are told therein that Mr. Davidson's judging of deerhounds and greyhounds was all wrong and that his decisions raised a storm of abuse. The writer does not even attempt to show which of the decisions was wrong, and the inference is that he does not know. If somebody told him a decision was wrong he forgot to remember why. In another part of the report we are told that the English judge of mastiffs indorsed a would-be American judge in placing Homer over Ilford Cromwell. The cream of the indorsement would have been skimmed if the erratic reporter had written the truth. Ilford Cromwell was not in fit condition for the show bench and should have been kept at home, hence the "indorsement." If the Western editor would engage competent and reliable reporters he would find that the change and extra expense would benefit his readers if it did not benefit him. Now for the dogs.

MASTIFFS—(MR. MORTIMER).

The class for champion dogs contained two entries, and Minting, the bold and typical son of Maximilian and Cambrian Princess, won easily enough from his grand-headed kennel companion Ilford Caution. In muzzle, wrinkle, pasterns and in carriage of tail Ilford Caution leads, but in other points Minting fairly smothers his rival, and taken all round is a much better dog. The open class for dogs introduced us to a medley lot of twelve, and after some delay Mr. Moore's young dog Coroner, by Orlando, came from the ring with the blue ribbon, and was properly placed. A description of him may be found in our New York report. Clement is a big, strong, good-limbed show dog. Beau, unnoticed, while defective in head and very weedy, is a better specimen than the third prize winner. Welsh, hc., although houndy in head, is a better dog than either Clio or Leo Victor; he should have been third. The first and second prize winners were properly placed, in fact, the judge handled the dogs he knew very well, and did not blunder until he came to the unknown quantities. Duchess, described in our New York report, was first in the bitch class, Boss Lady Clare being second. The last named, being all out of condition, should have given way to Lady Beatrice, who was third; all were described in our New York report. Nell, vhc., is shallow in skull, small in muzzle and defective in ears; her body will do. This was a poor class. Puppies were a wretched class of two, the first prize winner being far ahead of her mongrel-looking opponent. She has a fairly good skull, but is lacking in volume of muzzle, and her ears are much too light in color. She stands on legs and feet of more than average merit, but would do with more bone and is too straight behind. Why Venus III. was highly commended we do not know. She has wretched head, color and eyes, large ears, and shows not a particle of true mastiff character.

ST. BERNARDS—(MR. H. MUELLER).

These classes were carefully and well handled. The judge, as owner and breeder of St. Bernards, has acquired a knowledge of the breed, and his decisions, except in one instance, were well received. Otho and Miranda were the only rough-coated exhibits in the champion classes and walked over for the prizes. Both were in excellent condition. In the open class for dogs Barry II. repeated his New York victory and must henceforth compete in the champion class. Monte Rosa, that was given first at New Bedford over Eiger, made a good second. He is a young dog of great size, better in head than the majority, has great bone and stands on excellent legs and feet. Bryan Borru, third prize, like his sire, old Cæsar, has a plain and characterless head, but his lengthy body, good bone and gay carriage fairly earned him the place. Alvier, undersized and rather plain in head, deserved the vhc. card, but we thought Centaur rather lucky in being placed on equality with him. The latter is a red dog with poor head and is not up to show form. Nero, hc., is undersized, defective muzzle, straight behind, light bone, bad feet. His short and high carried tail is also against him. First in the bitch class went to Corrette, who must have had a very narrow squeak. The following are her defects: Cheeks too full. Muzzle small and rather snipy. Ears not well carried. Expression not quite right. Chest narrow. Ribs not very well sprung. Forelegs very crooked. Undersized. She is fairly good behind and has plenty of bone and the proper sort of feet. Paleface, second prize, is not a good one, but her head is not near so defective as it seems at first sight. Her muzzle should show more depth and squareness in profile and the forelegs should be straight and set into good feet, and not showing weakness in pasterns. She has a number of other defects, but doubtless her worthy owner would like to have some parts of her sent back to Arlington, and had we to enumerate all imperfections we fear there would be little left, excepting, perhaps, chain and collar. Bonnie Gipsey is not of the style of beauty we admire or look for in a St. Bernard. She is small in skull, weak and pointed in muzzle, and might have been very much better in eyes and in expression. She has good ears and truly formed body and quarters. Size and bone are essentials in which she is lacking. Rough-coated dog puppies were a very weak class of two and first prize was withheld. Guardsman, given second, is fully as good a specimen as Corrette (first in open bitch class), and if the latter was good enough for first so was he. Lack of massiveness in head and a rather weak back are his defects. He has good size and stands on fairly stout legs. King Charles, vhc., has very poor head and ears. In the corresponding class for bitches Leah, under-sized and defective in head, but showing quality, was given second, with Daisy, a poor-headed specimen, commended. Apollo did not care to face the music in the champion class for smooth-coated dogs, and, therefore, his son Hector scored a bloodless victory. Now that Apollo has changed owners it is not at all probable that the Chicago "organ" will make further attempts to convince itself that Apollo "shows more character" than Hector. Daphne, not in full bloom, was properly placed first in the next class for champion smooth-coated bitches. Her only opponent was Flora II. Both are well known. Victor Joseph, a wonderful dog when Mr. Tucker owned him, is now, according to certain reports, hardly able to beat third raters. A full and correct description of this dog appeared in FOREST AND STREAM of May 12, 1887. As the dog was at that time so he is to-day—a useful second-class specimen. Change of ownership has not made him either better or worse. It was a very close thing between Ivan, second prize, and Leo IX., third prize. The latter has much the best head but his color is less catchy than Ivan's and he is not straight in front. Wotan, vhc., is small and defective in head but shows good breeding. Chequasset Norman, vhc., is of good size, but his muzzle is not right and his coat is neither one thing nor the other. Appolonia, first in bitches, must improve very considerably in head before we can call her a good one. Smooth-coated puppies found Chequasset Norman first. We would have given the prize to Lord Hector, who, while under-sized, shows much quality, is better in head than the winner and has the proper texture of coat.

NEWFOUNDLANDS—(MR. MUELLER).

This class was not well judged, and the judge did not appear to be at home with the breed. There was but one Newfoundland in the class, the second prize winner. Had she been given first and the other prizes withheld, we think a correct decision would have been made. Don, given first, is plain in head, light and short in body, light in bone, short and curly in coat, undersized, and shows no true Newfoundland character. New York Lass, while defective in head, is built on good lines and has the proper texture of coat: she should have won with very many points to the good. Queen Cole, third prize, is plain in head, short in coat, straight behind, light in bone, and has a number of other less prominent defects.

GREAT DANES—(MR. MUELLER).

There were but two entries, both very poor specimens. The winner, Koloss, while decidedly unfit for bench show purposes, owing to his weak and cow-hocked legs, was the better of the two. The dogs shown at Vienna when Koloss won first must have been a very seedy lot. Leo V. is undersized and has wretched head and expression. Had we been judge it is probable that the Philadelphia Kennel Club would have been saved $10 and a silver medal. Frau, vhc., in the bitch class, is not a Great Dane. She is a black and white dog.

DEERHOUNDS—(MR. MORTIMER).

Chieftain and Wanda, Mr. Thayer's peerless champions, had walks over in their respective classes, and in the open class for dogs Robber Chieftain and his kennel companion, Highland Laddie, had matters to themselves. The prize was given to the latter, a decision which will never be indorsed by judges of the breed. Robber Chieftain beats Highland Laddie in head, legs, back, loin and in coat, and is a much better dog, in fact the best dog that Mr. Thayer has ever exhibited of his own breeding. Of the three bitches shown Theodora was clearly the best. Pride of Heather, light in loin, flat sides and out of condition, is so much better in other respects than Maida, vhc., that she was properly placed second. Dora being absent from the puppy class left Lady to walk over for the prizes. Defects—Muzzle weak, eyes not well set, skull round, neck a trifle short, back not very strong, loin rather light, second thighs lacking in muscular development, forelegs not very well set, shoulders too upright, body somewhat short, hocks rather straight, travels with hindlegs too close together. A number of these failings may improve with age, but Lady will never reach the champion class. She stands on good legs and feet (important points in her favor) and has fairly good coat.

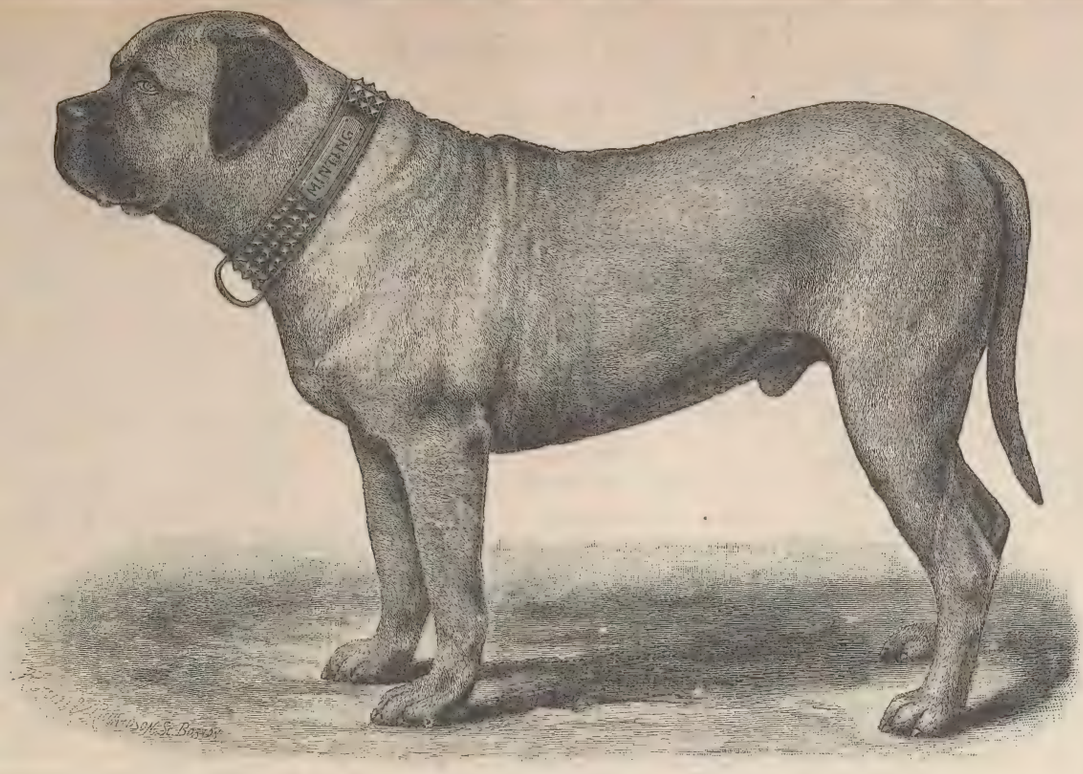
GREYHOUNDS—(MR. MORTIMER).

These classes were very poorly represented, there being but six entries in the five classes. The club has only itself to blame. Greyhounds are an important class, and their owners have a right to demand that they be judged by men who have owned greyhounds and attended coursing meetings, or at least by men who have had opportunities of carefully studying the breed. Few classes are harder to judge than greyhounds, and guesswork is not the sort of judging to suit greyhound men. It was well enough ten years ago, but dog men are better posted than they were in those days. Mother Demdike was alone in the champion class for bitches, the dog class being empty. The New York winners Middleton and Stormy Day were first and second in the open class for dogs, and vhc. was given to Captain, who is not a show dog. He is flat in loin, light in bone, has defective feet, light quarters, legs badly placed, feet turning outward, high-carried tail and plain head. First in the bitch class was given to the only entry in the class, Saturday Night, a very poor specimen. She is fairly good in head, short in neck, round in chest, wide in front, very defective behind, the quarters falling away very abruptly and causing a bad movement and giving an unsymmetrical appearance to the hind parts. Her shoulders are not right, and she is light in bone and a very poor mover. There was only one entry in the puppy class, and the prize was withheld for want of merit. There can be but one reason why it was withheld, seeing that the puppy is certainly not less than 50 per cent. a better specimen that the first prize winner in the preceding class. If Saturday Night was good enough for first, this puppy was good enough for first and special. She has fairly good head, ears rather large, but well carried, chest not sufficiently deep, and legs not quite straight. In other respects she is a good sapling, and well deserved first.

POINTERS—(MR. WILMS).

The quality of these classes was much better than we expected to find, and the judging good throughout. There were four entries in the champion class for heavy-weights, and Beaufort, who, with the exception of Wagg, is the best pointer we have ever seen, won very easily from Robert le Diable and Nick of Naso. He was in splendid condition. Robert, too, was looking well, but no amount of flesh can cover his light loins and quarters or give him good legs and feet. His head is much too shallow. Nick of Naso was not at his best, but it was a close thing between him and Robert, and while not as catchy as Robert, he beats him in many essential points, especially in feet, loin, and in strength of limbs. We are pleased to see that pointer judges are beginning to realize that what we said of Robert three years ago was correct. Mr. Davidson put Bracket, Lad of Bow and Fritz over him at New York, and Mr. Wilms would probably have placed Nick of Naso ahead of him at Philadelphia if Beaufort had not been in the class. Robert does not belong in the heavy-weight pointer class, and his limbs are much too light for a first-class pointer of any weight. The pointer proper is not a light-boned, tucked-up, light-quartered dog, with shallow head and open feet. On the contrary, he must have a deep skull, giving plenty of brain room. He should be rather long in body, tremendously strong in back and in loin, and his quarters, from a back view, should impress one that when he gallops the turf will fly. His legs should not be long, and should show great strength in every direction. His feet above all things must be good, and no judge of pointers will tolerate bad ones. Can anybody truthfully say that Robert has the points we have enumerated? Tammany was absent. Clover, looking well, had the bitch class to herself, and Bang, a rare bred one, was first in the open heavy-weight class for dogs. Our readers know him well, not a perfect specimen by any means, but a pointer every inch of him. Sachem, out of condition, was in his proper place with the red ribbon. If fit and well we are not at all sure he would beat Bang. Jimmie, the well known brown dog, was third. We thought him in the wrong class, but his owner assures us he has the right to compete with the pointers. In the bitches Golden Rod, a good-bodied daughter of Beaufort and Zuba, scored an easy win. If we pull her to pieces we find her lacking in squareness of muzzle, a trifle full in cheeks and light in eyes, not very strong in second thighs and not quite straight in front. She has a splendid loin, a well set stern and stands on the best of feet. Devonshire Countess, well known, was second, and Daisy Ranger third. The latter is rather full in cheeks and a trifle coarse in muzzle. Ears set too high and not carried quite close to head. Chest too wide. Back, loin and quarters fairly good. Hocks strong. Forelegs not quite straight. Good feet. Bone plenty. Naso of Kippen did not care to tackle old Donald in the light-weight champion class so stayed at home. Donald carries his years well and is the same good looking dog we saw at Birmingham years ago. Muzzle, stop, shoulders, stifles, hocks and carriage of tail defective—these are his failings. Juno S., a bitch of nice quality, but defective in stop and in foreface, was the only light weight champion bitch. She will be bred to Beaufort and he should correct her defects in the progeny. Had she good head she would be a most difficult bitch to beat. Count Croxteth was best in the class for light-weight dogs, but he is only a second rater. Head rather coarse, skull too wide, ears of good quality, but set rather high and the left not well carried generally; very throaty, chest too wide, ribs not well sprung, loin long, light and flat (who ever saw a Croxteth dog with good loin?), hocks not quite right, forelegs crooked, feet turning outward; they should be thick through the pads and not formed like the feet of the duck. A catchy looking dog that will not bear close examination. Naso Boy, well known, was second, and Banker, a rather plain-headed and shallow-bodied son of Bang Bang, third. Queen Fan, first at New York, was first here. She is not a good one. Muzzle weak, eyes rather light in color, expression not good, skull too round, throaty, chest wide, shoulders heavy, legs not well set, light in bone, feet not first-rate; a rather weedy specimen. Brunette, a black and white daughter of Graphic, pressed her very closely for the place, and had she been straight in front would have won. Wanda, defective at both ends, but good in body, was third. June Devil, a weedy looking daughter of Robert le Diable, was c.. and Ruby, defective in head, limbs and in body, vhc. Puppies as usual were a poor lot. How is it that one seldom sees a good looking pointer puppy? Don Quixote II. is plain in head, leggy and only moderate in body. He will never be a winner in fairly good company. Lass of Naso is a weak-headed specimen defective in stop, carriage of ears, back and in feet. Ruby, second in the novice class, has good head, but is defective in body and not as good in feet or in tail as she should be. Beaufort won the special for best of all classes and the Clifton Kennels took the kennel prize.

ENGLISH SETTERS—(MR. L. SHUSTER, JR.).



The quality of these classes was not up to what we expected to find, and the judging in a number of instances was very erratic. The well-known brothers Royal Prince II. and Royal Albert were the only champions entered, and the latter won handily and also took the special for best of all classes. Glen Rock was best in the open class for dogs, but Count Hendricks, second prize, got much more than he deserved. Skull short, wide and heavy; muzzle short and wide, and not clean cut below the eyes; stop not right; ears fairly good; flat-sided; loin long and light; quarters narrow; stands back at the knees; feet not first-class. The best point about him is his neck; he is not a show dog. Count Belton, third prize, while not at all a good specimen, was second best in the class. Muzzle not clean below the eyes; stop should be deeper; ears not quite close; eyes too light in color; chest fairly good; loin flat and rather long, but not showing weakness; quarters and hocks fairly good; fair amount of bone; not quite straight in front; coat might be better. Premier, hc., is very straight behind, shallow in middle, and plain in head. This was a very poor class. The bitch class was badly handled. Mavis, light-limbed weed, should not have been in the first six. Leaving her structural defects out of the question, her condition was such that she should have been kept at home. We are not, however, quite sure that her legs would be strong enough to support her body if she was shown in good shape. Countess Blitz, second prize, looked to us very much like Blitz II. She is light in loin, weedy, has not a very good head and squints. Why Fanchette was given third we fail to understand. Mr. Tallman, who handled her in the ring, had in his care two far better bitches, Forest Dora and Passion. The last named was third at New York in a much stronger class, and as Forest Dora was too fat and loaded about the shoulders we would have given Passion first. The best bitches in the class behind Passion were Alphonsine, Idylwoof and Forest Dora, and between these it was a very close call for second place. We think the judge got badly mixed over this class. Puppies were an indifferent lot, the best of them being Sleeping Beauty, first in the bitch class.

IRISH SETTERS—(MR. GLOVER).

Most of the winners in this class are well known. Mollie Bawn, the only champion, won in her class, and later in the day took the prize for best Irish setter of all classes. We have seen her looking better. Desmond II., first in the open class for dogs, was very lucky in getting the award. He is coarse in skull, and not deep or square in muzzle; neck heavy; tail high; stifles and hocks not first-rate; back rather too short; he is good in chest, legs, feet and color, also in coat. We thought Larry S., second prize, should have been an easy winner. Head fairly well formed, but not quite clean cut under the eyes; neck rather short and showing coarseness; good shoulders, chest, back, quarters and stern; lots of bone; good legs; fairly good feet; nice coat and color. Puritan, third prize, must have been closely pressed for the place by the vhc. dog Smuggler. The former is wide in skull, large and full in eyes, and not clean below the eyes; he is also flat in loin, tucked-up, straight behind, defective in tail, under-sized and his hocks are too far from the ground. Smuggler has a much better head than Puritan but is not quite straight in front, is flat in loin, stands rather low and is a poor mover. Chief S. has plain head and sour expression. Nellie was well placed at the head of the bitch class, but we think that Berna, second prize, and Lady Fawn, third prize, should have exchanged places. The former has a wedge-shaped head, bad eyes, defective knees, poor feet, no tail feather and was not in very good coat. Lady Fawn is well known. She too was not in good condition. Peggy O'Moore is short in skull, light in eyes, and has a pointer expression. Jessie, vhc., has wide skull, light eyes, very defective muzzle and sour expression. Only one puppy was shown. He will never develop a good one and in head shows more pointer than Irish setter character. His color is very light and we do not see how it can come right. We were disappointed in these classes. Mr. Thompson won the kennel prize.

GORDON SETTERS—(MR. E. MAHER).

The winners in the Gordon classes are well known. Beaumont, who shows more true Gordon character than any one of the lot, gave Royal Duke a lively time in the competition for the special for best Gordon. Royal Duke had the best of it in color and condition, but in muzzle, shoulders, length of body and Gordon quality the English dog was ahead, and when he gets into good condition will be very nearly the best of the breed in this country. Roxie won the special for the best bitch, and was looking well. The only new comer

MR. E. H. MOORE'S MASTIFF DOG "MINTING."

likely to be heard from again in fairly good company was Little Boy. He is a bit plain in head and his eyes are not right. His forelegs are not quite straight and his shoulders are not what they should be. He is a useful looking dog, showing more black and tan than Gordon character. The bitches, Roxie excepted, were a very poor lot, and so were the puppies.

FOXHOUNDS—(MR. J. R. STOVELL).

The dog class contained two entries and the judge disqualified Pilot for lameness and gave second prize to Brag—all he was worth. He is plain in head, has badly sprung ribs, light flat loin, light quarters, flat feet, ears not very well carried, poor brush, in fact is a lathy, leggy dog, showing little, if any, foxhound character. Three very poor bitches were shown and the judge wisely withheld the blue ribbon and gave second to Biz, coarse in head, light in bone, big in feet, deficient in brush and hollow in back. Taken altogether these were a wretched lot.

SPANIELS—(MR. FELLOWS).

Two Irishmen were shown, and Barney O'Connor was far ahead of Jess. He is rather coarse in head, and not good either in color of eyes or in ears; neither is his topknot first-class. In body he is better than average, but should show more power, especially in quarters, and would be improved by more bone. He is not in very good coat, and will, of course, look better when he is in full bloom. Those who have kept dogs of this breed know how difficult a task it is to keep them in tiptop trim. Jess, second prize, is defective in head, eyes, ears and in forelegs. The latter are not straight. She would not be a winner in good company. Only one Clumber was shown, the long-legged Johnny, and Mr. Fellows was on the point of withholding the prize for want of merit. No fault could have been found had he done this, for Johnny is a very long way removed from high-class form. His head is defective, especially in stop; body much too flat; limbs very high for a dog of his inches, feather very scanty, expression entirely wrong. We always knew that the owner had measured Johnny with a very elastic tape, and therefore had Mr. Diffenderffer measure him under his beagle standard measure with spirit level on top, so that no mistake might be made. The dog was measured in the presence of three witnesses, Messrs. C. H. Mason, F. F. Dole and John Lewis, who can all testify that the exact height is 19 1-16in., and not 18in., as stated by the owner. The dog's weight is not 69lbs., but 57lbs. in fair good condition. There was only one entry in the champion class for field spaniels, and as the dog was not eligible for competition therein he was disqualified. Mr. Charles M. Nelles is the owner.

"THE SHOW COCKER MUST GO.

(He's too long and too low).

The short-legged cocker can sit on a bench,
And display his fine feather all day;
But he can't hunt grouse nor the royal woodcock,
Because he ain't built that way.

The long body and the short leg,
And the dog that loves the house,
Have had their day and must give way
To the dog that can hunt the grouse."

The judge kept fairly well to type in his awards in the field and cocker classes, but we think attached rather more importance to short legs and long backs than any other judge we have seen. Mr. Fellows knows what a good spaniel should be, and he did not keep his friends in doubt on that score, but at once went to work to pick out the right sort for the ribbons. In the open class for field dogs Newton Abbot Darkie, the lowest and longest dog we have ever seen in this country, was properly placed first, and his kennel companion, Newton Abbot Lord, second. The last-named is longer on the legs than the judge liked, but has a good head and plenty of length. Bean, third prize, is very defective in head but has a fair Sussex body. The winner stood out in bold relief from the balance of the class and is a good one. In bitches the judge was not long in selecting Newton Abbot Jubilee for premier position. Doubtless her very short legs and long, low body proved too much, in Mr. Fellows's opinion, for her three longer-legged opponents. She is faulty before the eyes, not straight in front, and is defective in feet; but in other respects is a very hard bitch to beat. Newton Abbot Darkie easily won the special for field spaniels. His prominent defect is his hindlegs, which are not strong. Doc beat Brant in the champion cocker class, probably through being a little shorter on the legs and more chunky in build. He shows rather more true character in head than Brant, and is certainly an improved dog. In the open and puppy classes the judge was very persistent about having shortness of leg with plenty of length. There was nothing in these classes quite up to the form of the old champions.

COLLIES—(MR. DENNIS).

The Chestnut Hill Kennels saved these classes from mediocrity and made a splendid entry. The judging was carefully and well done but we think the judge would have done even better had he removed his kid gloves. It is impossible to gauge the quality of a dog's coat with a gloved hand. Scotilla, Flurry II., Roslyn, Sensation, Doc Hahn and Flurry III. are all well known and pending the Boston show it will be best to say little in regard to the position held by the others. There are a number of good youngsters out this year and their good and bad points will be alluded to on a future occasion. They have been carefully jotted down in our note books.

BULLDOGS—(MR. MORTIMER).

Robinson Crusoe was properly given the prize over his brother Merry Monarch, and the peerless Britomartis was alone in her class. We thought Sandy, first in the open dog class, a very lucky animal; he is plain in head and has a terrier body, and his legs are not well set. Tostig, while not a good one, is a better dog, and we liked Cribb equally as well. Dolores outscores Soudan in head, especially in layback and wrinkle. We cannot agree with a Western paper in its statement that his ears are large; they are small but badly carried. Gypsey Girl, the only puppy shown, may be heard from again.

BASSET HOUNDS AND DACHSHUNDE—(MR. STOVELL).

There were but three entries in the two classes, and Rubenstein was far ahead. Hilda is not his equal either in head, length or in skin.

BEAGLES—(MR. DIFFENDERFFER).

These classes were brimful of quality, with Bounce, Lou, Chimer, Jupiter, Marion B. and Jessie, all well known, the winners. We liked Marion B. for first place in the bitch class. She is much better than the winner in coat and in brush. Royal Krueger, first in the puppy class, is a very promising youngster, and unless something happens to him will make a name for himself. Mr. Diffenderffer handled the classes well, and appeared to be thoroughly at home with them.

FOX-TERRIERS—(MR. MORTIMER).

The entry in this class was small considering the inducements offered in the way of special prizes. There were not more than 20 dogs shown in the eight classes—a very poor showing. The awards in the champion classes was simply a repetition of New York, but in the open classes for dogs a bad blunder was made in placing Warren Discord, an oversized, cotton-wool coated, thickheaded, bad-eared, deaf and crazy puppy, over that sterling terrier Raby Mixer. We have never seen or heard of a more peculiar decision, and hope we may never see another like it. Bitches were properly placed, Rachel being far ahead of her kennel companions, Verdict and Blemton Brilliant. Verdict has improved very much since we last saw her, having fined down in head. The dog Warren Discord was promptly disqualified, and so Mr. Thayer got what he was fairly entitled to in the first place.

OTHER TERRIERS—(MR. MORTIMER).

Jubilee, with the Sansom street polish on him, had the bull-terrier class all to himself. The open class for heavy-weight dogs was represented by The Baron and Young Count, both well known. The latter should have been first. The Baron appears to be stone deaf. Duchess of York, who has a butterfly nose, should not have been placed over Miss Nora, who is not quite so good in head but better in body and shown in splendid condition. Little Dorritt, a smart one, had no opposition in the light-weight class. Only two puppies were shown and they were properly placed. Neither will be up to high class form.

Black and tans were a wretched lot of four. Safety, first in bitches, has a very weak head, and Sir Wallace, second in the dog class, is very wide in front. Neither is up to show form. Irish were a good class, and it was a close thing between Breda, Tiny, Greymount and Dennis. The last named was bred in this country and is a credit to his breeder. Border Wang, shown at New York by F. R. Hitchcock, should have been disqualified at Philadelphia, where he was shown by the Hempstead Farm Company. Jim was the only good Skye shown, and Yorkshires as usual were a poor lot. Both the winning toys are defective in head.

PUGS—(MR. MORTIMER).

Thanks to Dr. Cryer this class was well represented. Max, Bessie, Dude, Othello and Vesta make a team which any man might feel proud of. Clio is very defective in fore face. Daisy has bad head. Bradford Rowdy has good skull and wrinkle, but is long in muzzle; he should have been first in the puppy class. Au Jo, the winner, has a wretched head, white nails and bent and bad feet.

TOY SPANIELS—(MR. FELLOWS).

The winners in the King Charles are well known; they were in good condition. Joan of Arc and Grand Duchess, the winning Blenheims, are also old faces, and were properly placed. The two Prince Charles spaniels are defective in head and in coat, and are too large.

CHARLES H. MASON.

Following are the corrections of last week's

LIST OF AWARDS.

In rough-coated St. Bernard dogs, bitches and puppies, Centaur, Corrette and Daisy are owned by E. H. Morris, instead of E. H. Moore. In small pointer bitches J. M. Baker's June Devil was com. In Irish setter bitches C. T. Thompson's Nellie was first, instead of Mollie II. In cocker spaniel bitches, liver or black, C. M. Nelles's Frou Frou was com. In champion bull-terrier dogs F. F. Dole's Jubilee won. Somerset Kennels' Stinger was second instead of equal first.

SPECIAL PRIZES.

Kennel of mastiffs, E. H. Moore. American bred, E. H. Moore's Duchess. Kennel rough-coated St. Bernards, Hospice Kennels; smooth-coated, Hospice Kennels. Puppy owned in Maryland, W. S. Diffenderffer's Lord Hector. St. Bernard sweepstakes, Chequasset Kennels' Chequasset Norman. Kennel of pointers, Clifton Kennels. Best pointer, Chas. H. Mason's Beaufort. Best English setter, Blackstone Kennels' Royal Albert. English setter sweepstakes, J. B. Maloney's Sleeping Beauty. Kennel Irish setters, T. Thompson. Best Irish setter, same owner's Mollie Bawn. Gordon setter, W. Hammett's Royal Duke; dog, the same; bitch, H. F. Smith's Roxie. Gordon sweepstakes, J. L. Campbell's Becky C. Sharp. Kennel field or cocker spaniels, C. M. Nelles's field spaniel dog, E. M. Oldham's Newton Abbot Darkie. Puppy sired by Doc, G. M. Shaw's Jersey Boy. Cocker exhibited by a lady, Mrs. J. M. Sullender, Jr.'s Dick. Kennel collies, Chestnut Hill Kennels. Challenge collie cup, Chestnut Hill Kennels' Roslyn Sensation. Collie sweepstakes, the same; brood bitch, same owner's Flurry II. Kennel beagles, Somerset Kennels. Brace puppies, E. R. Coleman's Marion B. and Miss Mame. Working beagle, Somerset Kennels' Bounce. Dog owned by member of Beagle Club, A. L. Borley's Chimer. Bitch, same conditions, same owner's Lou. Beagle sweepstakes, Mrs. J. O. Fellows's Royal Krueger. Kennel fox-terriers, Blemton Kennels. Fox-Terrier Club challenge cup, Blemton Kennels' Rachel. Brace over 12mos., same owner's Lucifer and Rachel. Tomboy stakes, same owner's Blemton Brilliant. Pug owned by a lady, Miss Jean J. Strother's Au Jo.

MINTING.

WE give this week a picture of Mr. E. H. Moore's mastiff dog Minting, winner of the champion prize at Philadelphia last week. He was whelped May 25, 1885, and is by the well known champion Maximilian and out of Cambrian Princess. Minting is the best specimen of the breed in this country, if not in the world, and we have no doubt that he will be of great benefit through his progeny in improving the looks of our show benches in future years.

NEW HAVEN DOG SHOW.—New Haven, Conn., March 7.—*Editor Forest and Stream:* The fourth annual show of the New Haven Kennel Club will be held at New Haven Polo Rink, April 17 to 20 instead of on March 27 to 30, as announced. This change was necessary because the polo season does not end until April 7. Premium lists will be issued this week and will be mailed to all. As the space in the rink is limited and as the managers will not allow any crowding, it would be well for intending exhibitors to send their entries in at an early date, as the club reserve the right to return entries made when the limit has been reached. A large line of special prizes will be given, a list of which will be published in the papers together with a list of judges. Entries will close April 5.—E. SHEFFIELD PORTER, Sec'y.

"STONEHENGE."

OUR English correspondent writes: "What a name is that which Dr. Walsh has left behind him! His very opponents—not that he had many enemies, though all successful men have some—and those who differed with him on matters of opinion (for 'Stonehenge' was singularly accurate in his facts) compete with his most enthusiastic admirers in bearing testimony to his singleness of mind and immaculate integrity. His errors, which were few, were entirely of the head, not of the heart; and who among us, it may be asked, can have the temerity to consider himself immaculate? A continuous stream of eulogies upon the life and character of Dr. Walsh continues to pour in from all sides, and this must be as gratifying to his family as it would have been appreciated by him. No man who has labored for a lifetime in the service of the public can be insensible to the praise of honest folks, and so it was with Dr. Walsh. He always felt convinced in his own mind that he was taking the right course before he adoped any method of procedure whatever, but if he had occasion to reverse his decision the *amende honorable* was always forthcoming and invariably conveyed in the kindest manner possible. No chief more considerate and loyal to his subordinates, and more jealous of the interests of his employers ever sat in editorial chair, and, provided that any little personal crotchets that might be in his mind were properly respected, no director of a paper could be an easier man to deal with. Nor was 'Stonehenge's' interest in sporting matters by any means restricted to those of his own country. Americans and their out-door institutions occupied a very warm corner in his capacious heart. He delighted to receive accounts of lacrosse and baseball matches, or hear of big game bags from the far West; while the genius of American mechanics, and the dexterity of the rifle and gun shots who have crossed the Atlantic to exhibit their prowess in England were always heartily applauded by the head of the British sporting world."

BOSTON DOG SHOW.

BOSTON, Mass., March 5.—*Editor Forest and Stream:* Though entry lists will not close until the 19th inst., two weeks from date, the bench show committee of the New England Kennel Club has already increased its clerical force, owing to the demand for additional blanks and premium lists. An early call at the club rooms to-day, disclosed a state of encouraging activity. The mail contained a lot of entries, among others a string of 44 dogs from one kennel alone. Up to this time the entries actually listed amount to more than three times the number received up to a corresponding date last year.

Among additional special prizes received since the premium list was issued, is the Pug Breeders' challenge cup, valued at $50, open for competition to all American bred dogs. The American Spaniel Club has just notified the New England Kennel Club that its grand sweepstakes for field spaniels, open to dogs owned by members of the Spaniel Club, will be decided at the Boston show. The Linden Beagle Kennels offer a $30 cash prize to breeder of the best beagle pup (dog or bitch), sired by their stud dog champion Fitzhugh Lee and whelped in 1888. Also a cash prize of $20 to breeder of second-best pup (dog or bitch), same conditions as above. Donors not to compete.

A friend of the breed offers a handsome bronze medal for the best brace of Dalmatians. The well-known artist, Mr. S. Lawrence Brackett, offers an oil painting for best pointer, dog or bitch.

Exhibitors will do well to remember that the following express companies will return dog fees free: Adams, American, U. S. and Canada, New York and Boston Despatch. The following railroads will allow dogs to ride free of charge in baggage car, when accompanied by their owners: Boston & Albany, Boston & Maine, Boston & Lowell, Boston & Providence, New York & New England.

Following is a list of judges so far as appointed for the Boston dog show: St. Bernards and pugs, Miss Anna H. Whitney, Lancaster, Mass. Mastiffs, Great Danes, Ulmers, Newfoundlands, deerhounds, greyhounds, dachshunde, spaniels, collies, poodles and Italian greyhounds, Charles H. Mason, New York. English and Gordon setters and pointers, Dr. Wm. Jarvis, Claremont, N. H. Irish setters, Wm. Dunphy, Peekskill, N. Y. Foxhounds, beagles and Basset hounds, N. Elmore, Granby, Conn. Bulldogs, bull, Scotch, Irish, Bedlington, Dandie Dinmont, Skye, Yorkshire, black and tan and toy terriers and toy spaniels, Edward Lever, Philadelphia, Pa. Round-headed bull and terrier, John P. Barnard, Jr., Boston, Mass. HUBITE.

NEW BEDFORD DOG SHOW.

Editor Forest and Stream:

The dog show held here last week in connection with the eleventh annual exhibition of the Southern Massachusetts Poultry Association was a very successful affair, many fine dogs being shown. Mr. Chas. H. Mason judged all classes to the satisfaction of all. Following is a list of the

THE WORCESTER FUR COMPANY.

WEDNESDAY, Feb. 29 was the closing day of the fox hunting season, and the rendezvous at Lisha's Sportsman's Emporium presented a lively scene in the evening. It was an informal gathering of members, newspaper men and friends who came in to listen to the giving in of scores and the grand summing up of the season's work. The seats were all taken, as well as all the standing room, and many were the stories of fox hunts that were lucky, and others where reynard was shot at and made his escape in a badly wounded (?) condition, or the unlucky hunter couldn't get exactly in the right place, and the sly rascal "skinned round him just out of range," etc. Johnny Slocum wished he could have killed "just one more," while Uncle Nathan was satisfied with one, for that "beat none immensely." Webb Thayer was sad. He could only report a cipher as the result of his ninth year's effort and really began to fear that "poor faithful Dan would never have a chance to taste of a fox." Billy Dean was happy. He "got there just the same," and besides the $1.25 the pelt was worth, just three boxes of cigars, and one box would be brought into Lisha's and set up for the boys, and he also wanted it distinctly understood that he proposed to kill two next season. Uncle Nathan's Loud received his usual share of abuse, but the old gentleman thinks he "will pay the license on him just one more year, as he is only five years old and may possibly mature and make quite a dog." It was announced that two female foxes had been killed during the last few days, with the gloomy intelligence that next year's stock had been depleted just fourteen foxes by the operation.

The bare ground hunting lasted till nearly Jan. 1, with the average number of good days, but the snow hunting has been very poor, nearly every snowstorm ending with rain and followed by intensely cold weather. While there have been very few really good days for fox hunting during the last two months, the total number captured is fully up to the average. Following is the summary: Uncle Nathan Harrington 1, Horace Adams 1, W. S. Perry 1, Wm. R. Dean 1, Brigham and Cue 2, John R. Thayer 2, Leonard Rand 2, A. B. F. Kinney 2, J. E. Fuller 2, Byron Stewart 3, J. Henry Locke 3, George T. Bates 3, John A. Slocum 4, John M. White 5, C. H. Howe 6, M. M. French 12; total, 50.

E. SPRAGUE KNOWLES.

WORCESTER, Mass., March 1.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

RANGE AND GALLERY.

NEWARK, N. J.—At the semi-annual meeting of the Our Own Rifle Club, held Thursday, March 1, the following gentlemen were elected as officers of the club for the ensuing six months: Pres., Marcus Ullricht; Vice-Pres., Frederick Laute; Rec.-Sec'y, F. C. Knothe; Fin.-Sec'y, Fred Freiensehner; Treas., Wm. Drexler; Sergt.-at-Arms, Wm. Amberg; Captain, F. A. Freiensehner; Rifle Inspector, John Bayer; Official Scorer, Thomas Thornton; Judges, Charles Weeks and O. Krauss; Referee, O. A. Kiefer. The present membership of the club is 46.

AMHERST, Mass.—The following scores were made at the Amherst Gun Club's rifle range, Feb. 29 and March 2:

A F Bardwell	10	5	6	6	9	8	9	9	8	10—80
	10	8	10	5	9	8	8	8	7	8—81
H Adams	8	9	10	6	5	6	5	8	9	6—72
	8	7	7	7	10	10	5	10	10	5—79

THE WILLIAMSPORT MEETING.

THE programme of the first annual spring prize meeting has been issued by the Williamsport, Pa., Rifle and Gun Club. The matches will be shot on the club grounds, April 3, 4 and 5. The present list of club officers includes: Pres., Geo. W. Harder; Vice-Pres., S. C. Steuber; Sec., John E. Colket; Treas., W. P. Barker; Capt. of rifle club, N. A. Hughes; Capt. of gun club, S. C. Steuber. The tournament programme provides the following list of contests:

April 3.—Shooting to commence at 8:30 o'clock sharp. First event—30yds, shoot, 3 shots to count, off-hand, any gun, any trigger pull; sights, any except telescope; entrance $2, four re-entries allowed at $1 each; three highest scores to win. Second event—100yds. shoot, string measurement, 3 shots to count, off-hand, any gun, any trigger pull; sights, any except telescope; entrance $3, re-entries limited to four, at $2 each after first entry; three highest scores to win. Third event, shooting to commence at 1:30 P. M. sharp—100yds. shoot, standard American target, 5 shots to count, off-hand, any gun not to exceed 12lbs., minimum trigger pull 3lbs.; sights, any except telescope; entrance $3, to be divided in three moneys, 40, 30 and 20 per cent. Fourth event—200yds. shoot, standard American target, 5 shots to count, off-hand, any gun not over 12lbs.; minimum trigger pull 3lb.; sights, any except telescope; entrance $3, re-entries limited to three, at $2; one score only to count.

April 4.—Shooting to commence at 8:30 o'clock sharp. First event—100yds. shoot, standard American target, 10 shots to count, off-hand, any gun under 12lbs.; minimum trigger pull 3lbs.; sights, any except telescope; entrance $3; three moneys, 40, 30 and 20 per cent. Second event—40 rods rest match, string measure, 5 shots to count; any gun, any trigger pull, any sights (suitable rests will be provided); entrance $5, one re-entry allowed at $3; one score only to count; three moneys, 40, 30 and 20 per cent. Third event, shooting to commence at 1:30 P. M. sharp—50yds. revolver match, standard American target, 30 shots to count; any revolver or pistol, maximum weight 3lbs., minimum trigger pull 3lbs., open sights, standing position, left arm at side, right fully extended; entrance $3; 60 per cent. to first highest aggregate score of 50 shots, 30 per cent. to second highest score. Fourth event—200yds. shoot, standard American target, 5 shots to count, off-hand, any gun under 12lbs.; minimum trigger pull 3lbs.; any sight except telescope; entrance $3; three moneys, 40, 30 and 20 per cent.

April 5.—Shooting to commence at 8:30 o'clock sharp. First event—200yds. rest match, standard American rest target, 7 shots to count; any gun not over 12lbs., any trigger pull; sights, any except telescope; entrance $3, one re-entry at $2; one score only to count. Second event—200yds. shoot, off-hand, standard American target, 7 shots to count; any gun under 12lbs.; minimum trigger pull 3lbs.; sights, any except telescope; entrance $2, one re-entry at $1; one score only to count. Third event, State championship contest; shooting to commence at 1:30 P. M. sharp—200yds. shoot, off-hand, 20 shots to count, standard American target; any gun under 12lbs.; minimum trigger pull 3lbs.; this shoot to be for the 200yds. championship of the State, open to residents of the State only; entrance $5; military gun allowed 5 per cent. handicap. Prize, gold medal valued at $50, suitably engraved; to be won three times to become the personal property of the winner; a committee of the contestants to be chosen after the first contest to name the place and time for next contest. Fourth event—100yds. consolation match, open to those only who have received no prizes in the previous events; any gun under 12lbs.; minimum trigger pull 3lbs.; target 200 Massachusetts; entrance $1.

"It has been suggested," say the club officers, "that we take steps to form an Inter-State Rifle Association, to embrace New York, Pennsylvania, New Jersey and Delaware, for the promotion of rifle practice. We should like to hear from any and all riflemen from these States upon the subject, and hope to see a representative from each club in these States present at the tournament, to lend their aid in such an undertaking. There is no doubt but that such an association, well officered, would be productive of many good results, and we hope to have the matter thoroughly ventilated during the tournament."

BOSTON, March 3.—The regular matches of the association were well patronized to-day at Walnut Hill range, and a good number of shooters were present. The weather conditions were poor, but some fine scores were made, as the records below will show:

Military Practice Match—200yds.

J P Newell	4	4	4	4	5	5	4	4	4	4—42
S V Sumner	4	4	4	5	2	5	4	4	3	4—39

	9	9	7	6	6	7	8	5	7	1—71—194

GALLERY SHOOTING.—A repeating rifle match was started at Conlin's Gallery, 1255 Broadway, New York, on Washington's Birthday, to last ten days, and come to a close March 3. The conditions were: 10 shots, off-hand, standard decimal target, with Winchester repeating rifle, .22-cal. and open sights, time limited to one minute. This style of shooting has been very popular during the past winter with the shooters of this famous gallery. Below will be found a few of the best scores. This shooting, when one considers the time, does not seem difficult, but the thought that you must fire the shot in one minute, or a limited time, worries the shooter a great deal, the tendency being to fire the shots too quick and thereby make a poor score, or to take too much time and be disqualified, as was the case with Dr. Manning, who, in 63 seconds, made a score of 97, but in trying to fire in the time could not make more than 80, and would fire the shots in 55 seconds. The match was for a handsome gold medal, and was won by Capt. T. H. Swift, of the gallant 9th, who, by the way, is one of the best all-round shots in the city. Mr. Conlin promises to start a new and novel match in a few days:

	Points.	Sec.		Points.	Sec.
Capt T H Swift	98	54	Geo W Hamilton	87	59
Geo Bird	95	45	J P MacDonald	85	60
Major R M McKessell	93	53	Dr W R Pryor	80	25
Geo Grenzer	91	58	Dr A Manning	80	35
Dr W F H Edwards	89	55	W G Lindsay	80	60
J S Merchant	87	48			

THE BULLARD TIE.—Springfield, Mass., March 3.—The targets and score cards have been received from Mat Gindle and Lieut. A. E. Chantler in the tie match to decide the first position in our match No. 4, second series, for the Bullard champion off-hand marksman's badge. Each shot on their own range, Feb. 22, rules governing same as for previous match. It will be seen that Mr. Gindele is again the winner of the badge and has only to win it once more when it will become his private property. The following are the scores:

Cincinnati, O.										
Mat Gindele	10	8	8	8	7	7	7	7	8	8—78
	10	9	7	8	9	9	9	8	9	8—86

BULLARD REPEATING ARMS CO.

THE NEWARK FESTIVAL.—A meeting of the delegates from the societies which are interested in the coming festival was held on Monday evening, Feb. 2, and a permanent organization was formed, to be known as the International Sharpshooters' Union, and the following officers were elected: President, Hon. Gottfried Krueger; Vice-President, Julius Stapff; Secretary, Arnold Brandorff; Treasurer, Herman Scheiner. It was resolved that the shooting should be done under the National Rifle Association rules, and that all targets, except the "targets of honor," should be open to all comers. The targets of honor will be open to members in good standing of those clubs which join the union. Clubs are required to signify their intention of joining on or before May 15, and to furnish a prize. Each member participating will be required to pay an entrance fee of $2, and individual entries must be made on or before June 20. Those who wish to enter after that date will be required to pay $2 additional. In addition to the usual ring targets there will be American standard targets, on which matches for a large number of prizes will be arranged, and which will be open to any rifle, as provided in the rules of the National Rifle Association. The programme will be made public in about two weeks, and the aggregate value of the prizes to be offered will exceed $20,000. Those clubs not receiving a prospectus or copy of programme when issued are requested to notify the secretary, Arnold Brandorff, 110 Market street, of the fact. The Board of Directors of the Newark Shooting Society has been constituted a committee of arrangements, with power to carry the affair through. The following gentlemen comprise the Board: William Hayes, John Coppersmith, August Begerow, Frank Watts, Franz Haefeli, A. Seitz and A. Volheye.

THE REVOLVER SHOOTERS.—F. E. Bennett, the crack pistol shot, has deposited a forfeit of $100 to bind a match with an "unknown" from Montreal, who is looking for an opponent. The "unknown's" desire was communicated to Mr. Bennett by N. P. Leach, of Montreal, through A. C. Gould, editor of the *Rifle*, and Mr. Bennett has written a letter to the Canadian party, notifying them of the deposit and the terms of the match, which are as follows: Amount, $250 a side; date, April 16; arms, any revolver of not less than .44cal., using any full charge factory in unbroken boxes; distance, 30 or 60yds. stand, and American target, 4in. bullseye, 20yds.; 8in. bullseye, 50yds.; 150 consecutive shots, shoot-to commence at 2 o'clock P. M. Each man to have a separate target, shooting alternately each shot, and posting each shot as soon as properly scored, any open sight to be used and trigger pull to be not less than 3lbs. Mr. Bennett offers to shoot at either Creedmoor or Walnut Hill, and will allow $25 for expenses if shot at the latter place. Should the match be made each party will name an umpire and referee. The challenge remains open until March 18.

NEWARK, N. J., Feb. 28.—The return match between John Coppersmith, of this city, and M. Dorrler, of Greenville, for the championship of the State, was shot at the Belvidere House, Greenville, this evening. The range is 80ft. in length. Dorrler had the match in his own hands from the start, and his total was better by 7 points than any 100-shot gallery score on record. The scores were as follows:

Dorrler	118,	115,	116,	118,	117,	118,	115,	118,	114,	115—1,164
Coppersmith	117,	113,	117,	116,	112,	115,	109,	111,	113,	114—1,137

The referees were Andy Welters, of this city, and A. M. Kattenshoth, of Greenville. Scorers, Eugene McCraith, Newark; Wm. Rohidoux, Greenville.

THE MAUSER RIFLE.—According to a Munich letter the German grand headquarters staff has quite abandoned the intention of substituting the Mauser by the reduced caliber rifle. The Amberg small arms factory, which for twelve months past has been turning out the large-bore weapon, but where the manufacture, by order, had been stopped since August, has commenced working full time, as 35,000 Mausers were called for by the middle of February.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

SAN FRANCISCO, Feb. 26.—Quite a number of people were present this afternoon at the Haight street baseball grounds to witness the second pigeon match between Dr. Carver and John Kerrigan, the agreement entered into between the two contestants was for a shoot at single and double birds, 50 single birds and 25 pairs each, the former to be shot at from 5 ground traps, 30yds. rise and 80yds. boundary. The pairs were shot at from 2 plunge traps, 19yds. rise and 100yds. boundary. Kerrigan did first-class in the early part of the shoot, grassing 12 straight. He had rather hard luck with some of his pigeons; hit very hard they managed to keep in the air until a few feet outside the boundary. Kerrigan used a close-shooting hammerless gun, but in the latter part of the shoot on singles he ran out of No. 6 cartridges and in their stead he used No. 7, which were found too light to stop short the career of the strong-flying birds. He disappointed his friends very much in the double-bird contest. The first two clean misses evidently disturbed his nerves and afterward his shooting was unreliable. Kerrigan has a reputation of being one of the best double-bird shots in the State, but he did not by any means support this good opinion in to-day's performance. Some very easy shots he missed clean, especially so was this noticeable at some of the incomers. Dr. Carver as usual shot with professional coolness and made a splendid score on single birds; he with very few exceptions snaps at his birds and lands them within a few yards of the trap which they are sprung from. Instances where a swift flyer came from his caged quarters and got some yards off, a miss was the general result. His double-bird shooting was very neat and certainly remarkable for its quickness. Although Dr. Carver has proven himself to be too much for Kerrigan on pigeons, quite a number of people are of the opinion that the latter sportsman would have a much better chance of tieing the Doctor if the match had taken place at San Bruno, where there is always a good stiff breeze to prevent the birds from sleeping over the traps. San Bruno is the place where Carver's skill as a snapshot would be thoroughly tested, and possibly another meeting will be held there soon. The following is the score made in to-day's contest:

Dr. Carver.			
Singles	1211211111	Doubles	01 11 00 11 01
	0011022121		10 11 01 01 11

OTTAWA, Feb. 27.—At a special meeting of the St. Hubert Gun Club, the preliminary arrangements were made for the grand tournament on the Queen's birthday. The principal attraction will be the championship team shoot, teams to consist of 5 members of any club. The individual championship and continuous sweeps will also be shot for. In the championship matches the conditions will be 15 birds from open traps. The prizes will be in money and trophies. Prize list and full particulars will be advertised.

THE PASSAIC CITY, N. J., GUN CLUB has been organized with the following officers: Pres., C. R. Van Deusen; Vice-Pres., John Jellome; Sec.-Treas., Arthur F. Rice; Ex. Com., George W. Blankman, Milton H. Burns and J. A. Getchius; Audit. Com., Albert Totten and Albert W. Shaw. Membership fee $3, members limited to fifty.

CAPTAIN BOGARDUS RETIRES.

NEW YORK, March 6, 1888.—*Editor Forest and Stream:* With your permission I wish to make the following statement:

Since May 25, 1871, I have been the champion wing shot of America, without suffering a single defeat. Winning the Providence (R. I.) badge at Fleetwood Park, New York, on that date, gave me the title. The conditions governing the trophy were that it must be held two years, and the holder to shoot all comers for $500 a side. The crack shots of the country endeavored to wrest it from me, but failed. Upon the expiration of the two years I put it up for competition, open to all, and again won and held it as before. Once more I offered it, and though the matches were numerous I retained it, thus meeting all comers for six years. The badge was shot for under Rhode Island rules, one barrel, 21yds. rise.

In 1874 I won the Lorillard badge at Stamford, Conn., the conditions being five traps, 30yds. rise, the use of both barrels allowed.

In 1875 I went to England with the American rifle team, and upon arriving in London challenged the United Kingdom. I shot several matches, winning them all. One was for the championship of the world and a gold medal in addition to the stakes. I won it easily.

In 1878 I again went to England, shot all comers and defeated them, with one exception, and that was due to an injudicious change of powder at a critical juncture. My opponent refused to shoot me a second time, though I offered to make the stakes $5,000 a side. The result of the discussion led to my match with Mr. Aubrey Coventry for $5,000 a side. It was shot August 6, 1878, and stands to-day as one of the most exciting matches on record. Mr. Coventry at the time held the championship gold cup. So, with sixteen contests in England, fifteen and the championship of the world stood to my credit.

William Graham came to this county in 1886 and was looking for matches. I turned over to a Western journal in February of that year the cup won by me in England. The conditions imposed were Hurlingham rules, 12-bore guns, the winner to hold it for two years to become his property. Graham refused to shoot for it, but J. R. Stice, of Jacksonville, Ill., challenged, and the match was shot March 2, 1886, at Peoria, Ill. I killed 81 out of the 100 and Stice 76. We again shot for the cup four days later, and while I brought down 93 he stopped at 90. On Feb. 22, 1887, I met Andy Meaders, of Nashville, Tenn., who had challenged for the trophy, at St. Louis, Mo., and again victory fell to me. The score was 93 to 89 in my favor.

The two years which the cup was to be held have now expired, and because of advancing years and domestic affliction, I have resolved to retire from the championship field and leave it in other hands. For seventeen years, lacking two months, I have held the championship of America, and since 1875 the championship of the world.

In withdrawing from further championship honors, I beg to say that I do so with mingled feelings of pleasure and sorrow—of pleasure, because of the universal courtesy that Kinent I have received, and of sorrow that with me the end of such contest has come. My best scores have been: 100 pigeons straight, 21yds. rise, 80yds. boundary, Chicago, July 21, 1869; 99 out of 100, Coney Island, N. Y., 30yds. rise, 80yds. boundary, English rules, July 3, 1880, and in New York, Dec. 20, 1879, broke 5,500 glass balls, 15yds. rise, two traps, in 7h. 19m. 2s. In the latter I loaded and changed my barrels, two sets being allowed, without assistance.

There is no championship cup now awaiting challenge from the wing shots of America, but there should be and the winner ought to hold it two years against all comers before becoming his personal property. A. H. BOGARDUS.

WASHINGTON VS. ALGONQUIN.

THE long talked of pigeon shoot between the Washington Heights and Algonquin gun clubs took place on Washington's Birthday upon the grounds of the former, at Fort Washington. The match was for a valuable gold cup. The terms of the match were that each team should consist of 13 men, each man to shoot at 10 birds, 25yds. rise, 50yds. boundary, 5 traps, birds to be shot on the wing only, otherwise Hurlingham rules. Counsellor Chas. H. Preyer acted as judge for the Washington Heights, Rudolph Brenner officiated in the same capacity for the Algonquins. Mr. Robert Auld did the honors as referee. The birds were remarkably fine and swift and the shooting very good, many birds being scored as lost owing to dropping outside the boundary. The contest was close from start to finish, the Washington Heights Gun Club winning by 5 birds. The scores were as follows:

Washington Heights Gun Club.

E Roe	0110111101—7	W W Disbrow	1111111111—10
J Glasser	1111101111—9	G Russell	1100111010— 6
E A Fountain	0111011111—8	J Dux	1111001111— 8
D Wagner	1010100111—6	E Davidson	0110105111— 6
G Snook	0101102000—3	C R Terwilleger	1111011111— 9
C Saur	1001006011—5	J Terhune	1000110101— 5—88
J Keppler, Jr	1010111001—6		

Roe had 5 drivers, out of which he killed 4; 3 towerers, of which he killed 2, and 2 right quarterers, of which he killed 1, and used the second baarel 6 times.

Glasser had 3 drivers, of which he killed 2; 2 right quarterers, 2 left quarterers and 3 incomers, all of which were killed; he used his second barrel 3 times.

Fountain had 3 drivers, of which he killed 1; 2 towerers, 3 left quarterers, 1 right quarterer and 1 incomer, all killed; he used his second barrel 6 times.

Wagner had 2 drivers, of which he killed 2; 4 left quarterers, of which he killed 2; 2 right quarterers, of which he killed 1 and 1 incomer killed; he used his second barrel 6 times.

Snook missed 3 out of 4 drivers, killed 1 out of 2 right quarterers, missed 3 left quarterers and killed an incomer. He used his second barrel 7 times.

Sauer killed 2 towerers, missed a driver, killed 1 out of 3 left quarterers, 2 out of 3 right quarterers, and killed an incomer, and used his second barrel 6 times.

Keppler killed 2 drivers, 2 out of 4 right quarterers, 2 out of 3 incomers, and 1 left quarterer, and used his second barrel 6 times.

Disbrow killed 3 drivers, 4 left quarterers, 2 right quarterers and 1 incomer, using his second barrel 4 times.

Russell killed 1 out of 3 drivers, 3 incomers, and missed 2 out of 3 right quarterers. He used his second barrel 5 times.

Dux missed 1 of 3 drivers, killed 2 towerers, 2 incomers, 1 left quarterers and missed 1 of 2 right quarterers, and used his second barrel 3 times.

Davidson missed 1 of 5 incomers, 2 of 3 right quarterers, 1 of 2 left quarterers, and used his second barrel 6 times.

Terwilleger killed 1 of 2 right quarterers, 5 incomers, 2 drivers and 1 left quarterer, using his second barrel 3 times.

Terhune missed 4 of 5 incomers, 1 driver, killed 3 right and 1 left quarterer, using his second barrel 8 times.

Algonquin Gun Club.

Griswold	0111011111—8	Brenner	1101110011—7
Male	1111010011—7	Dunseith	1010011101—6
Ring	0100111011—6	Hanna	0111100110—6
Garside	0011100111—6	Lordley	0101000101—4
Gordon	0100101111—6	Van Schaick	0110111110—7
Cromwell	1110301011—6	Radginsky	1111010110—7—83
McClane	0101111011—7		

Griswold killed 2 of 3 right and 3 left quarterers, 1 of 2 incomers, 1 towerer and 1 driver, using his second barrel 5 times.

Male killed 2 drivers, 2 of 3 incomers, 2 of 3 left and 1 of 2 right quarterers, using his second barrel 8 times.

Ring killed 2 right quarterers, 1 of 3 incomers, 3 of 5 drivers, and used his second barrel 7 times.

Garside killed 3 incomers, 1 of 3 drivers, 1 of 3 right and 1 left quarterer, using his second barrel 6 times.

Gordon killed two of three incomers, three of four right and one of two left quarterers, one towerer, using his second barrel six times. Cromwell killed one driver, one towerer, two of five incomers, two right and missed a left quarterer, using second barrel five times. McClaine killed three incomers, two of three drivers, one of three right and one left quarterer, using second barrel twice. Brenner killed three of four right and two left quarterers, one incomer, one of three drivers, using his second barrel six times. Dunseith killed two of three incomers, one driver, two of three right one of three left quarterers, using second barrel five times. Hanna killed two of three right and one of two left quarterers; two incomers and one of three drivers, using second barrel four times. Lordley missed three of four drivers, two of three right and one of two left quarterers, killed an incomer, used second barrel eight times. Van Schaick killed three of four right and one of three left quarterers, one incomer and two drivers, using his second barrel seven times. Radginsky killed three of four left and three right quarterers, one of three drivers, and used his second barrel five times. After the shoot the members of both clubs retired to Saul's Fort Washington Hotel and partook of a banquet provided by the victors. XXXX.

GUN CLUB SECRETARIES are invited to send us scores for publication. To insure appearance they should reach us on Monday of each week. Our specially prepared blanks will be sent on application with stamped self-addressed envelope.

CANADIAN TRAP SCAPT.—The trigger experts enjoyed a good afternoon's sport at McDowall's shooting grounds on the 18th ult. The weather was fine and a large number were present. Two parties were shooting at the same time. The Owl Gun Club held their match to the south of the club house, while two blackbird contests were shot on the west side. In the first blackbird shoot Mr. W. Alexander captured first with twenty straight, breaking the record for blackbirds. Mr. P. Wakefield won the second prize in this contest, after shooting off ties with R. Charles and J. Jones. After this a sweepstakes at five birds for three cash prizes was shot. McDowall took first, McClure and Alexander divided second and third. At 20 blackbirds, 18yds.: Alexander 20, Wakefield 17, Charles 17, Jones 17, McDowall 15, McClure 13, Clabaugh 13, Collins 12. Felstead, Sawden, Gould and Roberts retired at the fifteenth bird. Ties of 17 at 20yds: Wakefield 5, Charles 4, Jones 4.

Sweepstake at 5 birds, 18yds: McDowall 5, McClure 4, Alexander 4, Felstead 3, Clabaugh 3, Smyth 3.

The Owls had a splendid turn out of members of their annual shooting tournament on Saturday afternoon at McDowall's spacious grounds. The weather was just the thing for shooting and although the competitors were unused to having sparrows as targets some exellent scores were made, as the following will show. At 10 sparrows each: 18yds. rise: G. Jones 9, E. W. Sandys 8, J. Rice 8, Towrison 8, C. Unwin 8, W. Felstead 7, C. B. Harrison 7, J. Montgomery 7, J. Carruthers 6, R. McKay 6, W. McDowall 5, J. Chambers 5, P. Gould 5, Wm. Mason 5, R. Chambers 5, T. Harmers 4, J. Mitchell 4, J. Adamson 3, J. Felstead 1, A. R. Lockhart 1. Ties at 9 birds, 20yds. rise; won by G. Jones.

The Owl Gun Club finished their shoot at sparrows at W. McDowall's new grounds on the 22d. The scores for that day being: C. Kemp 5, S. Longbottom 5, T. Smith 4, Loudon 6, C. Gilhooley 9, J. Douglass 6, G. George 6, C. Avis 4. Ties shot off at 5 birds, with C. Gilhooley winner. Prize winners: First class, C. Gilhooley; second class, R. McKay, Jr.; third class, A. Austin.

The third competition of the Toronto (West End) Gun Club for the challenge cups came off at Duck's place, at the Humber, on the 18th. Peoria blackbirds were used as targets, 15 birds each. Appended are the scores: Wilson 15, Blea 14, Smith 13, Dollery 12, Wakefield 12, Farmer 11, McLaren 9, Spiller 9, Hallarn 8, Derry 8, Watt 8.

The first monthly shoot of the Wild Fowlers' Gun Club, Hamilton, for the cup recently presented to the club for competition by three of the members of John Bowron's team took place on Monday afternoon, Feb. 20. J. Smyth was the lucky man in the first shoot, but it will be necessary for him to win it three times before it becomes his property. Hamilton blackbirds were used, 25 being allowed to each competitor. The shooting was at 18yds. and resulted as follows: J. Bowron 21, J. Smyth 21, Jos. Smith 19, G. Hore 17, J. Stephens 16, B. McLean 16, G. Brant 16, J. Morris 16, E. V. Spencer 16, W. Stroud 16, J. Hunter 16, Wm. Smith 15, L. Hipkins 15, C. Hunt 14, A. Smyth 14, W. Moore 13, M. Reardon 13. In the shoot off John Bowron and J. Smyth went back to 23yds. and broke 2 birds each. They then went back to 26yds. and tied again. In the final shoot Smyth broke 2 birds and Bowron 1.

A number of sweepstake shooting matches at Peoria blackbirds took place on the 24th at McDowall's grounds, Kingston road, Toronto. The weather was beautifully fine, and some cracking good scores were made. Before the sweepstake contests took place Mr. Alexander, who the other day broke 20 blackbirds straight, shot a match against an unknown at 25 birds 18yds. rise, for $25 a side, and won by 18 to 14. Mr. Alexander also undertook to break 16 birds out of 20, for $25, at 18yds. In this he failed by one bird, hitting only 15.

First sweepstake, 10 birds each, 18yds. rise: Alexander 9, Beatty 9, Kemp 8, Clarke 8, Blea 7, Loeds 6, George 6. Alexander and Beatty divided first and second, Kemp and Clarke third.

Second sweepstake, 5 birds: McDowall 5, Bates 5, Kemp 4, Loudon 3, Sawden 3, Wakefield 3. The two first divided the prizes.

Third sweepstake, 5 birds: Kemp 4, Bates 3, Sawden 3, Wakefield 2, Mitchell 2, Carter 2.

Fourth sweepstake, 5 birds: Bates 5, Pearson 3, Wakefield 3, Smith 3, Mitchell 3, Clabraugh 3, Johnson 3. Wakefield took second.

Fifth sweepstake, 5 birds: Bates 5, Clarke 5, McDowall 4, Wakefield 4, Sawden 3, Kemp 3. The two first divided the prizes.

Sixth sweepstake, 5 birds: Beatty 5, Kemp 5, McDowall 5, Clarke 4, Sawden 4, Bates 3. Beatty first, Kemp second.

Seventh sweepstake, 5 birds: Clarke 5, Kemp 5, Sawden 5, McDowall 4, Bates 2. In shooting off Clarke took first, Kemp second.

The Toronto Gun Club had a shoot at sparrows on McDowall's grounds on the 24th. Some capital scores were made at 15 sparrows each, 18yds. rise: D. L. Black 15. D. Blea 14, F. Martin 11, C. Pearsall 11, G. Brigg 9, W. McDowall 9, Alexander 9, S. Stancland 9, T. Loudon 8, W. Pearson 8, J. Werden 8, A. Purse 7, C. Ayre 7. Second class: Charles 12, D. Wright 12, E. Leroy 12, H. M. Kipp 9, E. C. Jackson 9, Felstead 8, Armstrong 7, Clabraugh 6, Sawden 5, Bayles 5. In shooting off the ties of 12 Charles killed four out of five and took the money.

A new gun club has just been formed at Toronto, making the sixth of the kind in the city, where three or four years ago there was but one. The latest comer is called the Beaver Gun Club, and has the following officers: James Barrett, President; Geo. Bunker, Vice-President; D. Beatty, Treasurer; T. Drynan, corner College and Lippincott streets, Secretary. The club has a membership of twenty, and meet on the first Wednesday of each month.

WORCESTER, Mass., March 2.—The Worcester Sportsmen's Club had a meet to-day at Coal Mine Brook Range. The wind was strong and the birds went in every conceivable direction. One of the first events was a 20 bird race:

E T Smith	11110 11111 11111 10011—17
A D Gilmore	11111 11110 01010 11111—16
E F Swan	10011 11111 11110 11100—15
W L Davis	11101 01111 01111 01001—14
G W Russell	11110 11000 01111 11110—14
H W Webber	00101 00101 01011 11111—11
Frank	0.100 11001 10010 10111—10

During the afternoon there was a team shoot with a possible 80 birds:

Smith's Team.

Smith	10110 11110 10011 10101—13
Swan	11011 10111 11111 10111—16
Russell	01100 01101 11110 11001—12
Frank	01000 11110 00101 00111—10—51

Gilman's Team.

Gilman	11101 11101 11101 11111—17
Davis	01110 10111 11010 01011—13
Webber	01100 11000 00100 01101— 8
Doon	10001 11011 00101 11011—12—50

The sweepstakes in this race were won Gilman first, Swan second, Smith third. Then a second match followed and out of a possible 48 Gilman's team was 32 and Smith's 18.

NEW DORP, Staten Island, Feb. 23.—Emerald Gun Club of New York city, regular shoot at live birds at Sea View Park. John Measel, referee.

W Glaccum (25)	1111110001— 7	N Measel (25)	0111101111— 4
John Measel (21)	1010101031— 5	L C Gehring (30)	1011111111— 9
Dr G V Hudson (30)	1110001011— 6	T P MacKenna (21)	1010111001— 6

C M Grainger (21)	1111010111— 8	P J Keenan (21)	1000100100— 3
H Rubino (21)	0001100100— 3	John White (21)	1111111111—10
T Cooley (30)	0103111111— 7	J J Ryan (21)	0001010010— 3
P Butz (21)	0111011000— 5	T J Oseicki (21)	0010001100— 3
I H Voss (25)	0000001010— 2	M Cherry (21)	0000000010— 1
R Regan (21)	1000010011— 4		

Ties on first prize, miss and out, second barrel ½ bird: Remsen, 30yds., 006; I. White, 21yds., 0054; White wins gold medal. Gehring wins second prize, $10 in gold, for the third time. Ties for third, 25yds.: Measel 0, Grainger 1, and wins silver medal. MacKenna wins the Oseicki trophy first time, gold medal. Thursday, March 1, the following officers were elected: President, M. McMunn; 1st Vice-President, Col. Thomas Codey; 2d Vice-President, Herman Rubens; Fin. Sec'y, P. I. Keenan; Treas., John Measel, Jr.; Rec.-Sec'y, T. P. MacKenna. The executive committee consists of the above officers and Messrs. Nicholas Measel and T. J. Oseicki. It was decided to grade or class the members as first, 30yds., second, 25yds., and third, 21yds., having for each grade a gold medal as prize, first prize value $35, second prize $25, third prize $15.—THOMAS P. MACKENNA, Rec.-Sec'y.

NORTHPORT PIGEON CLUB.—Northport, N. Y., Feb. 28, match at clay pigeons, 15yds.:

F O Nevious	0110001100—4		

MONTREAL, Feb. 24.—The weather having become fine and springlike the local clubs have begun practising for the second shoot for the Boyd cup. This shoot will be held at Lachine on the grounds of the Lachine Gun Club on March 17. The first took place Jan. 21, on the late St. Paul Gun Club grounds, the weather was very unfavorable, the extreme cold (20 below zero) preventing any good scores being made; the match was won by the Lachine club. The highest individual score was made by Mr. T. W. Lesage, of the St. Lawrence club; 12 out of 15. Notwithstanding the cold weather 6 teams contested for the cup, and it is confidently expected that if the 17th of March is a fine day, 8 teams will be on the field at Lachine. The competition is open to all in Canada. Messrs. Boyd and son are also going to give the best aggregate score in all matches a handsome gun case and the shooter making the best score in each match, a corduroy shooting cap, so each individual will have something to gain by making a good score. The cup is on view in the window of T.W. Boyd & Son; it is the finest piece of plate ever shot for in Montreal.

WELLINGTON, March 3.—Thirty-five gunners faced the traps at the grounds of the Wellington Club to-day, to participate in the regular weekly shoot. Wheeler and Chase shot a match at 100 birds, for a purse of $20, Wheeler winning by a score of 88 to 72 for Chase. Following are the winners in the several sweepstake matches: 1. 6 clay-pigeons—Eager and Stanton first. 2. 6 blue rocks—Bert and Phelps first. 3. 6 blue rocks—Bond, Bill and Melcher first. 4. 6 blue rocks—Eager, Bert and Moore first. 5. 6 clay-pigeons—Eager first. 6. 6 blue rocks—Phelps first. 7. 5 blue rocks, straightaway—Scott, Stone and Bert first. 8. 10 clay-pigeons, merchandise match—Garfield first. 9. 10 blue rocks, merchandise match—Snow, Schaefer and Moore first. Points were scored in the merchandise match as follows: Snow and Bond first with 18, Garfield second with 17, Eager and Moore third with 16, Grimes and Lee fourth with 15, Schaefer and Melcher fifth with 14, Sanborn, Bert, Bill, Swift and Scott sixth with 13, Brown seventh with 12, and Stanton, Baxter, McCoy and Chase eighth with 11. The seventh shoot for the Climax diamond badge will take place at Wellington, Wednesday, March 21. Three of the shooters have won the badge twice, and as there are to be but two more competitions, one of these will probably win it.

BOSTON GUN CLUB, Feb. 29.—Quite a number of sportsmen from the local clubs turned out this afternoon at the fifth shoot for the prizes given by the club. The weather was pleasant, and good scores were the rule. Following scores were made during the day: 1. Seven clay-pigeons, 18yds. rise—Adams first. 2. Seven Peorias—Adams and Kirkwood first. 3. Three pairs Peorias—Bond, Chase, Whitcomb and Kirkwood first. 4. Five Macomber metal targets—Reading and Cornell first. 5. Five clays—Bond first. 6. Ten Peorias—Bond, Bartlett and Jones first. 7. Ten clays—Bond first. 8. Five Macomber metal targets—Bond first. 9. Seven Peorias—Bond and Kirkwood first. 10. Seven Peorias—Jones and Kirkwood first. 11. Seven clays—Adams and Whitcomb first. 12. Seven Peorias—Whitcomb and Kirkwood first. 13. Seven clays—Hart, Linn and Kirkwood first. 14. Seven straightaway Peorias—Jones and Cornell first. 15. Five straightaway clays—Kirkwood first. The sixth, seventh and eighth eventh events constitute one point on the score for the Boston Gun Club prizes, the members scoring as follows: Bond first, Hart second, Reading and Kirkwood tied for third, Adams, Douglas and Cornell tied for fourth, Green fifth, Chase and Jones tied for sixth, Linn and Bartlett tied for seventh, Whitcomb and Gilbert tied for eighth, Eames ninth, Grew and Wild tied for tenth.

TORONTO, March 1.—In spite of the blustery state of the weather some interesting shooting matches at artificial birds took place at McDowall's grounds this afternoon. Following is a list of the prize winners, all at 18yds. rise: 5 birds, Conley and Gilroy divided. 2, 5 birds, Edwards and Gilroy divided, Conley third. 3, 5 birds, Gilroy and McDowall divided, Jones third. 4, 10 birds, Gilroy first, Douglas second, George third. 5, 10 birds, Gilroy first, Jones and Johnson second and third, Conley fourth. The match for $50 between Alexander and Crippen was postponed until next week, owing to the state of the weather.

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

Secretaries of gun clubs and others who are interested in the protection of the Yellowstone National Park are invited to co-operate with this journal by securing signatures to the petition printed elsewhere. See instructions on editorial page.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neide. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON, Albany, N. Y
Secretary-Treasurer: F. L. MIX.

Vice-Com.	*Rear-Com.*	*Purser.*
Central Div.	R. W. Bailey	W. R. Huntington
Atlantic Div.	Henry Stanton	A. S. Pennington
Eastern Div.	L. Q. Jones	Geo. M. Barney
N'thern Div.	A. D. T. McGachen	W. G. McKendrick

J. K. Bakewell, 110 Diamond St., Pittsburgh.
E. W. Brown, 146 B'way, N. Y.
W. B. Davidson, Hartford.
S. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Central Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—James Fanning Latham, Chicago, Ill.
Vice-Commodore—J. R. Bartlett, Fremont, Ohio.
Rear-Commodore—T. J. Kirkpatrick, Springfield, Ohio.
Secretary-Treasurer—Geo. A. Warder, Springfield, Ohio.
Executive Committee—H. G. Hodge, Dayton, O.; C. F. Pennewell, Cleveland, O.; C. J. Bousfield, Bay City, Mich.

The annual meet for 1888 will be held at Ballast Island, Lake Erie, July 7 to 23. Regatta begins Tuesday, July 10.

FLAT-BOTTOMED CANOES.

MY first canoe was a rather peculiar craft of my own designing, and she was built in a woodshed by lamplight. I don't think I did any work on her by daylight, unless it was to heft and admire her of a Sunday morning before church. She was made of paper, after the fashion of a canvas canoe; built at Oldtown, Me., and when completed I shellaced both inside and outside to render the paper (manilla) impervious to water.

I launched her in a brook, got into her narrow cockpit with considerable difficulty, and commenced my first canoe cruise. I went about fifty feet and ran afoul of a spike in a piece of joist in the brook bed, capsized and waded ashore covered with mud and green ooze. My craft was ripped open along her keel, and patches of paper, soaked with water, detached themselves and went sailing down stream. I took the wreck home, received a lecture from my father and much advice gratis, chopped my canoe into kindlings in obedience with the paternal mandate, and was extremely sorrowful.

My next canoe was built of wood, and turned out to be quite a good boat. She was flat bottomed, 15×28×7, decked with canvas, and had a cockpit of 5×18. I put her into shape during the long winter evenings, perhaps getting in three hours' work a week, and many a fond dream of future cruises did I have as I tinkered on the details that helped make her perfect. I put in a centerboard, rigged her with sails and drop rudder, and speaking from later experience, and it has been a varied one, she was a very able canoe, remarkably stiff and seaworthy. I used her in Salem harbor one summer, and then remodelled her into a much handsomer craft, with the addition of a wooden deck and longer cockpit. I raised her sides and gave her 3in. more sheer, altered the balance of her sails and spent a vast amount of time and thought over her interior arrangements. Then she did considerable cruising—and what was required of her she did "with neatness and despatch."

I cruised in the Mollie in Lake Winnipesaukee, down the Merrimac to the ocean and around Eastern Point into Salem Harbor, besides several cruises of a few days' duration. Perhaps her lines were not so handsome as the keel canoe, but she was much stiffer than any canoe of her beam I ever saw. I could beach her any-

where, and she didn't require blocking to keep her upright. When night came I could sleep comfortably in her and have room to spare; and if I was restless there was no danger of being tumbled out on the ground. She was heavy, but I carried her on a pair of baby-wagon wheels with the mainmast as a "neb," after the fashion of a handcart, and she went easily anywhere. I could take the wheels aboard, so they were always ready for a carry. I could stow a large quantity of stores into her and she was never crowded, and when I portaged it was not necessary to lighten her and make half a dozen trips with duffle.

She was a splendid sea-boat, and why not. Her model was similar to the famous Gloucester fishing dory in which the Grand Bankers haul their trawls. These dories can live in a sea that would speedily swamp a keel boat of equal length. Three of them have crossed the Atlantic, and made good passages. Were their models not suitable for heavy seas and good qualities under sail, these voyages would never have terminated successfully. In Provincetown, Mass., dories are used by the shore fishermen, and they are remarkably fast. Two spritsails are used and some of the boats have a jib. Their centerboards are large, and with plenty of ballast they can go almost anywhere. Two of these Provincetown dories have a local reputation for their speed, and have several times won in races where keel sloops and catboats sailed over the course with them.

Now I would ask why the cheap, easy-built, flat-bottomed canoe is not the boat for cruising purposes? TASHMOO.

PRESENT TENDENCIES OF CANOE RACING.

Editor Forest and Stream:

"Two things are essential to the realization of the progress we seek; the declaration of a principle and its incarnation in action." That the present methods of the A. C. A. are not such as to push forward the natural and healthy progress of canoeing, has been conclusively proved. Your recent article upon the subject was of itself enough to show that the tendencies of the Association races, the medium through which the Association affects and even controlls the progressive development of the canoe, was to destroy the canoe and the canoeists, and to substitute therefor the racing machine and the mug hunter. Of course the majority rules, and if the majority of the members of the Association prefer to hunt mugs in a craft with a 14in. cockpit and a sun rigger, the Association should continue to give them an opportunity to fulfill their heart's desires. In that case the genuine canoeist will be compelled either to seek the good of the sport and of their craft individually or through a new organization. If, however, the majority of canoeists still believe that canoeing is the art and science of using the canoe, and that this should be encouraged by the Association, the sooner they adopt Mazzini's maxim, and first declaring their principles, unite upon some method of incarnating them in action, the better will it be for the Association themselves as canoeists, and the canoe.

What, then, are the underlying principles of canoeing which progressive canoeists must discover? Is not the crowning virtue of the canoe her universality; and is it not to this virtue that it is due that more enjoyment can be derived from her use, with less unpleasant exertion, than can be got out of any other form of craft? If this is the case, and I for one believe it is, it follows that the only true development of the canoe must be that which increases her universality and makes her more meritorious; that is, more generally useful than she now is. The principle, therefore, upon which the Association should base all its actions in dealing with the canoe and its methods of continuing her development, is that the good of the canoe is the increase of her universality, and that the ideal canoe is the one that sails fast and paddles easily, is seaworthy and handy alike in a seaway and a rapid, and which gives her skipper not only enjoyment by her beauty, security by her strength, general satisfaction because of her general ability, but a good bed at night after she has tired out his muscles, not his nerves, ample stowage room for his comforts, and is withal not too big to be easily handled when ashore.

But how is this principle of universality to be incarnated in the rules and regulations of the A. C. A. races? There have been a good many suggestions as to how this was to be done, ranging from an Association cruise to the abolition of the 75ft. limit race, and there appears to be some danger that partisans will spring up, a very dreadful thing, particularly in a presidential year. The great danger about all racing rules and regulations is that they necessitate the supposition that their framers know exactly what form the development of the craft the rules govern should take. This is not possible; all that the rule makers can know is what is, and what is not, a fair type of craft, at the present time. Another trouble about racing rules is, that "jockeying" in some form or another is almost certain to arise. The "sliding seat" or "hiking board" is, for instance, not far removed from a piece of jockeying. Not only is this hurtful, because it prevents true merit from achieving its reward; it causes a misdirection of inventive energy, which instead of being devoted to solving true canoe problems, is made use of to specialize the craft. My private opinion publicly expressed is, that the way to avoid these dangers is to so alter the conditions under which a portion at least of the Association races are sailed, as to prevent anything but a true canoe from taking part in them, and that this can be done by means of an Association cruise. I admit, however, that this is but an idea, and that until a successful Association cruise has taken place it is impossible to state positively that there is anything but an alluring possibility in the scheme. What is wanted, however, at present, is something more than a possibility; a something that will, without revolutionizing existing methods, relegate the "machine" to the limbo of a special class, if it does not completely destroy it and will make the canoe the favorite of the Association. The scheme for effecting this, which you have proposed, is, I think, a practical one, and that it would be effective in removing some of the worst tendencies toward specialization is certain. It can hardly be asserted that the craft in which a man cannot sleep comfortably, which has not a cockpit big enough to enable her to be worked from the inside, and which is not big enough to accommodate her deck seat and centerboard, is not a canoe at all. She is a machine on the face of it and should not be allowed to race as anything else, if at all. To embody this idea in the rules of the Association would be simply to carry out to its logical conclusion that section of Rule I which gives to the regatta committee the power "to disqualify any canoe which, in their opinion is built with an evident intention to evade" the rule as to measurement. I certainly think also that Mr. MacKendrick's suggestion that standing rigs should be ruled out should be adopted. A 14in. cockpit and a centerboard in the middle of a canoe would not necessarily render her unsafe, but I cannot conceive of a standing rig and safety being combined in one and the same craft. My experiences in a canoe have certainly been of such a nature as to convince me that you cannot get a sail that will come down smartly enough to insure safety on all occasions, simply because greased lightning is slow compared with the way a squall arranges matters for the personal discomfiture of a canoeist when it makes up its mind to do so. I must confess, however, that I have never used a standing rig of any kind, nor have I ever seen one used that was big enough to leave a border around a postage stamp, and the men who use them with success may have effected a special arrangement with the squalls.

I do not understand very clearly how Commodore Gibson's scheme of one racing rig for all races can be worked. The canoe that can sail a good race would, in a paddling race, with all her gear on board, have but little chance with an out and out paddling canoe, and *vice versa*. The effect of the rule would probably be, therefore, to confine canoes more rigidly to their special classes than heretofore, which would be no improvement. If this scheme could be practically carried out, however, the result upon the development of the canoe would be exactly what is wanted. It would compel all racing men to work down their rigs to the simplest, handiest and lightest form, to subordinate each part of the rig to the other; in fact, to increase the universality of the canoe. Why should it be necessarily presumed that the cruiser's outfit should be rougher and less effective than the racer's? I believe that from the different necessities of their positions, the cruising rig should be worked down finer and be more effective than the racers. The winning of a race is all that depends upon the racer's rig, but the cruiser must often trust his life to his outfit, and the pleasure of having things right, tight and seamanlike, is as keen in a thrash round a point as round a buoy. Let us bend our energies in the future toward developing the canoe and her outfit with the end and aim of getting a craft that is a canoe with a rig equal to as many vicissitudes as her hull still is, and racing will be none the less enjoyable after the revolution than it was before.

RETAW.

CANOE RACING IN ENGLAND.—The first race of the season was sailed Feb. 8 in a strong N.W. wind, by the Oxford University Sailing Club, at Oxford, three canoes, Iris, Ariel and Wasp, taking part, with four sailing boats. The canoes gave up on account of the heavy weather.

A. C. A. MEMBERSHIP.—Northern Division—John Kinnon, G. H. White, T. J. Muir, G. E. Whiten, A. B. Perry, W. M. Hale, all of Orillia. Atlantic Division—Winfield Scott, Newark, N. J.; Alfred C. Molloy, Arlington, N. J.

ATLANTIC DIVISION MEET.

Editor Forest and Stream:

In response to your request for suggestions as to date and time for holding the Atlantic Division meet, I beg to submit the following, and for the reasons given suggest that the meet be held late in July, and be of at least ten days' duration, even though it displease those who say, "I expect to have two weeks' vacation during August and to spend it at the A. C. A. meet at Lake George; if we must have a Division meet let it be, say from June 30 to July 5, five days. This will include Saturday, Sunday and the Fourth, and enable me to attend it by being away from the office but two days. Also by being early in the season it will not affect attendance at Lake George, nor will the mosquitoes be so troublesome as they will be a week later."

As it now stands the A. C. A. meet will be held in this Division every fourth year, and the division meet will be the only one held in this division during the three intervening years. For various reasons many do not attend the A. C. A. meets. In fact, comparatively few, not over 20 per cent., reach it each summer, there remains then, a large majority of the Atlantic Division canoeists who will probably not attend the meet at Lake George and of these many have expressed themselves as unable to get their vacation during the last weeks of August, but they must take it earlier, for that or other reasons they have never been able to attend an A. C. A. meet. They wish to attend, not only the customary early spring meet, but also a longer one later in the year, or, say, ten days or two weeks' duration, and want the division meet to be to them what the A. C. A. meet is to those who are fortunate enough to attend it, a place to spend their vacation. In which case a short five days' meet would hardly prove satisfactory.

Of those whose vacations are limited there are few who would desire to include the Fourth, of itself a holiday, in the short week or two allowed them, nor would many care for so early a vacation. July 1 is quarter day, when office work is unusually heavy, and until the second week there will be no moon, without which camp loses half its charm. The Passaic meet is to be held from June 30 to July 5, and Philadelphia asks for the third week. Therefore, would it not be advisable to hold the Atlantic Division meet, say from July 9 to 21, and give those who constitute a large majority of our division an opportunity to attend a real good meet, instead of a little one of but a few days, which would scarcely pay them for the distance traveled. A. C. A. 1,023.

[We are not aware of any official statement that the division meet would be limited to five days, but the expectation has been to make it as long as the A. C. A. meet, about ten days, though men may come or go at any time. Naturally the chief interest in the meet will center in the racing, and it was suggested that if a holiday in mid-week could be had it would give many a chance to visit camp for that day.]

AMATEUR BOAT BUILDING.—Philadelphia, Pa.—Could "Deja" and some others visit Norristown, Pa., they would certainly change their opinion as to an amateur's inability to build a boat. Not only do the members of the club build their own boats, but the record of the Gracie, a 12×34, against the tuckups, shows that they know how to sail them. She is in commission already this year, with an 86ft. balance lug and a new steering wheel, which may prove very successful. From the speed she shows on certain points of sailing, she will certainly push the tuckups harder this year than last. The much over-rated tuckups have pleaded the baby act and ruled the canoes out. The canoe yawl Primrose, "an enlarged American cruising canoe," is another good specimen of amateur skill. Another member has built a Notus, which is a perfect copy of the lines published in the FOREST AND STREAM. As her owner is no novice at sailing, she may prove fast. The club has a new two-story house, and, from appearances, aquatics may boom there this season.—SQUID.

APRONS FOR DOUBLE CANOES.—*Editor Forest and Stream:* Will some of the many canoeists who use a tandem canoe single inform me how the apron behind the back rest is made, and how it is most easily fitted to the coaming without cutting the canoe? I cannot find anything that suits me in the several works on canoeing I have examined; they are too complicated. I want a light apron that can be quickly adjusted and easily removed. The distance from rear of the oval cockpit to back rest support is about 15in. I would prefer a cloth covering to wood, and the lighter it is the better it will suit me. If some of the fraternity will help me out of my difficulty my eternal gratitude will be theirs.—CHAPOQUOIT.

THISTLE IN NEW HANDS.

Editor Forest and Stream:

The famous Thistle has become the property of Mr. Coates, of Madge fame. This gentleman is a fighting yachtsman, so there is a chance of proving what Thistle can be made to do. We know on this side of the Atlantic that there is nothing wrong with Thistle's body, for she goes through the water as fast as Volunteer, and that with less sail area. Hence the proportions and the relation of beam to displacement, as well as the shape of her "lines" are all that can be desired. But Thistle is, like most large British cutters, lamentably deficient in holding on to windward. There are good judges in America who will guarantee to make Thistle the smartest yacht afloat, and a "world beater" by very trifling modifications to her plane of lateral resistance, by one of the following methods or a combination of both.

First, increase the draft by 18in. by attaching a deep plate held by fore and aft angle irons to the old gutter keel, said plate to run from nothing at the heel with gradually increasing depth to about amidships, then slowly rounding up to nothing under the forefoot. Or a second deep gutter plate of required mould could be hung below the old gutter keel. This would be the better plan, as ballast could be lowered and the arrangement would not be damaged or "folded up" upon taking ground, as the first mentioned might be.

Second plan. Rivet a flat plate horizontally across present keel, with angle steel along the keel for greater security upon taking the ground. Said plate to project 4 to 6in. each side, tapering to nothing at the round-up of forefoot.

Had the Thistle fallen into American hands such improvements would have been undertaken at once, as they were under private discussion at the time she was offered for sale. It remains to be seen whether John Bull has enterprise and intelligence enough to make the experiment.

This idea of flat-plate keels, projecting at the side, offers a field of innovation destined to come into wide use, for it is a solution of the question of combining the greatest "weatherliness" with limited draft in keel vessels. That it will be successful is hardly open to doubt, as I have testimony of the strongest sort in support. A friend spiked up a broad plank underneath the keel of a shoal "skipjack" in Florida waters and found the boat to be a regular wind-jammer. I know of other keel boats with keels whose cross section is nearly like an inverted V, and they out-look and outfetch the best centerboards of their length. This is much on the same principle as the broad shoe, which seeks to make a stop in the angle between shoe and keel by which a "nip" is got on the water, preventing the yacht sliding away to leeward. Such shoe plates also enable yachts to rest plumb on the mud, with a safety guy each side from the masthead.

Thistle can also have her canvas increased by 10 per cent., as she was stiffer than Volunteer, which, in view of their respective dimensions, shows Thistle to be under-canvassed by comparison, at least for racing in American waters.

If the English public, instead of following the foolish cry raised by the London *Field* in favor of centerboards, will keep cool heads and institute a few practical tests, they will discover there in a few weeks for themselves than by blindly accepting the loose talk of theorists who are not informed as to the facts in the case.

X.

THE FISHING FLEET.

ON March 3 Capt. Chas. Harty, of the schooner I. J. Merritt, Jr., and Capt. T. F. McManus, of the schooner John H. McManus, met at the office of the Boston *Globe* and arranged for a sweepstakes race, drawing up the following invitation:

We, the undersigned, representing the fishing schooners John H. McManus and I. J. Merritt, Jr., invite all the vessels of the fishing fleet, barring the Carrie E. Phillips, to enter a sweepstakes race with us on the following terms: The course to be 20 miles to windward and return. Each vessel to put up $100, the total amount to be divided into five prizes, as follows: Winner to take 40 per cent.; second vessel, 25 per cent.; third vessel, 20 per cent.; fourth vessel, 10 per cent.; fifth vessel, 5 per cent.

Race to be sailed Fast Day, nothing to interfere with a start except fog, storm or a calm which, in the referee's opinion, would prevent a finish.

Vessels to be allowed to carry the following sails, but no others: Mainsail, foresail, forestaysail, jib, flying jib, standing maintopsail, standing foretopsail, maintopmast staysail and working jibtopsail. Any vessel to be allowed to substitute a working main jib for the forestaysail and jib. No lug foresails to be allowed.

No lead ballast to be allowed.

Entries to be made with the yachting editor of the *Globe*, each entry to be accompanied by a deposit of $25. All entries to be made within two weeks of date. The final deposit of $75 to be made by each vessel on or before Monday, March 25.

THOMAS F. MCMANUS,
For J. H. McManus.
CHARLES HARTY,
For I. J. Merritt, Jr.

BOSTON, March 3, 1888.

It will be noticed that the Burgess boat is expressly excluded. Capt. Harty freely acknowledging that she was too fast for the fleet. It is suggested that a match be made at the same time between the Carrie E. Phillips and the pilot boat Hesper No. 5, to be sailed over the same course, starting just previous to the fishermen's race. The date chosen is just at the time the vessels are docked and cleaned, so all will be at their best. It is expected that several other schooners will enter. Capt. Cannon, of the Carrier Dove, is talking of a new boat from Mr. Burgess's original design, a mate to the Phillips.

BISCAYNE BAY Y. C. REGATTA, FEB. 22.

THE second annual regatta of this, the most southerly yacht club in the United States, was held on Washington's Birthday and proved a most interesting and successful affair. Of the 10 yachts entered for the races 17 started and finished. The large boats were sent over the regular club course, which is triangular and 15 miles in length. Starting from a stakeboat off Cocoanut Grove this course took them across the bay to and around the inner buoy of the Cape Florida Channel, thence up the eastern shore, but inside of Key Biscayne, to and around the Bear Cut buoy, and back to the point of departure. For the smaller boats a 5-mile triangular course was laid off near the western shore of the bay, and they were sent twice around it. In the first class there were but two entries, the Amy, a large New Haven built sharpie, owned by Mr. F. S. Morse, of Boston, and W. B. Brickell's Ada, a 40ft. sloop which was formerly the flagship of the Bayonne Y. C. These two made the prettiest kind of a race the whole way. The sloop was restricted to jib and mainsail, and under this canvas proved such an even match for the sharpie that the lattter only beat her by 8s.

In the second class the Mischief, Vice-Com. Hine, beat the Egret, Com. Munroe, by 14m. 6s., and of the five boats following them two made exactly the same time, while a third was but a few seconds ahead of these. The third class prize was won by the Mamie, a new boat owned by Mr. Chas. Peacock. She developed extraordinary speed and excited the admiration and envy of all the boatman of the bay.

The prizes in each class consisted of an American yacht ensign, and a challenge whip, which must be won three times by the same boat before becoming its permanent property. As all three of the winners have already been challenged to sail match races for the possession of these whips, we are looking forward to some lively work during the next two months, while the merits of the respective boats forms the all-absorbing topic of conversation from one end of the bay to the other. The annual meeting for the election of officers and the transaction of general business was held on Feb. 18 at the house of Mr. Kirk Munroe, commodore of the New York C. C., who has a winter residence at this place. Fifteen members attended the meeting, and the officers elected for theensuing year were: Ralph M. Munroe, of Staten island, Commodore; Edward Hine, of Newark, N. J., Vice-Commodore; Kirk Munroe, of New York, Secretary, and Jean d'Hedouville, Treasurer. A new constitution and by-laws were adopted and a club book ordered to be printed. The yachting season here is officially announced as beginning the first day of December and extending to the first day of June. The flag of the Biscayne Y. C. has undergone a slight change, and may now be described as being a pointed burgee of red, bordered by blue, and bearing in white on the red field the device "25 N.," which refers to the latitude of the club house, and designates this as the most southerly yacht club in the United States.

A few days ago one of the early members of the New York Canoe Club, Mr. Sutherland Smith, arrived here from Nassau via Key West, and launching his paddling canoe Ariel, is now busily exploring the beautiful, rock-bound shores of the bay and the several streams that flow into it from the everglades. The officers of the Biscayne Bay Y. C. extend a most cordial invitation to all yachtsmen cruising in Southern waters during the winter to run in back of Cape Florida and take a look at these waters. To all such, who will make their presence known at Cocoanut Grove, they will gladly furnish pilots or give minute sailing directions for all parts of the bay and its adjacent cruising grounds. All canoeists may also be sure of a hearty welcome from

O. K. CROBEE.

TENDENCY OF THE TIMES.—*Editor Forest and Stream:* There is a growing impression that the upshot of the improvements made in American yachts in consequence of the cutter agitation is certain to pilot us into the keel vessel in due course of time. This opinion has cropped out frequently of late. The *Sun*, Feb. 28, has an editorial, concluding with the following likely prophecy: "In the interest of true sport we cannot consistenly wish that they will never have that cup over there some day. And yet before it goes there we trust that the form of our yachts will have undergone another transformation, such as the Britisher does not dream of. May it be that by the time he has perfected his centerboard model our centerboarders will have deepened and solidified into keels, faster than anything yet evolved, the pioneer forms of the ultimate and perfect boat."—AMERICAN.

TAKING TO THE KEEL.—*Editor Forest and Stream:* It is evident that New York is swinging into line in favor of the keel wherever the draft will permit. A visit to Bay Ridge discloses a number of yachts receiving more and deeper outside lead until these craft have virtually become keel boats. The sloop Genia at Pamrapo is having her board ripped out and a keel substituted. While John Bull has gone all astray on the centerboard question, we in New York are following Boston into cutters and keels.—X.

CENTERBOARDS IN BRITISH WATERS.

FROM the comments of American papers on the failure of Lieut. Henn's motion to admit centerboard yachts to the Y. R. A., it appears that some have been foolish enough to believe that such a radical change could be effected in the British mind in one short season, or that the wonderful conversion of the Secretary of the Y. R. A. since his part in the proposed Mayflower-Arrow matches has carried with it all the members of the body. Whatever progress the centerboard idea may be making abroad, there was not the slightest reason to suppose that the proposed change would at once meet the approval of a majority, but it in no way follows that it will not in time do so. It was only after years of hard fighting, and when the results of the rule had become plain to all, that the old tonnage rule was replaced by a more liberal and equitable system; and it was not to be expected that a far more radical change would be effected in a few months. The British yachtsman is born and bred in the belief that the "shifting keel," as he calls it, is a thing of evil, to be avoided at any cost, and even now when some are beginning to realize that much of the odium attached to the centerboard in reality belongs to the shoal type of yacht once universal in America, they are loth to touch the pesky thing in any way. Considering the long standing prejudice against the board, it is natural that they should hesitate to throw it into free competition with their yachts by revoking the rule. This is a matter of home rule that Americans have nothing to do with; but when it comes to refusing to meet all foreign yachts on even terms the matter is far different. If vested interests demand protection from native centerboard craft it is nobody's business on this side of the water, however foolish and unfair such a policy may seem, and Americans would not care whether the rule stood or not, provided they were allowed fair terms in such international matches as that of Mayflower and Arrow. The ones chiefly interested are the friends of the keel boat, who have worked and hoped on, seeing each year their cause hindered by the lack of a clear understanding of the problem. Thus far, in the largest class, the fastest yachts have been the Boston compromises, and they must be recognized as the standard for windward work up to the present time. That the keel can be improved up to and beyond this standard, its friends firmly believe, but this can only be done by a long and thorough trial, side by side. The first five minutes of Thistle's work in the final race showed what all her racing in England had failed to disclose, and had she never come alongside of the American boats she would still be considered a wonder to windward. Genesta likewise showed the same failing when beside Puritan; but had she never crossed the Atlantic her ability and that of Irex to windward would never have been questioned, even by their worst opponents. It is for the sake of the keel yacht that we should like to see fair and unrestricted racing between both types. The action of the New York Y. C. has stopped the competition for the America's Cup, but English yachtsmen cannot afford to let the racing stop. The keel can and must be improved, but this can never be done by racing with each other. The time will come when the yachting public will demand a restoration of the Cup races, but unless British yachts are kept up to the proper pitch they will be as badly prepared then as they have been in the past. There is no need for the cowardly course that some Englishmen have advised, to give up the real issue and try to take the mug by means of a centerboard boat, but, on the other hand, it is just as foolish to throw away the lessons which a season of racing with Volunteer would teach to English yachtsmen. Their position now, with the best yachts they could bring to the line beaten in every race, is by no means a pleasant one, but it would be infinitely more mortifying if the keel boat in which they have failed were to be taken up by their Yankee rivals and proved a success. Such an event is by no means impossible or improbable, and in view of it no effort should be lost to improve in every way the national type of yacht which has so long been the pride of British yachtsmen.

RUSHTON'S BOATS.

THE reputation of the rowboats and canoes, built by Mr. J. H. Rushton, of Canton, N. Y., has been firmly established among boating men and canoeists for a long time, but in the new catalogue just issued the enterprising builder describes a new line of launches and other craft, of larger sizes but all the same high grade of workmanship that has made a name for his light boats. Fully alive to the wants of yachtsmen, Mr. Rushton has for some time devoted his attention to steam launches; and now includes in his catalogue a regular line of these handy craft of various sizes ready to ship on cars. Besides this, foreseeing the possibilities of the electric motor, he has made extensive experiments, and as the result now offers small boats fitted with this most convenient power. The builder sums up the advantages and disadvantages of this new motor as follows: "The disadvantages are, greater cost, greater weight, and the necessity of having a base or charging station, if storage batteries are used. At this date no primary battery has been found to answer the purpose. All are too bulky, too heavy, and too expensive to move. The advantages are, you can apply it to smaller boats than you can steam; it is noiseless and clean; no smoke, no fuel, no dirt, no grease, no danger; your power is always ready if the batteries are charged. You can start and stop at a moment's notice—turn a button, and off you go." Of course no engineer and no inspection is required. The power is specially adapted to boats of small size, 15 to 18ft., for fishing, etc., and as now applied is a practical success, though no doubt capable of great improvement in the near future. Of steam launches, the smallest built thus far is 14ft. by 4ft. 4in., used on the stage in a large tank of water in the play, "A Dark Secret." From this size they run up, 20×4½, 25×5, 32×6½, 32×8ft. In the boats in stock the stem, sternpost and frame are of hackmatac, with steel floors to frames, the clamps, shelf and deck-beams are of oak; sheerstrake and planksheer of mahogany; garboards, oak; planking, white pine; decks, cedar pine, blind fastened; interior finish of white pine, mahogany and cherry. The fastenings are of copper or brass where exposed to water, the wood work is bright finished, and all fittings are of polished brass. The motive power is derived from kerosene or coal, several makes of engines being fitted as ordered, the Shipman, Acme, Walters, or Rice and Whitacre.

In the line of small cruisers Mr. Rushton has added two new sizes of his popular model, the series now being 12×4, 14×4½, 16×5, and 18 5½. For hunting the old sneakbox is still built in two sizes, 12 and 14ft. The list of rowboats has been improved and enlarged, an important addition being the Adirondack or Saranac Lake boat, built by a local builder specially employed for the purpose. The rowboats comprise all varieties; for pleasure rowing, fishing, hunting and yacht use, and can be fitted with sails of any cut, the leading styles being fully illustrated. The list of canoes and fittings is a large one and deserves a separate notice, but yachtsmen will find much to interest them in this, as in all parts of the catalogue.

SHACKAMAXON Y. C.—The annual meeting of the Shackamaxon Y. C. was held in the new club house on pier 47, foot of Shackamaxon street, Philadelphia, on March 5. The secretary reported the club one year old, with 69 members and 23 yachts enrolled, 10 new members being admitted at this meeting; the treasurer reported the financial condition flourishing beyond all expectations of the promoters, the house committee turned over the new club house, one of the best occupied by any yacht club in the city. The election of officers resulted as follows: Com., C. F. Baker; Vice-Com., Henry Anderson; Sec'y, Wm. Shermer; Financial Sec'y, W. J. Harvey; Treas., H. Scheuerle; Trustees, Wm. Kirk, Geo. Anderson, Wm. Martin; Measurers, Robt. Beck, M. Thompson, W. Gaun. Votes of thanks were tendered to A. Gaudy, W. Slemmer, Jacob Engle, J. McCormick, W. Shermer, Chas. L. Work and Chas. F. Wall for furniture donated to the club, after which the meeting adjourned until March 19, at which time the races for the year will be decided upon.

PRISCILLA.—The alterations in Priscilla have been commenced by cutting away the old keel and garboards entirely. New heels will be riveted to the frames, bringing the garboards down with a curve, making the width at bottom of keel 20in. The lead will, of course, be stowed in the new keel. The sail plan has been completed by Mr. Smith. The foremast is well forward and quite short, the fore gaff peaking up at nearly the same angle as the main. The same bowsprit will be retained. Mr. Piepgrass is also busy with the new Auchincloss yacht. She will be 70ft. l.w.l. with a long overhang at both ends, 20ft. 4in. extreme beam and 9ft. 3in. draft. In general shape she resembles Cinderella, but is cut away more on the forefoot. The sternpost has but little rake, and the after part of keel is nearly straight, rounding up quickly toward the forefoot. The midship section shows an S curve as in Cinderella, the bilge being strongly marked compared with some of the new boats, while there is little flare to the topsides.

FORTUNA.—Capt. Newcomb with his crew will sail on the 17th inst. for Southampton, and Mr. Hovey, accompanied by Messrs. Longfellow and Stackpole, will follow on May 26, also going direct to Southampton. Fortuna is now hauled up at Fay's, but she will be fitted out with cruising rig for a trip to the west coast of Scotland, sailing for Boston about the middle of July. She will not enter any races on the other side.

AN IMPORTANT EXPERIMENT.—At the recent dinner of the Providence Y. C. Mr. Burgess spoke as follows on the subject of yacht racing: "Yachting interest in the last few years has centered in the large sloops. Now I think we are going back, and the favorite class will again be the schooners. My friend Owen, of the Sachem, will no longer have things his own way. The Grayling will come out again this season; the Priscilla has changed hands and will probably appear in racing trim as a schooner; the Montauk will fly her racing colors again; Com. A. Cass Canfield is having built a 90ft. schooner, and I am building a small schooner myself. I name her last because she will probably be there. She is the smallest of them. As for the smaller boats, if you will allow me to speak of something that concerns me just now, I am to make some interesting experiments in the 40ft. class. Four boats are now being built, all of the same length, 40ft. on waterline. They are being built as nearly alike as possible, so far as length, capacity and power and sail measurements go, but of different models. Two are keels and two centerboards. One is of the Puritan type, quite deep in the water, with a small centerboard under her cabin. I cannot venture to predict the result, but it will be instructive. Then we will be able to answer the question, 'What is the best type?' if that question can be answered at all." The experiment is apt to be an important one, but in order to make it conclusive it would be necessary for the four boats to race together for some time, and not in different waters. It is unfortunate that the rules and classes are such as to prevent the experiment including a boat of the same length, but of comparatively small beam, as the results would be still more valuable. The present tendency is toward both beam and depth, and there is no chance to try the excellence of a boat of four beams or less compared with the three beams of the new boats. Mr. Burgess expressed himself not long since in favor of the fairness of matching Volunteer against a 70ft. boat with time allowance, but now he does not expect Marguerite to save her time from boats but 4 or 5ft. longer.

CENTERBOARDS ON THE CLYDE.—At a meeting of representatives of seven yacht clubs on Feb. 7 the following classes were adopted: I. 6 rating. II. 3 rating; centerboards allowed. III. Length class, 17ft. on l.w.l., and not exceeding 19ft. over all; sail area limited to 530sq. ft.; no time allowance; mainsail or lugsail not to exceed .75 of total sail area. IV. 15ft. C. B. class. Boats not to exceed 15ft. over all; sternposts in a straight line; beam not to exceed 5ft. 6in.; keel not less than 2in. deep; depth of boat at one-third from aft not to exceed 2ft. 6in.; depth at any other part not to exceed 3ft. outside measurement; no decks allowed; gunwale not to exceed 3in. broad; weight of center plate limited to 60lbs. and metal band on keel not to exceed ¼in. thick; no other outside ballast allowed; boats all to be clinker built, and sail area not to exceed 150sq. ft. The limits laid down would answer well for sailing and boating clubs in this country which wish to encourage racing in small boats.

NEW ROCHELLE Y. C.—The annual meeting was held on March 5 at the Hotel Brunswick, the following officers being elected: Com., Charles Pryer; Vice-Com., George A. Barker; Rear Com., Z. Edwards Lewis, M. D.; Sec'y, Freeman C. Goffe; Treas., Eugene Lambden; Meas., George C. Foster; Trustees, Wm. H. Wilmarth, John S. Nicholas, C. S. Odell; House Com., J. H. Ryley, D. B. Acker, Jr., John W. Rough; Com. on Admissions, Henry E. Roosevelt, Henry Thompson, H. B. Towle; Law Com., Walter Large, C. H. Noxon; Nominating Com., Amos Brown, Charles H. Young, George I. Banks, F. C. Goffe, E. V. Osborne.

BUILDING NOTES.—Marguerite, schooner, is now ready for decking, Mr. Means's cutter has been launched, and the Baboon will be built where she laid. Mr. Longfellow's cutter, Alga No. 2, is partly in frame, while the Codman and Fowle cutters are being decked. ..Martin is now at work upon a yacht for Mr. C. H. Foster, of the Corinthian Y. C. of Marblehead, from the owner's design. She will be 26ft. over all, with a clipper stem, 20ft. l.w.l., 7ft. 8in. beam, 5ft. draft, and 3,100lbs. of iron in keel....A new schooner is spoken of for Mr. F. L. Adams, of Fairhaven, to be 56ft. over all.

YACHT BUILDING ABROAD.—At Southampton, Fay has cast a lead keel for a yacht of 60 rating, from Richardson's design. Payne & Sons have completed a handsome singlehand cutter from Watson's design, for Mr. J. J. O'Flanagan, of Dublin. She is 21ft. l.w.l., 6ft. beam, white above waterline, with bright topsides and gold stripe. She has a cockpit and a large cabin. Her name is Samonar. Fife & Son are building a 40ft. l.w.l. cutter for America, probably for Lake Ontario.

"SMALL YACHTS."—The sale of this valuable work is still increasing, and the many letters received from yachtsmen testify to its merit. Dealing with every detail of the subject it is a most indispensable aid to the amateur designer, builder or sailor, and should have a place in every shop and club house, as well as in the cabin of every yacht.

THISTLE.—It is reported by cable that Mr. Jas. Coats, owner of Madge and Marjorie, has purchased Thistle from the syndicate that built her. A report is also current, though not on good authority, that the Clarks are building two 90ft. cutters with centerboards on the Clyde, and will challenge with one of them for the America's Cup.

ICE YACHT RACING.—The severe cold weather of the last few days has given renewed hope to the ice yacht sailors. A race for the prize presented by Judge Gildersleeve was sailed on March 5, at Poughkeepsie, with six starters, Northern Light, owned by Dr. J. C. Barron, winning. The course of 13½ miles was sailed in one hour.

A LONG CRUISE IN A SHARPIE.—Capt. H. E. Judson and E. H. Winkes left Cleveland, Ohio, on Oct. 24 in a 30ft. sharpie and cruised by way of the Ohio canal, Muskingum, Ohio and Mississippi rivers, to New Orleans, arriving there on Feb. 19, after a very pleasant cruise. They returned to Cleveland by rail.

ESSEX Y. C.—Officers for 1888: Com., H. W. Jourdan; Vice-Com., J. Sannenberg; Recording Sec'y, H. Ramberger; Financial Sec'y, Laurent H. Crane; Treasurer, William Wichelhaus; Trustees, William Holzhauer, Jr., H. Hennenger and William King.

SAGAMORE.—This steam yacht, built by the New England Shipbuilding Co. for Mr. J. W. Slater, of New York, was launched at Bath, Me., on March 1. She started in tow for New York, where her engines will be put in.

BRIDESMAID AND ATLANTIS.—These two schooners which sailed so closely together in the Jubilee race last June, are matched to sail from England to Madeira for a stake of £1,000.

MORE LEAD.—Sachem will add more lead to her keel in place of inside iron. Mohican will have 10 tons on her keel, and Ival, Athlon and Alcedo will all haul out for a similar change.

HAMILTON, ONT., Y. C.—The newly organized club has already 160 members. A fine club house has been commenced and six new cutters will be added to the fleet this spring.

VOLUNTEER AND PURITAN.—Gen. Paine, Mr. Burgess and Com. Forbes are all united in saying that Volunteer and Puritan will not cross the Atlantic this year.

STRANGER.—Mr. Geo. H. Warren will leave Boston shortly to take up his residence in England. He will probably take Stranger across with him.

IROQUOIS.—Mr. Coolidge's schooner is now in New York, where her winter rig will be shipped, preparatory to a cruise to the South.

CINDERELLA.—Mr. Wm. Iselin has sold Cinderella to a Philadelphia yachtsman, Mr. W. B. Hopkins, who will not race her.

UNQUOWA.—Mr. Jennings has selected this name for the steel steam yacht Mr. Burgess has designed for him.

ATALANTA, steam yacht, Mr. Jay Gould, arrived at Algiers on Feb. 17 and sailed on Feb. 22.

SEAWANHAKA C. Y. C.—The second regular meeting will be held on March 10 at 8:30.

GITANA.—Mr. Weld's schooner reached Norfolk, Va., on March 2, after a rough passage.

MAGNET.—Mr. Howells will have a Wells balance engine in the Magnet this season.

INTREPID, schr., Mr. Lloyd Phoenix, sailed from Gibralter on Feb. 13.

MAVIS, cutter, has been sold to Chas. O. Burbank.

NORNA, cutter, has been sold to Mr. Proctor.

Miuistr (to little boy with a basketful of fish)—Little boy, aren't you ashamed to go fishing on the Sabbath day?

Little Boy (lifting the cover of the basket with conscious pride)—Ashamed? Look at them!—*Tid Bits.*

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

E. F. S.—A letter for you at this office.

C. P. L., Trenton, N. J.—The number is 7,585.

DONALD, Wellsburg, W. Va.—The parties mentioned are doubtful.

H. G., Lyme, Conn.—Is there a law on meadow larks in this State? Ans. Yes.

L. W., New York.—The "Complete American Trapper" is the best book on the subject.

RHODY.—The more lifelike you can make the decoys the better they will answer the purpose.

E. M. P., Gainsville, Tex.—Write for the Irish lark to E. B. Woodward, No. 174 Chambers street, New York.

G. L. B., Jr., New York.—The rifle is a favorite one and you will find it serviceable and satisfactory for the use required.

M. A. B., Toronto.—We know of no makers of sleeping bags. Material and mode of making, see this column in issue Feb. 2.

J. S. G., Bay Ridge.—The larger caliber will be the more satisfactory, and there is little or no choice in respect of accuracy.

R. J. D., Kansas.—The best hunting and target rifles are named and discussed in the pamphlet "Trajectory Tests," which you have.

F. R. B., Greensburg, Pa.—1. A very little white on the chest of the Gordon setter is admissible. 2. A dog can be registered at any time.

S. C., Tamaque, Pa.—When does the season for trout and bass begin in Pennsylvania? Ans. The trout season opens April 15, and the bass (black) on June 1.

H. L. B., Woodbourne.—1. You will find that you can do the more accurate work with the single shooter. 2. The repeating arm named is a standard rifle.

LEARNER, Brockville, Can.—1. The parties we believe to be honest, but we know them to be exceedingly negligent. 2. The book gives the information you require.

W. H. S., Rochester, N. Y.—Write to J. E. Thayer, Lancaster, Mass., in relation to bulldogs, and to F. F. Dole, 3,408 Sansom street, West Philadelphia, Pa., for bull-terriers.

F. R., Boston, Mass.—1. The powder is not considered perfectly safe. 2. The numbers of pellets are the same in same sizes without regard to chilling. 3. No make has the undisputed supremacy.

P. A. B., Philadelphia.—Would you not consider a canvas canoe dangerous in case of an upset from its lack of buoyancy? Ans. Canvas canoes should be provided with air tanks sufficient to float boat and crew.

Y. S., Ridgewood, N. J.—How long and wide should be a canvas canoe to carry a person weighing 150lbs. What is the best time of the day to fish for trout in March? Ans. A 15×30 canoe will be large enough. Morning and evening.

SYLVAN.—A blue rectangular flag at starboard spreader signifies that the owner is not on board. A white flag at starboard spreader signifies meal time in cabin, and a red flag at port spreader meal time for crew. The private signal should be 24×16in.

C. S. W., Victoria, Tex.—How can I obtain the report of the U. S. Fish Commission for 1885? What is price? Ans. Apply to your representative at Washington to send you one free, or write to the Public Printer, who will send it for the price, $1.05.

J. B. R., Delaware, Ont.—I have been cowboying out West for some five years, but having met with accident, I cannot stand riding. Is there any chance of getting work connected with cattle in West Virginia? Ans. There ought to be such work there, but we cannot refer you to any definite point or party.

J. D. M., Mechanicsburg, Pa.—Would you please inform me where I could buy carp for stocking a pond, and at what price? Ans. We do not know who has them for sale. If any breeders sell them it would pay them to advertise. For young fish, write to E. G. Blackford, Fulton Market, New York; he distributes them for the U. S. Fish Commission in Eastern States.

W. C. A. T., Chestertown, Md.—We had a clay-pigeon shoot today. Five of us shot for four prizes; one got first money, the second was a tie and the third was a tie, which left the fourth money outside. When those who tied for third shot off, the fourth money was given to the lowest man of those two. Some of us contend that he was no more entitled to it than the parties that shot for second. We would like to know who was entitled to it. We were shooting class shooting. Ans. The fourth prize was not won by any one, and could be disposed of only by agreement of all the contestants.

R. H., Terryville, Conn.—1. Please name some article with which to stick feathers on trout flies, snelling hooks, etc. 2. Is there any law on plover in this State? 3. Is there a close season for black bass in this State? Ans. 1. Tie on with silk. 2. No. 3. We find no general law for the State. In 1872 an act was passed protecting them in the Connecticut River between June 20 and July 20, but we find no account of its amendment nor repeal. In West Hill Pond, in the towns of New Hartford and Barkhamsted, they are protected from April 30 and June 10, and must not be taken except with hook and line. In South Coventry Pond they must not be taken between Nov. 15 and April 15, and then only with hook and line.

G. T., Erie, Pa.—While bass fishing in Canada last year, I found the most taking bait to be young pike from 5 to 6in. in length, and it occurred to me that an artificial bait would be of value. On applying to Mr. Conroy I am informed that he does not manufacture artificial fish. Do you know of any one in this country who does? The bait desired is an artificial pike, the spotted fellow, not the pickerel. Ans. Mr. Conroy tells us that the artificial fish used for bait are imported, and that unless there is a demand for a new style which would warrant manufacturers in putting it on the market, there would be no way of getting a few specimens of artificial pike. Samuel Allcock & Co., Redditch, England, make artificial baits.

ALL AROUND, Providence, R. I.—1. Where can I get good pictures of dogs, game, birds and fish? 2. Where is there good black bass or trout fishing near this place? 3. I want to buy a fly-rod, is —— a good maker? 4. Does the carp make a sucking noise when taken out of the water? I ask because I caught fish in the Housatonic River which were said to be carp and made a sucking noise, but did not know that carp were ever found in dirty water. Ans. 1. See advertisement in FOREST AND STREAM. 2. It is some years since we fished in Rhode Island, but formerly there were trout in nearly all the streams near the Connecticut line. 3. The firm named is good and reliable. 4. The carp often make such a noise, as does many other fish. They are often found in muddy water. The fish you caught may or may not have been carp, we cannot say.

INFORMATION WANTED.

CAMP GROUND.—Little Neck, N. Y.—Would some of the older campers who may see this please inform me through the columns of your paper of the best place where a party of five young men can camp out during the month of August? We want some secluded place within 300 or 400 miles of New York city, where there is good fishing and plenty of game.—O. P.

New Publications.

HAND BOOK OF VOLAPUK.*

VOLAPUK, or the world language, was constructed some nine or ten years ago by Schleyer, a German priest, and designed as a general medium of communication between people of different countries; but when attention was drawn to it through the press, some critic asserted dogmatically that languages are natural developments, and could never be supplanted by a tongue made to order, and all the other critics reasserted the dogma until it found general acceptance. Even they who realized the advantages of selecting one language for international intercourse saw nothing in Volapük to award it a preference over French or English.

*Hand Book of Volapük. The Office Company, New York.

But in the meantime manuals and dictionaries of the new language have been issued in France, Germany, Austria and other European countries, there are some 200,000 students of the language, more or less international correspondence is being conducted in it, eleven periodicals are devoted primarily to it in Europe, and now that a New Yorker (Charles E. Sprague) presents us with a neat little manual of the language, we rub our eyes and realize that it is time to look at the objections in the light of accomplished facts.

All spoken languages are the products of a long course of development certainly, but when we proceed to analyze the conditions of growth, we find that in their first stages languages have grown up wholly by accretion, that they have been often modified by the fusion of two or more languages in one, and that it is only when a people reaches a high stage of culture that its scholars succeed in imparting such measure of organic structure to its language that it becomes capable of assimilating fresh roots and growing by internal development. Every language, in fact, has received its first form and direction of development from ignorant and unscientific people, and the unsystematic results of their labors is a perpetual bar to the reduction of the language to organic rules.

This objection detracts nothing from the utilitarian value or force or beauty of a language, nor from its capacity to express the finest shades of thought, but it renders it very difficult to acquire; and in looking for a language for international correspondence this objection is found to extend with fatal force to every spoken or dead language. They are languages which have developed by accretion and can only be mastered by a study of each part or word.

Volapük, on the contrary, is an organic structure, its roots are arbitrary, as must necessarily be the case, for there is no natural language, but all its inflections proceed by law of organic development, by rules to which there are no exceptions.

The whole structure of Volapük is, in fact, so simple that it may be mastered in a few hours' study by the aid of Sprague's hand-book, while, as regards the language itself, one is really astonished at the talent displayed in facilitating its acquisition. Every letter has a constant sound, there is only one declension of nouns, one conjugation of verbs. The verb is recognized immediately in a sentence by its termination in ok, ol, om, of, etc., the equivalents of I, you, he, she, etc.; the tenses by the prefixes a, e, i, o, u, etc., which become pa, pe, pi, po, pu, etc., in the passive; adjectives are formed from the root by the addition of ik. The roots have been selected from English, French, German, Latin, and the interrogative le has been adopted from the Russian, but although some forty per cent. of its roots have been adopted from the English, many of them have been so modified that they are not recognizable at first glance.

The facility with which Volapük may be acquired, the simplicity of its structure, and the absence of all ambiguity of meaning promise to render it a very convenient medium for international mercantile and scientific correspondence, but the great advantage of Volapük will be appreciated when it shall be taken hold of by Chinese and other civilized Orientals as a medium of communication with the western world.

Art of Boxing and Science of Self-Defense, together with a Manual of Training, by William Edwards. Illustrated from instantaneous photographs. New York: Excelsior Publishing House, 29 and 31 Beekman street.

Persons who are interested in athletic sports of whatever kind are prone to recommend that particular one to which they are especially attached, and to assert with great emphasis, that running, rowing, riding, or whatever it may be, is by far the most wholesome form of exercise that can be taken. Setting aside prejudices of this kind, however, it may be safely asserted that two of the best forms of violent exercise are fencing and boxing. The first of these is unquestionably more intricate and difficult than the last, and its accompaniments make it out of the question for it to attain at present the widespread popularity which it ought to have. Boxing, however, requires less apparatus and less skill, nothing more than, in fact, a set of gloves and an opponent, and so it is within the reach of almost every one. Properly practiced it strengthens the muscles, quickens the eye, and gives to each man who becomes expert in its practice, a certain confidence in his physical possibilities, which is a decided gain to him. That boxing is practiced by the low and the brutal is nothing against it. The way in which his acquirement is used depends on the man and not on the accomplishment. A very excellenty work on the art of boxing, from the pen of "Billy" Edwards, which has just been published by the Excelsior Publishing House of this city, gives in clear, simple language about all the instruction that can be given in words, and two performers who put on the gloves with this book before them will soon get a very clear idea of most of the principal moves of fense and defense. The illustrations serve to make plain and emphasize anything that is not clear in the text, and add a great deal to the book's usefulness. Price: Boards, 50 cents; paper, 75 cents.

Scientific Dairy Practice. For Canadian Farmers. By W. H. Lynch, Ottawa: A. S. Woodburn.

FOR SALE AT THIS OFFICE.

Among the Many Novelties

Introduced by us last spring were the

Dead Finish, Waterproof, Braided Silk Fly Lines,

FOR SALMON, TROUT AND BLACK BASS.

These lines have given perfect satisfaction and stood the most severe tests. *They do not crack, chip or become sticky and stiff,* but remain soft and pliable. These lines are waterproofed through and through, not merely on the surface. They will not become tender in use or by age.

Also a new style **LANDING NET,** made of *waterproof braided linen line,* which prevents the hooks from catching in the meshes. The prices of these nets are only a little in advance of the old style made from twisted thread.

ABBEY & IMBRIE,

Have You Read It?

THAT LATEST BOOK

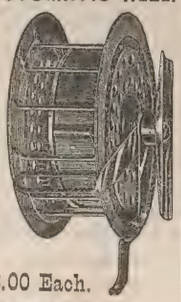
On the Great Maine Wilderness, entitled, **From Lake to Lake; A Trip Across Country.** A splendid story of the Androscoggin Lakes region. Don't fail to buy it at once. 224 pages, 30 illustrations. Price $1.00 by mail.

JAMAICA PUBLISHING COMPANY,
Jamaica Plain, Mass.

QUEEN & CO. 924 CHEST. ST. PHILA.

FINE FISHING TACKLE.

Our catalogue which we have recently issued contains descriptions of more and better specialties than are shown by any other Tackle House. We mail this catalogue without charge. Send for a copy. We call particular attention to the following:



THE BRAY FLY BOOK.

In this book the flies may be as quickly attached as to throw in an envelope, and at the same time perfectly secure, while they may be as easily detached. The book is made of good material and in the best possible manner. *It is the best book in the world.*

Prices, $4.00 to $6.00 Each.

THE IMPROVED AUTOMATIC REEL.

Those who angle for fish requiring a long line will appreciate its good qualities, particularly the rapidity with which it recovers the "slack" often caused by the eccentric movements of gamey fish. It enables the angler, and makes it desirable, to use lighter tackle. No fisherman giving the Automatic Reel a thorough trial will ever venture to return to the old style crank reel.

Prices, $6.00 to $8.00 Each.

A. G. SPALDING & BROS.,

241 Broadway, New York. 108 Madison Street, Chicago.

"SHOOTING."

The only English journal devoted exclusively to sport with gun and rifle is *Shooting*, edited by Sir Ralph P. Gallwey, Bart., author of the Badminton Library, and G. T. Teasdale-Buckell, Esq., who exported all the Llewellin setters to America and won the National Brace Stake and the Field Trial Derby four times each.

The most practical correspondence and the best selection of advertisements appear in *Shooting* weekly.

Few Americans ever heard the names of ur best English gunmakers.

Price of *Shooting*, postpaid, $3.25 per annum. Send post office order to the Publisher, 182, Strand, London, England.

A New Magazine.

SEND FOR PROSPECTUS.

The first number of the Androscoggin Lakes Monthly will be issued on Thursday, March 15, and each month thereafter. The magazine (100 pages) will be especially devoted to matters of interest connected with the lake region. Special illustrated articles by able writers each month. All persons who have visited, or are about to visit the Androscoggin Lakes, will find the Monthly valuable reading for them. Subscription with premium, $2.00 per year. Address JAMAICA PUB. CO., Jamaica Plain, Mass.

NEW YORK CITY.

A NOTABLE ART ENTERPRISE!

The Sportsman's Reverie.

A SERIES OF PICTURES FOR SPORTSMEN.

READERS of the FOREST AND STREAM cannot fail to recollect Mr. Thomas F. Watson poem entitled, "The Sportsman's Reverie," printed in this journal about two years ago. Later on a few stanzas were added to cover other scenes of typical American sport with the gun. The author depicted vividly the varied visions which come before the view of the veteran sportsman as he sits in easy chair before the fire. Of the author and his poem the *Detroit Free Press* said in an appreciative notice: "The author is evidently a man of the most acute sportsmanly enthusiasm, as well as of nice literary taste. His poem is built upon a very simple plan. Before a cheerful fire—like Ike Marvel's hero—sits a veteran of rod and gun; he grows half drowsy over pipe and fire and the poet has caught—with a nice and sensitive appreciation—the reminiscences of a hundred hunts which flit through his brain. One experience after another is described with graceful pen touches; the quail, the woodcock, the snipe, the deer, fall before the crack of the gun; a long day's sport—a glorious day such as no man ever compassed between sun and sun—is described, even the trout, from the clear rapid, paying tribute to the prowess of a dreamland sportsman, until at last, with the fall of the quiet night shadows, the sportsman draws his boat to the shore, his tired retriever crouches at his feet, and, with his ducks, the final trophies of his sport, at his side, he looks back over the darkening water; and then, once again at his fireside, the end of the vision comes naturally and gracefully."

And now these "word pictures" of the poet have been complemented with the actua canvas pictures of the painter. Artist-poet and poet-artist have united to give us the poem in a magnificent setting. Mr. Robert Hopkin, the celebrated artist of Detroit, has painted a series of twelve pictures, each telling in color what the poem tells in words. From these paintings have been made superb heliotype engravings, each having beneath it the particular verse of the poem illustrated. The series is remarkable for strict adherence to nature fidelity in portraying action, and artistic merit.

THE TWELVE PICTURES:

No. 1 shows the hunter seated in an easy attitude in an arm chair, gazing reflectively into the fire on the hearth. Above the fireplace are the head and antlers of a deer. The sportsman's right arm is around the neck of his dog, which is resting on his haunches beside the chair. His left hand holds his pipe. The firelight flickers on the floor and around the legs of the chair.

No. 2 represents dawn breaking over a small lake. The night shades are fleeing. A mist is rising from the eastern end of the lake, of which trees fringe the edge. A plover is circling in the air, and in the foreground is a mallard lazily flying out over the glassy water.

No. 3 represents snipe shooting. In the foreground is the sportsman, his body twisted around to the left in the attitude of making a double on snipe. Standing beside him is the setter, waiting for the word to retrieve. To his right is the border of a wood, the branches bending to the strong wind. In the distance are the sails of craft on the lake.

No. 4—woodcock shooting—shows an opening in the copse around whose border a brook is winding. In the foreground, standing deep in the ferns and rank vegetation, is a setter on a point. Behind the dog is the sportsman in the attitude of shooting at a bird flying directly over him.

No. 5 shows a quail hunter in the foreground, walking along ready for the shot, which will follow the rise of the birds, on which the dog is drawing to a point. A haze is over all, and the sky is that of a day in Indian summer.

No. 6 depicts grouse or partridge shooting in the beech woods. The hunter is walking down a slope. The dog has come to a point ahead of him. The bird has flushed and the hunter is shown aiming. The pointer has stiffened into an attitude of strained attention, as he watches the bird fly away. The upper part of the sportsman's body is in the shadow, the lower part in the strong light of the sun rays.

No. 7 shows an angler reeling in a trout. A brook is tumbling down through the woods and over the rocks into the pool. The sky is cloudy and the sunlight is struggling through.

No. 8—deer shooting—is a forest scene In the foreground a buck, just shot, is falling on the edge of a lake. Tearing down the slope behind him are two hounds. To the left, behind the roots of an upturned tree, are seen the head and shoulders of the hunter, whose rifle is still bearing on the deer.

No. 9 represents shooting over decoys. A gale is blowing and the water of the channe outside is lashed into whitecaps. In the bay the decoys are tossing in the chopping waves. In the foreground is a point of rushes, in which the skiff of the hunter is partially concealed. The flock of ducks, which has just swung in outside the decoys, is broken by the discharge of the first barrel. One section is wheeling out over the river. The other has broken off to the side and is wheeling out again to meet the first section. Some scattered birds are dashing above the head of the hunter, and he is twisted around in his skiff aiming at a bird flying above and behind him.

No. 10 shows flight duck shooting. The scen is a marsh, on whose broken surface the sun is setting behind the clouds. In the foreground, on a grassy point, are the hunter and his spaniel. The hunter is in a kneeling attitude and in the act of firing his first barrel. The spaniel is plunging into the water to retrieve the bird which has fallen to the first barrel. In the distance are flying ducks.

Nos. 11 and 12 represent the hunter retiring from the marsh and at home, and these two are among the strongest of the set.

The pictures are printed on the best 150lb. plate paper; size of paper 24×30in.; size of print 14½×17½in. The pictures have the tint and tint border and the artist's remarque, and form artist's proofs, an édition de luxe.

The prices of these engravings are as follows: Singly, $3.00; any group of 4, $10.00; the complete set, $30.00. Any group of four may be ordered, but we beg to suggest the following groups as strong combinations:

Group A.	Group B. (Upland.)	Group C. (Duck).
Plate 1, The Reverie.	Plate 3, Snipe Shooting.	Plate 9, Duck Shooting—over Decoys.
" 2, The Dawn.	" 4, Woodcock Shooting.	" 10, Duck Shooting—Flight
" 7, Trout Fishing.	" 5, Quail Shooting.	" 11, Homeward.
" 8, Deer Hunting.	" 6, Grouse Shooting.	" 12, Home.

FOR SALE BY

Forest and Stream Publishing Co.,
40 PARK ROW, NEW YORK.

Yachts and Canoes For Sale.

MESSRS. COX & KING ARE FAVORED with instructions to sell by auction at their offices, 5 Suffolk street, Pall Mall, London, on Wednesday, April 11 1888, at 3 o'clock precisely, unless previously sold by private contract, the very desirable and first-class cruising steam yacht **OSSIAN, of 147 Tons Y. M.** The vessel is in the very best possible condition in all respects and amply found, has recently been entirely refitted and the cabin accommodation most conveniently arranged, including spacious deck saloon. Is an exceptionally powerful vessel for her tonnage, and especially suitable for foreign cruising and to make the passage across the Atlantic, and therefore well worth the attention of every American yachtsman desirous of obtaining a steam vessel of about 150 tons Y. M. Plans, particulars, photographs and conditions of sale may be obtained from the auctioneers as above. Telegraphic address, "DERAT, LONDON." Scott's code used.

Cruising Yacht for Hire or Sale.

The owner of a cruising yacht, 47ft. long, 14ft. beam, 6ft. draft (with centerboard up), perfectly fitted out for the accommodation and comfort of 4 to 6 persons in the cabin and 3 men in forecastle, pat. W.C., and all modern improvements, will hire or sell for a reasonable price, important business engagements preventing him from leaving the city. The yacht was specially built of the best material for comfort and safety during the winter of 1886, under owner's personal supervision, and is suited for excursions in the Gulf of St. Lawrence. Arrangements will be made to afford all the sea trout and all other fishing required; salmon may be included. This is an opportunity seldom offered. Address Post Office Box 1081, Quebec City, Canada.

FOR SALE.—FIRST CLASS NEW FLUSH-decked iron steam yacht, 130ft. long, handsomely fitted, schooner rigged; speed 17 miles per hour. Steam vessel circular. SAMUEL HOLMES, 120 Front st., New York. feb9,3mo

---

FOR SALE CHEAP.—A STEAM YACHT, 53ft. long, 10ft. beam; a fine sea boat, used three seasons, fully equipped for cruising. Also a steam launch, 27ft. long, fine steel boiler, coppered hull, etc. Box 235, Salem, Mass.

ANSWERS TO CORRESPONDENTS.

PROTECT THE PARK.

ALL READERS who are interested in the protection of the Yellowstone National Park are invited to co-operate with this journal in the endeavor to secure needed legislation. Petitions will be sent to all who will undertake to have them signed and forwarded to Washington.

SYSTEMS OF GAME PROTECTION.

STATE game warden systems are in their experimental and formative stage. No system has been devised and put into actual operation which fully meets the requirements. Some are lacking in one thing, some in another.

Beginning with the oldest, there is the Maine system. There are here two Commissioners who have subordinate officers under them. The Commissioners are dependent on the wardens for the detection and arrest of offenders. The wardens were once given a part of the fines recovered. At the last session of the Legislature the law was amended, taking away from the wardens their shares of the fines. The result has been that the wardens have not done such effective work as they did before. The stimulus has been removed; the service is correspondingly inefficient. Maine's great game and fish interests urgently demand a change in the law, and a restoration of the rewards to the wardens.

A similar defect in the Michigan system goes far to nullify the efficiency of official game protectors. There the statute prescribes that the wardens shall be paid by county supervisor boards, and their compensation is left entirely to the will of the supervisors. Game protection had a great boom in Michigan when the system first went into effect, but very soon it was discovered that supervisors were not inclined to vote money to wardens in payment for services rendered, and here, as in Maine, activity ceased because there was no money in it. Game protective societies will talk protection and make speeches and write arguments in its favor for nothing; but when it comes to a warden actually going to work and doing something, he must in some way be paid for it. Michigan's game protective system will fizzle out unless some way is provided to pay her officers for a faithful discharge of duty.

In one particular the Michigan system is well planned. The local and subordinate wardens are under the control and direction of a chief warden, who has jurisdiction over the entire State.

Ohio has a force of wardens who do efficient service; and it is thought that their work can be improved if they are placed under the direction of a chief. The most important piece of game and fish legislation before the Ohio Legislature this year has been this proposal to provide for a chief game protector.

The same plan has been under discussion in New York, in which State the game protectors are now under the control of the Commissioners of Fisheries. They are required to report to the Commissioners, but they are appointed by the Governor and may be dismissed only by him. The Commissioners of Fisheries, as a board, have demonstrated their unfitness to direct the protectors. Some of the members of the Commission appear to think it the proper thing to resolve the meetings into minstrel shows and crack jokes when game protection is under discussion. Even were the Commissioners a unit as to policy and united in zeal, they would hardly be asked to assume the labor involved in an adequate supervision of the protectors, for the Commissioners serve without remuneration. A bill has been introduced into the Assembly to provide for the appointment of a chief protector, who shall have general charge of the work throughout the State, and to whom the other protectors shall be subordinate.

The efficiency of such a system would depend altogether upon the character of the man appointed to fill the place of chief protector. If he is to be only a new cog in the political machine, put into place to further the ends of the man who appoints him, the last state of game protection is likely to be worse than the first. If on the contrary a fit person could be appointed irrespective of political consideration, to do the work with the sole aim of protecting game and fish, the gain would be decided; and the protectors who now wink at law breakers with or without an itching palm, would be given an opportunity to seek out new fields of usefulness in some other line of endeavor.

CLASSIFICATION OF RACING YACHTS.

IT IS just a year since the attention of American yachtsmen was first called to the pressing necessity of a reform in the matter of classification, by the FOREST AND STREAM, the point then most strongly urged being that all the leading clubs should combine in adopting and supporting one uniform system, whatever that might be. The progress made, and the manner in which the subject has been dealt with by the clubs in this time is a striking evidence of the lack of unity and purpose in American yachting, and is at least conclusive, if far from satisfactory. Had the matter been promptly taken up when first suggested, a series of classes could easily have been determined on before the season opened, and as comparatively few racing yachts were built last season, the new classes could have been used in all, or nearly all, the season's races, and the scheme have been in perfect working order before the building season of 1887-8. Though some discussion took place and the necessity for action was generally recognized, no concerted movement was taken by the clubs. The Seawanhaka C. Y. C. brought up the question among a number of other pressing matters, but nothing resulted save the appointing of a committee to report in time for action after the close of the season. The New York and Eastern clubs paid no attention to the matter, while the Larchmont Y. C. temporarily remodeled its old classes in partial conformity with those proposed by the FOREST AND STREAM. Only two clubs, the Atlantic and the young New Rochelle Y. C. moved actively in the matter, both taking up the proposed classification and adopting it permanently, while the Corinthian Y. C. adopted the classes as an experiment in its first regatta.

During the racing season little was done, but in the fall a move was made which resulted in a lengthened conference of committees from the New York, Seawanhaka, Atlantic and Larchmont clubs. The Eastern Y. C. was invited to join, but as no meeting was held during the winter, no official action was possible. Though the representatives of the various clubs differed on some points, all were agreed on the main issues, and the original classification, already adopted by the clubs, was recommended by each committee. The Atlantic Y. C. was already committed to it, the Seawanhaka C. Y. C., at a special meeting, authorized its officers to sign in its behalf an agreement of all the clubs binding them for a period of five years, and the Larchmont Y. C. unanimously adopted it, but in deference to the leading position which has always been conceded to the New York Y. C., it was generally felt that its consent was indispensable to the full carrying out of the plan.

Here came the first hitch; from the beginning the New York Y. C. had failed to push the subject, and for a very good and sufficient reason; that in doing so it would have to follow other clubs younger than itself. The fact that the whole movement was the first general step toward a needed organization of the clubs, that the success of the plan would be of the greatest advantage to all, weighed but little when compared with the other facts, that the plan had originated entirely outside of the New York Y. C., and that it had already been approved by other clubs. The committee, however, after full discussion with those of the other clubs, recommended the plan, and it came up for final action at the general meeting of the New York Y. C. last month.

Here a second snag was encountered. In the proposed division the single-stick classes, beginning at the lowest, were as follows: 26ft. l.w.l. and under; over 26 to 30; over 30 to 35; over 35 to 41; over 41 to 48; over 48 to 56; over 56 to 65; over 65 to 75; over 75ft. This division has much to recommend it; the intervals increased in size as the lengths of the yachts were greater, it grouped the existing boats very well together in nearly all the classes, and it encouraged good sizes of boats for the new fleet to be built under it. As will be seen by the list given in the FOREST AND STREAM of March 24, 1887, it fitted well with the existing fleet, save at one point, the yachts known formerly as first and lately as second class, those of about 70ft. Here the proposed plan would raise the limit 5ft., or to 75. This was felt to be an objection to it, but with the next lower interval at 55ft., it was very difficult to avoid a disturbance somewhere, and while it was undesirable to upset a long established class, the evil was not so great as it seemed. Looking over the class, the boats were: Bedouin, 70ft. 1¼in.; Titania, 70ft.; Gracie, 69ft. 4in.; Shamrock, 67ft.; Pocahontas, 67ft.; Fanny, 65ft. 9in.; Ileen, 65ft. 4in.; Stranger, 65ft.; Thetis, 64ft. 2in.; Huron, 63ft.; Arrow, 61ft. 8in.; Hildegarde, 61ft. 6in.; Mischief, 61ft.; Wenonah, 60ft. 9in. Of this lot of fourteen only three have any chance of first place in a fair race to-day, Bedouin, Shamrock and Titania. The rest are either too small or too old in model and build to have the least chance of a prize, and Bedouin has stood for several years the acknowledged leader of the class. Her owner is willing to see the limit extended to 75ft. Shamrock, for some reason, was intentionally built too small by 3ft. for the class, and Titania is the only one likely to make a well-grounded objection to the change. As for Pocahontas, Fanny and the rest, their place in the racing is not such as to entitle them to the right to object, while Gracie has little hope of winning from a well-designed modern boat of her own size. The new class proposed at 65ft. would, moreover, include all from Fanny down in a class where any of the first half dozen, Mischief, Stranger, Thetis, Huron and Fanny, might still have a fair chance to win, and where, even if a new boat were built to the class, she could not greatly exceed them in size, so that they would be actually better off than in the old 70ft. class with Bedouin and Shamrock to take all the mugs.

Weighing all points together it would seem that while one or two boats might have their chances injured by a new yacht of greater length, the arrangement would in itself have been beneficial to the majority, and have aided the adoption of the entire list of classes depending on it. Whether or no the new 75ft. class would at once have proved popular and have been built up to is uncertain, but the new 65ft. class would have been a most desirable one. The experience of forty years of yacht building has brought out vessels of 60 to 67ft. as the favorite size for single-stickers, as the above list will show, in fact until a few years since no sloop exceeded 67ft. This size proved ample for the needs of the majority of yachtsmen, but these were all old wooden craft; a vessel of steel or composite build and modern style, of 65ft. l.w.l., would have at least thirty per cent. more cabin room, and at the same time be safer, faster, and would cost little or nothing more to run. She would give the accommodation generally demanded, in fact far

in excess of what yachtsmen were well content with a few years since. Going down to the next size, 56ft., it is practically the old limit, but 1ft. longer, and if built up to, would give a large cabin, one very good stateroom for the owner, a fine ladies' cabin aft, and perhaps an extra room for a guest, far more room than Clara or Cinderella; in fact a steel yacht of 56ft. l.w.l., with clipper stem and good counter, would have nearly the cabin space of the cutter Wenonah. The 75ft. class would, in all probability, prove a successor to the present large class, being better within the requirements of the men who care for racing in single-stickers than a Volunteer or Mayflower. A keel boat of this size, in steel, would give about the cabin space of Puritan.

The question of such a change as the replacing of the 70ft. class by two new ones was very carefully discussed among yachtsmen, and the weight of opinion was in favor of it as a movement for the general good. When it came up before the New York Y. C., however, matters soon took a different turn. The owner of one of the yachts interested, the Gracie, opposed the motion, urging that it was an injustice to the present splendid fleet to admit a yacht 5ft. longer to race against them, and the owner of the Fanny made a similar plea. Mr. Busk, former owner of Madcap and Mischief, quietly knocked all the weight out of the objection by remarking that he had repeatedly raced a yacht of 61ft. against others of 67 to 70ft. with much pleasure and profit, also a yacht of 43ft. against others up to 50ft. and over. He might have added that Gracie, 70ft., and Fanny, 65ft. 9in., had been handsomely beaten on elapsed time in a fair race at Marblehead last August by a keel craft of 63ft. Arguments of this kind were not wanted, the New York Y. C. is nothing if not sentimental, and its holiest feelings were aroused for the protection of these sacred relics, the whole plan was promptly voted down, the agreement with the other clubs was at an end, and a movement that is becoming daily more important was stopped for the time, if not entirely killed. No consideration of the effect upon designing and racing, no thought of the good or bad effects to follow, only protection for the ancient hookers once so dear to New York, and an assertion of the utter independence of the New York Y. C.

As the matter then stood the classification had been adopted by both the Larchmont and Atlantic clubs, and to a partial extent by the Seawanhaka C. Y. C. The next move of the New York Y. C. was to propose another division of the classes, which was adopted at a special meeting last week, as follows:

Sloops, Cutters and Yawls.—Class 1, all over 80ft.; class 2, 80ft. and over 70ft.; class 3, 70ft. and over 61ft.; class 4, 61ft. and over 53ft.; class 5, 53ft. and over 46ft.; class 6, all of 46ft. and under. Yachts launched prior to June, 1888, exceeding the higher limit in any class by a fraction of a foot shall be included in that class.

Similar changes were made in the schooner class, but we need not notice them as the case is precisely the same as with the singlestickers.

The case of Fanny is a very amusing one, showing how an owner can deliberately work against his own interests. Had the original classification been adopted, with the accompanying clause as proposed, Fanny would have been the largest vessel in the 65ft. class, with Stranger, Thetis, Huron, Mischief, Arrow and Hildegarde below her, and with the aid of time allowance she could have won sometimes when the weather favored her. The result of her owner's action has been to keep her in a class where she is outmodeled, outbuilt, and can hope to win only by aid of some tremendous fluke. She will have to give time for about 4ft. of length to Bedouin, Shamrock, Titania, and the new steel Auchincloss boat, an utterly hopeless undertaking.

As to the respective merits of this classification compared with the other, had this been presented by its present sponsors in the first place they might have been discussed, but now it is not worth while, as the whole point of the case lies in the fact that the New York Y. C., which would be considered the leader in American yachting, took no action in the matter until other clubs had done so; then, when it was plain that it must follow, not lead these clubs, it went to work deliberately to hinder the good work for unity and system which they had begun, and now seeks to destroy it all and set up a new structure in its place. Whether or no it is working for the interests of national yachting is a question that all may judge for themselves.

Great as the influence of the New York Y. C. has always been, thanks not to what it has lately done but to its age, numbers and traditions; it is certain that the combined action of three progressive and energetic racing clubs could successively uphold the step they have taken, but one of these is likely to follow in the wake of the New York Y. C., the committee of the Seawanhaka C. Y. C. having recommended the adoption of the New York classes in place of those already approved by the club. It has also been made to appear, though no authority is given for the statement, that the Atlantic Y. C. is willing to repudiate its action and follow the New York.

If the New York Y. C. had shown any disposition to aid the work or to pass intelligent criticism on what the others had done, the case would be altogether different, but, as it now stands, the action of the club can only be considered as an attempt to assert its superiority over the other New York clubs and to teach them that their place is after, not in advance of the great New York Y. C. Such being the case, all friends of yachting will look eagerly to see a display of independence and backbone on the part of the other clubs that will enable them to hold successfully the position for the advancement of yachting interests which they have already taken, and to put through successfully an important measure.

It must be remembered that the main point in dispute, the existence of the 75ft. class, is now supported by the Eastern, Larchmont, and Atlantic, three powerful clubs, and if the Seawanhaka C. Y. C. coöperates with them they will govern at least seven regular regattas in each season, besides extra matches, to the single annual regatta sailed under New York Y. C. rules. A 75ft. yacht could then be built that can enter all these events and still have a show for the Brenton's Reef Cup, in fact all she would be debarred from would be the N. Y. Y. C. annual, and perhaps a race or two on the cruise under New York rules, in fact the balance of power lies entirely in the hands of the four clubs mentioned if they care and dare to use it.

THE ROCK CLIMBERS.

XII.—A NIGHT RIDE.

AFTER the Rhymer had departed, several days were spent quietly about camp and on the mountains. A little game was killed, a few photographs taken and —most remarkable of all—a new arrival welcomed to the lake.

One morning as Appekunny and Yo sat upon the beach in front of camp, attending to some hides, they saw appear on the crest of one of the ridges on the other side of the lake, a mounted man, and, a moment later, a four-horse team. At first they thought that it was Joe Kipp, who had half promised to come out and make a hunt with them, but the glass, when it was brought to bear on the animals and wagon, showed that it was a soldier outfit. The high sky-blue wagon was easily recognized, and, as if to make assurance doubly sure, it was presently followed by three or four men on foot. They passed on up the lake, and although a couple of rifle shots were fired to advise them of the camp's position, they were not seen again until the next day. Then, however, Appekunny, while out hunting for the horses, which had crossed the Inlet and were feeding on the flat, came upon their camp, and Lieutenant B. returned with him to the tent by the lake. The meeting was a pleasant one, and after chatting a while, and getting all the latest news from the States, horses were saddled, and the three rode off up the lake and took some pictures.

Just as they were starting out, Jack rode into camp, having safely returned from the settlement. He brought a last word of good-bye from the Rhymer, and the good news that the latter had safely started for the railroad. On their return to camp it was determined to take advantage of the still evening to ferry all their possessions down to the flat at the foot of the lower lake. There they would make a cache of the greater part of the baggage, and loading two mules with their bedding and a week's provisions would start for Swift Current. Lieutenant B. was asked to join them, and to stay with them as long as he felt that he could. Accordingly camp was broken and everything carried down to the beach and loaded into the boat, and about 7 o'clock in the evening just after it had fairly become dark, the boat swung off the shore out into the dark waters gleaming under the bright moonlight, and the slow steady stroke of the oars told that the men were off for the end of the lake. It remained for Yo to gather the horses and mules, drive across the Inlet, down the other side of the lake and then across the river to the flat. Then, having selected a good spot for the camp, he was to kindle a fire on the beach which should serve as a beacon to guide the boatmen to their haven.

It was seven or eight miles down to the camping place, and a beautiful bright moonlight night for the ride. Lieutenant B. had come down to watch the boat move off, and a few moments after it had disappeared, Yo had gathered the stock from the flat back of where camp had been and started them across the Inlet. Then his companion bade him good night, promising to be on hand by noon next day to join them on their excursion up Swift Current, and Yo was alone.

For perhaps half a mile the animals went on very well, but it was a bad time of day to drive them, for it was just the hour for feeding. Presently they came to a place where the grass was thick and sweet, and there with one accord they scattered out and began to feed. Each individual animal had to be ridden after and started along the trail, and the moment the rider ceased to urge it and turned back after another, it would stop and go to feeding again. The stock did not like the idea of leaving this place where they had been for several weeks, and first one and then another would turn off and try to break back. Among some rough ridges, where the dead quaking aspens grew thick, thin white branches shining like silver in the moonlight, they all scattered out and pushing as far as possible into the dead brush, began to feed again. Then Yo had to break his way in, get beyond them and drive them out, and the calm way in which the mules would stand with their ears thrown forward and look at him until he had come almost near enough to strike them was peculiarly irritating. By the time he had driven them across the Inlet flat and up on to the south side of the lake, the herder was in a frame of mind which was not at all in keeping with the calm loveliness of the quiet night. The horses kept their tempers, even if he did not his, and continued to act in a way that would have tried the patience of a saint, but at length coming to a point where the country was more level and open, he succeeded in getting them going at a lope along the trail, and by keeping close to them, and now and then touching up the laggards with the end of his lariat, they made good time down the trail. Then after a little while the sweet influences of the scene began to have their effect and the irritated spirit was soothed.

The wind had fallen, and over mountain, valley and lake lay the mantle of the mysterious silence which is so often a part of these wilds. There was no soft stir among the long grasses, no crisp rustle of aspen leaf nor whispering sigh of swaying pine boughs. The sharp bark of the fox and the hoot of the owl were stilled; the wailing, quavering cry of the coyote and the trumpet note of the wild goose were hushed. The air was soundless.

The trail could sometimes be seen far ahead, winding like a slender snake over the yellow hillside, and along this the horses trotted briskly in single file. Sometimes they lagged a little, and then, as the curling end of the trailing rope flew forward among them, jostled and crowded each other and then broke into a rapid lope, which carried them far ahead, perhaps over the next ridge and out of sight of the rider, who kept up the same swift, steady trot along the trail.

The ride was full of poetry, but its beauties could be felt, not described. The great white moon, nearly at her full, had climbed half way to the zenith, and lit up prairie and mountain with a glory that was as much more beautiful than that of the sun at noon as it was different from it. The open prairie was flooded with the clear white light, but beneath the trees and in the brush were odd black shadows, which sometimes moved along and took strange new shapes, which changed as they were seen from different points of view. The silhouettes cast on the ground by the scattered pines along the trail were black as ink, and when the way led through groves of aspens the ground was curiously flicked with black and gray and white, making it look as if it were rough and broken. In the open the bunch grass had a uniformly pale gray tint, and the scattered patches of yellow rye grass looked white, not with the clear, brilliant whiteness of snow, but dull, rather like stretches of white sand. The whole effect was that of riding over a desert without vegetation, a barren waste of verdureless soil.

The air was still. Windmaker slept and his servants were at rest. Only now and then when the god stirred uneasily, a gentle zephyr breathed over the lake, and sighed itself away over the prairie beyond. On either side were dimly seen the dark shapes of the mountains, and the snow-clad peaks beyond Swift Current, whose tops were visible over the nearer hills, shone and glimmered in the clear light. Beyond these was the pinnacle of Chief Mountain, and over this, as if a part of it, hung a blazing star. It seemed to the rider as if this were a lighthouse and the star its beacon which beckoned him onward.

And now a strange thing happened. Suddenly he noticed that he was no longer alone. Ahead of him, galloping along the trail on a horse that went as silently as the wind and as swift, rode an Indian, who held in his hand a rifle, and bent down now and then on his horse's neck, as if following a trail. His long hair floated out behind him and rose and fell with the swing of his horse's stride, and the moonbeams shone on the naked brown skin, which glistened as he meved his body. And as the rider watched this trailer just before him, it seemed that the figure was a familiar one. A moment after a shadow appeared by Yo's side and then under his right arm came creeping into view, and stealing up beside him, a pony's bony head and long slim neck, and in a moment there galloped silently with him another rider; and when he looked into the strong, stern, yet kindly face, he beheld the countenance of a friend long since dead. Half turning in his saddle, he glanced over his shoulder and saw behind him other men, one white, and the rest red and naked, following close at his heels. His eye took in at a glance all the details of the picture, and he noted the strong white columns of steam that shot out from the horses' wide-spread nostrils in the regular even play of their lungs, the tossing manes, the wet sides glistening in the moonbeams, and the glint of the light on the rifles. And again looking before and about him, there were no more mountains, nor dark pines, nor the shimmering waters of the lake, but only, as far as the eye could reach, undulating, treeless sandhills, covered with scanty yellow grass, and dotted here and there with broad-horned cattle, that raised their heads and stared at the little group of riders that sped silently by, or turned and fled, disappearing among the ghostly shadows of the sandhills.

It seemed natural enough to the man that he should be riding along so swiftly and so silently with these companions, and yet as he recognized them one after another he remembered that for years all of them but one or two had been sleeping in unknown graves by the hurrying waters of the turbid Loup. He saw now that it was not among the mountains of Montana nor along a Kootenay trail that they were galloping. The rough sandhills, the soft cushioning soil on which the horses' hoofs gave no sound, the white poppies that gleamed in the moonbeams, the sharp sheaves of the yucca stiffly stretching their blades toward the sky, these all belonged to a country far different and far distant from this, a country far to the southeast; while the men with whom he rode so steadily and so fast were his own people, the Skeedees, the Wolves. Fired by a race hate which has grown with ages, a hate made fierce by generations of warfare, they were riding, as they had so often done, on the fresh trail of their ancestral foes, the Sioux. There came back to him as he pressed on a scene in which he had taken part, in years gone by, which was like this. He remembered the long ride, scarcely interrupted for a day and two nights, the headlong charge, the scattering rifle shots, the recovery of the horses, the dead bodies of the Sioux scattered on the prairie, how their naked skins showed dark on the yellow sward, and their raw scalpless heads glistened in the moonlight; the easy relaxed attitude of three of the dead, and the twisted limbs and hideous distortion of the fourth, the triumph song of the victorious Pawnees, the rough dressing of the wounds of two of them, and the slow return of the successful party with their booty and the scalps. Well, now they would again conquer, for were they not led by that white chief, whose presence commanded victory, who had never known defeat? So on and on they swept. No words were spoken, but the swift silent ride continued, and the trail grew more fresh. On a sudden, as old Tuckee-tee-lous rode over a little ridge, he half turned and waved his arm over his head. The horses bounded forward at full speed. There at their feet was the feeding herd of the hostiles, while in the shadow of the brush stood two rude teepees. The reins were thrown loose on the horses necks, the rifles held in readiness, and like a whirlwind they swept down the slope, while from every throat burst the fierce Pawnee war cry ringing out shrilly over the silent prairie. There was a vision of tossing heads and flying heels, a rushing to and fro of dark shapes, a sound of thundering hoofs, and they were close on the stampeded herd. Yo's horse stumbled and almost came to his knees, and—his rider found himself alone, holding his gun in his hand and riding furiously across the flat, near the outlet of the lake, after his little herd, which was scattered in rapid flight.

He rubbed his eyes and looked about him half bewildered; then checked his horse, sighed softly, and as he rode slowly on, wondered whether he had been dreaming or whether the spirits of those whom in other days he had known so well and trusted so wholly had indeed been riding by his side that night.

Through the black shadows of the trees on the last creek he passed, and out on to the steeply sloping hillside into the bright moonlight, then down by the brush where the wagon was cached, and along the trail to where it turns down to the river's brink. The horses hurried down to the water's edge and were soon standing along the gravel bar drinking deeply of the cool, pure water. Then when they had raised their heads they plunged in; crossed the moonlit river, clambered up the bank on the other side, and were soon loping briskly across the wide flat. A short gallop brought them to the point where camp was to be made, and their herder drove them into a wide bay of meadow, surrounded on three sides by willows, feeling sure that for an hour of two they would be so occupied in filling their bellies that they would have no time to think of straying off. His own horse he tied in the brush near the spot which he had selected for camp, and then stepping down to the beach began the task of gathering drift wood for his fire.

The wind had begun to blow, at first softly, but with a constantly increasing violence, and every now and then a gust would come which would scatter the brands of the fire along the beach, and Yo began to consider that it was quite possible that the boat might not reach the shore that evening, and that he would have to spend the night sitting up by the fire. After a little, however, the slow, regular stroke of the oars began to be heard, at first very far off and faint, but gradually nearer and more distinct. A call from the shore brought a response, and presently the boat came in sight, touched the shore, and the mariners told the story of their voyage. How the wind had blown and the sea risen and dashed into their boat, and over their possessions piled up high above the gunwales, and too how they had stopped to eat supper, a relation which set Yo to rummaging in the cook box for some cold victuals with which to satisfy his own appetite.

It was late, and nothing could be done that night toward unloading. The blankets were thrown on shore, the boats hauled up and secured, Yo's horse was picketed securely near camp, and presently the men spread their beds and laid down to rest under the cold moon. Yo.

The Sportsman Tourist.

AN UNINVITED GUEST.

SOME years ago when the Atchison, Topeka and Santa Fe Railroad Company were engaged in making preliminary surveys for their present transcontinental line, a party of civil engineers were seeking to locate a feasible pathway for the road across the Mojave desert in eastern lower California.

This desert, so called, is not a great plain of barren sand, but is an immense extent of country lying west from the Colorado River almost if not quite to the Sierra Madre mountains, covered with sage bush, soap bush and cactus of twenty or more varieties, from the "birdnest" or "pin cushion" type which grows almost like a bunch of moss, to the wonderful "yucca", a great hideous distorted tree with limbs as large as its trunk and only thornes for leaves.

No other vegetation is seen, and for a hundred and fifty miles in every direction the undulating plain stretches away to the distant mountains without a drop of water to be found anywhere on its arid surface. During the summer months the heat there is intense and it is almost impossible to cross the desert without a numerous train of horses and wagons and many barrels of water to be used en route.

Should the water give out, suffering and perhaps death, certainly for the animals, and it might even be for their drivers, would ensue.

The surveyors' party, however, were old Westerners and entered this desolate land fully equipped to meet all its terrors. There were nine men in the party with a train of seven wagons, plenty of food and water, and tents to protect them from the noonday heat and the night chill.

One pest, however, the men had not counted upon. This was the great number of rattlesnakes. Much to their surprise they found these reptiles unusually plentiful, so much so that care had to be constantly exercised lest one should step upon them among the thick brush in spots, and also to prevent their intruding upon the camp at night.

Most of the party had been accustomed to sleeping upon the ground, but shortly after entering the desert they all constructed for their night use low cots standing some 18in. high, which they set under cover of the two tents and occupied at night, feeling much safer when thus raised above the level of the earth. Two or three of the party had horse hair lariats or halter ropes, which were also stretched in a circle about the tents each night, and across which the snakes do not like to crawl; probably because the sharp ends of the hair pricks them.

After these arrangements had been completed the men felt much more at ease, and when darkness fell they usually retired early with a satisfactory conviction that however much danger they ran in the day time from *Crotalus*, they were assured of safe rest at night.

In one of the tents four cots were usually set, in the other five. Chief of the party Beardsley, his transit man Collins and backflagman Harlan with axeman Cherry occupied the four, while the remainder of the party filled the other five. There was no need of a night guard in this silent region, for Indians never crossed the desert, and of wild beasts there were none except rabbits, prairie dogs and an occasional coyote.

One night as supper was eaten the general conversation fell upon the subject of snakes, and all spoke of the unusual number which had been seen that day even for that reptile-haunted land.

"I certainly killed two to-day," said Collins, "and I saw half a dozen; I fear I shall dream of them to-night."

"Better unload your revolvers then," laughed Cherry, "for as you sleep in our tent I should not want you to shoot in your dreams. We should suffer more than the rattlers."

"This must be rather a favorite spot for them," said Chief Beardsley, "I think I saw two or three. I believe I will try to collect some rattles. Our friends at home would prize them; Donovan," he continued turning to one of the train hands "be sure the lariats are carefully stretched to-night, for I think it will be chill and if so the snakes will be attracted toward our camp by its warmth and try all the harder to join us."

"I'll see to that, sir," replied Donovan, "I've no taste for their company."

Shortly after the tired men rolled themselves in their blankets and sought each his cot. In the Chief's tent Collins lay next the door, Harlan second, Beardsley third and Cherry in the fourth place. They pretty well filled the small tent.

For some hours, indeed until almost dawn nothing occurred to mar the repose of the party, but at about five o'clock in the morning and just as the east was begining to purple with the final promise of a new day Beardsley awoke. He was a quiet, man and observing from the sounds about him that his tentmates were still sleeping he did not rise, but lay thinking of the duties of the coming day. Suddenly a whisper low but shrill struck his ear. He turned his head quickly.

At his side within easy reach of his hand was Harlan's cot and on it lay Harlan his face colorless, his eyes staring, his breath hardly passing his dry and half opened lips! Beardsley was shocked.

"What is it, Mat, are you sick?" he exclaimed, partly rising and stretching his hand toward his companion.

"Hush!" said the other in an intense whisper, "don't stir! There is a rattlesnake lying upon my breast coiled up between my blankets! He has been there two hours and I have hardly dared to breathe! How shall I get rid of him?"

"Great heavens!" cried Beardsley in a low tone, his own bronzed face turning pale while he nervously glanced down at his own rumpled blankets, "are you sure it's a snake? How did he get there?"

"I don't know how he got there," replied Harlan, "I only know he's there! If by no other sign I can smell him!"

It is a well known scientific fact that this reptile gives forth a most unpleasant odor.

The others in the tent were now awake and with wide open eyes and ears observed all that was going on but without moving lest they should disturb their dangerous visitor.

"Can I not shoot him?" said Bearnsley, "I will fire across you so as not to hit you but to kill him."

"But if you didn't kill him then he would surely kill me!" moaned Harlan. "No, that will not do. Some other plan must be tried."

"I might cut him in two with a blow of my knife." whispered Collins, "but if I struck too hard it would cut you too."

"No, that will not do either," said Cherry, "there is only one thing to be done. You must fling blankets, snake and all off on to the ground with a single motion, not giving him time to strike, and we will fill his skin with bullet holes," he added, drawing his revolver from the holster where it hung at the head of his cot, "before he can get free from the blankets."

Harlan's face grew even more white than before if that might be.

"But suppose," he began, when Beardsley interrupted him:

"No use supposing, Mat; Cherry's plan is the only feasible one. Brace up, man, the horrible odor is making you faint and weak, but gather all your strength and will power and spring upright with one motion. That will throw the reptile on to the ground before he has time to strike. Besides he is between the blankets and can't get at you easily. We will all be ready with our pistols and finish him quick enough. Now, cheer up," he continued, cocking his weapon; "all ready, don't wait but act quickly —now!"

The Chief fairly shouted the last word, and as if thrilled with the electric current from a powerful battery poor Harlan gave a terrified shriek and with a mighty effort threw himself almost upright on his cot, at the same instant hurling blankets, intruder and all forcibly from him to the ground.

There was a half heard rattle, a sudden roar and crackle of pistol shots half a dozen or more, a tent full of smoke which as it cleared revealed a badly riddled bundle of blankets lying motionless at our feet. One of the men rushing in from the other tent stumbled over them and disclosed a full sized bloody rattlesnake shot through and through, dead as need be all but the wriggling tail.

We never found how our uninvited guest gained admission nor was the frightful experience ever repeated, but it was some days before Harlan recovered his usual composure, and even to-day he may be made to start by the sound of a metallic rattle which reminds him of his Mojave bedfellow. F. E. HAMILTON.

SOME CANOEING.

Editor Forest and Stream:

If somebody doesn't get drowned you will be apt to receive a call some time in May from your correspondent "Tarpon," who proposes to make a canoe cruise from Tarpon Springs down the Gulf coast, around the Florida capes, up the Atlantic coast to New York, up the Hudson to Lake George, and home to St. Johnsbury, Vt., from which place he started some four years ago. He sends me a letter dated March 1, from which I make the following brief extracts: "I have been waiting until I could write you something definite about the trip. Shall start about the 15th in the 'rag canoe.' You know her, and know whether I can handle her. As you say, it is a trifle risky, but if anybody can do it I think I can. Will drop you a postal as often as I strike a post office, that you may know how I am getting along, and will also write to FOREST AND STREAM. Should like to meet you in New York if I get there."

Yes, I know the "rag canoe," and have been in her more than once. She is a decked canvas, 14x28, with an apron, and very speedy. Her owner handles her to perfection. Her rig, when I last saw her on the Gulf coast, was a balance lug and small dandy. If she escapes the sharp-cutting coon oyster bars and snags she may get around the Florida capes; but if she works up the coast to New York safely it will be a marvel. I have ventured on a little fraternal advice to the old canoeist, thus: "Take daily notes, making the most of any startling incident; people like to be startled. If you happen on to a very big serpent, don't let him shrink in measuring; and the same remark will apply to 'gators, as well as fish and game. Give the poor, dumb things credit for all there is in them, and if you must err, let it be on the generous side. If you get stranded on any of the 20,000 keys between Tarpon Springs and Bay Biscayne, and are forced to live on palm cabbage for months like Capt. D. and his crew, console yourself with the reflection that there are hundreds of poor people in New York and Boston who have no cabbage at all, and that Capt. D. and his men came out fat and healthy at last." NESSMUK.

Mr. Charles Getshon, of 134 Fifty-fifth street, Brooklyn, has inserted a notice in the papers offering a reward of $20 for information "leading to the conviction of the brute who knocked the eye out of a pug dog on Feb. 14, on Second avenue, between Fifty-fourth and Fifty-fifth streets." The injured dog, named Box, is an English pug, highly intelligent, and with a famous pedigree. He belonged to a German Count and was imported about eight months ago, and finally, about Christmas, passed into the possession of Miss Kittie Getshon, the organist of St. Andrew's P. E. Church in Forty-seventh street. The dog was a great pet in the neighborhood, and there was general regret when Box returned home on Tuesday morning after an hour's absence, with his face covered with blood and the right eye hanging on the cheek. Box received careful medical attention, but a sad change has come over his appearance. "Until his eye was knocked out," Miss Getshon said, "Box was beautiful and fat and his eyes were large and full of expression. At present his face has the appearance of a prize fighter's physiognomy. I would not have felt half as badly if the dog had been killed. I will get a glass eye for Box if he can be induced to wear it." Several valuable dogs belonging to residents of the neighborhood have been poisoned of late, and bills offering rewards for the apprehension of the murderer of the canines have been posted extensively around.—*New York Sun, Feb. 19.*

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy, Bolt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N. P. R. R., St. Paul, Minn.—*Adv.*

Natural History.

THE FOOD OF RAPACIOUS BIRDS.

Editor Forest and Stream:

It is to be feared that we shall get too much ahead in the matter of creating sympathy and protection fo certain birds of well-merited ill repute. This matter is once more (as frequently heretofore) called to my attention by an article in your issue of March 1, under the above caption. I beg leave to note an exception on the part of the commonwealth *vs. Accipiter velox*. It is to be legitimately inferred from Mr. Swift's showing that this desperate villain should be protected by law. Judged by the contents of his stomach duly catalogued with all the precision of scientific record, he preys upon small birds and an occasional mouse, and is entitled to be under the special protection of law as a specialist in the destruction of that public nuisance the English sparrow. Knowing what I know of the sharp-shinned hawk, I infer that in the vicinity of Elmira, New York, he feeds on sparrows and mice on account of the scarcity of nobler game. Where the Virginia partridge abounds it is a fact within my personal knowledge and experience that this hawk is extremely destructive of this bird. I give as an instance of the deadly ferocity of its swoop, an occurrence I once witnessed. My brother and myself were shooting partridges when a covey was pointed by one of the dogs in a heavy bunch of tall ragweed, the other dog backing at close quarters. We had advanced to within twenty yards of the covey and were taking position for the shot, when we were startled by a rustling noise within a few feet of our heads, and in an instant the birds flushed with loud screams as a hawk plunged headlong into the bunch of weeds from which they darted forth in all directions. Instantly my brother, directing his first barrel at the hawk, killed it, and also killed a bird with his second barrel, while I directed my fire at the birds. On recovering the birds, the dog also retrieved the hawk and brought it in with a dead partridge in each claw. The claw had entered one of the bird's throat and passed out the top of its skull, through the brain; the other bird was simply throttled, the foot being clenched in deadly grasp around its throat. I have no idea that the hawk could have taken wing with a full grown partride in each foot, but this whole affair exhibits the destructiveness and power and great audacity of this hawk, well named *velox*, for I believe the arrowy speed of its deadly swoop is unequalled by any other hawk. I have often seen this hawk snatch poultry almost out of the lap of the shouting hen-granny in our Southern farmyards, and only last winter I knew of one of them pursuing a hen into the stable, and into the very stable where a man was grooming a horse. I take exception therefore to the sharp-skinned hawk being taken under the special protection of the law, in consideration of the Elmira bill of fare for rapaces—a bill of fare which does not vary in any important or constant relation to the variation of the species, and which probably represents the raptorial food supply of that vicinity much more accurately than it does the general habits of the species.

If any of your readers who are practical field sportsmen have any regard for my opinions, I suggest it to them, that they take knowledge of a group of hawks which (like Cain) any man finding them shall slay, viz., Cooper's hawk, the slate-colored hawk, the rough-legged hawk and, above all, the sharp-shinned hawk. I repeat it, that it is within my knowledge and experience that this group is especially and very destructive of our finest and most valued game birds, and our most beautiful insectivorous and sweetest song birds. I join in Mr. Swift's malediction of the fox and the great horned owl, but they are scarcely worse than the weasel and skunk, which both destroy. Of the abundance and destructiveness of this last, few persons I suspect entertain any adequate conception. As illustrating this point, I knew a case in which a gentleman, having lost many poultry, put out poisoned birds to kill the foxes which he accused of the theft; when he went to take up his baits in the morning he found no fox, but did find ten dead skunks.

M. G. Elzey, M.D.

[We do not quite understand our correspondent's classification. Does he place Cooper's, the sharp-shin and the rough-leg in the same group?]

THE HERMIT THRUSH.

No one of ornithological tastes can afford to be without a fair knowledge of the thrushes. At the present stage of classification, they are the climax of bird-life. Whatever degree of importance may or may not attach to their peculiar points of structure, or however much any one may admire brilliancy of plumage in other species, in song, that most charming of all phases of bird life, the thrushes silence all others. One may prefer the varied range of the song of the wood thrush, singing as if he were in a profound and delightful reverie; another may prefer the marvellous tones of the Wilson, as he throws the forest into a sweet vibration of melody by his rather monotonous notes; and another still may prefer the sacred song of the hermit; but all must admit, that no other music of any three birds of the same family, can equal that of this trio. They are also harmless birds, adhering almost entirely to the forest, and so never disturbing the products of the husbandman. Moreover, they no doubt do much to aid in the preservation of our grand forests. With all their high endowments, they are of very humble habits. The ground, or at best the lower story of the woods, is the range of their abode; nor is there any evidence that the thrushes ever feel the need of fine clothes. Last but not least, their gentle, retiring ways win upon us.

To those who reside in the Middle or Southern States, no one of this family seems more shy and mysterious than the hermit. He is far too boreal in his habits to spend the summer with us, and he generally goes south of us to spend the winter. His vernal migrations are in advance of most birds, and so he steals a march on us; and his return in autumn is generally too late to find us in the woods. Thus persons generally fail to make the acquaintance of this most boreal of his race. Only recently have we learned how far north this bird may spend the winter, and how much cold he can brave. In and around the District of Columbia, the hermit may be found in sheltered places of the forest and around springs, at any time in winter; and in at least one instance, the bird has been seen near the Potomac when the thermometer was a number of degrees below zero. I think, however, that it can scarcely be called common at this season of the year.

To see the nest of this species, built on the ground and set off with its fine clutch of greenish-blue eggs, one must generally go as far north as Maine or northern New York; and the same is true as to the locality of his song. Much to my surprise, however, I have heard the hermit sing as far south as Montgomery county, Maryland. One cold wet morning, the sixth of April, I heard it deliver a weak song barely intelligible; and again the 26th of October, I heard a similar song. No one unacquainted with this musical performance could have identified it; but to one who knows the movement of the melody, the peculiar modulation could not be mistaken.

One of the most charming items to a naturalist visiting northern New England or the Maritime Provinces in spring is the song of the hermit thrush (*Turdus palassi*). I reached Paradise, in the Anapolis Valley, Nova Scotia, during the night, and early the next morning climbed the South Mountain to listen to the birds. It was the beautiful morning of the second of June, 1883. As I passed through a swampy tract of alders, on nearing the foot of the mountain, I was greeted with the divine song of the hermit. It had been familiar to me in the days of childhood, and I had often recalled the unutterably sacred feelings it used to awaken; but never during the many years of my ornothological studies had I heard it, though I was quite familiar with the bird in its migrations. Stimulated by anticipation and with a vague conception formed from the descriptions of authors and the analogous songs of other thrushes I was prepared for the happiest impression. It was a moment never to be forgotten. The song begins with a note like the vowel *O*, passing through several intervals of the musical scale in a smooth upward slide and in a tone of indescribable melodiousness, and continues in a shake which gradually softens into silence, thus giving a most pleasing diminuendo. Put into syllables it is well represented by Mr. Burroughs's phrase, "*O-o-o-o, holy-holy-holy-holy*," and I sometimes thought I heard it say, "*O-o-o-o, seraph-seraph-seraph-seraph.*" Again I could discover no suggestion of articulate language, but only that soul-language of pure melody which speads directly to the heart without the ruder incumbrance of speech. With short pauses this diminuendo is repeated any number of times, but always on a different key and witha different modulation. Now it is on the main chords, now on the intermediates, and now on the most delicately chosen and inspiring chromatics. When pitched high, the shake is through shorter intervals and in a weaker tone. The lower toned modulations are always the sweetest. Sometimes the tones are so soft as to sound far away, though the bird is quite near; and again the notes are very penetrating and may be heard from quite a distance, especially when aided by the echoes of tall dense forests. The tone of the melody is neither of flute, nor of hautboy, nor *vox-humana*, but something of inimitable sweetness, and is never heard away from the fragrant arcades of the forest. "Spiritual serenity, or a refined, poetic, religious devotion, is indeed the sentiment of the song. He whose troubled spirit cannot be soothed or comforted, or whose religious feelings cannot be awakened by this song in twilight, must lack the full sense of hearing or that inner sense of the soul which catches nature's most significant voices." ("Our Birds in Their Haunts," pp. 491, 492. J. H. Langille.

THE PRONG-HORN ANTELOPE.

BY R. W. SHUFELDT, C.M.Z.S.

If the reader will refer back to my article upon The Peccary, where the U. S. National Museum "List" for the Order Ungulata is given, it will be seen that a separate family, the Antilocapridæ, has been created to contain our Prong-horn Antelope. It is the only representative of this family, and consequently as *Antilocapra americana* it stands alone in its glory, nor is it at all likely that any species will be discovered hereafter to keep him company. Through the able investigations of Canfield, Bartlett, and more especially the very complete ones of Caton, it is now a well-known fact that the antelope periodically sheds its horns, and that these appendages are in due time by an epidermal growth reproduced again. But this process as here performed is a very different one from what we find to be the case in the true *Cervidæ*, for in *Antilocapra* the horns when shed are semi-hollow, having overgrown for their basal moieties a bony core found on the frontal region of the skull over each eye. The study of the growth and shedding of these horns is a wonderfully interesting chapter in anatomy and physiology and should not be missed on any account by those engaged in such subjects. True antelope are not known to shed their horns, and this character alone would, in classification, place our Prong-horn directly between the *Cervidæ* and the hollow-horned ruminants.

Furthermore, this animal, as we well know, has an anterior projecting prong on each horn, which is never the case in true antelope, and it likewise agrees with the hollow-horned ruminants, as the cattle, in possessing a gall-bladder, and in lacking the lachrymal sinus in front of each eye. As in the deer tribe, our female antelope possesses four functional mammæ, *Capra* having but two. *Antilocapra* again, lacks the rudimentary hooflets, to the side and near of its cloven hoofs proper; nor has it the cervine tarsal and metatarsal glands, though *eleven* other small glandular structures are located in the integuments upon different parts of its body, the one on the middle of the back making the odd one. Exceedingly curious in character is the coat of our antelope, each hair being hollow, pointed, and *fragile*, that is, when once bent, it nearly breaks, and owing to its non-elasticity will not resume its straightness again. A close coat of fine white fur is found next the skin in this animal, and Caton has noticed that whenever it "is excited in play, by fright or by rage, the hair of the white patch on the rump rises up and assumes a more or less curved radial position, from a central point on each side of the vertebræ, as we sometimes see too radial points on the human head." I would add to this that the antelope also erects the hair this way when in great pain, as I have observed in animals of this species that I have wounded, and approached to kill. This erect and bristling bouquet of snow-white hair when thus displayed upon the round rump of this creature, is truly a beautiful sight, and once seen not likely to be forgotten.

The eyes of *Antilocapra* are very large, intensely black, winning, soft and expressive, and full of fire when the animal is irritated. Yet our antelope has but poor vision, and depends, so far as its senses are concerned, very largely upon its smell and hearing to avoid its enemies.

Female antelopes of this species also develop a short pair of horns, ranging from one to two inches long, and as one difference in the kids of this animal, we may detect the rudimentary horns of the male at birth but not those of the female. As a rule the female bears a pair of kids at a birth, but may have only one; all of those I have discovered leading young have always had two. Dr. Rothrock, several years ago, secured a very young deformed kid of this species, it having two heads joined back of the orbits. The prepared skull from this specimen used to be in the Museum of the Surgeon General's office of the Army, at Washington.

From my own studies and observation, and from my reading the works of others upon *Antilocapra*, I would say, so far as his classification goes, based upon the summation of his structure as we now understand it, that I take him to be more nearly related to certain antelopes than to any of the other ruminants, with a dash of the caprine, cervine and cavicornine elements still clinging to his organization, and with a strength of prominence exactly in proportion to the order in which I have named them; more of the goat than of the deer, more of the deer than of the *Bos*, and a great deal more of the antelope than all three of these put together.

Prong-bucks shun the forest, but occur from small bands to thousands on the rolling prairies from the tropics to the 54° north latitude, west of the Missouri River. They probably never passed east of the Mississippi; they always have been a plain lover, as are their nearest kin.

Several years ago I was hunting antelope some five or six miles north of Fort Fetterman in Wyoming. It was in early October, and my success during the day had been wretched, for I had been tantalized with the sight of a great many antelope, but had shot never a one. On my return, being mounted on an excellent hunting horse, I came to the top of a low rolling hill, when upon looking down in the shallow valley beyond it, there lay nine antelope upon the ground, and all within two hundred yards. At the sight of me they jumped up together, and you may imagine my surprise when I saw that the largest buck, a full-grown and splendid specimen, had a *jet black head and shoulders*, while the coloration of the hair of the rest of his body was normal. My brain actually reeled with excitement, for I would risk almost anything to obtain such a prize. They were rested, while myself and horse were nearly tired out with the day's ride, so I hardly knew what to do, especially as they soon began to walk off at a rapid pace. Having succeeded often in a charge under such circumstances, I resolved to try it, and at once plunged the spurs into the flanks of my weary horse; and the spurt we made surprised the antelope, and diminished the distance between us in a trice by a hundred yards. Here I rapidly dismounted with rifle in hand, and let my horse go. Meanwhile my game took start and actually flew up the side of a low, long and narrow hill, some one hundred and fifty yards beyond me, and instead of passing over its crest, tore along at a steam engine rate down the middle path of its summit. The old black-headed buck was in the lead, and the other eight followed in single file. I had a heavy rifle, made especially by the Government for officers of the Army, caliber .45, and with it I drew a fine sight on the object of all my desires, who was going at such a pace that one could not keep his legs individualized by sight; then I held fully three yards directly ahead of him, and pulled. Imagine my disappointment when I saw a noble doe directly in his wake, plunge one side, and roll down, stone dead, with the bullet through her heart. Dismounted as I was, and completely leg-weary, my last chance was gone, and from that day to this, I have never seen or even heard of such a specimen, and indeed, a melanocomous condition as that was in the antelope must be one of the rarest of freaks.

Never have I seen better ground to hunt the antelope on, though, than the Laramie Plains, where, on one occasion, over ten years ago, I slept out under a single blanket with a companion hunter, with the view of "giving them a brush" next day. It froze hard during the night, and in the morning when the light was still a deep gray, I sat up to rub my poor joints, and to bring my nearly congealed circulation into play again. The light was just sufficient to allow me to see three white and slowly moving objects not more than fifty yards from the foot of my bed. At this sight I naturally warmed up, and commenced rubbing my eyes instead of my stiffened joints. They were antelope; and quietly reaching out for my loaded rifle, I, in exactly the same instant of time, knocked down an old buck, and caused my snoring companion to jump clean out from under the blanket, with an alarm, which he said prevented him from hitting a single antelope during the day's hunt which followed. It is not often one can "sit up in bed" and shoot an antelope at peep of day. Before evening I had seven down, all "single stalks," which most people I think will consider a good bag.

The cutaneous glands of the Prong-horn, which I have already alluded to in a foregoing paragraph, are found both in buck and doe, and at all seasons are responsible for the indescribable and pungent odor which surrounds these animals. What the exact use of such an organ may be I am at present unable to state, but am inclined to think that the chief use of the glands is to protect the animals from swarms of troublesome insects, as gnats, mosquitoes and flies. Its short tail is useless for any such purpose, and these pests on the plains are truly frightful sometimes, and yet I have to see an antelope ever annoyed with them, while I have seen horses driven nearly distracted.

Where the skin is exposed on an antelope it is of a jetty black color, while where the hair grows it is of a bright flesh tint. For the most part the coloration of an adult specimen of this species is of a tawny ochre shade, being darker along the back and lighter on the sides. The animal is also handsomely set off with certain white areas, and black facings, distributed as I have drawn them in my figures illustrating this paper. Horns and hoofs are both coal black, although the apices of the former are often shaded off with a paler tint. Kids when first born never show the maculation so characteristic in the fawns of the true *Cervidæ*, but are essentially colored like their parents, although of much paler shades where the tawny tints prevail.

Prong-horns in their feeding seem to confine themselves

A PAIR OF PRONG-HORN ANTELOPES (*A. americana*) MALES.—DRAWN BY THE AUTHOR FROM HIS OWN FIELD SKETCHES.

(The background adapted by the author from view in Hayden's Survey.)

to the various grasses growing on the prairies, and never eat the leaves of trees or any kinds of fruit. They are very fond of the "soda licks" so abundant in the most of the regions they inhabit, but will take common salt in lieu thereof, when kept in a state of domestication, as has been shown by Judge Caton. As pets they make extremely engaging ones, and in reality this is the only way we can fully study them, and as the habits and morphology of the species have as yet by no means been exhausted, it is earnestly to be hoped that both science and private individuals will make constant endeavors to study them by such methods.

Every one who has hunted the antelope is aware of its fleetness for a short spurt, how then it becomes fatigued and even sometimes captured. While at Fort Laramie, in the spring of 1877, I often saw these animals run down and taken with a good pack of gaunt and vigorous greyhounds. They make in the chase some truly wonderful horizontal springs, but fail utterly when they come to jump over anything over a yard or more high. During the rutting season old bucks fight each other with all the lusty courage of yore, while the females never lack the necessary spirit in stoutly defending their young against any danger that might threaten them. Hunters also know how to take advantage of the almost insane curiosity the animals show when approached by any strange object on his feeding grounds. The endeavor to inform himself on the salient points of a red flannel shirt, has cost many and many an antelope its life, and I doubt very much that any of them can tell a great deal about that garment to-day. But my space is well nigh expended, and yet I feel I have hardly touched upon the natural history of this, one of the most engaging animals of our entire mammalian fauna, and one so strictly American. Many parts of its structure still require the careful investigation of the anatomist, and Caton in speaking of its permanent preservation to students of the future, and its domestication, says, "We have an abundance of territory well adapted to this purpose, now lying waste, and a limited appropriation, to be expended under the direction of the Smithsonian Institution, for instance, whose expenditure of the funds committed to its charge has been characterized by the soundest judgment and highest integrity, might promise success. What would we not give could we resuscitate some of those animals which were formerly abundant on our continent but have recently become extinct? The danger, if not the probability, is that our successors in the not distant future will make the same reflection in reference to the bison and prong buck, if not the moose and wapiti." This was penned by the hand of a man who looks far over the field; ten years ago the ink which committed those words to paper, dried. I am not the only naturalist that seconds this same sentiment to-day, and can point to the vast stretches of our western territorial domains, now richly bestrewn with the bleaching skeletons of our nearly extinct bison, to support the plea.

RABBITS AND ORCHARDS.—A writer in the *American Garden* recommends as a protection against rabbits "to rub the bark of the trees thoroughly with blood or grease, which makes it distasteful to the rabbits. They will not touch a tree that has been treated in this way, for the smell of fresh meat always terrifies this gentle and, in many respects, innocent little creature. This also prevents the mice from gnawing the bark from the trees, although occasionally they will overcome their prejudice for a taste of the tender bark. When the trunk of the tree has been peeled, the wound is covered with a cloth on which is spread a little grafting wax or cow manure. This latter, besides excluding the air from the wound, tends to heal the injured part, but if left on too long it becomes dry and hard, where insects or larvæ congregate."

Game Bag and Gun.

All readers who are interested in the protection of the Yellowstone National Park, are invited to co-operate with this journal in the endeavor to secure needed legislation. Petitions will be sent to all who will undertake to have them signed and forwarded to Washington.

PILGRIMAGE OF THE SAGINAW CROWD.

IV.

THE way of our getting back to Red Fork will be described by both Brooks and Ed. You will readily see that the stories do not jibe; one or the other is given to romancing, and we are afraid it is "Section 37;" at any rate he must stand the brunt of it. Ed's is given first, as he, together with George and the writer, left ahead of the others, consequently he must know more about what took place. In fact, Brooks's little episode of the "night sentinel" business at our camping ground that night will probably be better relished by first hearing a truthful account of the same. Ed writes as follows:

On Monday we decided to make a start for home the next day, and arranged that Billy, George and Ed should start at noon with the lumber wagon and darky driver, taking the baggage and dogs. George, thinking he would rather ride in the saddle than the wagon, we concluded to take a saddle horse along. As we would have a pretty heavy load, we figured on making Buck Horn Creek, about fifteen miles from the ranch, the first day, which would leave us an easy drive of about thirty miles for Wednesday. The rest of the party were to leave on

Wednesday morning with the spring wagon and make the drive through in a day.

Tuesday morning was occupied in packing our trunks and getting ready for an early start, intending to get our dinner about eleven and pull right out, so as to get into camp before dark, but we found it after twelve before we were ready for the start.

After bidding a regretful good-bye to the good people at the ranch, we climbed to our seats and George mounting his horse saying he would ride ahead and have the gate open for us, we directed our driver to go ahead, but we did not seem to go with any great rush, our off horse evidently not having been getting ready as the rest of us had, or for some reason he did not like to leave home. It was only after much coaxing and many endearing words added to many kind remarks from the rest of our party and the friends at the ranch such as "Boys, we hate to see you go off in such a hurry"; "Say, boys, does your father want to sell that horse"; "Wood and water right handy, this will be a good place for you to camp to-night," and other equally cheering remarks, that we finally got under way. But just as we came to the further end of the corral and not yet out of sight of the ranch, the same horse stopped again, probably to take a last sad look at the home of friends he loved so well. About this time George having tired of holding the gate open for us rode back to see if we had decided to wait over until next day. We told him to go back and hold the gate, we were coming as fast as we could, wondered if he took us for an express train. We stuffed our fists in our ears so as not to hear the flattering and encouraging remarks from our friends at the ranch, and calmly awaited the result of our driver's conference with the refractory beast. After a while it resulted satisfactorily, for we again got under way and this time managed to get outside the gate and out of sight of the ranch. That was about as far as we did get though, as again not half a mile from the ranch our poor homesick horse finally made up his mind that he could not leave his home and pull his share of the load, and he stopped evidently never to go again. Any inducements we had to offer only seemed to settle him more firmly in his determination to that effect. We finally asked our driver if among all the horses in the pasture there was not one that would pull.

"Golly, boss, doan know; dare dat are hoss, M. C., mebby he pull, he mighty peart hoss." So Ed rode back to the ranch, and getting Fred and Shorty, rode over to the pasture, and after some little time succeeded in capturing "dat are hoss, M. C.," and taking him back to the wagon hitched him in. Thinking perhaps two baulky horses might be better than one in case M. C. should turn out that way, we took the saddle off the horse George had been riding and put it on the homesick one, sending the other back to the pasture. This time we made a glorious start; at least it seemed so to us who had been so long trying to come so far. After this we had no more trouble with our horses, getting along over the smooth roads at a good fair rate of speed.

We had gone about five or six miles on our way, when Billy sang out, "See the turkeys," and off to our right about 200yds. was a flock of about thirty-five or forty, making tracks as fast as they could for the thick timber in the creek bottom, about 400yds. ahead. We called out to George, who was a short distance ahead, to ride into the flock and scatter them; he put spurs to his horse and dashed ahead, riding right into the midst of them before they took wing. He unfortunately did not have his gun with him. A portion of the birds flew out of sight into the thick timber, but many of them, after flying a short distance, lit down and skulked in the thick grass. Billy and Ed immediately unchained the three dogs, Bob, Nip, and Mose, and loading with our No. 2 shells, started after them. Billy had marked them down better than Ed, and seemed to be right on the track of them, for they began getting up ahead of him, but flushing wild and giving him long shots, evidently too long and out of reach, although he kept his little sixteen going, hoping he might be able to reach one of them. This he finally did, breaking its wing, and crippling it so that the dogs captured it. This seemed to make our dogs perfectly crazy with excitement, so bad, in fact, that for some time we could do nothing with them. They flushed a number of birds and about spoiled our sport. Finally, however, we succeeded in calling them in, and after giving them a sound chastising and some good advice, we succeeded in quieting them down to a great extent.

By this time we had come down into the creek bottom; and while skirmishing around, Mose came to a point, backed beautifully by Bob and Nip. Billy and Ed walked up, and when they were within about fifteen yards of the dogs, up got a fine large turkey right from under Mose's nose, when *bang, bang, bang, bang,* four shots were fired in rapid succession; and still the turkey kept on his way apparently none the worse for the leaden shower the boys supposed they had sent in his direction and which was intended for his especial benefit. To say that those two men were disgusted with themselves and with each other would not begin to express their frame of mind. To think that two men of their age, who had shot in the field every season since they were big enough to raise a gun to their shoulder, and considered themselves at least fair shots, to allow a bird of that size and as fair a shot as could be to get up and go away without so much as a feather to show, was decidedly humiliating. The dogs each turned around and looked upon them with amazement, and as much as said, "Well, a bit of that chastisement you administered to poor us would evidently have done you good." Billy and Ed, after gazing sorrowfully for a few moments upon each other and then upon the vacant spot where the bird had disappeared over the brow of the hill, called for George and asked him the nearest way to the wagon, and took a bee line therefor. On the way Mose again came to a point, and upon walking up, there rose a solitary quail, which Ed proceeded to pulverize with a charge of No. 2 shot. Had it been a turkey he probably would have missed it. Had we taken the time and not have been in so much of a hurry, and only taken one dog, we could have bagged a good portion of the flock; but thinking we would just rush in and get a shot or two apiece and then hurry on our road, as it was getting late in the afternoon, we did not take the pains we otherwise would.

Hurrying to the wagon we told the driver to make as good time as possible so as to get over some bad road which we had to cross before getting to our camping place. Darkness overtook us some miles before reaching the Buck Horn, and by the time we stopped at the stream it was pitch dark; we crossed the stream by the light of matches, and reaching the other bank proceeded to look for a place to camp, or rather to prowl around in the dark, and by the aid of now and then a match to find a place where fuel was handy. We soon found it, and quickly had a roaring fire of dry oak limbs, which we found in great abundance scattered around on the ground. It was certainly as good a place for a camp as we could have found had we had broad daylight to aid us. While our driver was watering and feeding his horses the rest of us were gathering up wood, of which we got a generous supply, after which we proceeded to discuss the lunch which had been put up for us by Mrs. Davidson, a cold lunch, but a supper which we all appreciated and relished. After supper Billy and Ed, taking a firebrand for a torch, took some dog biscuit down to the creek to soak for the dogs' breakfast, placing them in a shallow place in the stream and weighting them down with heavy stones to prevent their floating away. We made our camp by placing the trunks and boxes at our heads to break the wind, and placing our rubber blankets on the ground, using our overcoats for pillows, each one of us rolling up in a pair of blankets, we slept the sleep of tired, happy men, with the bright stars shining down upon us and the festive voice of the coyote and screech owl soothing our slumbers.

We had intended starting in the morning before break of day, but it was fairly light before we were astir, and after sunrise before we were under way. On going to the creek to perform our morning toilets, we took the dogs along to give them their biscuits for breakfast; but alas, some hungry animal had made a raid upon the biscuits during the night and not a solitary one remained. We had to share our own breakfast with the dogs.

While getting ready to start we heard a covey of quail calling. They were on our way; we took the dogs and started ahead of the team. Our dogs worked beautifully, making several fine points. We had a number of shots, bagging seven of them.

We saw no more game until about the middle of the forenoon, when we flushed a fine large turkey from the side of the road, not twenty feet from the wagon. Of course we were not ready to shoot; our guns were at hand but not loaded. She flew about 200yds. and lit, taking to her heels for the prairie. George came to the wagon and got his gun, and attempted to ride her down, but before he came within shot she took wing and flew over the hills out of sight. This was the last game we saw on the way out.

Just before reaching Salt Creek, where we intended taking our noonday lunch, the other boys with the light wagon overtook us, so we had a jolly dinner all together.

After dinner and a rest of about an hour and a half we started out together, but the spring wagon soon left us out of sight and we saw no more of them until we reached Red Fork.

We stopped during the afternoon and gathered a lot of hickory nuts, filling our pockets with the largest finest nuts we had ever seen, being at least twice the size of our Michigan nuts. Walnuts, hickory nuts and pecans grow in great abundance. The pecans, like the hickory nuts, grow very large and are of a very rich, sweet flavor.

We reached Red Fork soon after dark tired, but having enjoyed our ride every minute and regretting that we were so soon to leave this beautiful country. I think we would all have been glad to turn right around and take the trip over again, had not business cares required our attention elsewhere. Ed.

Now hold your breath, for truly our friend Brooks proceeds to mix things up.

After we decided to turn our faces homeward the next question was how we were to divide up, as we had considerable baggage, consisting of our trunks, valises, ammunition, blankets, etc., and only one little, two-seated platform and a common lumber wagon; the former the natives called a stage, and in one sense it was, taking into consideration the size of the horses used in that country.

The drive being an all-day one, we started the lumber wagon on with the baggage and dogs, the team being an old rheumatic horse and a mule, with Tom, the colored boy, as driver, escorted by George mounted on a mustang and Ed and Billy as passengers. They got off at noon and the rest of the party promised to follow early in the morning and overtake them, all go in Red Fork together.

Tom, with the aid of a little nip now and then from his passengers' "cold tea" urns, succeeded in making good headway and reached a splendid camping ground on the bank of a very pretty stream before dusk. [Reader, pause and prepare to admire a very fertile imagination.] Cutting down a large tree for the back log of the campfire, they took the trunks, boxes and valises from the wagon and placed them so as to form a half circle facing the fire. Each gathered a quantity of dry leaves and made his bed, first placing the leaves on the ground, then over them rubber blankets, the rubber side toward the ground, then a blanket over the rubber cloth and blankets over themselves, using grain bags stuffed with leaves for pillows. Each man in turn stood guard two hours during the night, which passed very pleasantly, being first serenaded by a pack of wolves and followed by a company of coyotes and a pair of horned owls.

At daylight Tom, who was on guard, roused the sleepers with, "Gemman, for de lord sake, jes hear dem dar turkeys!" And sure enough, not more than fifty yards away they found a flock of some forty, and in less than an hour they succeeded in making a fine bag. Returning to camp they found Tom busy getting out the cooking utensils, preparatory to getting breakfast, after which they broke up camp and started on their journey.

About this time the Doctor, Fred or the Official as we called him, Morley and the boy driver, Charley, left the ranch with the two-seated platform and the little jaded mustangs. After they had driven about ten miles the off horse showed signs of a general giving out, so Morley took the reins, thinking perhaps with good, careful driving, they might be able to reach Red Fork. The roads for the next twelve miles were very rough, stony ground, with a good many hills to climb. At the foot of each hill the party would get out, Morley with the whip in one hand and the reins in the other, while Fred, the Doctor, and Charley put their shoulders to the rear of the wagon and pushed. With this assistance, all the mustangs had to do was to "keep in the middle of the road" until the top of the hill was reached. We traveled along in this manner until we passed all the rough places and were once more upon the rolling prairie with the advance party just in sight. At noon we overtook them on the bank of a little creek.

Tom's having had to stand watch the night before and do the driving, too, the strain had been a little too much for him; there he lay stretched out full length, flat on his back and fast asleep. The mule, horse and George's mustang were enjoying a good feed of corn, while Ed, Billy and George were busy getting the coffee boiling and preparing one of the turkeys for the fry pan. When Charley's team had been unhitched, the harnesses taken off and each mustang had had his "roll," they were given their corn and all hands joined in getting ready for one of Mershon's square meals.

Should you, dear reader, ever have the pleasure of camping out with brother Mershon, you would be greatly interested in watching him prepare his meals. Delmonico's French cook would open his eyes could he see the unrivalled way in which our brother dresses and cooks his birds and fish.

After dinner cigars were brought out and some good stories were told, with now and then an old chestnut, a little snooze all round, and then the party were off.

After going some few miles the dogs to our left came to a point, Morley having his gun ready, jumped out of the way and ran over to where they were and got two barrels into a covey of chickens. Motioning to us to follow he struck out for the birds, which had gone some distance. In crossing a little slough where the grass was above his waist he was seen to suddenly stop, and clapping his hand to his leg he yelled like a loon, "Come, boys, come quick. Centipede, centipede. Come quick."

Charley and Tom put their whips to their beasts and away we flew, George taking the lead on his mustang, and expecting every minute to see Morley fall. But, judge of our surprise when on getting out and coming up to him we found his fingers closely clutched on his deer-foot hunting knife, which had worked its way through his trousers pocket. He was pale as a ghost and frightened almost to death. Some of the boys were so convulsed with laughter that it was necessary to administer restoratives in order to prevent hysterics. Poor Morley will never forget that day as long as he lives, and we will never forget that heart-rending yell he gave.

Returning to the road we resumed our journey. The sun was coming down pretty hot about this time, and we began to feel the need of water for ourselves and teams. Morley all this time had been very quiet; the centipede scare seemed to have completely sealed him up. He ventured a remark now and then but tended strictly to his driving.

After making up our minds we would have to go without water until we reached Red Fork, there suddenly loomed up in the distance a little white farmhouse. It seemed ages before we reached it, the distance being much greater than it looked, and owing to the poor condition of our teams each mile was seemingly the last they would be able to make. We found the place deserted, doors locked and curtains down, and made up our minds the owners, Indian farmers, were in town trading. We found the well. The water was very good, indeed, for that country. Taking a drink all round and giving the mustangs all they could hold, we began to explore the premises. The Official mounted an old hen coop, and with his field glass sighted a water melon patch in the corner of an old garden a few rods from the road leading from the house to the main. Getting into our wagons, we proceeded in the direction of the patch. In the meantime some of the boys were debating the advisability of tackling said patch, fearing one of the red men might have been left to watch the farm and at this moment be in some convenient place to give us the full benefit of a Winchester. The City Official, going a good deal on his glass and having made a careful survey, expressed himself fully satisfied that no red man was within gunshot. On the strength of this three of the party volunteered to go into the patch and bring out two melons each, Fred agreeing to keep a sharp lookout and give the alarm by firing his six-shooter. They did not take a great deal of pains in selecting their plunder, as they appeared anxious to return as soon as possible. Putting the melons in the bottom of the hack and covering them with a blanket, we proceeded.

Upon losing sight of the farmhouse and seeing no one approaching from either direction, we halted and prepared for a feast. The Doctor suggested we should be very careful not to let any of the seeds drop in the road, as we might be tracked. One after another of the melons were cut, but out of the six we failed to find a ripe one. Having the six green melons on our hands we commenced to question how to dispose of them. It would not do to carry them into Red Fork, and to leave them by the roadside would never do; so after looking the matter all over we decided to get out our axes, dig a hole for each one and bury them. This we did, leaving six little newly made graves behind us.

Nothing worthy of note transpired during the rest of our journey that day, and a little after dark we drew up to Hotel de Miller, tired, yet sorry it was our last day with the birds. Brooks.

He sends with his romance the following, and I think you will agree with me in saying this being his "first offense" will not excuse his utter disregard of truth:

Dear Editor [meaning me]—Inclosed please find my first effort. Should you find after reading it through too "rank" for publication, consign it to the base burner and forever spare me ever making another attempt at this kind of business. Yours truly, Brooks.

The uncertain shadows of an October evening had gathered around the good village of Red Fork, as we pulled up our tired horses at the store door. For the last half hour we had expected the lights of the little station to appear at each bend in the road; and finally as we swung into the quiet little valley shut off on all sides by the curving hills now dark against the sky, and saw glimmering in the distance, which was not far, the dozen lights that told us that there was Red Fork, we gave a great big sigh of relief all around, for really the wagon seats had grown recently very, very hard.

A lantern is kindly provided by our good store-keeper, and by its light we unload the wagon, tie up the dogs, proceed to quiet Mrs. Miller's for supper; and oh, how hungry we are. The same kerosene lamp and bucket of water with slimy laundry soap accompaniment is again resorted to and we take turns at it, cheered by the tuneful voice of our fair hostess, which oozes through the cracks and crevices of the kitchen where she is busy fry-

ing sweet potatoes—and such potatoes. We forgave her then, and forgive her again now for all the tiresome hours we were compelled to listen, or rather hear her chattering tongue; and the fried sweet potatoes did it. You who have never eaten a potato grown in the Creek Nation and especially one of Mrs. M.'s frying, are not qualified to mention the vegetable. How we did cause everything put before us to disappear. The fragrant tobacco makes the world look very peaceful to us all; we feed the hungry dogs and they go to sleep at once. A turkey is taken to Mrs. M. with the request that it be cooked for our to-morrow's lunch, for we have had one experience with Vanita at the dinner hour. We pack everything we can, and turn in and sleep the sleep of all good sportsmen under similar circumstances.

After breakfast next morning we finish the packing. Brooks shaves himself and has no competitor in the dude line. I learn this by his completely cutting me out with a fair damsel in a trim-fitting corduroy suit, who fortunately had an entire seat to herself as we changed that night at Monett. Brooks of course could find no other in the coach, after I, the only really eligible man in the crowd, had been rudely sat down upon by her.

Brooks leaves us at Springfield to spend a few days in his old home at Fort Scott, taking the sorrowful dog Rube. We awaken next morning at St. Louis. The boys want to spend a day here, and I am in a hurry to be back to a business needing my attention. We say good bye, and I proceed on my way with the three dogs, and reach home in good time the following morning.

So ends the event of the year, that which we had counted upon for weeks and weeks before going, and will with pleasant memories look back upon for months, and who knows but for years afterward.

These yearly pilgrimages of the same chosen friends and boon companions cannot go on forever. One by one time obliterates a dear face or hushes the sunny, cheering voice of the best of friends. A thousand and one things are possible and some more than probable to prevent, that will make even the next round-up, on which we are already counting, not what the last was. Some may be gone, and a pleasure will be blemished with regret. Which one this will be may many years to come be called upon to tell, and though taking our life's pleasure year by year as we grow older, can we not hope that many a time again may the old clan gather at the call of the spirit of the golden October days, and not a single leaf be torn from the book of our fellowship.

WM. B. MERSHON.

SMALL BORES.

Editor Forest and Stream:

In reply to the query of "W. E. P.," I would say that, from my experience, a 20-bore far surpasses a 10-bore, in that it shoots stronger and kills at a greater distance.

The gun I have used for the past three years was made in Belgium about a century ago. It is doublebarreled, weight 7lbs., 36in., with flint-locks, which I had altered into cap. The only objections I have to the gun is the noise arising from loading it, the ramrod being very slender, and, as in the case with all muzzleloaders, its inability to go off at critical moments. I loaded rather heavy, and would take my chances at anything that came within notice in the woods.

The shooting ability of the gun was chiefly limited to gray squirrels, and I consider a gray squirrel to be as tenacious of life and as difficult to bring to bag as any game hereabouts. Three years ago I shot twenty-eight squirrels and only lost three, and was but few times called upon to use the second barrel. It is a curious fact that very often a female squirrel will require at least three shots to dislodge her, whereas a buck will generally tumble at the first barrel. A good deal depends upon whether you see the squirrel first or the squirrel sees you. He often tumbles to a sudden surprise with more eagerness than if he were all expectant.

I often used to go out with a 12-bore after partridges, with a wind-up at squirrels. The gun was a $150 muzzle English, made to order, with very little choke; and I have spent many a good half hour sneaking up to get a chance to tear the squirrel to pieces, only to see him dodge around on the opposite side of the tree and vanish.

I once had two splendid shots at a couple of squirrels in oak trees bordering a path in the woods, but they vanished quicker than the smoke from the gun. The next day while going through the same place with my squirrel gun, as I called my 20-bore, I espied a gray in the top of an oak, stretched out on a limb, basking in the sun. He seemed to recognize me, and could not be prevailed upon to sit up for a fair shot, and took great delight in my embarrassing position. The experiences of the previous day prevented me from acting rashly. I surrounded the enemy, deployed to right and left, advanced and retreated; but without result. Finally I determined to stir him up, and at the first shot he left his stronghold and tumbled down literally riddled with shot. From that moment the gun reached the highest pegs in my estimation, and has never yet shown in what respect my faith was misplaced.

I am not a bit prejudiced in regard to the gun, as I have a fine breechloader which I prize highly; but I would readily give way to the 20-bore in a squirrel hunt were it not for the fact that my brother last winter blew off four inches of the right barrel by reason of a little snow in the end. T. POTTER.

WILLIAMSTOWN, Mass.

DEER AND HOUNDS.—Ellenburgh Center, Clinton County, N. Y., March 5.—*Editor Forest and Stream:* On the 2d inst. some hunters drove a young deer out into the clearings with hounds and a boy caught the deer, but the hound came up and despite the efforts of the boy killed the deer. There are no constables near here, and that kind of hunting is being done every winter. These hunters could be easily stopped by some one in authority, but no one has authority. Please inform me to whom to go with this complaint. It will be soon the time when they can go to the yards and crust hunt the deer and ruin the sport, now that the deer are quite plenty.—W. G. [Peter R. Leonard, of Ogdensburgh, is the State Game Protector and should be called in to punish the hounders.]

JOHN G. WORTH, of Cheyenne, Wyoming, advises us that he proposes to organize a party of hunters for an expedition in the Rocky Mountains, to be guided and supplied with transportation facilities by himself.

GAME IN THE YELLOWSTONE PARK.

YELLOWSTONE NATIONAL PARK, Feb. 2.—*Editor Forest and Stream:* Since writing the last notes from the Park the weather here has been unusually warm and pleasant, with occasional light snowfalls, but not enough to add to the depth. The frequent chinooks have settled the snow faster than it fell, clearing all the streams of ice and uncovering a great amount of country where the snow was thin. The greatest depth of snow reported from any part of the Park is only three feet on a level. The streams fed by waters from the Park will be very low next season, unless we are favored with more than our usual quantity of spring snow and rains.

The game I reported as having left their winter range in November for their higher feeding ground, has remained further back in the mountains than ever known before, and less went out of the Park. I am quite sure not one hundred elk have been killed the past season outside the Park limits by the many hunting parties from surrounding towns, when, as a rule, several hundred are shot for meat and market.

On Monday, the 13th inst., the Government scout, Ed Wilson, and Sergeant Schrongler started out to look up the buffalo in the Park, and report on the game seen. The Sergeant was selected by Captain Harris as the best man in the troop to accompany Wilson on the trip. A supply of dried beef, crackers, tea, sugar, salt, and matches, one blanket each, a small hatchet and their snowshoes made up their outfit.

Leaving the Mammoth Hot Springs they made to Yancey's Station the first day, On the road they saw several bands of elk on Blacktail Deer Creek, over two hundred antelope on the high bench country to the north of the road near Geode Creek. Up that creek to the south they saw some two hundred elk in small bands. Elk were in sight most of the day. The antelope on Mt. Evarts were not seen. At Yancey's Station they rested two days.

From here they followed the road to near Junction Butte. Before crossing the Yellowstone River they saw elk scattered all over the south sides of the mountains across Lamar River (East Fork of the Yellowstone). At Junction Butte they saw the sign where a large band of antelope had been feeding. (This band has been reported several times to the FOREST AND STREAM.)

Leaving the Butte they traveled south to Specimen Ridge. No trouble was experienced climbing the ridge, and snow shoes were not required, as most of the country was bare, with snow only in immense drifts in the hollows and slopes of the hills to the east. These drifts are packed so hard that one can walk over them at any time. Following the ridge for a few miles, the scouts soon came in view of the country across the Yellowstone, around Mt. Washburn and Tower Falls, where a great many elk were seen in all the open country, and on the ridge running up to the mountain. On Specimen Ridge, as far as they could see, were bands of elk in every direction, but no buffalo nor fresh sign. Arriving at a high point at the head of Amethyst Creek, camp was made for the night. Having no lodge, a shelter was made of boughs, and snow banked up for a wind break. A good supply of wood made a comfortable camp-fire, as the night was clear.

The next day was spent looking for the buffalo supposed to be somewhere on the Ridge, which was followed up to the head of Chalcedony Creek. A great many elk were seen, a few sheep and much old buffalo sign. A camp was made on the Ridge by a large green pine, a fire was built of buffalo chips, of which a great quantity was lying around. A comfortable night was passed here by having a good supply of pitch pine and chips for fuel. Here, as on all the open ridges, there was no snow only the drifts. The view was grand from the camp, the mountain peaks showing in all directions, with hundreds of elk in sight on the open ground over the valley of Soda Butte Creek and as far as the eye could reach.

From this camp the men struck south for Pelican Creek and the Yellowstone Lake, crossing the head of Broad and Deep creeks, and camped the next night near some hot springs on a small tributary of Pelican Creek. More snow and timber was encountered this day, and very little game was seen after leaving Specimen Ridge. In the timber between Deep and Broad creeks the deepest snow was found—three feet of settled snow. Several red foxes were seen on the Ridge and ducks in all the open water. Every running stream was free of ice. In running down a long hill to Broad Creek on his snowshoes, Wilson lost his hat halfway down, and was going too fast to stop, so he concluded to get along without it, and "gave it to the sun and game." Their camp this night was on the edge of heavy green timber, where there was no dry wood but limbs, so that a good supply of wood was difficult to find. They spent a very disagreeable night, as there was snow falling most of the night, a high wind blowing, and it was very cold; to add to their discomfort, they discovered that most of their dried meat was unfit to eat, thus putting them on short allowance.

In the morning the weather cleared and they struck out for Pelican Creek; when they came to the open country, they found a band of fully two hundred elk in a small open space and ran up within forty yards of the nearest; the elk made for the timber to the right, between Pelican Creek and the Yellowstone. The men could have run them down on their snowshoes without much of an effort and killed them with their snowshoe poles, although the snow was but two feet deep in the timber. Other large bands were in sight, on the open sidehills toward the lake. In all over five hundred were seen here. On Pelican Creek several otter slides were noticed. The stock of provisions giving out the scouts decided to cross the river and go to the Falls Hotel. Striking the river about a mile below the lake they found it open, had to follow up the river and shore of the lake almost to the mouth of Pelican Creek before they could get out on the ice of the lake, where they succeeded in crossing to the Cabin point on the west side. They followed down the river for a little over a mile and a half to some heavy green timber, where they made camp, very near where I made one of the camps while out for the FOREST AND STREAM a year ago. They saw many ducks in the river, and heard birds flying all night. In the morning Wilson left his coat as a mark and proof of their having been here, for he did not want to pack the coat as the weather here was so much warmer. Soon after leaving camp a flock of seven swans were seen in one place. Others were seen all along the river, and besides swan there were teal, mallards, spoonbills, fish ducks, and many others not recognized, in great numbers all the way to the Falls in the open water.

At the Mud Geysers, elk sign was again seen. Taking up the ridge from here they reached a high point from which less than a mile distant they saw three buffalo. Some other dark objects were seen, but too far off to be certain of their nature, but supposed to be buffalo. The three buffalo were in Hayden Valley near the edge of the timber. This is where objects, supposed to be buffalo, were seen by the FOREST AND STREAM Commissioner and reported last year. Scattered all over the valley for miles elk could be seen in large and small bands. After wading Alum Creek, the men followed the wagon road to the Falls. They saw one wolverine and several otter slides where the animals had been playing on the snow banks along the river.

Through here there was much lynx sign where they had hunted for rabbits, and possibly young elk. Foxes and their tracks were seen wherever there was any game. Only two mountain lion tracks were seen on the trip. Arriving at the hotel the men made up for their fast. They found the ice all gone from the two great Falls, where a year ago there were mountains of it. The next day they made a short run to Norris.

Soon after leaving the hotel at the Falls they could see elk across the river on the bald hills and in the open parks. Also elk sign all around the Falls.

The next day they left Norris for the Mammoth Hot Springs, where they arrived safe, but a little the worse for their trip. They saw no game in Swan Lake Basin, as there was a snowstorm at the time they crossed it, preventing their seeing any distance.

They report seeing in all over three thousand elk—a sight which alone would be well worth the trip.

That they saw but three buffalo is nothing strange, as it would be almost impossible to find them in so short a time. There being so little snow in the Park this year one is not quite sure where to look for them. H.

WINTER SHOOTING AT MONTAUK.

A FRIEND belonging to the life-saving station at Nether Plain, Montauk, writes this: "We have had not many hard storms this winter, but right cold weather and plenty of it. It was very tough work to turn out of our warm bed in the station house at 12 o'clock at night, with the mercury nearly down to zero, to go out on our patrols; but as that is our business we should not complain. There has not been much gunning at Montauk the past fall and winter, as all the shooting there was for coot, off the south side in the ocean surf. There were at one time in Great Pond some 4,000 or 5,000 broadbills, but they did not make any shooting, as they sat off in the middle of the pond and could not be approached."

In former years the wildfowl shooting at Great Pond was unsurpassed, as the waters were then fresh (before the salt tides were admitted), and the abundance of fresh grass, valisneria, etc., attracted the geese and other fowl there in great numbers. There was then fine shooting on the shore between the pond and Peconic Bay, the fowl constantly flying too and fro from bay to pond. The geese were then collected by thousands, and other fowl very plentiful. In the fall season the surrounding grassy plains were alive with immense flocks of plover that afforded excellent sport.

The fowl shooting this winter in Gardiner's and Peconic bays has been unusually good. These bays have been frozen over in most places to the depth of 6 or 8ft., leaving, however, many open places where the fowl, such as coot, old squaws, sheldrake and whistlers, resorted for feed in great numbers. Some of the Greenport gunners have killed hundreds of these fowl among the open waters and the drift ice. One of them, Mr. W. R., killed nearly sixty of them in one day, and hundreds during a week. He told us that he paddled out in his small skiff in their very midst, and as his boat was concealed with ice and snow, he was enabled to shoot multitudes of them as they arose from the water. He says that so unsuspicious were the fowl that he could approach within an oar's length of them, and then would scare them up and shoot as they arose in air. It was good and profitable sport, as there was a ready sale for the game. It seems strange that these fowl, that usually migrate southward on the approach of winter, should linger here so long in these icy waters, but such has been the case. We do not learn that the quail have suffered much in this region during the late severe winter.

GREENPORT, Long Island, March 5. ISAAC MCLELLAN.

WORCESTER SPORTSMAN'S CLUB.

THE annual meeting of the Worcester Sportsman's Club was held at the library room of Horticultural Hall on Wednesday evening, March 7. There were about the usual number present, which includes the active members of the club, and the utmost harmony prevailed. The report of the secretary, E. F. Swan, was a model of its kind, showing every detail of the club's business throughout the year. His books and accounts had been carefully looked over and approved by the Executive Committee, and after the reading of the report the compliments of the club were expressed by a rousing vote of thanks. The report of the Treasurer was also very satisfactory, showing a surplus in the treasury of over $400. During the fourteen years of the club's existence there has never been an assessment. Whatever the club has had in hand, any scheme which required more money than was considered expedient to take from the treasury, the funds have always been forthcoming by subscription. More trap-shooting has been done the past year than in any previous year in the history of the club. With a membership of about one hundred and fifty there are many who could hardly be called sportsmen and who join wholly for the social privileges. There are also a good many who are thorough sportsmen who never shoot at the trap. Among these there are some who think trap-shooting receives rather too much attention to the neglect of the more important matter of game and fish protection, and it is to be regretted that this feeling is not without cause. There is no serious lack of harmony in the club, and this latter class have no wish to detract from the pleasures of trap-shooting so long as the more important business is not neglected. There is every reason to believe that the enforcement of the fish and game laws will receive more attention than in the last two years. To expedite matters in the election of officers, a committee appointed by the chair retired and made up a list

which the meeting accepted by electing every candidate presented, by ballot, and in every case almost unanimously. Major L. G. White, who has served several years as president, declined a re-election. The officers elected are: President, Gilbert J. Rugg; First Vice-President, A. B. Kinney; Second Vice-President, E. S. Knowles; Secretary, E. F. Swan; Treasurer, M. D. Gilman; Executive Committee, E. T. Smith, V. F. Prentice, R. L. Golbert, Corren Doane.

It was voted to hold a tournament on Fast Day, which occurs on April 5. E. Sprague Knowles.

Worcester, Mass., March 8.

Billings, Mont.—Several gentlemen interested in the pursuit of wild game and the strict observance of the game laws, have formed the Billings Game Protective Association, O. F. Goddard, President, and Chas. Harris, Secretary.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

All readers who are interested in the protection of the Yellowstone National Park, are invited to co-operate with this journal in the endeavor to secure needed legislation. Petitions will be sent to all who will undertake to have them signed and forwarded to Washington.

FLY-TABLE TALKS AND NOTES.—I.

Julian Hawthorne in recent comments on novel writing and literature made several suggestions which were fascinating to me. I had many times thought of offering to the readers of the Forest and Stream bits of talk from the fly-room, extracts from letters relating to flies, fishing and kindred topics; but the difficulty in arranging all these so that they would hold your interest, the possibility of the need of giving some urgent reason why I should offer them at all, made me hesitate when really feeling that many of these letters which I received might arouse discussion and create greater knowledge. Haw thorne writes:

> If stories were told by word of mouth instead of being written in a book, they might (other things being equal) be of purer quality, for then a look, a tone, a gesture of the hand, would suffice to connect and relate the parts which in writing must be circumstantially specified and explained; the story must be a continuous web, not a series of impressions flashed disconnectedly upon the mind. In some fortunate themes, in which the soul of the idea, as it were, transfigures the body of it, these connections appear slight; and the tact and ingenuity of the writer may render them practically inoffensive if not agreeable, but the one "entire and perfect chrysolite" still eludes the resources of literary chemistry.

I felt the "one entire and perfect chrysolite" so unattainable, and literary chemistry so complicated, that as I have said, I hesitated, but I found encouragement in his further words, in which he says:

> And yet some alleviation of the difficulty ought to be possible, or at least conceivable. I should be inclined to look for it in the direction of a more nearly complete sympathy between the reader and writer. As matters stand now, the latter places very little confidence in the ability of the former to comprehend or interpret the significance of what is submitted to him, and therefore he enters into explanations and circumlocutions. The reader, on his side, is by long custom so habituated to this constant assistance from the writer, that as soon as he takes up the book he instinctively divests himself of all independent activity, and constitutes himself a merely passive recipient of whatever treatment is administered to him. He sits still and lets the author do all the work; and it is not surprising if a good deal of energy has to be wasted in the effort simply to keep the reader awake. The mutual relation is a false one, if indeed there can be said to be any relation at all. It bears analogy to the attitude toward each other of the sexes in certain barbarous or perverse nations, where the women, being treated like imbeciles, evince their intelligent aptitude in the only way left to them, to wit, by becoming slaves or imbeciles. But such nations fall into decay and barrenness, because the man cannot abuse or neglect the woman without suffering at least as much as she does. Intelligent and highly civilized communities expect much more of their women, and the women invariably prove themselves adequate to any demand made upon them. They become the true helpmates that their Creator intended them to be, and all goes prosperously and merry as a marriage bell.
>
> Between the writer and the reader then, a certain marriage of the intellectual and sympathetic faculties should always exist. The book must be rendered complete not by the writing of it, but by the writing assisted by the reading. He must liberate his imagination, he must awaken his understanding, he must open the fountains of his knowledge and culture. He must feel that he shares the responsibility of its truth and excellence, and that he, no less than the writer, is liable to blame for its deficiencies. If this be recognized then literature will grow to heights undreamed of.

Now, is not this a most charming and ingenious suggestion? I admit, of course, that Julian Hawthorne intended more and less than we shall avail ourselves of; but as a grain of salt hints of the ocean, may we not accept the suggestion, if not the whole? I therefore call upon you who read, the editor permitting, to fill out complete what I offer you; to supply, by imagination, discussion and added facts, deficiencies; and as our much respected Walton once said, "To invite you to it, I do here promise you that, for my part, I will be as free and open-hearted, as discretion will warrant me to be with a stranger."

Is it needful to describe the fly-table? I might do so, but the details and surroundings would, perhaps, not be interesting; and, if given accurately, you might wonder the table is not in better order. Others have hinted that to me at times. You might think the little room wherein it stands crowded, with the big and little fly-cases, the round table with lamps and books, and the easy chairs, which won't stay out. You would perhaps say, "It is not business-like," and go on to tell me that a room like this should be devoted to the work alone, and books, easy chairs and visitors should all be forbidden or relegated to the adjoining library. Nearly every one who comes to the room does say this, so I should not wonder at you for saying the same; but if not "business-like," it is very social.

It is the one place in the house where smoking is allowed, being good for the feathers, you know; and I have observed that to idle people it is always interesting to watch others busily occupied; it provides them with entertainment with no personal exertions. So into the fly-room come one and another, dragging easy chairs after them; staying sometimes to talk, sometimes to read aloud, while the regular occupants with busy fingers are quietly turning, whirling and looping hooks, feathers, silk and tinsel to create the—I think once or twice in my life I have heard them called—"feathery lures."

I wish that I had the talent of a Boswell to record conversation, and could give you some of the arguments touching upon many topics. One or two of the occupants, and two or three of the frequenters of the fly-room have a steadfastness about their own opinions, which same they do not hesitate to express. I should like to present these opinions to you who read, and let you be umpire; some time in the future I may. But just now we are snow-bound. Callers are few, and conversation lags.

Looking out you may see only a white expanse of snow, such snow as city dwellers can hardly imagine. A week ago I crossed Liberty street in New York, wading through a mass of gray drift, not thinking much of it, except in despair at the dirt, until some one said: "Just think of it, all this is snow!" Snow! Snow means to me whiteness and glitter piled in masses until one almost loses belief that it can ever disappear and uncover green fields, golden cowslips and violets blue. Snow, as I look out upon it now, is heaped fence high; covers every house roof with a thick soft blanket; caps all the window frames; is lodged in every notch of the branching trees, and whitens each horizontal limb. The short trunks of the apple trees are hidden and the branches circle and bend till their tips meet the rising mass underneath. Looking further the hills rise still higher, white and glistening, immense sugar loaves apparently, but of cold instead of sweetness. Behind them and throwing them into bold relief are the mountains, blue walls round our entire valley. Occasional patches of white here and there on the mountains betray the autumn fires; and you remember the nights you stood watching them burn. Again you hear the rustle of the dry leaves under your feet, smell their sweet, moist breath and the delicate, far-away smoke; feel the soft wind on your face, and look to see it rouse the faint, flickering light to bright, darting flames up against the dusk of a murky sky. The vagueness of the sky is spaced here and there by the mild glow of stars which have lost all their glitter, and the moon is warm and red, watching all through a veil, instead her usual cold, calm self. Can this be the same sky to-day? Only a shade lighter blue than the mountains; one wide, wide arch of color, unbroken except by the silhouettes of the naked trees. I like better the warmth and glow of the autumn night; but the beauty of this day is marvellous, the purity of it an appeal.

The roads are not even lined in any color, they are merely a break in the smoothness, tossing up broken blocks on either side, and you can look way beyond into the fields, seeing the only thing you ever may which comes from Heaven and returns unsullied.

The trains are all delayed, but they still struggle through to us each day, bringing their budgets of letters, which are the only break in the monotony of work and reading. I propose to give you parts of some of these same letters, hoping they may be to you something of the pleasure they have been to ourselves. Some of you who read these papers will recognize your own words, and I trust you will not think it a liberty I am taking. I would like to give your names with the extracts from your letters, I, of course, shall not do that without your permission, and to obtain it would require much time; but I shall venture to offer to other fishermen some of your ideas, for they are many of them too good to be lost, and some of them—well, some of them—well, we will let the readers decide for us.

Letters come to me from all parts of the country, giving the experience of many men in various sections. I fancy this experience may be of interest and benefit to others. I hardly know where to begin to select, so will take this which came a day or two ago and lies on top of the pile, written from Minnesota, which reads:

"I herewith send you a rude fly. It is the only one of the species, dead or alive, that I have any knowledge of. During the latter part of last season, while spending a few days on a small stream in Wisconsin, I made three or four flies something like the one I send to you—I say something like it, for I could not make two alike—and much to my surprise I caught more trout with them than any other fly used. My mode of fishing with this fly was by wading down stream, using a long, stiff rod and short line; leader and line not more than 5ft.

"It was not possible to cast on this stream so I simply trolled from side to side, much in the same manner as bait-fishing is practiced on swift, shallow streams.

"The materials used in making this fly are Carlisle hooks soldered together, silk, gut, horse hair and dental rubber, 'Dam No. 2.' My idea is to make the body of silk and cover it throughout with the flat pieces of gut, made in this way they are almost indestructible.

"I would like to know if something of this kind made more artistically will please the trout better than the bungling ones used last year. If this specimen suggests anything new or of use to you I shall be pleased to know that I have contributed something to my fellow anglers."

Accompanying this letter was a tiny wooden box, and snugly packed in cotton the insect mentioned. The wings are of rubber, laid flat over the back, feet of horse hair, body wound with gut, double hooks.

I have had many letters of inquiry in times past for the best flies and the best methods for these wild Wisconsin streams, perhaps when all else fails this new creation, which is really very attractive, may be "just the thing," who can tell?

Looking up from the page my eyes fall upon a package of older letters which I have placed in a bundle together as too good to be lost to sight Here is one from a fly-fisherman with many, many years of experience; a man who could undoubtedly hold your attention for long hours with his knowledge of men and fishing. His letter gives the history of a much-used and most admirable little fly called the Beaverkill. I am sure you will be glad to read of it and have the record preserved, so I will give the letter nearly entire:

"My Dear Orvis—Your kind and pleasant letter of the 10th came to hand on the following day. The two flies mentioned were not inclosed, hence I cannot express any opinion concerning them.

"The opinion of an angler as to the merits of a fly does not amount to much unless founded upon his experience in its use. Sometimes I have bought flies new to me because they looked 'taking' and have found them so; but more frequently I have found them 'no good'. The three flies with which I have caught the largest number of trout are (1st) gray hackle with scarlet body wound with silver tinsel, (2d) coachman for evening fishing, and (3d) Beaverkill. The latter fly I introduced and named.

"About forty years ago my first fly-book was filled with English flies of great variety, there being generally but three of a kind. Among them was a fly unknown to me which I chanced to put on with two others to fish a large and beautiful pool under a high fall on Mill Brook, Delaware county, N. Y. Within an hour I took upon this fly alone from that pool thirty-two trout, averaging from four to sixteen ounces each. My two companions, both older, better and more experienced anglers, did nothing in comparison until I gave each of them one of the two remaining flies, when their sport became good. When the bout was over the best preserved of the three flies was given to Harry Pritchard with an order to make three dozen 'Beaverkills' like it.

"It has proved an excellent fly; not always the best, but more frequently so than any I have used except the gray-hackle. I have used it on all the streams hereabout in Massachusetts, John Brown's Tract, etc., and generally with success. A few years ago I was in Pritchard's selecting flies. As I was taking from the case and counting out a dozen or two of the Beaverkills, a gentleman, whom Harry introduced to me as Col. ——, remarked to me, 'I think that the best fly in the world. My cousin brought me from London some English flies. This was among them. I gave one to Harry, and he has made and sold thousands of them.' I looked smilingly at Harry, when he in his slow way said, 'Colonel, that gentleman [pointing to me] was the one that introduced that fly more than thirty years ago. He showed me the first one I ever saw, and named it. That fly you brought me as a sample was made by me, I recognized it in a moment. Whether your cousin bought it in London or New York, I made the fly.' The Colonel looked rather crestfallen and left. Harry then said, 'He has been telling that story for years. I didn't undeceive him, because I did not care anything about it; but when he told this to you, who knew better, I thought I had better tell him the history of the fly.' * * * When I began this I thought two pages of note paper would fill the bill. Pardon an old man's garrulity."

The preference expressed for the gray-hackle in this letter reminds me of what "Bourgeois" has said of it in "The Rod and Line in Colorado Waters," in relating his funny experience in teaching a beginner how to fish with a fly. He writes at the end of it: "When I gave him a gray-hackle and told him that was to the trout what bread was to civilized man, a staple article of which he seldom grew tired, or if he did, to try the brown-hackle, which, still like the bread, was a wholesome change; that if he could get neither the gray or the brown, then to take a grasshopper, pull off his legs and wings, and string it upon a No. 6 Kirby." Later he tells us: "In the matter of hues the taste of the trout must be considered; to all else you may consult your own. It is well to have in your fly-books a little of everything, but of gray and brown-hackles, as already intimated, coachmen and professors an abundance."

There is a temptation to quote further, for was there ever a more delicious blending in any book written, of sensible fishing tactics, fun, dainty sentiment and droll philosophy. The opening chapter, first published as a little sketch in a weekly paper, attracted my attention and won my hearty interest in its author. He can never write anything better than that same chapter, although he has written much that is good since. "A broad river with its low-lying south shore heavily timbered and rich in early summer verdure; a long bridge with a multitude of low stone piers and trestle work at top; in midstream, two miles away, the black hull and tall masts of a man-o'-war, lying idly; between and beyond, the smooth bosom of the blue expanse dotted with fishing sloops under weather-beaten wings, moving lazily hither and yon; to the north, but invisible save a straggling outer edge of tumble-down houses—a possibility then—now 'they tell me,' a magnificent city; a decayed wharf with no signs of life, and draped in tangled seaweed that came in with the last tide, the jagged and blackened piles stand brooding over the solemn stillness like melancholy sentinels sorrowing over a dead ambition. The ripple of the waves is a melody and the air is fragrant with a brackish sweetness."

All this is a vision to me, ever since the reading; and the "little fellow, barefoot, coatless and with a ragged straw hat who crawls out from one of the center piers of the old bridge," whose story is told, one to pity and to like. You read: "Success will often take an old boy, let alone a young one, off his feet; and it sometimes leads to indiscretion and results in worse than failure, and again is the corner-stone of a noble monument. That boy had fished with success off that pier more than once, but had kept his fish-pole and left the evidences of his disobedience at a friendly neighbor's. This day he marched straight home, fish-pole and all. The sable ruler of the kitchen confirmed upon sight, the lurking apprehensions that would not down in spite of triumph. 'Ah! honey, whar's you bin dis livelong day? Miss Mary's gwine to give it to you, We's bin a-huntin' an' trapsin' all over dis here town, an' yo' pa, he was jis gwine,'"

The home court which followed, the "sable ruler" chief witness, the "brown eyes which questioned," and the "gray eyes" which saw and judged, and whose owner finally said: "Hold on, my boy; do not misunderstand; papa will trust you; you shall have the best tackle in town."

"Why do you deal with the boy in this way?" remonstrated the mother.

"Why? Because I myself was a boy once, and I don't want to forget it."

"But the boy drifted with the tide over the Blue Ridge and the Alleghenies, and twenty odd years ago he anchored in the wilderness, where Denver now stands, to surprise you folks from down East." One of the most welcome letters on the "Fly-Table" is from this same boy, now so many years older, and in it he writes that "some day, perhaps before long, he must come East to have a good talk with his friends."

The fly-room doors will open widely to welcome this genial fisherman, and to meet him will come another, I trust, whose last letter lies in friendliest proximity to his. The latter letter speaks of many matters interesting to all fishermen, of which you may hear more and directly from the writer instead of second-hand, but I must take a bit of it which refers to another book on fishing and camping and its author:

"Had a letter from John Danforth to-day written in Canada. John walked over the line about thirty miles—a bee line, over mountains and through swamps, in a

snowstorm—in nine and a half hours, including stop for lunch. He was to return to Parmacheene the day after writing to me. I should like to visit his camp in winter. He is now engaged in trapping animals alive to keep them in confinement and study their habits. R. would like Danforth and he would like his place. I told Mrs. M. that I would like to have R. read Danforth's book, but forgot to give it to her when she was here. John is a mighty hunter, and knows more of the woods and the inhabitants thereof than any man I ever met. With it all he is a most beautiful companion. When I was there last fall he and I sat up every night, when we ought to have been in bed, smoking and talking until past midnight."

Would we had been owls on one of the bending branches near that camp-fire, listening to hear those stories! We have all heard the fluttering wings of the traditional "little bird who told," whose liking for stray bits of gossip has been much indulged; this bird would have had something really worth telling.

Apropos of hunting, the next letter is suggestive, written by one who is most successful in both hunting and fishing, and who often claims a corner in the fly-room:

"I am making my plans to go South this week. I do not know where I shall go. Tell R. I have sent 500 shells from the Atlantic Ammunition Company, loaded with Schultze powder, to Savannah, and expect to do lots of quail shooting before I return. I wish the game laws permitted me to send some of them North. That Schultze powder is great. No smoke, and cracks like a rifle, but needs a good gun to shoot it in."

Perhaps a future letter will tell us of his luck with the quail. Reckless riding, gun and a small "darky" combination last year put a sudden stop to the quail shooting with a broken arm. May he be spared all such this year; but is the powder which demands "a good gun to shoot it in" and "cracks like a rifle" wholly safe?

"Down South" recalls a letter from North Carolina, which shows that the civilized races do not monopolize artificial flies. "Veritas," in his delightful paper in the FOREST AND STREAM of Feb. 11, makes one a little bashful about even mentioning any improvements in angling implements, but surely he will permit me to tell of those which the "simple red man" has found effectual.

"Last winter I wrote you from our factory, Reidsville, N. C., ordering two dozen No. 8 Sproat hooks, to use in making some North Carolina Indian flies or hackles, and in sending them, you sent an extra hook and requested me to send to you a sample, but not having the material (deer skin) then did not make them. I procured some a day or two since and now send to you two specimens which you will see are reversed hackles, made by cutting narrow strips of skin with the hair left on, and wrapping the same around the hook a few times, and tieing well at each end. The Indians tie them to perfection and use some sort of cement or varnish making waterproof the thread. They use various colors and lengths of hair from different skins, but usually rather stiff hair and preferred from the deer's legs. They often cut the hair off and use it without the skin, but the flies made in this way are not as durable. Feathers are occasionally used in the same way.

"The effect of this reversed method is very perceptible in swift water. Every little move in drawing back as it floats down gives it the appearance of a live worm trying to get out of the water. It does not amount to much with the feathers, as they have no worm or caterpillar appearance. In addition to this form I send you, they sometimes use three or more stiff hairs running down over the curve of the hook ¼in. or more long, to reproduce the feelers on the caterpillar's head. The advantage of twisting the skin around the hook is to give it a sort of turning motion in the water as the current strikes it.

"I send you specimens of hair on the skin, trim the skin down thin, soak well in warm water, and then stretch it thoroughly and cut it in strips to suit."

Accompanying the letter were the pieces of deer skin and specimens of the flies described. Are they not related to the much recommended "fluttering fly"?

C. F. ORVIS.

TROUT FISHING AT LAKE BATISCAN.

AUGUST 15, 1887, by the express train of the Quebec and Lake St. John Railroad, from St. Raymond, our party, consisting of Messrs. E. A. Panet, N. P., Wm. Demers, my brother Arthur, and myself, left on our long contemplated excursion to that unknown lake called the "Big Batiscan," (a smaller lake in the vicinity is called the "Little Batiscan"). We had with us four capital guides, and all the supplies true sportsmen care about encumbering themselves with on such a journey.

Big Lake Batiscan was not hitherto known to have been visited by white men during the summer months; but, in winter on snowshoes, trappers and explorers had done so on a few occasions; and reported on the beauty of its surroundings, and the enormous size of its trout. The leader of our party was that brave sportsman and esteemed gentleman, Mr. Panet, of St. Raymond, before mentioned. He proved equal to the occasion, the backbone and main spring of the expedition in all the trials that beset our paths. Our four guides consisted of French-Canadian trappers, the principal being Jean Morasse, of St. Raymond, so well known, who has tramped every foot of this Province with Jos. Bureau, an explorer in the employ of the Dominion Government. Although 62 years of age, he is as active as a much younger man. The manner in which he handled the canoes, poling up and running the rapids, was the admiration of all, and his cooking never to be forgotten. The pea and bean soups he put before us at our mid-day meals, always found us loud in expressions of praise, he certainly possessed wonderful skill in satisfying the appetites of as ravenous a lot of tramps as ever food tempted. Next came Bernard Marasse, a perfect Hercules at carrying a heavy load over a portage. The other two men, Moïse and Alexis Noels, were as good men in canoes as ever handled a paddle. For our party of eight we had provided two strong birch bark canoes to carry us, with about 1,000lbs. of baggage and provisions.

We left St. Raymond on Monday evening by the 7:30 train of the Quebec & Lake St. John R. R., having been favored by a glorious send off by about twenty-five or thirty of the fair ladies and a few gentlemen friends. Parting from this charming gathering, we felt that we were leaving the "girls we love behind us," as the old song has it, and this feeling haunted us till we reached Rivière Pierre, when we realized the fact that we must begin work in earnest by removing our outfit from off the regular passenger train, which went no further, and take the construction cars (belonging to Mr. Beemer), for the rest of the journey by rail. After having transferred our baggage and provisions from one car to the other, the men proceeded to put in a box car our canoes, one of which, about 22ft. long and prized very much, they tried to shove in through a side door, but its length caused considerable difficulty, and to our dismay we found that it had been so much injured as to be unfit for use. This was really vexatious, until we found we could replace it by another at Beaudet Station, where we were to leave the railroad, and at 11:30 that night we reached this point. After carefully stowing away all our effects we stretched ourselves on the bare floor of the depot, there merely a log hut, and were soon enjoying our first night's rest.

Early next morning we were up, breakfasted, and then set to work making up the packs that each was to carry over the many portages we were to encounter. All being ready we carried the bundles to the edge of the Batiscan River, loaded our canoes, and, with a hearty cheer, shoved off from the shore and began paddling, keeping time to the cheerful voyageurs' song, all joining in the chorus in a manner to make the woods echo our voices. We proceeded in the following order: E. A. Panet and A. Van Felson, in one canoe, with the Marasses and half the baggage. Wm. Demers and myself, the other two men and remaining baggage in the other. Having paddled up the river about one hour we came to the first portage, which was about one mile long. Each having shouldered his pack followed our leader in Indian file; an occasional obstruction brought some of us tumbling down amid the roars of laughter of those more fortunate ones, who would then lend a kindly hand, lift up the fallen, and, with the best foot forward, the path would be resumed.

At the end of this portage the canoes were again entered, and paddling another mile and a half found us at the Forks, a juncture of the Batiscan and Lightning rivers. Heading our canoes up the latter stream we soon came to the first rapids, when poling was begun in earnest. At the head of these rapids another portage was soon made, and a short distance further up we came to the third, and having gone over this we felt as hungry as wolves, it being mid-day. Our cook prepared a delicious meal with a quantity of trout caught in a few minutes' time, near at hand. The whole party were in joyful spirits until it was discovered that in our haste we had unfortunately left one of our principal bundles behind at the second portage, and it must be sent for. This detained us about four hours, when we made another start, poling up three more rough rapids and then met less current, when paddles were again used. Our leader and men pushed to the next portage to prepare camp for the night, for there we intended resting from our labors, delighted with the beautiful scenery we had met and fully enjoying our first day's outing. The canoe conducted by my men was headed for the shore on the way, much to my surprise, and I asked them to hurry on and round a point instead of landing, but they kept on in the same direction till suddenly stopping they pointed out to us a small stream of cold spring water running from the mountain side into the river, and told us to try a cast in the pool before us. This we readily did, and as soon as the flies touched water the pool seemed alive with trout, eager for the dainty morsel, and we hauled them out one and two at a time as fast as we could cast, and Demers and I yelled with delight over the sport. Fish weighing from one to three pounds, and one big fellow gave such a tug that my casting line was gone like a flash through the water, having given away at the upper loop. This was soon remedied by replacing it with another, and I was again in full play until roused from the sport by our friends ahead, who had set up camp and were lustily hailing us to come to supper since ten minutes or more, but we were so taken up with success landing trout that we were oblivious to all else, and their yells had not penetrated our ears. When we reached camp and displayed our catch they shouted with joy over the numbers we had captured in less than half an hour. We cooked all we could eat that evening and left plenty for next morning's breakfast, and salted down a quantity to pick up and carry home with us on our way back.

We were up bright and early the next morning and soon in our canoes again, poling up some heavy rapids till we reached the first falls of the river, which are about thirty-five feet high, where I expected we should have another difficult portage over the hills; but we undertook and succeeded in crawling over the smooth rocks, and gradually came to the top. Again taking to our canoes, we pushed on through one difficulty, then another, and camped half way through a long portage at 7 o'clock that evening. One of our men (Bernard) having become ill and unable to go any further, we were sufficiently tired with our day's work to accept any excuse for a halt. We all enjoyed a hearty supper, partly on canned corned beef left over from a former meal. Soon after I experienced a sensation of distress and sickness which I could not account for, and after a night of unrest awoke so weak and in pain as to be unable to stand; two of the men also complained of feeling unwell, but it sooner left them than it did me, and during the whole day I was unable to do any share of work, and required the assistance of my friends, who were exceedingly kind to help me on. At one part of the journey they carried me over a long portage. Bernard, having fully recovered from his illness, was as lively as ever, and after I had drank some strong warm tea I began to feel better. Being assured that each portage or rapid was the last, I took courage and would not give up, but this story was made up for the purpose, as we encountered fifteen more before the finish. My own and the men's illness was due to our having eaten corned beef which had been opened the day before, and some of it left in the can. This should never be done, in hot weather particularly, for the canned articles, whether meat or vegetables, rapidly decompose after being exposed to the air, and become very unwholesome, if not poisonous.

At night we camped on an island, where we all thoroughly enjoyed a welcome sleep. Next morning we awakened, every one himself again and eager to reach our destination. Two hours' toil over rapids brought us to the end of our journey, where we found a log hut erected by Jean Marasse, last winter, for the lessee of the lake, A. L. Light, Esq., C. E., of Quebec. We struck our tent alongside it, and after a hearty dinner started to explore the big lake Batiscan.

What a grand sight opened out before us! At one glance the lake in its full extent could be seen, it being about nine miles long, and said to be thirty miles around, being a beautiful sheet of water, unbroken by islands or other obstructions. It is bound on one side by high mountains, resembling those of the Saguenay, appearing like bare rock, while on the other side they have a gradual slope to the water's edge, and are quite a contrast to the others, and are covered with trees, such as elm, birch, mountain ash, etc. I wish I could color in words the beauties of this grand scenery. As soon as we had recovered from this spell of admiration, which our first view of the lake and surroundings had created, we put our rods together, jumped into the canoes and began casting our most taking flies around the borders of the lake, and were rewarded by capturing many beautiful trout about 15in. in length; but these did not satisfy our ideas of what we should catch in a lake renowned for its big fish, and knowing that the water was exceedingly deep and that large trout are found therein, we decided to try the artificial minnows we had provided ourselves with. Attaching one to the end of our lines, weighed down by heavy sinkers, below the minnows, we allowed it to touch bottom, the canoes were slowly paddled on and the lines made to quietly rise and fall 2 or 3ft. This trolling proved a perfect success, for first one then another of the party would shout out, "I have a beauty!" "a monster!!" "a young whale!!!" as each magnificent fish was hauled up and dropped into the canoes.

Two of them 8lbs. each; six or seven nearly 7lbs. each and many 4 to 6lbs. Fifteen of the large ones weighing 85lbs., or an average weight of 5¾lbs. each, all being speckled trout, beautiful in shape and color, the true *Salmo fontinalis*. It is reported that no other fish than trout are found in the lakes above the falls I have before mentioned. For four days we enjoyed the unequaled fishing of the lake and the River Moïse emptying into it. Fly-fishing in any lake is seldom successful in the months of July and August, and we therefore entered the River Moïse and paddled up its comparatively placid waters for about five miles. This river was teeming with trout, which in its clear water we could see darting ahead or off from the sides of our canoes in every direction. We caught them wherever we tried a cast in such numbers and greatly enjoyed our success. We soon found our canoes literally filled with trout from 12 to 18in. long, and one of these weighing but 2lbs. would struggle harder than a five-pounder caught in the lake.

Thoroughly tired out from casting we decided to return to camp early. After landing our fish and laying them on the moss the sight was one our party can never forget and we decided that such sport should satisfy the most ardent fisherman and it would be a sin to kill any more. Therefore the next morning we packed up our traps, and with a parting look at the charming scenery of the lake we gave three hearty cheers and a tiger for Big Lake Batiscan and began our journey homeward.

I must mention that we so enjoyed the fishing that we did not unstrap our guns. We saw numerous birds of several species from the golden eagle to the bush warblers, and several kinds of ducks which breed near this lake. On shore our guides pointed out the tracks of such animals as the moose, caribou, bear, otters, beaver, fox, mink, and other quadrupeds. On the borders of the lake were varieties of the most beautiful wild flowers I have ever seen, greatly adding to the charm of the scenery, one would fancy they were placed there for that purpose.

We were somewhat anxious to know how our canoes, after the rough usage over so many portages, would stand the strain of shooting through the rapids, but they proved equal to the occasion, being beautifully handled by our guides who steered them through the intricate channels, often twisting like huge snakes around boulders or other obstructions to our admiration, as we scrambled down the path over slippery rocks on the edge of the stream. Our friend Demers, who was decidedly the best dressed of the party as far as neatness in clothing was concerned, got a ducking here which soon took the starch out of his linen and left the rest of his suit in no better condition than those of his companions, who delighted in the comfort of dilapidated clothing. They also came in for their share of wettings, all joining in hearty roars of laughter at mishaps which had no evil results.

The first night we camped at the Big Falls, which are said to bear a striking resemblance to the well-known Nippegan Falls. The next day's journey was similar in events to the first, and I must say, judging from the rapidity with which we sped along, the stream well deserves its name of the Lightning River. About noon we reached the landing at Beaudet Station, on the Lake St. John Railroad, and soon transported our canoes, luggage and boxes of fish, intended for our friends, to the car which was to carry us to our destination, the romantic village of St. Raymond, to be welcomed back to the charming girls and friends we left behind us, and whom we were anxious to see again and proudly display to them the trophies of our trip. While stopping over at Beaudet Station we were much amused at an exhibition made by a man named Peticlere, who has succeeded in taming a number of fish of the chub family, who came to him when he showed himself on the banks of the river, feed out of his hands, and even allow him to take them out of the water and pet them as you would a bird. They certainly know him, as they will not approach others. We left Beaudet Station at 5 P. M. and arrived at Rivière Pierre, where we were to pass the night, at about 7 P. M. Upon our arrival we presented a sorry spectacle; a razor had not glided over our faces for ten days, and we were covered with an undergrowth of beard of all colors and shades.

We slept that night in the hospital, a large room taking its name from its resemblance to a dormitory, accommodating some twenty or thirty travelers or regular boarders employed on the construction of the railroad.

The next morning we took the train for home, which we reached in good time, and were heartily welcomed by the loved ones and our friends, among whom we distributed about 150 dozens of trout, the remains of what we had caught on our two days' trip, after consuming several dozens each day among our party of eight hungry men. We met with every possible courtesy from the manager and and employees of the road, who are true friends of the sporting fraternity and greatly assist in making such excursions as ours successful and anxious to be repeated.

GEO. VAN FELSON.

QUEBEC, Canada,

IN THE LAND OF THE MICMACS.—V.

[Continued from Page 68].

WHEN Sebatis had disappeared in the bushes we resumed our pipes, listening to Davey, who kept up a constant rattle of humorous comments on the Indian until he had completed the task of dish washing; then, taking up the axe, he wandered off.

We next visited the falls on the North Branch, and spent some time admiring the rocky chasms down which the water tumbled before spreading out into a round dark basin, over which masses of foam floated, circling hither and thither on their endless journey. Here, too, we caught some fine sea trout, which Phil promised to have prepared and smoked according to some new receipt of untold virtues, procured from an "old hand" on the Restigouche. Around the base of the cliffs we found large quantities of wild red currants, their vines trailing over the stones, and clusters of fruit hanging in graceful racemes, painting the dark rocks beneath. Cookey was set to picking at once, and soon had a two-quart dipper filled, which we boiled for a few minutes in just a little water, and then pressed out the juice. This was mixed with some sugar and bits of lemon peel, bottled, and packed away in the damp cool sand under bushes near the water's edge. It was intended to serve as a substitute for lemons, the stock of which was about gone; and when tried in the evening was excellent, one tablespoonful of the rich syrup in a glass of water making a delicious lemonade, scarcely to be distinguished from the real article except by the color. Currant picking and syrup making became henceforth quite an industry.

The sky becoming overcast about 4 P. M., big Peter advised us to try the pool as the fish would likely rise well. We did so and continued whipping its broad surface until half past six, when our catch numbered but two—an 8-pounder by Walter and one 10¼ pounds by James. The salmon were either getting scarce or lazy.

Returning to tent, Cookey was nowhere to be found, but Louis informed us he had gone away about half an hour before to the North Falls Basin to fish.

"To fish! Louis," repeated Phil with a puzzled look, as his eye noted all the spare rods still on the pole-supports of the tent, "What on earth is he fishing with?"

"Cuttum birch pole dis morn' berry long, den gettum cod hook mine all same's me usum for gaff, puttum on piece trout for bait, an' him go 'way."

"Did he tie the hook to the end of the pole, Louis?"

"O, no, brudder, me showum put on line an' all."

"But what did he use for a line?"

"Dat big string you hangum shirt on."

"Sure enough, boys," remarked James, laughing and looking at the two stakes, "The little cod line's gone; Cookey's first fish is bound to come out."

Away we all hied to the falls to witness Davey's amateur performance with this rude tackle. Evidently he was bent on showing us what his theory of "no foolin' wid a fish" after it was hooked meant, if he could only induce one to snap at a mouthful of iron and bait. We soon descried him standing on a projecting ledge with an enormous wattle in his hands and looking intently into the pool. Presently he sprang back, raised the sapling high into the air, and tugged and pulled fiercely. Then we ran toward him, more interested than amused, for that must be a whale surely to withstand such force. James shouted at the top of his voice:

"Hallo! what have you there?"

Davey raised his head for a moment in the direction of the sound, but upon seeing us turned quickly, and with the wattle across one shoulder, began climbing up the slope, determined to prove he could fetch him out of that without any help from us. By this time we had reached the ledge and observed a black object slowly rising above the surface, which in another moment was seen to be a portion of the trunk of a tree with several long knots or parts of branches and the line twisted around one of them.

"Easy, easy, Davey, here he comes; look! look!" shouted Walter.

The excited angler glanced over his shoulder into the pool, but immediately exclaimed:

"B' the howly saints! black, and wid horns!" and then making a savage pull, the cord parted and down he went among the stones and scrub. Back sprang the line into the water, the black monster sinking slowly and completely disappearing, as Davey regained his feet and reached the ledge.

"Bad cess t' m' luck! It's too bad t' lose the father uv 'em all!" said he with some feeling, gazing at the spot where the giant fish had disappeared.

"What did you hook, Davey?" inquired Phil, looking as sober as possible.

"What wus it?" replied he somewhat indignantly, "None uv yer skippin' runts, sur, as play wid feathers un floies at the top uv the wathur, but a reg'lar solloka-dowser frum the bottom. I knows where t' find 'em," with a shake of the head.

"Your line wasn't strong enough, Davey, you must try him to-morrow again," remarked Walter.

"That I will, sur, un wid a sthring he'll not fool wid, aythur."

We thought it best to throw as little light as possible on the subject, leaving to Cookey perfect freedom of acting on his own opinions, and were just about starting to return when we saw Sâk approaching hurriedly. He told us a dugout canoe was coming up and would presently be at the landing. The craft was soon seen close under the shore a short distance below, guided by two men, and looking through Walter's glass Sâk thought the tall one in the stern was Ben Scrogg, the worst poacher in the country; the other, Jim Kitts, a "silent" partner in the business. Fearing our appearance might cause them to suspect danger ahead and turn back, we concealed ourselves behind some bushes, and in our object were specially favored by the fact that the Indians had already carried up and arranged the canoes around their fire-place to sleep under, for it was beginning to threaten rain, besides in Davey's absence no fire had been lighted. Thus all was still and natural.

On came the poachers straight for the little sand beach, but just as the canoe grated on the shore Sâk stepped down and accosted the new arrivals, while the whole of us moved into view on the terrace above.

"Hullo, brudder Scrogg," said he with a smile, "me no spec seeum you up here. Havum hard time polum spose?"

"Sorter tough, Sâk," replied the tall, lank chap, evidently surprised but trying to appear calm, as he stepped toward the bow, throwing a blanket over a box on the way; "but what yer doin' up here? there's a hull army o' yes," casting a glance at the party above.

"Genelmen catchum salmon; me an' udder Injuns fetchum in t'ree canoe."

"Ah! cur'us we heared nothin' 'bout yer bein' head o' us," observed the long individual, stepping out and shaking hands with Sâk, "but come ter think on't we wus a-worryin' our lives out ter git up afore the water 'ud fall, ter look up a chance fur logs on Libbey's Bruck, so hedn't time ter 'quire along 'bout ennythin'. Yer fine an odd fish ur two here, I s'pose?"

"O, lots," with a wave of the hand toward the pool, "jes full, all same's one eel pot."

"Yer don't say so! Well, come ter think on't, Jim ruther 'spected it, didn't yer, Jim?"

"Ruther," grunted the silent partner, sitting on the bowboard with head bent down, watching the faint wavelets playing with the sand.

"Ketched menny?" queried Scrogg with an air of interest.

"Two times," replied the Micmac, spreading out both hands.

Yer don't say so! Twenty! Gosh, Jim, this is cur'us, aint it?" then in a careless manner, "but it's no odds t' us if the river's full, we aint on sich bissness. Who be the gentleman comin' down?" referring to James approaching them from the bank. In the friendly, whole-souled manner for which he is noted, the latter quieted the stranger, and soon they were seated side by side on the bow of the dugout, engaged in conversation, Kitts having exchanged his late resting place for a softer one in the sand, where he was silently amusing himself straining the latter through his hands, and erecting miniature pyramids in the manner of boys. After attempting in vain to get a remark from the mute mound builder, Sâk withdrew and rejoined the rest of the party above.

"Who are the beggars, Sâk?" inquired Walter.

"All sames, me 'spose, Ben Scrogg an' Jim Kitts."

"Where are they going?" some one added.

"O, huntum lumber chance, him say; but gottum big box pork an' beans all same," and the speaker indulged in a broad grin.

"O, yes, we remember your story, the excuses these poachers make. Will you not take us down and introduce us?" added Walter, quick to perceive a means of taking some fun out of the event.

"What you mean by dat, brudder?"

"You know their names?" alluding to the stranger.

"Sartin, Ben Scrogg, Jim Kitts, same's me sayum 'fore."

"Well, can't you say 'Mr. Scrogg I've much pleasure in introducing Mr. Miller'?"

"What good for all dat pow-wow?"

"Why, then we shake hands and talk like friends. All white men do it."

"Why for you no talkum all same, no pow-wow?"

"They're strangers, we don't know them, won't talk to them, they are no friends of ours. See?"

"Berry well, me doum all same. How dat pow-wow, once more?"

Walter repeated the form of introduction, but the Micmac's simple nature and common sense had perforce dwelt on the reasons advanced for the ceremony, getting them mixed up with the verbal presentation; so that when we had halted in silence two or three paces from James and Scrogg, Sâk, standing between us, addressed the latter thus:

"Brudder Scrogg, you one stranger, you no friend to white man here, white man no wantum talk with you, Mr. Miller no wantum talk with you, an' brudder Scrogg dis Mr. Miller all same," extending his hand in the direction of Walter, "an' dis pow-wow big fun for me," and stepping backward, fell over the mound builder into the water.

In spite of the bewildered looks of Scrogg, we laughed heartily at Sâk's performance and its unpleasant ending, so that the mute object on the sand actually looked up for a moment, but dropping its head again, went on with its favorite pastime. Advancing to Scrogg we shook hands heartily, welcoming him to North Branch, and to the hospitality of our board, expressing the hope he would remain with us the whole of the next day, as we purposed leaving the morning after. He was afraid he couldn't, had to hurry up to the mouth of Libby's Brook, four miles further, and set out on a lumber exploration across the country. He had expected to make the mouth that night, but feared he couldn't, as it was getting late and looked like rain. Inviting him to our tent, we regaled him after the custom of the country, and he was just beginning to find a fluent tongue, when Cookey announced supper, to which he went after a flood of excuses and apologies about his appearance. But no efforts of ours could induce Kitts to leave the sand or extract anything from him but an occasional "no" pitched in a high key and accompanied by an emphasizing shake of the head. Evidently his business was to keep that box in sight, obeying no doubt the well-understood wishes of the boss, who, however, went so far as to apologize for this apparent lack of courtesy by saying, "He's an odd critter, that air feller, seems born on pupus ter mope roun' an' keep 'is mouth shet, an' hang as clus t' the craft as a woodchuck t' 'is hole or a porkapine t' the bark o' a tree. Half 'sleep he is mos' al'ays, night an' day jes the same; never eats a reg'lar meal, but keeps a-gnawin' at somethin' old or hard as no one else will tetch; 'pears t' have an idea 'twas never 'tended for 'im t' talk an' eat an' sleep like other folks—cur'us critter, past all 'countin' for, but a reg'lar buster in the woods, keeps the trail like a hungry dog."

By the time tea was over, Scrogg was in very good humor, and readily yielded to our wishes to remain all night at North Branch. Calling Kitts, he gave directions about putting up a blanket "lean-to," and storing the traps and grub on the opposite side of our camp-fire, and that mute worthy performed his task with all the care and promptness of one whose only wish and hopes were to please his master.

As darkness closed in and the camp-fires burned up brightly, our new-comer became exceedingly loquacious, and, seated in our midst, spun story after story of his many adventures and hair-breadth escapes in the wilderness. His style was peculiar. He never paused for a word, never hesitated at the end of a sentence, never made the least stop except when he expectorated tobacco juice, which he frequently did, into the center of some glowing coals, and then he gazed in silence at the fading blackness, as if at some prophetic charm of life, resuming the narrative when it had completely disappeared.

On one occasion, after watching the effect of a well-directed stream for some time, he suddenly straightened himself up as if the dying shadow had touched some cord of interest, and looking across the fire and beneath the "lean-to" he inquired: "Where is that critter Jim?" then calmly, "I thought he wus 'sleep by this time, but come ter think on't the cur'us cuss hardly ever sleeps enny 'cept when uther folks hev lied down, an' never scasely till the fire dies down too, an' all's dark's Egypt an' nothin kin see whare he is, jes like an owl, turrible fond o' the dark, ten t' one he's a mopin' 'bout that craft, keepin' way out o' sight. Jim! Jim!" Presently a croaking "yah" sounded in the darkness and the singular fellow made his appearance.

"Hev ye done ennythin with that air box, Jim?"

"Nah," replied the "silent" partner, edging out of sight behind the "lean-to."

"Come ter think on't, genelmen, we've a lot o' pork an' beans in a box thare, an bears is turribly fond o' em, an come 'casion'ly out on this here pint at night, p'tickly o dark, rainy nights, ter nose roun' after berries an' fish bones an' toads an' pismires an' sich cultch when a puss-son's sleepin' an' kint tend to em, so Jim ye orter take it over t' the rocky pint t'other side whare it'll be safe, cause nothin' ever comes thare 'cept ter die or ter run away quicker'n lightnin' when he fines out he is thare, an' we've got some turrible work ahead up to Libbey's Bruck an kint 'ford to lose eny, will want it all an' more too."

"Don't take all that trouble, Mr. Scrogg," urged Walter "put it into our tent, it will be perfectly safe there."

O thankee, the cussed bears might go a nosin' roun' an' tear yer tent or frighten ye, an' Jim's well 'quented with the pint an' ud sooner be alone in the dark, gled ter git a chance ter git away from the noise an' glare o' the fire, so ye hed better take it acrost an' put it under the Disme Ledge, whare nothin' ever comes, not even a bit o' daylight."

Away went this passive, servile morsel of humanity into the darkness, and shortly the low sound of a pole being cautiously handled reached our ears. We heard it on the opposite side, just abreast us, and Scrogg remarked carelessly that he was in the right place; but a few minutes later a faint noise was wafted to us from some distance down river. Scrogg coughed and glanced around. He easily satisfied himself that we too had heard it.

Having hidden the object of his master's uneasiness somewhere among the rocks and scrub a long distance from "Dismel Ledge," Kitts returned at the end of a half hour, and in obedience to the call of Scrogg, emerged out of the darkness and stood partly concealed by the "lean-to."

"Whare did yer put the box, on the p'int jes crost here, Jim?"

"Yah," came over the fire.

"That's the place," added Scrogg, with much apparent satisfaction at having obtained such valuable information, "but what took yer down so far? Wus it ter git that pole we seen lyin' acrost thare on the stuns as we come up to-day?" The latter question was hurried so quickly on the heels of the former as to give Kitts no time to answer the first.

"Yah," answered the laconic Jim, disappearing entirely behind the blanket.

"I 'spose yer didn't bring it 'long; foun' it crooked or cracked or broke or somethin'?

"Nah," replied the blanket.

"Mos' ginrally the case," continued Scrogg, with a profound air; "when a pole gits away on this here stream it isn't wuth a cuss, an' ye orter hev knowed that long 'go an' saved yerself the trouble; I sed as much when I seed it, didn't I?"

"Yah," returned the weather side of the "lean-to."

Thinking he had thrown inquisitive and suspicious people off the track of the mysterious box, Scrogg resumed his narrative:

"Yes, they is a ketchin an a killin' o' the salmon young an' old as fast's they kin, but how's they goin' ter hang out? Jes see down the river an' bay what's a goin' on, frum Skimminac P'int t' Chatham's, 'bout forty mile, an' both shores jis kivered with nets, a reachin' out half a mile or more with all kinds o' dum contraptions hooked on to both sides ter confuse an' tangle an' drownd the poor cusses when they is a feelin' ter git roun', pouns an' triangles an' dens so's yer cudn't count 'em, one inside t'other an' t'other inside nex' one, an' so on t' the end o' the chapter. They look like some tarnal varmint, a lizard or a daddy-long-legs, with more'n a dozen arms an' legs a swingin' out on both sides, nothin' ter be seen but poles, an' flats, an' strings an' dugouts big 's scows a movin' backards an' forrards al'ays in a hurry jes as if they wus a worryin' their lives out fur fear a dum fish gits past alive. Yes, suree, these tarnal snares jes as thick as hurrin' bone fences on the mash whare the lots is four rods wide an' fences twixt 'em all so's a little way off not a cussed bit o' mud or grass kin be seen, nothin' but sticks an' poles an' logs a p'intin' into the air. Well, that's jes the way the shores look down 'tween Skimminac an' Chatham, fur I seen 'em meself, wus down ter see my ole woman's brother Abslum las' week, he hed the wind-flew-endways an' janders mighty bad, an' thare is islands outin the water, some on 'em mos' as big's the hull o' Red Bank, Huckleberry an' Baydewind an' Fox an' Portage an' Sheldrake an' Whiskey an' Hay an' Middle Island, an' every blessed one is kivered with them dum lizard-shaped varmints as thick's parrige, an' how on airth is a fish goin' ter dodge 'em an' git up t' Chatham, I'd like ter know? Well, the most sing'lar thing in natur is some do dodge 'em, but the river gits narrer to Chatham an' keeps a-gittin' narrerer clean up to Three Islands, nigh on to forty miles more, an' thare it's not more'n thirty yards wide; but the dum nets is thare, too, ter head off an' ketch enny stray devil 's hed luck ter 'scape b'low an' kill 'em off afore gittin' to whare they lays their eggs, an' the hull river fur these forty miles is jes lined with nets a-reachin' out frum both sides an' a-shakin' hands in the middle an' a-winkin at one 'nother hows they's doin' the smart thing, or mebbe they is actilly loppin' over one 'nother an' gittin' into trouble with scows an' bots an' canoes as kint pass up nur down without a-foulin' of 'em. Every man 's got a farm long the river no wider 'n a cow lane hes a net sot or says he hes the right to sot one if he sees fit, an' Government be dummed, an' it 'pears he kin do so, fur the jedges says he hes repairin rights, or somethin' or other.

Well, outen every hundred fish as comes into the bay an' tries ter git up ter lay their eggs 'bout one lives ter taste fresh water, an' likes 'nough he's an ole he fish an' aint wurth a dum fur layin' eggs, an' so a poor pusson kint git a cussed fish, fur they is a-watchin' sharp, an' as soon 's one or two is seen in enny o' the holes up here, the Government is after 'em hot stick, and glaums the hull river over with their nets, scrapes the tarnal bottom bare (an' tows the hull consarn in boxes t' their hetchery down river, whare a lot o' perlitical hingers-ons too lazy to airn their livin's like honest folk, an' don't care a cuss if all the fish in the country an' all the poor pussons went t' the devil. Well, these is 'ployed to rassel with the salmon an' steal their eggs an' nuss the younguns, jes tho' they kin do it 's well as the fish theirselves; an' then the ole ones as is twisted an' yanked an' squozen in pullin' their eggs from 'em mos'ly die, when they's pitched back into the river, an' the eels eat 'em: an' as soon 's the younguns is born they is dumped into churns made o' tin an' hauled in carts fur mos' a hull day, bumpin' over stuns an' rocks an' mire holes, a-bouncin' an' a-churnin' all the time, which is onnatral, an' shooken up by this tarnal kerchow all day, the little ones gits dizzy an' weak an' sick an' puke an' turn their bellies up'ards, an' menny dies an' pisens the water. an' then more gits sick an' gasp an' puke, till bimeby when mos' half of 'em's dead an' th' uther half 'ud like ter be, the carts gits t' the place whare they're goin' ter dump 'em in, which is a shallus, the water not more 'n three four inches deep, but a runnin' kinder quick an' jes full o' spickled trout as hungry 's spring bears an' 's smart as Injun devils, not more 'n two three inches long, but all mouth an' belly an' stumerk an' 's holler 's a punkin jes seems 's if made on pupus ter be al'ays empty an' lyin roun' an riddy ter bite at ennythin' from a skeeter to a toad; p'ticklar cusses they is, too, fur they'll eat nuthin' 'cept what's alive, and seems ter take fun in bitin' an' pullin' an' teasin' enny unlucky creeter's dropped in among 'em or's been crippled somehow and cu'dn't help comin' through the shallers, an' when they're jerked an' wooled an' torn it mos' t' bits, so's the poor devil's mos' dead, one swallers it an' the rest wonder where it's gone to, an' how they bungled in letting it 'scape after they hed it kinder weak and seem'ly not worth much, an' so they scuds roun' an' roun' a lookin' for it, but none o' 'em ever 'pears ter think o' such a thing 's one swallerin' it, an' ten t' one but the one as did swaller it is doin' his level best a lookin' fur it too, forgot all 'bout it. But the mos' cu'rus thing 'bout these cusses is they al'ays want ter be holler, fur if enny happen tu git filled up once in a while, which is generally when the casts an' churns comes 'long, they puke right up agin an' out they is once more in the shallers, a keepin' a sharp lookout, gled they's holler agin an' feel's they uster an' reddy ter gollup down enny livin' varmint comes 'long.

"Goin' ter hev a fine day to-morrow," observed Scrogg, after gazing at a black spot on the coals until it had disappeared, "al'ays a sure sign o' clearin' weather when the black spot gits away quick.

"Well 's I wus' sayin', the churns is lugged from the cart an' took out into the shallus jes at the top an' a leetle clus in shore, some one side an' some t'other, now enny pusson's ever seen a spickled trout 'cept in a baskit or on a gad or fryin' pan orter know that tho' the leetle cuss is full o' fun an' works hard at it like enny uther youngster an' 'pears very foolish an' acts queer p'tickly 'bout his feed an' stumuk hes not by a long chock a big enough dunce ter hang outen the middle o' that air rapid an' keep a scullin' an' a scullin' day in an' night out agin the tide, an' them's thinks so are bigger fools nor the trout; no suree the wee varmints is clus in 'long-shore an' is not a scullin' ether, they's a lyin' easy, hid behint a leetle stem or stick or bit o' bark with one eye or mebbe both on the shallus a watchin' out fur business. Well, the men sits down the churns, an' look into the rapid an' see no trout an' thinks there's none roun', 'cause they don't come out an' show themselves, which would be a very silly thing fur them ter do, an' byemby they pulls out the heads an' dump the churn over. an' swish goes the hull consarn into the water; the dead ones an' sick, an' well ones, if thare is enny, is mos'ly mixed up at first, but prisently the dead ones float an' the little weak an' sick critters begin ter wriggle, ether tryin' ter swim or most likely mebbe givin' their las' kick a-dying, an' all flot down a leetle, when all of a sudden a spickled varmint spies 'em an' darts out, an' enether an' enether, till byemby the water's jest as thick's parrige; sich pullin' an' yankin' wus never seen, but the trout don't tetch the dead ones, not them; the eels git 'em furder down, an' so the holler cusses jes gaullops the leetle fry like a half-starved turkey eatin' buckwheat, an' how menny o' them wee wrigglers do yer s'pose a trout ull hold? Well, I'd say 'bout a dozen or more, an' what's wuss an' wuss for the wee fry when them empty gluttons is filled up, they pukes the hull business up an' begins over again. Well, the little salmon's able ter swim make fur the stuns and weeds long shore, but the trout don't heed 'em, they'll see them later on, they's too busy jes' then killin' the weak ones 'fore the tide kerries 'em too fur down, an' when they's done all of 'em, an' the big picnic's over, they come back agin t' their hidin' places an' begins ter hunt up the well ones as is keepin' dark, but these poor in'speerinced cusses don't know nothin' 'bout hidin', an' in 'bout a week p'raps or more the trout hev 'em all kilt an' puked up, an' is holler agin, so the eels gits the ole ones and spickled trout the young ones, and there's not a dum fish left in the country for a poor pusson." CHIKTEK.

NEWCASTLE, N. B.

BETTER THAN GUIDE BOOKS.—I have been able to get information through the medium of your valuable paper, for which I have studied railway maps, time tables, guides, etc., for months without success; if it is any satisfaction to you to know it. In one instance I have located a lake where the trout fishing is reported to be elegant, a lake not widely known, and kept mighty shady by its few visitors. I heard of this lake indirectly three years ago, and since then have written a dozen parties regarding it, but to no purpose. In a FOREST AND STREAM contributor I recognized a party who was familiar with that section, and from him learned the long-sought-after location. Worth a year's subscription, and cheap at that.—SWIRL.

MARYLAND ANGLERS are striving to have the laws for the protection of game fishes amended, so that they may be more effective.

DURABILITY OF ARTIFICIAL FLIES.

A CORRESPONDENT writes on the subject:

Your correspondent "Percyval," in his admirable talk on "Fishing Tackle" in a recent issue, makes the suggestion that fly-tyers should make flies to wear better than they do. What does he say to the following performance of a specimen of double-winged fly with protected body, made for Florida fishing? Dr. George Trowbridge thus writes from Sarasota, Fla.: "The fly with red tail, scale covered orange body, light yellow hackles, and double white wings, has made the following score: Feb. 22, 4 sea trout, 1 skipjack; Feb. 23, 6 sea trout, 1 channel bass of 17lbs. This is probably the largest channel bass ever taken with the fly by any one. Feb. 24, 11 sea trout; Feb. 25, 9 sea trout, 1 cavaillè, 1 grouper, 1 rockfish. While lifting a small sea trout into my boat, not using the landing net, the old and frayed leader broke, so I cannot return the fly for your inspection. The greatest damage was done to the hackle, which was almost entirely destroyed."

"Percyval" can see in the above that his ideal of durable flies has been realized. No man should complain if his fly safely lures 35 fish, including a 17lb. channel bass, all of which are "death on ordinary flies."

FISHING AND CAMPING WANTED.—Princeton College.—A party of college fellows have in view a trip to the woods of Wisconsin this coming summer. We know nothing more of the country than its general reputation for good fishing and shooting. If we go, we would start in from Duluth. Can your readers give us some idea of in what part of Wisconsin, Minnesota and Michigan the best sport is to be found and what pay guides get, etc., in that part of the country, and oblige—C. F. U.

Fisheulture.

THE DECREASE OF FOOD FISHES.

[Concluded from page 128.]

THERE is no need of further examination of the hidden wealth of the sea, or the returns of the fishermen. You have seen the one heaved up for our instruction, and the weirs and nets of the other spread open to our view. The dominion was given to man for his constant comfort and support, and not to satisfy his avarice or his greed. It is dominion and not destruction. It involves care, protection, increase and continuance, and not the violation of laws which can end only in exhaustion and consequent misery and want. The preying of the fishes, one upon another, will prevent any overstocking of the waters, and no agency but that of man can prevent an enduring supply.

It is not enough that a few straggling specimens may be found feeding upon the shoals and around the rocks. They only serve to call bitterly to mind the days when we used to go a fishing, and the great store of fish which we used to catch. They only remind us of the glory which once was, and the wretched means which have caused it to depart. There are a few reasons, of quite a different nature, why the trapping and seining of fish should be regulated by law.

First—It is a monopoly. No sufficient reason can be assigned why a few men with an extensive apparatus should be permitted to absorb the common wealth of the sea to the injury of those whose scanty means permit the use of only the simplest and rudest of tools. It is no answer to say, even if it was true, which it is not, that the traps will furnish them cheaper than the hook and line. We prefer to catch them ourselves. We like the excitement which it produces, and the health of body and mind which it insures. Besides, we much prefer our fish "fresh out of the water," to the stale refuse of the market man's ice chest. The right to catch fish belongs to all the people alike. They are the property of all, and no one has the right to interfere with it in such a way as practically to shut out another from his share. The five or six millions of edible fish which are known to have been taken in the weirs and nets during the past two seasons, have fallen into the hands of less than one hundred individuals. It is here quite in place that I should call your attention to the great waste of fish consequent upon their being caught in such vast numbers. It will be shown to you that a very large proportion of them are not marketable fish, and such as are not, are either used by the trapper to enrich his land or thrown out to rot upon the shore. Such a sacrifice of our growing fishes should not be allowed to continue, and furnishes of itself a sufficient reason for the suppression of the traps. If this vast number had been allowed to seek their feeding grounds, they would have been distributed fairly among all those who were pleased to fish for them. It is the right to catch fish which belongs equally to all, and not simply the right to go fishing, which is about all that remains to us. The weary day, the longing expectation, the disappointment, the wet jacket, the empty basket and the hungry stomach; these are what are left to us, while the trap is overflowing to him for whom the sea was forced to yield up its treasures, while he was sleeping in his bed.

Second—The increase of the population and the greater facilities for shipment and transportation to people inland, the increase of pauperism and crime, the difficulty of obtaining employment, all demand that every obstacle in the way of the natural increase and distribution of our food fishes should be removed. There is no miracle now which will make the five loaves and two small fishes feed the hungry multitude.

Third—The setting of stationary devices for the catching of fish presents an obstruction in the way of those who have occasion to pass and repass along the shore in the small vessels and boats; no very general interference with navigation, perhaps, but, as the witnesses will tell you, some of the leaders of the pounds extend a mile or more from the shore, and some are anchored out. In their efforts to overreach and outdo each other, the trap man plants his stakes further and still further into the sea. Besides this, it is now complained that the traps obstruct the kelp and seaweed and prevent them from being deposited on the beaches. It will be shown to you that this evil is not inconsiderable. The uses and value of seaweed as a fertilizer are well known. Perhaps it will be proved to you that its value to the lands near the coast is equal if not greater than that of unmarketable fish which are spread upon it. The traps in many places, particularly on Sconticut Neck, are set so thick that upon seeing a sketch of them on the map, the resemblance to a fine tooth comb was readily suggested to us. It is also claimed that a large number of the young of those fish which have been procured to restock our streams and rivers with edible fish are destroyed. To what extent, there are some here who will perhaps be able to give us information. The pounds have a capacious maw and not a very discriminating taste. It is useless for Massachusetts to spend large sums of money to propagate fish only to have their young swept by the tide into these prison pens of the sea. Still further, none desire the maintenance and continuance of them except the trappers themselves, the market or middle men, the railroads, guano companies, the manufacturers of seine twine and other materials used in their construction, and those who complain that but for the pounds the cod and mackerel fishermen could not be provided with bait. As to all of these except the last, for the reasons already given, no consideration should be had. The evil which they do is not compensated for by any advantage to those who claim that they will be injured by their discontinuance.

Fourth—But it is said that if you do away with the traps, fish will become dear. As I have before said, there is not a particle of truth in this. The thing is absolutely impossible, for they have become so dear now that very few can afford to buy them. This story was once thought to have some foundation for it, and the trap men have told it so often that some of them actually believe it themselves. Because the market men don't pay the trappers but a cent or two a pound for fish, does not make them cheap to the consumer. When all the fish are caught in a few days or a few weeks and shoved into the markets, it gives the market men a chance to combine, which they do, and charge the consumer what they please. They are undoubtedly here in full force to defend these traps, as might be expected, to defend a business that pays them from 800 to 1,000 per cent. If the trap men would or could deal with the consumer himself we might be shown some mercy, but whoever knew a fish market man to have either conscience or mercy? Fish of all kinds were very high in the markets last year, and have been more or less so for many years. The scarcity of an article of food is what makes it dear, and the traps have made the fish scarce. They catch up vast numbers of fish very early in the season, and then they may be very cheap to somebody, but they are very dear to the people. If they are cheap at all, they are only so for a short time, while all through the season they are scarce and dear. It is simply outrageous that the trappers should catch up so many fish at one time as to be obliged to sell them for one-quarter or one-half what they are actually worth, because they will not keep, and then tell us that this is the way to make fish cheap. These very fish, if they were left alone, would in due time seek their feeding grounds, would be of better quality (for no fish is good until they begin to feed), and then would be caught in such quantities and at such times as to supply the market at a fair price. The trappers do well with their fish for a little while, but the marketmen are the ones who make the money by it.

They tell a good story of one of our trappers in Fairhaven, which perhaps is worth repeating. He had taken a very large number of small scup from his traps one day last summer, for which there seemed to be no market near at hand. So, being a very thrifty man, he packed them up nicely and sent them to New York, thinking he might get something for them there. A few days afterward he received a letter from his consignee, who acknowledged the receipt of the fish, and coolly said that although they were not spoilt, they were not saleable, and requested him to refund the money which he had paid for the freight. I don't know whether he sent him the money, but being rather a liberal man for a trapper I conclude he did, and then it is not likely that he would care to lose so valuable a customer. He can tell us about that himself, as he is here, I believe, and expects to become a witness. He is the one who says so much about making fish chep by trapping them, and I suspect this is the way he found it out.

Whatever may the opinion of any one with respect to the general subject here under consideration, whatever theories may be set up to account for the scarcity of these fish, the importance of ascertaining certainly is conceded by all. While we have been examining and dredging, theorizing, speculating and guessing, the mischief has been steadily increasing. Costly researches have been made, costly and tedious bearings have dragged themselves along, and yet the only experiment which could set this vexed question forever at rest, has never been tried.

It reminds me of what is said to have taken place a great many years ago with respect to another question about fish. A question before the Royal Academy of London was, whether a vessel of an ascertained weight would weigh any more after a living fish of one pound weight had been placed in it. An excited debate arose on the subject during the absence of Sir Isaac Newton, who was a member of the society. One said that it would weigh a pound more, others said it would not weigh any more, and each was full of theories and reasons to justify his view. The discussion was renewed when Newton was present, who, perceiving its warmth, arose and asked to have the vessel of water and the living fish brought in that the experiment might be tried and the truth ascertained. So here we say, let the wholesale methods of catching fish be stopped for a time and we shall know all about it. If the stopping of the traps does not increase the number and cause them to be more evenly distributed, according to their instincts and habits, then there is an end of the matter, and the time and expense of future hearings on the subject will be saved. But if it does, then our waters will be speedily repeopled. and these valuable food fishes will be as abundant as formerly. The causes which have been assigned to account for the scarcity of fish otherwise than by over-fishing, not having been found to be sufficient, or that they have ceased to exist, we find the question complicated with financial or mercantile interests of several forms. We are told that many business enterprises will suffer, and perhaps be destroyed, if the weirs are discontinued. So it always has been. Whenever and wherever any capital is invested in any business, no matter how injurious it may be to the general welfare, so soon as it is attacked, an army of capitalists is immediately on foot, provided with all the sinews of war, ready to take the field. To this the catching of fish presents no exceptions.

It is alleged that if the traps are interfered with the following list of disasters will happen: 1. The owners of these devices will suffer loss. 2. That a large number of men will be thrown out of employment. 3. That the markets will be inadequately supplied with fish. 4. That the railroads will not earn so much freight. 5. That agriculture will suffer for want of fertilizing compounds. 6. That the manufacturers of twine will be obliged to suspend. 7. That the cod and mackerel men will not be able to procure sufficient bait in due season. These several interests are all represented here in remonstrance to demonstrate the alarming consequences which will ensue upon any interference with their particular business. Caring nothing for the fisheries except so far as they are a source of profit to them, indifferent as to whether the poor have food or not, looking each one for his own interest, they join in a fight against these petitioners and appeal to you to protect them. They care not if all the fish along the coast were captured in one day, without regard to the injury of others, if they could sell them for money, and run the risk of a fresh supply to-morrow.

In illustration of what "Man, the destroyer" will do for gain, I quote an extract from the London *Spectator*, to be found in the February number of the *Audubon Magazine:*

"It is stated that the quagga, the beautiful wild striped ass of South Africa, has suddenly ceased to exist. The boot makers of London and New York wanted his skin for a particular kind of sportsman's boot, and he consequently passed away out of zoölogy. There may be a few left on the highest and wildest plateaus; but the Boers, tempted by the high prices, have extirpated the herds which existed only ten years ago in South Africa. That will be the fate of the elephant, too. There will soon not be a bird of paradise on earth, and the ostrich has only been saved by private breeders. Man will not wait for the cooling of the earth to consume everything in it, from teak trees to humming birds, and a century or two hence will find himself perplexed by a planet in which there is nothing except what he makes. He is a poor sort of a creator."

And I add that woman is as bad as man, and not for so

good a reason. Many a one would be willing to sacrifice the whole feathered tribe to disfigure what she calls a love of a hat, that would outshine the lofty structure which topped out a more fortunate neighbor.

It is for the Legislature to act upon other grounds and for higher ends. It behooves the State to deal with this matter in accordance with the laws which regulate the increase and decrease of the fishes and the needs of the people, and not solely for the interests of any private individual whosoever.

The State is the custodian of its own wealth, and watches over it for the good of the many and not for the interests of a few. Massachusetts has ever been proud of its fisheries, and can ill afford to permit them to be destroyed. Besides, many of these alleged disastrous consequences are by no means sure to follow; and, that it may not be charged upon us that we are indifferent to the interests of others, we will pass them briefly in review:

1. That the original cost of the several devices of the fishermen is undoubtedly considerable, we admit, but their present value is not very great, and unless the owner has been unusually unfortunate, they have paid for themselves more than once, so that the only actual loss which will be sustained is the remote one of a prospective catch. The assessed value of the twenty-four traps on Sconticut Neck, taxed in Fairhaven, is only about $2,000, and the amount of taxes paid on them into the town treasury was only $28. Besides, when men invest money in any business which may be controlled by law, they know what risks they take; and when they come, as now, and ask you to protect them in their property, they forget what little regard they had for the capital of others when they set up their traps. Before the fishing with hook and line had been interfered with, a large capital was invested in smacks, boats and their equipments. The business was ruined and loss sustained, slowly, it is true, but not the less sure.

2. That some people will be thrown out of employment is probable, but renewed fishing grounds will employ ten men where only one now is needed.

3. I have already alluded to the probable effect upon the markets. It is of no advantage to the consumer that the markets are glutted early in the season with a great supply of fish, while for the greater portion of the time they cannot supply their customers. They may make more money by handling large quantities of fish at a time, but they will have better fish and a more steady supply from those who catch only a limited number at a time.

4. That the railroads will carry more freight is true, but the Commonwealth cannot be expected to overlook all other considerations in order to make freight for them.

5. That the lands will suffer for want of fertilizers is not probable. There would be a gain in this respect on the seashore if the seaweed is allowed to collect. But whether so or not we cannot see how our valuable food fishes can be afforded for such use. Fish guano is not so much better or cheaper than other concentrated manures that our fisheries should be sacrificed to produce it.

6. The only compensation we can see for the twine men is that they should work up their stock into hand lines, but we fail to see why the business of making seine twine should be protected at the sacrifice of a business worth a million times more than that is.

7. There is certainly no disposition on our part to prevent the cod and mackerel fishermen from having all the bait they need. We would do anything within reason which would aid them, so that they might supply us with cod and mackerel at a reasonable price. We think that it will appear that their bait can be furnished to them even if some restriction is put upon the pounds and seines. It will probably be in evidence before you that they are supplied with herring at the pounds from about the twenty-fifth of March to the tenth of May, and it is to be hoped that this investigation will bring out some valuable information on this important branch of the subject.

That the differences between the mackerel men and the anti-trappers are reconcilable we have no doubt, and that a provision can be made which will benefit the one without injury to the other. The dealers in mackerel undoubtedly make as much money with mackerel at $25 per barrel, as they did when they sold them for $10, and with much less trouble, but the more abundantly they are caught and the cheaper they are, so much the better for the people who consume them. We could afford to sacrifice something to supply them with bait if the effect should be to cause them to come down a little on the price of their fish, but it is rather hard to make us suffer the loss of our other food fishes and be obliged to pay an advanced price for mackerel and cod.

We have thus endeavored to place before you a view of the condition of the fisheries as they were in 1872, and have referred to such investigations as had at that time been made, together with the several theories which had been set up to account for the changes which up to that time had taken place with our criticisms thereupon. It remains for us now to offer you evidence as to what has taken place since.

Since 1872 little has been done and little written to advance our knowledge of the question. For nearly half a century the food fishes of our sea coast, so rich in flavor as to tempt the appetite of the rich, so essential to the poor, so wholesome and nutritious to all, the only food which a poor man or woman can get without money, are seen to grow scarcer year by year. Meantime injurious methods have been resorted to to capture them in vast numbers without reference to the laws of their origin, their increase, or their growth. We are confident that such a relationship has been seen to exist between these two concurrent data as to show that the one is the effect and necessary consequence of the other. Little or nothing has hitherto been done to prevent the former by any limitation or regulation of the latter. Is it too much for us to ask that some decisive step be taken, having for its chief object the restoration of the fisheries.

Let me ask, sir, in conclusion, what other matter of so great concern to so many people of this Commonwealth has been neglected like this? Around the stately deer, the timid fawn, the swift and eager hare, and the little rodent with the shady tail, you throw the protection of the law. The partridge and the quail gather their broods under their wings, which they would not but for you. The birds in you find their kind protector, and come to thank you with their early and their later song. Shall the fishes alone, whose enemies are without number, be left without a friend?

THE MISSION OF THE MENHADEN.

Editor Forest and Stream:

Mr. Martin says the sophistries and subterfuges resorted to by the menhaden oil men should not be allowed to overshadow the fact that food fishes are decreasing. It would seem to us that Mr. Martin and his friends should produce evidence and be sure they were right before they undertook the passage of a law, which, if enacted, will injure thousands of people and render almost valueless a large amount of invested capital.

We deny the allegation, and produce the sea bass, striped bass, tautog, weakfish, porgy and bluefish; and will prove to Mr. Martin, or any one else that cares to know the facts that since 1870 they have been as plenty at times (the quantity varying with the different years) as they have ever been before during this century. An Eastern fisherman hired out to us this week at ten dollars per month and board, notwithstanding the fact that he was one of the crew of a vessel that took last week 16,000lbs. of cod and haddock between Gay Head and Montauk which were sold in Newport at 1 3-10 cents per pound, leaving a pittance so small after expenses were paid, that he left and engaged with us until something better turned up than helping catch eight tons of fish and selling them at cost.

Mr. Martin and his friends ask for a law which is broad and sweeping and if passed will affect all the menhaden fishing grounds from Florida to the Bay of Fundy, and their claim is that the menhaden is the food of food fish, which we deny by saying there is not a single food fish on our whole coast that depends on the menhaden for their daily food. This statement is based on years of observation by men who have watched them from their lookouts at masthead of the menhaden steamers, and they say there is not a single food fish ever seen feeding and keeping company with the large bodies of menhaden which were present on our coast. The fact that as a rule we catch no food fish worth mentioning in taking menhaden is proof positive that our assertion is correct, and we have plenty disinterested witnesses who have stated under oath that in taking menhaden with purse seines we don't catch food fish enough to supply our crews. The menhaden is rarely found in the stomach of a food fish.

The menhaden that Mr. Martin's law is to reach, and I had in mind when I made the above statement, is the menhaden of commerce, 300 to the barrel, twenty-eight gallons, not the small fry 1,000 to the gallon, or 28,000 to the barrel, which came here in July and left in October and have not been seen since. They are not the menhaden that is under consideration, and as they have been present only three months in six years they could not have been the daily food of the bluefish and squeateague which have lived in the same waters since they left. From calculations made at that time it was demonstrated that the daily destruction of the small menhaden in numbers by the bluefish and squeateague was enormous, and man's destruction in comparison was best expressed by a cipher. Menhaden are sometimes seen fifty miles from land (not often), but if we were forced by law not to fish inside a one-half mile limit it would ruin our business, as any one can find out by consulting the fishermen. Mr. Martin says: "A recent editorial in this paper alluded to some wild statements made by the oil men before a committee of the National Rod and Reel Association last month. I say wild because made in the face of accepted facts, and in contradiction of their own declarations." The above criticism does not seem quite fair to us, for we were invited to meet the committee to make statements to show why no restriction should be placed upon menhaden fishing, which we did, and every statement we made was true and can be made good. The president of the Association, Mr. Wells, said he was surprised, for our statements were so contrary to what he had heard, and wanted to know if there was a chance for him to go out on our steamers and see for himself. We told him there was, and we are in hopes he, Mr. Martin, or any one else that wishes to know the facts of the case, will make it their business to see for themselves.

The U. S. Fish Commission, which is made up of disinterested men who have thoroughly investigated our shore fisheries, are unanimous in the opinion that no law is called for, and say if food fish are ever scarce it is easy to stock the sea by using the hatching apparatus they have at their command. DANIEL T. CHURCH.

TIVERTON, R. I., March 4.

THE NEW HAMPSHIRE HATCHERY.—In our last issue we recorded the destruction, by fire, of the hatching house at Plymouth, N. H., in charge of Col. Elliott B. Hodge. The Legislature of the State has adjourned for two years, and unless the Governor's Council authorizes it to be rebuilt, the work is pratically stopped. It has been suggested that it might be rebuilt by private subscription if the gentlemen who angle in Sunapee Lake and other New Hampshire waters take an interest in this matter. It is the duty of the State, and to its interest to have the hatchery replaced, and we do not doubt but the Governor will authorize Col. Hodge to go on with the work, if public spirited men interest themselves to place the matter properly before the Council.

The Kennel.

All readers who are interested in the protection of the Yellowstone National Park are invited to co-operate with this journal in the endeavor to secure needed legislation. Petitions will be sent to all who will undertake to have them signed and forwarded to Washington.

FIXTURES.

DOG SHOWS.

March 20 to 22.—Inaugural Show of the Renssalaer Kennel Club Troy, N. Y. Alma M. Ide, Secretary. Entries close March 10.

April 3 to 6.—Fourth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 17 to 20.—Fourth Annual Show of the New Haven Kennel Club, New Haven, Conn. E. Sheffield Porter, Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5981.**

AN EVIL AT DOG SHOWS.

Editor Forest and Stream:

I would suggest that all shows insert a regulation in their premium lists and catalogues, that under no circumstances is a handler to be allowed to use a whip on his dogs in the show. I think that many mastiff men besides myself noticed at the late New York show that the mastiffs were much more excitable than usual, springing up and barking at passers by (especially at boys), and apparently in a state of general disturbance. I thought that Minting was more excited than I ever saw him before; he has always seemed to dislike shows, but accepted them as necessary evils. The same of Ilford Caution and Cromwell, both are amiability itself at shows, and solicitous of notice, Cromwell especially overwhelms one with frantic attentions, yet while they were still amiable at New York, they seemed to be keeping a weather eye open for something to happen. The cause of this did not strike me at the time, but I have since remembered that I once saw a mastiff handler lash one of his dogs for making a noise, and I have no doubt that it was the sound of such lashings and the responsive howls of the victims that disturbed all the dogs in the neighborhood. It seems to me that under no circumstances has a handler a right to disturb another party's dogs, by lashing his own. The handler who cannot keep his dogs under control in a show without a whip is unfit to be trusted with such a responsibility. If he chooses to risk his own life by using a whip on his dogs at home, he may do so, but he will some day undertake it, when the victim resists and other dogs are present and at liberty, and a worse than the "Camden horror" will be the result, and the poor mastiff will suffer in reputation as a consequence. W. WADE.

HULTON, Pa., March 2.

JOHNNY AND DRAKE.

Editor Forest and Stream:

Mr. A. C. Collins has kindly drawn my attention to the following errors which appear in the catalogues of the Providence, Boston, Philadelphia, Hartford and New York shows of 1887, and this year's New York show, and I trust that you will allow me to set the matter right through the medium of FOREST AND STREAM to prevent possible complications or unpleasantness in the future. I only saw one catalogue last year, the Newark, and the entry therein is right, or I would have made the corrections before. As it was I had no idea they existed. The entries were made by Mr. W. Tallman, who, besides being a very busy man, has to enter a good many dogs, which would account in a measure for the blunders in question. For the two first I think the printer is to blame. I quote champion Johnny's entries only as the mistakes in those of Drake are identical:

"Providence, R. I.—Johnny, whelped June 11, 1884. Breeder, Capt. F. H. D. Vietta. (Ben—Joan) direct Clumber House descent."

"Boston, Mass.—Johnny, Jan. 11, 1884. Breeder, Capt. F. H. D. Vieth. (Ben—Joan)."

"Philadelphia, Pa.—Johnny, lemon and white, date of birth 3 years. Breeder, Capt. Vieth. Sire, Sam; dam, Joan."

"Hartford, Conn.—Johnny, whelped 1883. Color, lemon and white. Breeder, Capt. Vieth. Sire, Sam; dam, Joan."

"New York, N. Y., 1887.—Johnny, liver and white, etc."

"New York, N. Y., 1888.—Johnny, 5896, born June 11, 1884. Breeder, Capt. Vieth. (Ben—Joan). Winnings, first, Newark; second, Providence; first, Boston; first, Hartford, 1887."

I also notice in your Philadelphia prize list the following: "Champion Clumbers, F. H. Mercer's Johnny." Not having seen the catalogue I do not know who is to blame. Allow me to give the true particulars as the simplest method of correcting the incorrect: Johnny, lemon and white Clumber spaniel, born June 11, 1884. Breeder, Capt. F. H. D. Vieth. Sire, Ben; dam, Joan. Direct Clumber House descent. Owners, F. H. F. Mercer and W. B. Almon Hill (Clumber Kennel). Winnings, first, Newark; second, Providence; first and special, Boston; first, Philadelphia, 1887. Champion and stud dog cups, New York; champion, Philadelphia, 1888. These, with of course the exception of the record, apply also to Drake.

Apologizing for occupying your valuable space, for which my desire to have the matter explained must be my excuse, I am very truly yours, F. H. F. MERCER.

SNOOZER.—London, Ont.—Snoozer was a mongrel with a good deal of terrier blood in him, and his intelligence was remarkable. He became acquainted with me as a bicycle rider soon after I first met him, and he immediately thought that every one who rode a wheel must be myself; but one or two trials convinced him of his error, and he would always recognize me when riding down town, and would run out from the sidewalk wagging his tail and smiling as only he could. The finest display of intelligence I ever saw him make was when I leaned over to him in my office and said, "Snoozer, are you coming down to the bank with me, old boy?" He jumped up and wagged his tail and we started. On the way I stepped into a store and lost him, or rather he lost me. In a short time I came out and missed him, but felt no anxiety as it was impossible for him to get lost. When I got to the bank, however, I found him lying down in front of the teller's desk waiting for me, and when he saw me he indicated by his actions that he wasn't at all surprised but knew I would come. It was his habit to accompany me all over town, and the bank was not the place to which I went most frequently, so that he must have plainly understood me. I would not have been surprised had he looked at the bank for me, but I certainly was surprised to have him wait for me there.—W. E. S.

MASTIFFS AT NEW YORK.—*Editor Forest and Stream:* In your report of the New York dog show in your issue of March 1, in speaking of the awards of the mastiff class, you say that the owner of Homer has admitted that the award of the champion prize to him over Ilford Caution was wrong. As Mr. Stevenson was confined to his home by sickness during the entire period of the show this statement must be intended to refer to me, and I will thank you to contradict it as being an entire mistake.—R. D. BELKNAP. [It must be admitted that the statement to which Mr. Belknap takes exception was incorrect. The reporter doubtless had in mind something that had happened in the past. At the Fanciers show, held in New York two years ago, Ilford Caution was placed over Homer and Mr. Stevenson admitted that the decision was correct. At the recent New York show Caution was in better form than we have ever seen him, while Homer, to say the least, is hardly as good as he was two years ago, consequently the statement of our reporter was practically correct.]

AMERICAN FOX-TERRIER CLUB.—*Editor Forest and Stream:* At the annual meeting of the American Fox-Terrier Club, held Feb. 23, 1888, the following officers were elected: August Belmont, Jr., President; John E. Thayer, Vice-President; H. P. Frothingham, Secretary-Treasurer, 2 Wall street, New York. Board of Governors—August Belmont, Jr., H. P. Frothingham, J. E. I. Grainger, Fred. Hoey, Edward Kelly, Clarence Rathbone, L. M. Rutherfurd, Jr., W. Rutherfurd, John E. Thayer. The club is in a most promising condition, and that there are a great many additions to the ranks of breeders and exhibitors of the fox-terriers was shown by the unprecedented entry of 121 fox-terriers at the late New York show. The stakes also filled with very much increased entries, Apollo closed with 9, Tomboy with 12, Home-bred Puppy with 69, Produce of 1889 with 97, Stud Dog of 1889 with 22 subscriptions.—H. P. FROTHINGHAM, Secretary.

MICHIGAN KENNEL CLUB.—At the annual meeting of the Michigan Kennel Club at Detroit, March 6, the following officers were elected: President, Bruce Goodfellow; Vice-President, John N. Bagley; Secretary, Dr. M. V. B. Saunders; Treasurer, Fred C. Whitney; Fifth Member Executive Committee, F. H. Croul; Delegate, H. E. Cook.

KENNEL MANAGEMENT.

☞ No Notice Taken of Anonymous Correspondents.

R. Q. T., Baltimore.—One of my dog puppies, 9 weeks old, has a small wen about size of a hickory nut on his stomach. It is soft. Is there anything I can do for it, or do you think it will disappear in time? Ans. Dog is ruptured probably, "umbilical hernia." Consult a vet.

H. M., Detroit, Mich.—1. What is the earliest age at which a bitch should be bred? 2. I have a pug bitch, 10 months old, whose hair has been and is still coming out to such an extent that she is beginning to look mangy. How can this be cured? Ans. 1. Unless well matured, do not breed until her second season. 2. Fowler's solution of arsenic, 5 drops night and morning, and keep bowels open.

L. W. C., Schenectady, N. Y.—I have an Irish setter dog, 8 years old. His nose has been running for about ten weeks, and swells slightly at times. The discharge is very much like water. He has also been shedding his coat about three months. Will you kindly inform me what I can do to prevent the discharge and hair falling out? Ans. Keep the bowels open with two teaspoonsful of syrup of buckthorn daily. Give 5 drops Fowler's solution of arsenic three times daily in the food.

SPANIEL, New York,—I have a spaniel dog 2yrs. old recently imported, who has been suffering since his arrival from some skin disease. Have tried him with Fowler's solution, 6 drops, twice daily in his food for three months, but it seems to have no effect. He will get better and put on flesh, and then break out again all over his back. After a few days sores dry up, scab forms. Appetite fairly good, at present in poor condition. Coat rough and eyes sore. Have tried different treatments without success. Kindly advise what course to follow. Ans. Give 10 drop tincture of chloride of iron in water morning and evening and apply the following salve:

℞ Ung. diachylon.... ..... ℥ss.
Ung. zinc oxid..... ..... ʒiss.
Mix.

W. S. B., Jamestown, N. Y.—I recently lost a fox-terrier bitch puppy, seven months old, under peculiar circumstances, and thought possibly you might be able to explain the cause. She had been eating little for a few days, though the first symptom we noticed was a constant shivering and inclination to keep close to the stove. During the night she seemed restless and the next morning she evinced considerable thirst, but immediately threw up on drinking. Showed a good deal of fever, head hot, etc., and I began treating her for distemper. By noon she had no apparent fever and was sleeping quietly by the fire. At 2 o'clock my mother, who had been working in the same room, went over to pet her and found her dead—had died without a whimper. The dog was not noticeably sick over two days and did not have a convulsion of any kind, or make a single complaint; was of a perfect constitution, had not seen a sick day since coming into my possession at two months; weighed about 18lbs. An hour before she died her pulse was 180. Don't think the dog was poisoned, indeed know of no poison that would act in that way. Ans. Not possible to say. A post-mortem would have disclosed cause. Possibly poison, rapid pneumonia, cerebral or heart trouble.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co

RANGE AND GALLERY.

BOSTON, March 10.—The shooting conditions were very good today at the Walnut Hill. Below are the scores:

Revolver Match, 50yds.

	6	10	6	2	4	3	4	4	7	4—50—101

Chas. Summers won gold medal.—JAS. MONTGOMERY, JR., Sec.

TOPEKA.—At the last shoot of the Rifle Club, the leading scores stood in three trials of 10 shots each on standard target, 200yds.:

E G Minkler	80	75	73—228	C C Trimmer	64	61 78—203
G E Morrison	76	76	80—232	Reed McCarter	57	71 72—200
C R Paine	66	75	80—221	J L Paine	67	58 70—195

SPRINGFIELD, Mass., March 3.—E. T. Stephens, of this city, made a clean record of bulleyes in shooting over the Chicopee Falls range this afternoon. His score was 93, only two points below the best on record, made by E. T. Richardson and C. H. Winthrop. The president, vice-president, captain and a number of the Maynard Rifle Club present signed the score card, so that the record made by Stephens would be recognized. H shot at a Hinman or standard target, 200yds., off-hand, using a Maynard rifle of .32-cal., with 35grs. powder and 162grs. lead. Below are the complete scores:

Stephens	8	9	9	10	9	10	10	10	9	9—93
Clark	7	6	8	9	8	8	9	8	6	10—80
Engle	10	8	6	10	5	9	7	10	9	6—80
Gassner	6	10	9	4	6	6	7	9	10	8—76
Horr	9	4	8	6	5	8	4	5	10	7—66
Warner	6	5	5	9	6	5	4	3	7	5—55

THE REMINGTON SALE.—The resale of the Remington Armory at Ilion, with Hartley & Graham again the purchasers, this time at $200,000, an advance of 47,800 over the bid at which the property was knocked down to them at the sale of Feb. 11, has been the subject of considerable discussion among the gun trade. Ex.-Gov. W. C. Squire and ex-Senator Warner Miller, were the trustees of the syndicate formed to bid the property up to about twice the figure at which it was sold, unless Hartley & Graham would agree to continue to run the works in place of dismantling them, as has been reported. Wm. W. Reynolds, of the firm of Hartley & Graham, who represented the firm at the sale, said that everything was now settled, and that upon the approval of the sale by the court the firm would enter into possession. There would be no further opposition to the confirmation of the sale, as the syndicate had withdrawn its objections. Mr. Hartley, the senior partner, said: "We wrote a letter to the syndicate, giving our promise to run the works at Ilion, and not to dismantle them or to remove any machinery except to replace it with later inventions. We intend to run them as a business concern, to make money."

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

CANADIAN TRAP NEWS.

PARIS, March 3.—A shooting match took place here to-day for $25 a side, between James Cook, of Paris, and Chas. Fisher, of Brantford, at thirteen birds each. Cook won by killing eleven, Fisher only eight.

TORONTO, March 3.—The following scores were made at McDowall's grounds to-day. Artificial blackbirds were the targets. Three prizes were shot for in the 5-bird matches and four in the others: First sweep, 5 birds—Felstead and McDowall divided first and second, Rice and Hetherington divided third. Second sweep, 5 birds—Hetherington and McDowall divided first and second. Third sweep, 5 birds—Hetherington and Gilroy divided first and second. Fourth sweep, 5 birds—Hetherington first. Fifth sweep, 5 birds, class shooting—Hetherington first. Sixth sweep, 10 birds, class shooting—McDowall first, Charles second money, McClure and Rice divided third, Felstead fourth. Seventh sweep, 5 birds, class shooting—Felstead, Roberts and McDowall took 5 straight, Hetherington and Charles 4, and McClure 3. A 10-bird match between Roberts and Charles was won by the former with a score of 8 to 7.

The silver cup presented to the Bradford Gun Club by W. H. Cooper, of Toronto, was finally won on Friday, March 2, by Peter Matt for the third time. T. Edmanson won it twice and Joseph J. Boddy, James St. Clair, W. A. St. Clair and S. Mitchell once. The club are making arrangements to have a friendly shoot with the Owls, of Toronto.

The much-talked-of shooting match between Messrs. James Douglas and Samuel Staneland, at 25 birds each for $100 a side, came off on March 6 at Dan Blea's place, West Toronto Junction, Staneland winning by the poor score of 14 to 12. The birds were very lively, but neither man appeared able to do himself justice. Luck was against Douglas, several of whose birds fell dead beyond bounds. Staneland started off by grassing 5 straight, while Douglas missed 4. The latter subsequently braced up a bit, but could never recover the ground lost at the outset. Here is the score:

At 25 birds, 26yds. rise:

Douglas	1000010001101011000111101—12
Staneland	1111100001110011001001011—14

Dan Blea was the referee.

MONTREAL, March 8.—The annual meeting of the Montreal Gun Club was held to-night in Victoria armory, and was pretty hot for a little while. It has been known for a long time that there were two rival factions in the club, one of which wanted the club grounds moved to Cole St. Antoine and the annual fees raised, while the other wanted the club to still shoot at St. Gabriel and retain the old subscription fee. Though not openly announced it was pretty well understood that the split was between the French and English members; the former did not turn up at the meeting in any numbers and consequently the English section carried everything before them and elected their complete ticket, which was as follows: President, A. Ramsay; Vice-President, Geo. Boulter; Sec.-Treas., E. A. Cowley; Captain, C. McEachreau; Committee, Messrs. Atwater, McCaw and Leach. The question of drafting new by-laws and constitution was referred to the new committee, which is tantamount to making the changes the English faction have been agitating for. A large number of resignations were received, and Alderman Morris informed the meeting that a new gun club will be organized at once. It will likely be called the Dominion Club, and will in a great measure be constituted of the men who have resigned from the Montreal Club.

OTTAWA, March 9.—The Ottawa Gun Club held a shoot to-day at fifteen birds. Harry Street took the first prize with 10, B. Rothwell coming second with 9, W. Tracey third, also with 9, A. Stewart, E. White and L. Labelle tieing with 8, and A. McPhee killing 6. This evening the club had its annual meeting, and elected as officers: Dr. Beth, President; Alexander Stewart, Vice-President; H. Streetfield, Captain; C. Chubbuck, Secretary-Treasurer; Dr. Mepher, Baldwin Tracey and Rothwell, Committee; Labelle and Davies, Auditors. The club is doing well, and will send two teams to the St. Hubert Gun Club tournament.

The first shoot for the gun presented by Messrs. Enos, James & Co., of Birmingham, through Mr. Charles Stark, of Toronto, to the West Toronto Junction Gun Club will take place at Dan Blea's grounds on Tuesday next, the 13th inst., at twenty Canada blackbirds.

BOSTON, March 7.—A large crowd of trap shooters was early at the Walnut Hill Range to-day, to take part in the opening matches of the season, and to shoot in the champion team badge match, which was won by the Wellington Gun Club. Following are the team scores and other events of the day:

Wellington Gun Club (First Team).

Wheeler	1111111011011111111101—17
Dan	1011111101111111111111—18
Stanton	1100111011111011011115

Snow	1100001111100011110—12
Gordon	1000011000101111111—12—71

Results in other events:

First event, 5 bluebirds—Wheeler first, Eager, Davis and Smith second, Wurm third.

Second event, 5 clay-pigeons—Smith first, Wurm and Dickey second, Gilman and Nichols third, Eager fourth.

Third event, 6 blackbirds—Tinker first, Dickey and Sampson second, Snow third, Eager and Nichols fourth.

Fourth event, 10 clay-pigeons—Dan first, Swan second, Wheeler and Stanton third, Eager and Holden fourth.

Fifth event, 3 pairs larks—Smith first, Tinker, Wurm and Dickey second, Eager and Davis third, Knowles fourth.

Sixth event, Macomber targets—Smith first, Wheeler second, Wurm and Tinker third, Snow and Davis fourth.

Seventh event, 5 clay-pigeons—Edwards first, Sampson, Wheeler, Tinker and Sanborn second, French third, Gilman fourth.

Eighth event, 10 blackbirds—Wheeler and Stanton first, Nichols and Swan second, Gerry, Dickey and Sampson third, Davis, Gilman and Holden fourth.

Ninth event, 10 blackbirds, straightaway—Wheeler and Gerry first, Dan and Dickey second, Tinker third, Nichols and Smith fourth.

Tenth event, 7 blackbirds, straightaway—Lee, Dickey and Edwards first, Chase, Stanton and Tinker second, Wurm and Wheeler third, Perry fourth.

Eleventh event, 25 clay-pigeons—Dickey first, Wheeler second, Eager and Wurm third.

Twelfth event, 7 blackbirds—Snow and Eager first, Edwards, Chase and Dickey second, Wheeler third, Dan and Wurm fourth.

Thirteenth event, 5 clay-pigeons—Eager and Wheeler first, Wurm second, Edwards and Chase third.

Fourteenth event, 5 clay-pigeons—Wurm and Dan first, Chase second, Dickey and Nichols third.

Fifteenth event, miss and out, clay-pigeons—Wheeler and Wurm first.

THE CAPITAL CITY GUN CLUB, of Washington, D. C., at its annual meeting, March 7, elected the following officers: President, Burridge Wilson; Vice-President, Col. J. L. Woodbridge; Secretary, Seymour Cunningham; Treasurer, James M. Green; 5th member of Executive Committee, F. A. Hopper. Headquarters, 1405 F. street. Any strangers visiting our city who are interested in field or trap shooting are cordially invited to look us up.

Shoot for individual challenge badge, clay-pigeons, 5 traps:

Green (16)	1110000111110101011111100010110111000110—32
Cunningham (18)	1111111111111111101111101111111101111111101111—46

FRESH POND GUN CLUB.—Fresh Pond, L. I.—At the annual meeting of the Fresh Pond Gun Club the following officers were elected: Wm. Alexander, President; James B. Kent, Vice-President; S. S. Scott, Secretary; L. B. Kent, Treasurer,—S. S. SCOTT, Sec.

SPRINGFIELD, N. J., March 5.—Union Gun Club's third monthly prize shoot at 25 blue rocks, 3 traps, 18yds. rise, N. G. A. rules. 7 prizes:

E D Miller	1111110111111111111111111—24
J M Roll	1111011111111111101110110—21
C H Johnson	1111111111010011111111—22
F Dunican	1110111001010111100101010—15
A Sickley	1011011010000111601010010—13
H Lightipe	1100000100000100000000001— 5
W Sopher	0111011000100110100111111—15
Conover	0110111110001011100100011—17
R Williams	1111110111011111110001111—20
D H Sayre	1011010110100101010010100—12
G Pudney	1110101011111111111111101—21
R Morrison	1111101101111111111101001—20
[illegible] Bryant	0110110010000100101001111—13
E Sickley	1111101111111000101110111—19
V Sayre	1001110011000101110101011—13
W Wade	1100100110000100000100000— 8
Newton	1111110010101010110000101—14

Miller took diamond badge. Johnson gold badge. Roll with 5 to Pudney's 4 took silver badge. Monson with 5 to Williams' 4 took corduroy hunting coat. Sickley, leather gun case. Conover, corduroy hunting pants. Duncan, canvas hunting coat. The boys all enjoyed themselves. The day was cloudy and the light rather poor, which accounted for some of the lower scores, especially that of Mr. V. Sayre, whose eyesight is getting dim on account of his age. Although Mr. Sayre is nearly eighty years old, he makes remarkable shooting on a clear day, and takes as much fun out of the recreation as any of the younger members. The match had been about completed, and Mr. Roll, the president of the club, had won the second prize, a handsome gold badge, when lo, the arrival of Mr. Johnson, who had been detained by his train, put a nervous expression upon the face of the over joyous Roll, as Johnson is considered one of the best shots of the club. He shot his score of 25 birds in seven minutes, without leaving his place, and breaking 22 out of the 25, thus depriving Roll of his second honors and adding one of the many exciting events to the day. Several sweeps were shot, double and single birds, and excellent scores made. Hot coffee was furnished free on the grounds, and with the warm club house every one was comfortable.

SYRACUSE, March 3.—The Auburn and Onondaga Sportsmen's clubs shot a match this afternoon for the second time this season. The stakes were suppers for the teams. A few weeks ago the Onondagas went to Auburn and were defeated and to-day they turned the tables on the victors at the Valley range in this city, and ate a supper at the expense of Auburn later in the evening. The match was a close and exciting one, Syracuse winning by only 2 points. One month from now a final match will be shot at Auburn, when the question of the best two out of three will be considered and settled. The score to-day was:

Syracuse.		Auburn.	
Prettie	14	Tuttle	13
Montgomery	16	Embody	10
Sawyer	11	Rathbone	12
Hookway	14	Stewart	16
Luther	15	Church	13
Walters	11	Perree	13
Williams	14	Whedon	12
Blakely	10	Howland	14
Ayers	14	Bridgen	15
McCormick	13	Steele	12
	132		130

WELLINGTON, March 10.—The Saturday shoot of the Wellington Club was well patronized to-day. In the merchandise match, points were made as follows: Bert first, with 18; Stanton second, with 16; Scott, Bond, C. B. Sanborn, Chapin, Phelps and Payson third, with 15; Chase, Eager, Schaefer, Garfield and Grimes fourth, with 14; Snow, Green and Bill fifth, with 13; Bangs, Edwards, Bradstreet and Brown sixth, with 12; Stanley seventh, with 11; and Moore and Hammond eighth, with 10, out of 20 birds, 10 clay-pigeons and 10 blue rocks. Following are the winners in the sweepstake matches: 1. Six clay-pigeons—Eager and Scott first. 2. Six blue rocks—Scott, Moore and Eager first. 3. Six clay-pigeons—Bert and Schaefer first. 4. Six blue rocks—Bond, Moore and Grimes first. 5. Ten clay-pigeons, merchandise match—Scott, Garfield, C. B. Sanborn and Bert first. 6. Ten blue rocks, merchandise match—Bert first. 7. Six clay-pigeons—Bert first. 8. Six blue rocks—Stanton, Bill, Chase and Stanley first. 9. Six blue rocks—Moore and Stanton first.

DAYTON, O., March 7.—A match was shot here to-day between Al Bandle, of Cincinnati, and Rolla Heikes, of Dayton; 100 live birds each, for $100 a side, Burlington rules. Bandle won by a score of 87 to 84.

CAMDEN, N. J., March 10.—There was an interesting live-pigeon shoot to-day at Chris Ekert's, for a fine Clabrough breechloading doublebarrel gun, 12-gauge; 25yds. rise, $2 entrance, no shooter allowed more than two chances; first ties, 28yds.; second ties 31yds.: Geo. Horner, 101, 110, 010; Geo. Wolf, 011, 110, 11; G. H. Huber, 00; L. M. Featman, 101, 110, 00. C. Eckert, 100; P. Clew, 110, 00 A. Steinman, 00; J. Peacock, 110, 00; I. B. Meeks, 100; A. Steinman 110, 110, 010; S. Alberson, 101, 100; E. Wallace, 100; Metz, 00; H. Fox 100; W. Kerns, 110, 00; Hothersall, 101, 011; Metz, 011, 00; Meeks, 100 Eckert, 00; Kerns, 100; won by G. Wolf. The birds were an extra good lot, and many fell dead out of bounds.

CINCINNATI, March 7.—In a suit by the Ligowsky Clay Pigeon Company against the American Clay Pigeon Bird Company, Judge Sage to-day decided that two patents of Geo. Ligowsky and J. A. Bloom, covering the trap used for throwing the clay pigeons or clay birds, both owned by the plaintiff, were infringed by the defendant, and granted a perpetual injunction, with an allowance of damages to be sustained by an account. The court held that Geo. Ligowsky's patent was an original device, and that it covered all the essential features of the machine.

BRIGHTON GUN CLUB.—This club held a shoot on the 7th a Faneuil, Mass. A number of trials were had at clay pigeons Peoria blackbirds and bats. The principal event was the contes in the Boston Gun Club series, the following being the winners D. Kirkwood first, J. Connell and F. Gaiceley second, C. Parker, E Flanders, E. Green and B. Lynn third, H. Sangus fourth, C. Grew fifth, I. C. Maguire sixth, L. Brievogel seventh, B. Jones eighth, F Buck ninth, T. Harrigan tenth.

DETROIT, March 13.—A grand blue-rock shooting tournament open to the world, opened here to-day and will close on the 16th One thousand dollars in prizes are guaranteed.

Canoeing.

STANDING OR LOWERING RIGS.

Editor Forest and Stream:

In my last I asked "Paddle" to enlighten us on the reason why in the international race the crew of Pecowsic, that had not enough sail, did not get down on his knees and change for larger ones, and thus show that the claims made for this style of rig could be upheld in practice. "Paddle," in answer, comments on what he is pleased to call my dense ignorance and piteous appeal for light, and yet refrains from enlightening us on the point wherein our ignorance lay. With reference to the Humber Bay experience, Dotterel reminds me that when starting out we sailed until the wind got too light, when sails were lowered and paddles resorted to. "Paddle," says, "Now, just think what would have happened if he had had standing sails. Why he would just have stowed them and rode the storm out." Yes, that reads very nicely. But in the first place, I could not have stowed them, as I have a 4ft. air chamber in the bow of my canoe that would not admit the standing masts; and in the second place, even if the air chamber had not been there, the space on each side of my centerboard was filled with grub box, dunnage bag, etc.; in the third place, there is not one canoe in a hundred that has room to put standing sails in when cruising stuff is on board. Where, then, are the claims made regarding the advantages of this style of rig? "Paddle" brings out his horn of victory and makes the air ring with its loud blasts proclaiming all sorts of advantages for the standing rigs, and then in the next breath, without a blush, he says that Mr. Barney is discarding the standing rig—for what?—for what "Paddle" evidently considers a second-rate rig, *i. e.*, a hoisting one. It is satisfaction enough for me to learn that the originator of the rig is kicking it overboard after two years' trial, and taking to what I have been advocating, not because I advocated it, but because he found by experience that it was best, and I presume it is the same with his canoe. Just one more point. "Paddle" says when your sails are nicely stowed, just sit low, and with a few strokes of the paddle head your craft up into the wind and wait. Only a person who had never been within a thousand miles of Humber

Bay could talk such pure nonsense. Humber Bay is an indentation of Lake Ontario, considered by all mariners to be the stormiest of all the great lakes, and for any one to advise a canoeist meeting with a squall in that vicinity just to sit low and wait to be blown out into the broad tempestuous waters of Lake Ontario, why it is—well, I just haven't language to express what it is without resorting to cuss words. Of course, we who cruise to Humber Bay ten or twelve times a year are always pleased to receive such good advice, as we do not know anything about the locality ourselves.

It seems to me that "Paddle's" idea to change the proposed paddling cups from Class I. to Classes III. and IV. is a most wholesome one, as a Class I. canoe is practically good for nothing, and now that there are no special races for it I believe there are only four canoes of that type in the Association; while if a good cup were to be given for that class perhaps next year we would have ten or twelve useless canoes of that style. But if the cup, as "Paddle" suggests, is given for Classes III. and IV., many will enter with their ordinary paddling craft a little polished up. I do not think it would be well to confine the paddling races for the cup to decked craft, though they should be allowed to compete, but the sailing and combined cups would afford sufficient sport for that craft, while a paddling cup shall be won by a paddling canoe which in nine cases out of ten are not decked. With reference to "Gracie L.'s" article, the point he makes about deadrise is good, and one which I put into practice in the spring of 1887 when building my canoe.

Be it far from me to want to see all Class A canoes thrown out of the Association, as I believe they have their place, but what I was objecting to was their being especially favored with the 75ft. limit, besides having as good a chance in the unlimited, while a good and large class of canoes had no race. Nor do I want to see the races so fixed that the rough-bottomed baggy-sail cruiser can win, but that a good model of sufficient beam and stowing capacity, properly rigged, shall be put on an even or better footing than purely sailing machines. W. G. MACKENDRICK.

TORONTO, March 2.

THE SINGLE BLADE AND THE OPEN CANOE.

Editor Forest and Stream:

If, from his own experience, Dr. Douglass has come to the conclusion that the double-bladed paddle will carry a man further in a day than will the single-blade, the expenditure of energy in each case being equal, I am prepared to abandon my belief to the contrary, but I am not prepared to admit that the double-blade is in place in an open canoe for all that. The Doctor himself says that it is generally admitted that for fishing and hunting and for tandem work, the single-blade is superior to the double. It should be as freely admitted that it is a handier and finer instrument, requiring more skill in its use than the double, and that it can be used to better general advantage, and with more pleasurable effect in an open canoe than can the double. If these facts are not cogent enough to justify an attempt being made to prevent the racing mania from breaking up the historical connection between the single-blade and the open canoe, it can only be because the "git thar" argument is the only one now regarded as of any moment. I do not wish to be considered as an enemy of the double-blade; on the contrary, I think that it is as much in place in a decked canoe as the single-blade is in an open one. The mere fact that in order to use a double-blade in a Canadian open canoe it is necessary to build a "soap box" seat into her, spoiling her for anything else, should be enough to condemn the use of the wrong paddle in the right boat. Dirt is only matter out of place, but it is a serious nuisance for all that.

I do not believe that the racing mania is powerful enough to drive the single blade out of use, and that the Stricklands, Tom Wallace, Shaw, Sherwood and others, mighty wielders of the single paddle, are not to have successors; but I do think it would be an outrageous shame if the canoeing associations did not encourage them and the single blade. This duty falls particularly upon the Northern Division.

Dr. Douglass appears to be confident that the birch bark canoe was invented before the log by our Northern Indians. The natural evolution of the boat is from the raft to the hollowed log and from the dugout to the built craft, and I see no reason for believing that the evolution of the canoe on the waters of the front chain was an exception to the general rule. RETAW.

THE ATLANTIC DIVISION MEET.

BROOKLYN, N. Y., March 7.—*Editor Forest and Stream:* The Atlantic Division of the Association is formed, the boundaries outlined, the officers elected, and all has received the approval of the Executive. The next thing to be decided is the site for the first meet, which is no easy matter, and the excellent committee appointed by the vice-commodore, Messrs. Stephens, Whitlock and Carpenter, have before them a problem which is probably more important to the general Association than any that has arisen during the present administration. Something like 300 members of the Association have enlisted in the Atlantic Division, and if this division fails of its full purpose, probably many of that 200 will not return to the old organization. On the other hand, if the Division officers take the proper action, a large and strong contingent will be formed for the general good of the Association.

Where is the Division meet to be held? Several places have been suggested, on the Delaware, Croton Point, N. Y., Huntington Bay, etc., etc. The first place mentioned, it would seem, is out of the question, because so far from the majority of the members at present enrolled. The second place can hardly be accepted, for the reason that one of the chief arguments for a new division was the necessity of holding a salt-water meet, where one could get the full, free and steady sea breezes, and could experience the pleasures of salt-water cruising and racing. These cannot be obtained at Croton Point, which is thirty-five or forty miles up the Hudson River and directly opposite the Haverstraw Mountains. Huntington Bay is left, and a beautiful place it is, too; but is it not too far removed from the most of the members?

Now then, the present membership is divided something like this: New York city 71, Brooklyn and vicinity 17, Paterson and vicinity 17, Philadelphia 9, Washington 2, and a number scattering. It is plainly seen that a meet thirty-five miles east of New York is not easy of access to the largest number. What point then would be more desirable? The answer at once suggests itself, viz: somewhere near South Amboy or in that locality. I do not know of any particular place but surely some desirable site could be obtained and then being most centrally located a large and strong meet could be expected. Points on Raritan Bay can be reached by water in canoe by over 120 of the 150 members of the division. Daily steamboat connection from New York and vicinity, railroad direct from New Jersey points and Philadelphia. And what other point presents such desirable qualifications? New York, Brooklyn and the Passaic River men could cruise to the meet in a day, and others, with little inconvenience, could reach by train or boat. I have looked over the matter only by map.

Let us hear from some practical man in the neighborhood, for there must be many desirable sites. QUEEN BESS.

Editor Forest and Stream:

I suggested a site on the Delaware River for the Atlantic Division meet for the following reasons: If the meet were held in a locality where canoeists are numerous and only a few are members of the A. C. A., places as in Washington, Harrisburg or Philadelphia and their suburbs; it would undoubtedly increase the membership of the A. C. A. I remember how an objection was made by a man who lives in the northeast end of New Jersey about the A. C. A. meet being held on Lake George. Now, should the Atlantic Division meet be held in the near proximity to the boundary (which, however, would have the largest attendance in numbers), I suppose there will be no objection from the canoeists south of Pennsylvania, but they will wait until the meet moves south; and then join. Why not then in the beginning, by having the meet in a central location, encourage all canoeists to join? Perhaps some readers might think I want the meet where it is near home; this, however, is not the case. What I would like to see is a meet in a location where it does the most good. Perhaps some of the Washington or Harrisburg canoeists can suggest a better site. J. A. B.

PHILADELPHIA, March 3.

Editor Forest and Stream:

As the time of holding the Atlantic Division meet is as important as where it shall be held, and as no suggestions have been made, I write expressing not only my own, but the opinion of a number of others. The Passaic River canoeists (with a very few exceptions) will not go to Lake George and want to spend their vacation at the Division meet. Many others from Jersey, the Delaware, Pennsylvania and other sections in the Atlantic Division who have never been to an A. C. A. meet will probably do the same thing if? If what? If the meet is held at a time when they can get off and if it lasts long enough to pay for the time and trouble of traveling there. If held in August it would conflict with the Central Division meet at Lake George. September is too late and we have nothing left but July. The moon is full on July 23, and so the best time for a meet would be from July 14 to 23. July 1 to 7 has been suggested but does not find favor, as being a little too early to get vacations and having no moon. All with whom I have talked favor a meet of not less than ten days, held in middle or latter part of July. It should be at least ten days to make it worth while for those at a distance to come, and we will hope to see many such.

We have all wanted a meet convenient to New York waters, have done our share of kicking at the way things have been run, and now that we have a division of our own let us have a meet that will be so attractive that every canoeist within the limits of the Atlantic Division will be interested and want to attend. I should like to hear from others in different parts of our new Division. IDLEMERE.

BELLEVILLE, N. J.

CANOE CRUISES.

Editor Forest and Stream:

The following summaries of cruises about New York and Long Island Sound may be useful to others cruising over the same waters:

MORRIS CANAL—PASSAIC RIVER—1882.

Newark, Little Falls, Paterson.

July 6—Morris Canal, Newark to Paterson.
7—Morris Canal, Paterson to Pompton Feeder.
8—Morris Canal, Pompton Feeder to Little Falls; Passaic River, Little Falls to Newark.

PASSAIC, EAST, HARLEM AND HUDSON RIVERS—LONG ISLAND SOUND—1882.

Newark, Bridgeport, New Haven, Newark.

Aug. 12—Newark, 12:30 P. M., arr. Astoria, 7 P. M.
14—Astoria, 7 A. M., arr. Milton Harbor, 7 P. M., camp.
15—Rye.
16—Rye, 2 P. M., arr. Stamford, Conn.
17—Stamford.
18—Stamford, 10 A. M., arr. Penfield Reef Light House.
19—Light House, went to Bridgeport, arr. High Rock Grove, camp.
20—High Rock Grove, 8 A. M., arr. New Haven; New Haven, 2 P. M., arr. Penfield Reef L. H., 8 P. M.
21—Penfield Reef L. H., 12 M., arr. Stamford.
22—Stamford, 10 A. M., arr. Kingsbridge, Harlem, 8 P. M.
23—Kingsbridge, 8 A. M., arr. Newark, 4 P. M.

PASSAIC RIVER, MORRIS CANAL TO NEW YORK BAY, EAST RIVER, LONG ISLAND SOUND—1886.

Newark to Port Jefferson, L. I.

July 31—Newark, 11:20 P. M., arr. (Battery, 6 P. M.), Woolsey's Point, L. I., camp.
Aug. 1—Woolsey's Point, arr. Sands Point, camp, hotel.
2—Sands Point, arr. Matinecock Point, camp, hard blow.
3—In camp all day, hard blow and rough, fair camp, house close by.
4—Matinecock Point, arr. Eaton's Neck, farm, etc.; Eaton's Neck, arr. Crane's Neck, bad camp.
5—Crane's Neck, arr. Port Jefferson, good camp.
6—In camp.
7—Port Jefferson, arr. boat house, near Nissaquag, Smithtown Bay, (find Mr. Matherson), rain.
8—Smithtown Bay.
9—Smithtown Bay, arr. Oak Neck, camp.
10—Oak Neck, arr. Riker's Island, camp.
11—Riker's Island, arr. Newark.

NEW HAVEN, CONN.—NEWPORT, R. I.—1886.

Passaic and East Rivers, Newark and New York Bay, Long Island Sound, Rhode Island Coast.

Sept. 3—Newark, 8 A. M., went to Tompkinsville, arr. near Jersey City, night at anchor.
4—Saw races at Tompkinsville, arr. Pier 25, East River, 7 P. M.; by steamer Continental to New Haven, fare $1, room $1, canoe $2.50.
5—New Haven, arr. Stony Creek, night at anchor.
6—Stony Creek, 10 A. M. (at low tide scarcely any water in Kilingworth Harbor or Indian River; not enough for canoe) arr. Clinton, night at anchor.
7—Arr. Saybrook, camped at Govt. Dock, South Cove (bad); find Capt. Rance Brewell.
8, 9, 10—Foggy; but little breeze since 4th; in camp.
11—Saybrook, 12:15 P. M., reefed, arr. New London Light 3 P. M., arr. New London 5 P. M., night at anchor.
12—N. London, 1 P. M., arr. Bushy Point, a most perfect camping ground, milk, eggs, etc., can be had at Avery's Point.
13—Bushy Point, 12 M., arr. Stonington 3 P. M.; Stonington 4:30 P. M., arr. and entered Noye's Inlet 6 P. M.
14—Day spent at Noye's Point, quite a summer resort.
15—Noye's Point, 10 A. M., passed Judith, smooth water, arr. Beaver Tail at 6 P. M., Castle Hill, 10 P. M., anchored in creek.
16—Arr. Newport; stopped at Frasch's float; find E. W. Gilman.
17, 18, 19, 20, 21, 22—At Newport.
23—S.E. storm.
24—Newport, 4 P. M., breeze S.W., arr. Castle Hill Creek 6 P. M.; at anchor.
25—Castle Hill, 9 A. M., breeze N.E., arr. Judith 10:45 A. M.; immense sea; arr. Noye's Pt. 2 P. M., with S. wind; hard blow at night.
26—Blows hard from S.W. all day; tide very high; rainy.
27, 28, 29—At Noye's Point; find Mr. Chapman or Sissin.
30—Noye's Point, 2:30 P. M., arr. Stonington 5 P. M.; find Merrill A. Squires, a canoeist.
Oct. 1—Stonington, 12 M., arr. Avery's Point; very cold; for a fair price a very bad dinner may be had at Avery's Pt.
2—Arr. New London, very cold, but canoe on City of New York, fare to New York $1.75, canoe $2.50; A. R. Brown only canoeist here.
3—Arr. New York; arr. Newark; cold.

ROUSE'S POINT, N. Y., TO NEWARK, N. J.

Lake Champlain, Lake George and Hudson River.

August and September, 1887, cruised home from A. C. A. meet.

The above cruises, with the exception of Port Jefferson and Little Falls trip, which were made in home-made canvas canoe, 14×28, were taken alone in Rushton Mohican No. 1, 60sq. ft. sail.

STEAM CANOES.—Omaha, March 1, 1888.—*Editor Forest and Stream:* Will your correspondent "W.," writing of a "Very Small Steamer" in the FOREST AND STREAM of Jan. 28, 1886, please give a more detailed account of his steam canoe? As to the weight and height of engine from floor to cylinder top, and whose manufacture, the depth of canoe amidships and at bow and at stern, how much decked over, size of propeller and shaft, and general expense of construction, etc? Steam canoeing is a branch of aquatics pretty sure to make its appearance in the near future, to judge from the many questions on the subject propounded in "Notes and Queries" of the *Scientific American*. We have steam yachting, and its votaries are counted by the thousands, and why should we not have steam canoeing, to take its place among outdoor recreations as a pastime involving a pleasant study of delicate machinery, and a means of relaxation from the continual grind in the city. Heretofore the bulk and expense of fitting up canoes with steam machinery has been the greatest bar to its successful introduction, and it is still an open question as to whether steam power can be applied for cruising purposes. Mr. Davidson, in the *Scientific American* of March 8, 1879, describes his steam canoe Nina, accompanied by an engraving, and says that she was perfectly adapted to quiet river and bay cruising, and that the cost of running was insignificant. Now in this age of progress and electrical discoveries it would not seem strange, but rather only a question of time when the paddling canoeist of to-day will be equipped with a light and speedy self-propelling craft, and we already imagine him luxuriously reclining on a cushioned backrest, while he has only to press a little button beneath his hand on deck in order to start his screw, stop or go ahead, at half or full speed, and this too probably at a comparatively small outlay of cash. The motive power, not much larger than a high hat, is compactly stowed away in an unused compartment beneath the deck, and as he glides swiftly along with no exertion required on his part, he leans still further back on his soft, chair-like back-rest and idly wonders if the steam yachtsman with his many and heavy unpaid bills enjoys half the comfort and elegance that his staunch little craft affords.—W. R. S.

A. C. A. MEMBERSHIP.—Central Division: Ray Hillabrandt, Johnstown, N. Y., and F. K. Fitler, Pittsburg, Pa.

HARTFORD C. C.—Members of the Hartford C. C. are talking up the coming season; Rushton's catalogues and Joyner's, as well as others, have made their appearance. The new styles are being discussed, and one or two have orders in for new craft. Our river is now cold and the current swift, and, as I look at it from a window from whence I can see all of its long curve toward the city wharves, it has a bright, glittering, brown color, shading off into a chill steel blue. When it looks that way it is too cold for cruises around Hartford. We shall, in a few days, be joining hands in the canoe hospital over the varnish pot, and shall be looking up the few grains of tobacco left over from last fall in our lockers. We shall take a smoke out of it—not because it is the best tobacco in the world, but because it will have a flavor of the pleasures of last summer, and be an earnest of the pleasures of the coming season, when the river shall be no longer blue and chill, but sparkling and cool and most inviting to the canoeist. Spring is upon us, and we long for a chance to use the jolly sail and the double paddle.—J. D. P.

Yachting.

AMERICAN AND ENGLISH YACHTS.

THE perfection of dryplate photography and the portable camera has proved a boon to the yachtsmen of to-day. To form any adequate idea of the importance which its present use will be to the yachtsmen of a generation hence it is only necessary to consider what would be the value of an accurate picture of the start for the great race of 1851, or the ocean races of 1866 and 1870. The yachts of that time have passed out of existence or have been so altered as to be unrecognizable, and the thousand and one details of rig and style that would be most interesting to-day are irretrievably lost. Not so will it be, however, with the fleet of to-day; twenty, forty, or a hundred years hence the leading craft, large and small, will be preserved in every detail through the art of the photographer and printer. To most persons the photograph of a yacht is a pretty picture, something to admire for the moment and then to forget, but to the yachtsman it is more than a mere pleasant reminder of his boat, it shows her truthfully as she was, and by its aid he is enabled to study the rig and sails with a scrutiny that is not possible when sailing on board. Yachtsmen everywhere are familiar with the work of Mr. N. L. Stebbins, of Boston, whose pictures embrace the leading British yachts as well as the greater part of the American fleet. The best of these photos to the number of fifty have lately been reproduced by the photo-gravure process and gathered together in a very handsome volume, published by Charles Scribner's Sons, under the title of "American and English Yachts." The reproductions, made directly from the negative, lose nothing in detail and absolute accuracy, while they gain in the softness of tint over the original photograph. The selection is an excellent one, giving the leading yachts, both racing and cruising, of both nations, from the largest racers down to catboats, steam not being forgotten. Each plate is accompanied by a brief history of the yacht, with her dimensions, the latter being obtained from the most authentic sources accessible. A feature of the book is the introduction, by Mr. Edward Burgess.

As this is the first occasion on which the noted designer has appeared in print, and as no one is better qualified than he to write much that yachtsmen would be glad to read, it is something of a disappointment to find that he has quoted liberally from English authorities; however, the summary of the growth of American yachting, though brief, is not without interest from a historical point of view. As to the living issues of to-day Mr. Burgess says little, but we are glad to notice that he speaks in favor of a heavier tax on sail, and we hope the hint will not be lost when the question of measurement is taken up by any of the clubs. Mr. Burgess says, "In taxing the sail area more than has yet been done by our clubs, the English have not erred, and I hope that we shall follow the same direction." Speaking of the great point now in dispute, he says, "As for the comparative merits of the centerboard and keel, the question, I think, is more one of convenience and safety than of speed. For the smaller class, where sufficient draft of water can be given without bringing the boat into constant danger of taking the ground, and rendering docking inconvenient, the keel boat has some advantages; but in the large boats, where the draft must be limited, the centerboard is a most desirable addition and will come into universal use for cruising yachts, as well as racers." We could ask no better indorsement than this of the position that the FOREST AND STREAM has so long held, that the centerboard possesses no special virtue of itself, that the keel is at least equal to it in point of speed, and superior in other points where the depth will permit its use. As to the practical solution of the question in the large classes, whether the improvement of the keel boat of 80 to 90ft. is merely a matter of detail without exceeding the present dimensions, we believe it is only possible at the expense of a draft that would be prohibitive. Mr. Burgess evidently favors the latter idea, but the true answer to the problem can only be reached by further building and racing.

YACHT BUILDING AT ROSLYN.

MR. CLAPHAM is now busy with three new boats of the style lately described in the FOREST AND STREAM of Dec. 15, two being built at his yard in Roslyn and one under the direction of his foreman at Tarpon Springs, Fla. One of these yachts is to go to Buenos Ayres, a duplicate of Mr. Auchincloss's boat, 36ft. over all, 9ft. 6in. beam, 3ft. hold and 16in. draft. The clipper stem and long light counter, with a fair sheer, make a handsome and lively looking craft, far more shapely than the old sharpie. The sides flare out considerably, and the bottom has a moderate deadrise, but abaft the midships the sides round into the counter as in an ordinary yacht. The construction is very ingenious, the hull being strong and light. The keel is of chestnut, doubled where the mizzen step and the stock of the balanced rudder come. The main keel is cut away where the trunk comes through, but two long side keels are worked in, well bolted to the fore and after sections of the main keel. The timbers are of chestnut and the planking of clear cypress. A stringer of chestnut is worked along the heels of the timbers, and, with the lower strake of the side planking, forms a rabbet for the bottom plank, which run thwartship. The deck is of white pine and cypress in narrow strips. The rig will be that of the Roslyn yawl, introduced by Mr. Clapham. The headroom of course is limited, but for the draft, 16in., the accommodations are very good, five beds being easily made up, with extra space for stores and a large cockpit. There is ample room to sit up under the trunk, the chief disadvantage being the size of the centerboard, very long and so high that when fully up, as at anchor, the occupants of the cabin cannot see from side to side. The second yacht, for a Mr. Ruhe, of the New York *Sun*, is similar in model, but with a plumb stem, being 28ft. over all, 8ft. beam, 36in. hold, also yawl rigged. The Florida yacht is for Gen. W. W. Lowe, a 35ft. Roslyn yawl of the usual model. Mr. Clapham is also at work on a 16ft. cruiser.

SEAWANHAKA C. Y. C.—The second regular meeting of the Seawanhaka C. Y. C. was held on March 10. The committee on classification reported in favor of the adoption of the classification originated by the New York Y. C., which report was accepted. No action will be taken until the next meeting. A resolution was passed empowering the library committee to make a permanent list, for the use of members of the club only, of the various ports and depots of supplies along the coast. The list is intended to include all railways and facilities for repairs and hauling out, telegraph stations, stores, etc. The date for the annual race was set for June 23. A motion was passed to establish a standing committee to have charge of a register of Corinthian sailors, and to examine the qualifications of Corinthians. The fleet surgeon, Dr. J. West Roosevelt, has arranged two lectures on practical surgery and medicine for yachtsmen, which will be delivered in a short time. He has also perfected a compact medicine chest, specially for yachts of moderate size, which will be put on the market by one of our large drug firms at a moderate price. The next lecture will be delivered on March 17 at 8:30 P. M. by Lieut. Everett Hayden, U. S. N., the subject being "The pilot chart of the Atlantic Ocean." The lecture will be illustrated by stereopticon views.

KINGSTON (ONT.) Y. C.—Dr. C. K. Clarke's new 30ft. w.l. cutter Gerda is pronounced a very handsome craft. She is receiving her joiner work of cherry and maple and will be ready to bend sail at an early day. The builders deserve great credit for their job, which is perfectly true to the plans, although the first boat of her kind built in Kingston. Oldrieve & Horn will supply the canvas.

A NEW SPINNAKER BOOM.—Capt. Crandall, of the schooner Mohican, has devised an extension piece to be fitted to the inboard end of a spinnaker boom, extending its length at will.

NEW YORK Y. C.

A SPECIAL meeting of the New York Y.C. was held on March 9, at which a new classification was adopted and several changes in the constitution and rules were made. The classification is as follows:

Schooners.—Class 1, all over 100 feet, L. W. L. length; Class 2, all over 90 feet and not over 100 feet; Class 3, all over 80 feet and not over 90 feet; Class 4, all over 70 feet and not over 80 feet; Class 5, all 70 feet and under.

Sloops, Cutters and Yawls.—Class 1, all over 80 feet, L. W. L. length; Class 2 all of 80 feet and over 70 feet; Class 3, all of 70 feet and over 61 feet; Class 4, all of 61 feet and over 53 feet; Class 5, all of 53 feet and over 46 feet; Class 6, all of 46 feet length and under.

In place of the exception cause as to Class 2, sloops, the following general clause was adopted:

"Any yacht which shall have been launched prior to the 20th day of June, 1888, exceeding the higher limit in any class by not over the fraction of a foot, shall be included in that class."

The course was also changed so as to start from Buoy 15, just outside the Narrows, instead of from Buoy 18 off Owl's Head. The amendments passed are as follows:

Article XIX. of the Constitution to read:

"This Constitution shall only be amended as follows: The proposed amendment must be legibly written or printed with the name of the member proposing the same, and a copy thereof sent to the secretary of the club, and another copy pasted on the bulletin board of the club house for at least one week previous to a general meeting of the club. Any amendment must first be submitted at a general meeting, and shall be valid only when approved at a subsequent meeting. If adopted at the general meeting it must be kept posted until the next meeting by the secretary in a conspicuous place in the club house. No amendment once rejected shall be reconsidered at any subsequent meeting within six months thereafter. There shall be no suspension of any article of the Constitution."

Chapter XXIX. of the By-laws to read:

"These by-laws may be amended only as follows: The proposed amendment must be legibly written or printed with the name of the member proposing the same, and a copy thereof sent to the secretary of the club, and another copy posted on the bulletin board of the club house for at least one week previous to a general meeting of the club. Any amendment must first be submitted at a general meeting, and shall be valid only when approved at a subsequent meeting. If adopted at the general meeting it must be kept posted until the next meeting by the secretary in a conspicuous place in the club house. No amendment once rejected shall be reconsidered at any subsequent meeting within six months thereafter. There shall be no suspension of these by-laws."

Rule XXVIII. of the Racing Rules to read:

"These racing rules can be amended only at general meetings and as follows: The proposed amendment must be legibly written or printed with the name of the member proposing the same and a copy thereof sent to the Secretary of the Club, and another copy posted on the bulletin board of the club house at least one week previous to a general meeting of the Club. Any amendment adopted at a general meeting shall be valid only when approved at a subsequent general meeting. When adopted it must be kept posted until the next meeting by the Secretary in a conspicuous place in the club house. No amendment once rejected shall be reconsidered at any subsequent meeting within six months thereafter. There shall be no suspension of these rules."

ICE YACHTING.—On March 5 a race was sailed by the Marlborough I. Y. C. over a 10-mile course for first class yachts carrying over 400sq. ft. of sail. The starters were: Nimbus, Covert & Haviland; Moose, Theo. Kniffen; Yum Yum, E. W. Corwin. The latter won easily, taking the club pennant formerly held by the Etta. The race for the champion pennant of America was sailed on March 8 over a course of about 13 miles, off Roosevelt's Point, there being 3 rounds, 2 miles to windward and return; the wind was strong N.W. Before the main race a scrub race between Avalanche, Icicle and St. Nicholas was sailed, being won by the former. The challenge race was started at 12:20, with Scud, J. P. Weaver, of the Shrewsbury I. Y. C., in the windward berth, with Avalanche, E. H. Sanford, sailed by T. Smith; Icicle, J. A. Roosevelt, sailed by Norman Wright; St. Nicholas, owned and sailed by P. C. Rogers, and Northern Light, owned and sailed by Dr. J. C. Barron, in order. St. Nicholas soon led, the first round being timed: St. Nicholas, 12h. 55m. 48s.; Icicle, 12h. 55m. 56s.; Scud, 12h. 56m. 24s.; Avalanche, 12h. 56m. 47s. Northern Light was struck by a squall and lost a little time. At the next buoy St. Nicholas capsized and Icicle led. The second round was timed: Icicle, 1h. 6m. 53s.; Scud, 1h. 9m. 14s. Avalanche disabled her rudder and gave up; Icicle won by nearly two miles.

NEWARK Y. C.—The following officers were elected on March 8: Com., Thomas J. Rache; Vice-Com., Wm. Murray; Record. Sec., Frank Long; Fin. Sec., Thos. Luff; Treas., E. M. Grover; Meas., Wm. Humpage; Trustees, L. Wright, Jr., J. M. Foote and Hardy Bush. At the dinner which followed the meeting a handsome compass and binnacle was presented to the retiring commodore, Mr. Chas. E. Cameron, by the club, and an elegant cabin lamp was also presented by the seven members of the Corinthian crew of the flagship Emmy C. This yacht has been sold to Messrs. Price and Rache, former owners of the Annie R., and the latter name will be transferred to her. Mr. Cameron will have a new boat, now building by Price, to be called after the old one. Her dimensions are: Length over all, 35ft; l.w.l., 28ft. 6in.; beam, 11ft. 6in. She will be a centerboard boat, but with lead keel and inside ballast. Grey Eagle, Vixen and Rambler have been sold out of the club. The new move of the club to Newark Bay, made last season, gives a far better location than of old, and avoids the long and tedious trip up and down the river. The new anchorage, directly on the club course, can be reached by rail, and it is within easy sail of the Kills and Staten Island Sound.

STILL BEHIND THE AGE.—It hardly seems possible that yachtsmen could still be blind to the advantages of low ballast, and yet there is a place within a dozen miles of New York to which the great news of the use of lead keels has not yet penetrated. At Roslyn the cruising schooner Cavalier, a yacht of 65ft. l.w.l., is now nearly ready for launching. She is a keel boat, deep and of fair round form, with easy diagonals, but her keel, 2ft. or more outside of rabbet, is of wood, the ballast being entirely inside. In construction the yacht is very heavy through the liberal use of yellow pine of large scantling. How much she displaces or how much ballast she will require are yet among the uncertainties of the future. Unfortunately this is only one of many comparisons that might be made between progress forward in Boston and backward in New York. Boston builds a schooner with the second largest lead keel in the country; while in New York a yacht of the same size and type has only wood keel and inside ballast. Of course in a year or two some Long Island genius will "discover" or "invent" lead keels, as was done a couple of years since at Bay Ridge; and then the Cavalier will be hauled out at some expense and have one fitted.

CYTHERA.—This handsome and able cruiser is now fitting out for a cruise to the West Indies, with Mr. W. A. W. Stewart, her owner, and his family on board. There are very few American built yachts of the size that can show the cruising record of this fine yawl, which made a winter passage from England to the West Indies, and thence to New York, two years since, being hove to for 122 hours in a gale in the Bay of Biscay. Cythera has come in for much unmerited abuse from irresponsible critics because of her lack of speed in light weather, but the fact is entirely overlooked that she is kept under a small cruising rig for such work as she is now going on, and it is only through the sporting spirit of her owner that she is entered in any races. Under racing canvas there is no doubt that she could still show her heels to any of the older yachts of her size, and surpass them as greatly in speed as she does in accommodation and seagoing power.

RHODE ISLAND Y. C.—The annual meeting of this club was celebrated by a reception and dinner on Feb. 27, at which a large number of guests were present, Mr. Burgess being among them. The tables were decorated with the cups won by Sachem, including the Goelet cup of last year. The officers elected were as follows: Com., Wm. H. Low, Jr.; Vice-Com., Fred P. Sands; Rear-Com., Chas. F. Hands; Pres., Sayer Hasbrouck, M.D.; Sec., E. Howard Wright; Treas., R. Herbert Carver, M.D.; Measurers, Benj. W. Stillwell, Paul B. Warren; Trustees—Chas. G. Bloomer, Benj. Davis, Geo. H. Slade; Membership Committee—Charles G. Bloomer, Jr., Chas. H. Howland, Wm. G. Brennen, Arthur M. Black, Robt. L. Greene; Regatta Committee—E. Howard Wright, Elisha S. Arnold, Frank P. Eddy, Chas. I. Manchester, R. Herbert Carver, M.D.

ISEULT.—This sloop, formerly the Romaine, is now being fitted with a metal keel, under the direction of Mr. John Hyslop, her overhang also being lengthened. The new keel will be formed of an iron shoe under the main keel, several inches thick, with a slot for the board. On each side, separated from the iron by an oak batten, a lead shoe will be worked outside the garboard, being as thick as the iron shoe on the inner edge, and tapering to nothing where it meets the planking. By this means the surface will be increased but little, while the weight will be much lower. The object of the iron is to prevent danger to the keel about the slot, as might follow if lead were used.

CHANGES OF OWNERSHIP.—Mr. Burgess has lately made the following sales: Cinderella, for W. E. Iselin to Dr. Wm. Barton Hopkins, of Philadelphia. The yacht will still hail from New York. Gleam, steam yacht, 60ft. over all, 50ft. l.w.l., 11ft. beam, 4ft. 6in. draft, by F. O. Wellington & Co. to John P. Cushing, of Boston. This is not the Herreshoff Gleam, but a new boat, a powerful cruising craft with the Wellington engine. Mavis, cutter, has been sold for Thos. E. Proctor to Geo. E. Henry. The small cutter Madge has been sold by Chas. Young. Nautilus, steam yacht, has been sold by O. H. Booth to John Huntington, of Cleveland.

SOUTH BOSTON Y. C.—At the last meeting of the club it was decided to remain in the N. E. Y. R. A. The club will endeavor to secure from the Police Commissioners a patrol boat to look after the yacht fleet in summer. The following committees were appointed: Reg. Com., Com. Fuller, Vice-Com. C. F. Morrill, A. H. Hall, O. A. Ruggles. J. G. Cooley, J. B. Farrell, Frank N. Isham, G. A. Crawford, J. W. Sherman, Jr. Membership Committee, W. H. Godfrey, G. F. Clark, Dr. T. G. Reed, W. A. Haskell, W. C. Cherrington. After the meeting Capt. J. A. Palmer, Jr., lectured on "Practical Shore Navigation."

HAMILTON (ONT.) Y. C.—The first annual meeting of the new club will be held April 2, at which sailing rules will be adopted, based upon the most approved customs of the day. A great deal of interest is manifested in the "Ambitious City," and a bid will be made for the racing honors of the lakes. The new club house will be opened in a few weeks. Collector Kilvert's new flush deck 32ft. w.l. cutter is planked up, and will be one of the first of the new fleet to go in commission. Local experts consider her a likely craft. She will have the Scotch cutter Cyprus for one of her adversaries.

SOUTHWARK Y. C.—At a meeting of the Southwark Y. C. of Philadelphia, on March 5, the following officers were elected for 1888: Com., John M. Eppright; Vice-Com., James Irvin; Rear-Com., Samuel Ducket; Measurers, Wm. Dougherty, Geo. Creasey and Wm. Baitzel; Sec., Francis George; Treas., Isaac Sharp; Trustees, F. B. Maxwell, Geo. Lance, V. V. Dorp, A. Watson, Jos. Stephens; Regatta Committee, Julius Hoffman, Chairman; V. V. Dorp, Jos. Stephens, H. D. Basier; Ex. Com., Geo. Lance, Isaac Sharp, Steward, John Snyder. The active membership is 131; honorary membership, 2; boats in fleet, 39.

THE INTERNATIONAL RACE ON THE LAKES.—The $500 cup for American and Canadian yachts on the lakes, is now assured, and another cup for smaller yachts is proposed as well. The winner of the cup may be challenged to sail after thirty days, so several matches are likely to come off during the season.

YACHTS' NAMES.—Mr. Means's new cutter will be named Xara, and Dr. Rice's schooner, building at Bath, will be named Monhegan. Dr. Jameson's little cutter will come to the line under the name of Bantam. These may not be ideal names, but we commend them to yachtsmen who are inclined to stick to the old canal boat style of Sally J. and Mary K., or, even worse, to name their yachts after themselves.

A LARGE LEAD CASTING.—It has been decided to make the keel of Mr. Wyeth's new schooner of lead instead of iron, and on Saturday Mr. Eddy successfully cast the mass of 33 tons in a single piece. This stands next to Ileen's keel, 35 tons, the largest ever cast in this country. The frame is ready and will soon be up The dimensions of the yacht are: 76ft. over all, 62ft. l.w.l., 16ft beam. She will be a keel boat.

WILLIAMSBURG Y. C.—Officers: Com., Chas. Hupe; Vice-Com., Henry Roth; Port Captain, Henry Zobel; Pres., Jas. Scheusele; Vice-Pres., Chas. N. Gerard; Treas., Jos. Northrup; Regatta Com.—Fred Kellers, Edmund Brown, John Clifford, W. Voght and John McElroy; Board of Trustees—Edward Wetzler, Levi Smith Wm. Martin, Jos. Silve and Chas. Droge.

NEW SCOTCH YACHTS.—We learn that Mr. Watson has contracted with D. & W. Henderson & Co., of Partick, builders Thistle, for a composite yacht of large size, similar in design Thistle. He has also two yachts building by Fife & Son, at Fairlie one a centerboard boat, and a fourth yacht building at the Cul zean works.

DORCHESTER Y. C.—This lively club has followed the lead of the Seawanhaka C. Y. C. in urging the formation of a naval reserve, and also in the establishment of a winter course of lectures for its members. The next lecture, on the evolution of the modern gun and ship of war, will be delivered by Lieut. J. C. Soley, U. S. N., to-morrow evening.

THE MOSQUITO FLEET.—As usual, the first race of the season will be that of the Mosquito Fleet of City Point, on Fast Day, April 5. The classes will be 13 to 15ft. and all under 13ft, with two prizes, $15 and $10, in each.

THE FISHERMAN'S RACE.—The Carrie E. Phillips has been admitted to the sweepstakes and has deposited her entrance, and the McManus and Roulette have done the same. Others are expected to come in.

WIZARD-VIVID.—A second match for $250 per side has been made between these sloops, to be sailed on May 30, off Larchmont.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

H. F., Parkdale, Ont.—Rock elm is very good for canoe timbers.

H. C. N., Hartford.—We know of no book on the construction of dog houses.

J. H., Rich Valley.—E. B. Woodward, Chambers street, New York, will perhaps take the animals.

S. R. K.—There is quail shooting, and you will also find wildfowl in the waters. The game resources are not specially inviting.

F. W. M.—The method of finding the center of effort is fully described in "Small Yachts" and "Canoe and Boat Building." It is too lengthy to republish in our columns.

A. G., Sedgwick, Kansas.—There are guns of the dimensions given, and you may obtain them from any of the dealers whose advertisements are found on other pages.

ONTDEX.—1. Reaming out the peep would enable a quicker sight to be taken; it would not answer the purpose of the Lyman so well as the Lyman. 2. We cannot discriminate.

M. V. W., Mt. Vernon, Me.—It will be better for your foxhound to let him run at large during the summer. Meat in moderate quantities is not injurious. Feed your hound well, at night only.

H. B., White House, N. J.—Will you kindly tell me if there is any good practical work on carp culture and where I can obtain it? Ans. Geo. Finley, Pittsburg, Pa., has published such a book and so has Milton P. Peirce, Philadelphia.

A few days ago, while strolling around town, a representative of the *Times* fell into the company of one of the best known bear hunters in the Adirondack wilderness. Edwin Roberts resides on the shores of Brant Lake, and during the last twenty or twenty-five years he has probably tramped over more square feet of mountain and valley than any other resident in his section. The old vet is fifty-six years of age, and is to-day as hale and hearty as a man of twenty-five. During the last fifteen years he has killed forty-two bears, besides slaying hundreds of smaller animals. Night after night has he slept beneath the spreading pines, and winter or summer, has carried on his trade of hunter and trapper uninterruptedly. Some time ago he captured an albino bear, that was afterward purchased by Joel Rising, who at that time was proprietor of the Phœnix Hotel, Hague. To listen to our old friend's bear stories is like obtaining a glimpse of the mountain fastnesses, murmuring brooks, shady dells and beautiful lakes, among which he has passed so many years of his life. Mr. Roberts is a modest man, and will no doubt be considerably surprised to find his name in print.—*Glens Falls (N. Y.) Times*

"SHOOTING."
The only English journal devoted exclusively to sport with gun and rifle is *Shooting* edited by Sir Ralph P. Gallwey, Bart., author of the Badminton Library, and G. T. Teasdale Buckell, Esq., who exported all the Llewellin setters to America and won the National Brace Stake and the Field Trial Derby four times each.
The most practical correspondence and the best selection of advertisements appear in *Shooting* weekly.
Few Americans ever heard the names of our best English gunmakers.
Price of *Shooting*, postpaid, $3.25 per annum. Send post office order to the Publisher, 188 Strand, London, England.

The Still-Hunter
—BY—
T. S. VAN DYKE.
PRICE, POSTPAID, $2.00.
FOREST AND STREAM PUBLISHING CO.,

CHARLES DALY 3-BARREL.

The success of this gun introduced last year has exceeded our expectations. The maker's name is a guarantee of perfection in workmanship and every other desirable quality in a gun. The rifle barrel is rifled on a new system, which gives perfect results. The barrels are put together (a difficult thing in a three-barrel gun) with perfect accuracy. IT IS A GREAT CONVENIENCE TO ALWAYS HAVE A RIFLE WITH YOU. THE EXTRA WEIGHT IS NEXT TO NOTHING.

12-Gauge are made with rifle barrel, .32 W. C. F., .32 Marlin, .38 Marlin, .40 Ballard, .45 Government. Price, $5.00
10-Gauge " " " " .38 Marlin, .40 Ballard, .45 Government. - - - - " 95.00

THE SHOT BARRELS ARE FINE DAMASCUS.

Fishing Tackle Department.

We wish to call the attention of Dealers in Fishing Tackle throughout the United States and Canada to the fact that we have recently purchased their entire stock of GUNS, PISTOLS AND FISHING TACKLE from Messrs. John P. Moore's Sons, and shall continue the business at 302 Broadway and 84 Duane Street. There being no time to get out a New Catalogue of Fishing Tackle for this season's trade, we have decided to use J. P. Moore's Sons' Catalogue, fourth edition. TO THIS CATALOGUE we have just isued a New Discount Sheet and Supplement. Dealers who have not the above Catalogue will please send for it. If you have it send for Supplement and Yellow Discount Sheet. CATALOGUES TO DEALERS ONLY.

THEIR

MACHINERY & MANAGEMENT.

A Review of the Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc., Etc. With 96 Illustrations.

By C. P. KUNHARDT.

CONTENTS:—Theory of the Steam Engine; Boiler Efficiency; The Engine and Its Parts; The Screw; Laws Applicable to Steam Yachts; Extracts from Lloyd's Rules; Racing Steam Yachts; Management and Care of Machinery; Principal Types of Yacht Machinery; The Design of Hulls; Addenda; Tables; Etc.

SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.
—*From Author's Preface.*

Yachts and Canoes For Sale.

MESSRS. COX & KING ARE FAVORED with instructions to sell by auction at their offices, 5 Suffolk street, Pall Mall, London, on Wednesday, April 11. 1888, at 3 o'clock precisely, unless previously sold by private contract, the very desirable and first-class cruising steam yacht **OSSIAN, of 147 Tons Y. M.** The vessel is in the very best possible condition in all respects and amply found, has recently been entirely refitted and the cabin accommodation most conveniently arranged, including spacious deck saloon. Is an exceptionally powerful vessel for her tonnage, and especially suitable for foreign cruising and to make the passage across the Atlantic, and therefore well worth the attention of every American yachtsman desirous of obtaining a steam vessel of about 150 tons Y. M. Plans, particulars, photographs and conditions of sale may be obtained from the auctioneers as above. Telegraphic address, "DERAT, LONDON." Scott's code used.

Cruising Yacht for Hire or Sale.

The owner of a cruising yacht, 47ft. long, 14ft. beam, 6ft. draft (with centerboard up), perfectly fitted out for the accommodation and comfort of 4 to 6 persons in the cabin and 3 men in forecastle, pat. W.C., and all modern improvements, will hire or sell for a reasonable price, important business engagements preventing him from leaving the city. The yacht was specially built of the best material for comfort and safety during the winter of 1886, under owner's personal supervision, and is suited for excursions in the Gulf of St. Lawrence. Arrangements will be made to afford all the sea trout and all other fishing required; salmon may be included. This is an opportunity seldom offered. Address Post Office Box 1081, Quebec City, Canada.

YACHT FOR SALE, 33FT. LONG, 9FT. beam, 5ft. 9in. draft, iron keel, 6ft. headroom; accommodations for five. Thoroughly fitted for indefinite cruising. Fast, staunch, strong, very handy. Address Prof. E. T. REICHERT, University of Pennsylvania, Philadelphia.

FOR SALE.—FIRST CLASS NEW FLUSH-decked iron steam yacht, 130ft. long, handsomely fitted, schooner rigged; speed 17 miles per hour. Steam vessel circular. SAMUEL HOLMES, 120 Front st., New York. feb9,3mo

ALL READERS who are interested in the protection of the Yellowstone National Park are invited to co-operate with this journal in the endeavor to secure needed legislation. Petitions will be sent to all who will undertake to have them signed and forwarded to Washington.

A MONUMENT TO AUDUBON.

A MOVEMENT is on foot to erect a monument over the grave of John James Audubon.

The plan originated with the scientific men of the country, and up to this time all the work has been done by them, but the movement should be far broader and far-reaching than this. The great painter-naturalist was thoroughly an American, proud of his nationality, and his work was more than national in its scope. This work did more than has done that of any other man to popularize the study of ornithology, and to instil into the hearts of his countrymen a love for nature and her creatures.

Subscriptions to a monument of this character should be drawn from every quarter of America, and should come with a free hand, according to their means, from the rich and from the poor. The movement should be a national one.

The design of the monument, which will be found in another column, is graceful and appropriate. From a base of granite, on which is sculptured a medallion of the face of the naturalist, rises a column of North River bluestone surmounted by a Runic cross. The shaft of the column is ornamented with figures of typical birds and mammals in which Audubon felt an especial interest, and here and there on the monument are carved plants and flowers which he was the first to bring to light. The whole will be about twenty feet in height. It is estimated that the total cost of the stone and the expenses of putting it in position will be about $10,000, and it is desired to raise this sum.

More than almost any other class of men do the sportsmen owe a debt of gratitude to Audubon. He it was who figured as the first plate in his incomparable work the life-sized wild turkey, and by his magnificent delineations of North American birds made the sportsman familiar with the feathered game of our broad continent—those species which he has not pursued as well as those which have fallen before his ready gun. Audubon was not less a sportsman than a naturalist, and many of his sketches show the deep interest he felt in the scenes and pastimes which interest us to-day.

It is fitting, therefore, that sportsmen should take an equal interest with naturalists in the erection of a stone over the tomb of one who combined in himself the best qualities of sportsman and naturalist. We believe that this will be a welcome suggestion to sportsmen throughout the land, and especially so to many of our clubs, including as they do some of our most wealthy and public-spirited citizens. Such associations as the Audubon and Cuvier clubs, and many others, will be likely to take action on an occasion like this, which will show how sincere is the feeling that they have for the memory of one to whom we all owe so much.

But it is to the individual sportsmen throughout the land, those to whom the nobler sports of the land and water are their choicest recreation, who love nature, and thus have so much in common with the naturalist, that his memory is most dear. A monument which shall fittingly express the affection and reverence and admiration which is felt for Audubon by these unnumbered thousands should be contributed to by each one of them, so that each should feel that he has a personal share in it. A small sum contributed by each man would serve to raise a shaft which would be an honor to its donors and a source of pride to the whole country.

It is the hope of the committees which have this matter in charge that the subscriptions will be numerous and general rather than few in number and large in amount. The monument ought to represent as large an area of our country and as many people as possible.

The FOREST AND STREAM believes that sportsmen, feeling as they do the deepest interest in the objects which Audubon so loved and to which he devoted his life, will, with their well known generosity be largely represented in the list of contributors to this good object. We shall contribute to the fund, and will receive and hand to the committee who have charge of the matter all sums sent to us for that purpose. Such contributions will be acknowledged in the columns of FOREST AND STREAM, and the names of the donors published, unless forbidden.

THE MAN ON SNOWSHOES.

THE man on snowshoes has been laughed at more or less in the latitude and longitude of Manhatten Island. Dwellers in more favored climes look on snowshoes in the same matter-of-fact way they regard top boots and tallow to grease them with; snowshoes are there necessary and accustomed aids to locomotion over the deep snows. But in this vicinity the snow supply is so fickle that snowshoes are the fad of enthusiasts; under ordinary conditions their use is nothing more nor less than sport. Snowshoeing may be capital sport, but it is sport none the less, and does not rise to the dignity of utility.

With the prodigious downfall of snow last week the conditions were changed. The steady-going citizen floundered, and the man on snowshoes all of a sudden found himself on top. He was in great demand He flitted about the street like a sprite. The New York *World* sent him out to interview snow-stalled railroad trains. He came, if not like an angel with wings, at least on errands of mercy, with succor to the famishing. One incident of this character deserves notice. The secretary of the Oritani Snowshoe Club of this city, Mr. Wakeman Holberton, and the president, Mr. Geo. M. Fairchild, Jr., live in Hackensack, New Jersey. When the winds blew and the blizzard came the president was snowbound in New York, and the secretary, at home in Hackensack, spent Monday, Tuesday and Wednesday, snowshoeing about the town, conveying cheer, vegetables, meats and milk to his imprisoned neighbors, among them the family of the Oritani president himself. Subsequently these two gentlemen made a tramp through the game covers in the vicinity of Hackensack, where they came upon the fresh tracks of a bevy of seven quail, showing that they had fared bravely through the storm.

One lesson to be drawn from the experiences of the blizzard week is that snowshoeing is an accomplishment well worth acquiring. The snowshoe in this part of the land is something like the six-shooter they used to tell about in Texas; it may be a long time before you need it, but when you do need it you need it bad.

HENRY BERGH.

HENRY BERGH, the founder of the American Society for the Prevention of Cruelty to Animals and up to the time of his death its president, died in this city March 12. His death ends a notable career. Henry Bergh was one of the men who made an impress on his generation. His name stands for a distinct quality—humanity to the brute creation; he established and built up in America the great scheme of systematic protection for animals. This system is now so familiar, so much a constituent part of the civilization of the day, so universally indorsed by all sensible people, that we can only with some difficulty recall the time when Bergh and his protection of animals notions were ridiculed and scoffed at. The rare triumph was accorded the man of seeing the idea, which he set out almost single-handed to promulgate, finally given universal acceptance.

The society he established has become a power in the land. There are branches in thirty-six States, and similar organizations have been formed in Central and South America. This amelioration of the hard lot of the animal world is so fully due to the life-work of this one man that no words can adequately sum up the debt owed to Henry Bergh. Like all enthusiasts Mr. Bergh occasionally took ground on certain questions where others could not follow him, but no one ever questioned the lofty principle, zeal and singleness of purpose which ever controlled him. The world is better to-day for the life-work of Henry Bergh.

SNAP SHOTS.

A CORRESPONDENT calls attention, in another column, to the unwise proposition to allow box-boats in the Bush River. This box-boat bill is intended to let in such men as he names in his communication; and as far as the resident part of it is concerned, that is all bosh. True, the people back from the river feel aggrieved at not being allowed to trespass on the shores as of old, to get a few ducks; and their representative undoubtedly thinks this a good dodge to help him and his box-boat friends at Havre de Grace as well. The bill is, of course, in effect for the box-boat men and big-gunners from Havre de Grace, and for no one else.

Owing to delay of mails and enforced absence of editors many things which should have been published in our last issue failed to appear, and are printed to-day. The paper was put to press promptly on time last week, Wednesday, in the face of extraordinary obstacles. The credit for that achievement—for an achievement in truth it was—is due chiefly to the undaunted energy and untiring devotion of the FOREST AND STREAM'S printer, Mr. Charles L. Schember.

Some crank has come forward with the proposal to enact a law at Albany requiring every dog to be equipped with a collar bearing the owner's name, or in default to suffer the penalty of death. This brilliant notion may have come in the stilly night to some genius who, having killed a sheep-worrying mongrel, could not identify its owner; but he has undertaken a large contract to put such a silly law on the statute books.

The many friends of Mr. Franklin Satterthwaite, whose acquaintance among American sportsmen is so wide, will be sincerely grieved to learn that he is still very ill. It is now many weeks since he was laid up with a severe cold and he is still confined to his bed. All who know him will unite in hoping that his long and tedious illness may have a speedy termination, and that so good a sportsman may soon be restored to full health.

The Park petitions are going out in response to requests from our readers in every portion of this broad land; and if the volunteered services of these individuals are to be accepted as an evidence of popular sentiment, the feeling in favor of Park protection is wide-spread and earnest. If all work together, Senate Bill 283 will become a law.

On or before May 1 the FOREST AND STREAM will remove from Park Row to No. 318 Broadway, corner of Pearl street.

THE ROCK CLIMBERS.

XIII.—HUNTING A GLACIER.

"A WEEK'S grub, the bedding and the camera will be all that we need for this trip, and two animals can carry that very easily." Thus spake Yo as the party rose from their breakfast the morning after their arrival at the foot of the lower lake.

"And suppose we kill some meat," said Appekunny, "what then?"

"What then?" answered Jack, "why put the meat on one of the mules and pack the blankets on one of the loose horses with the stirrup hitch. Give us a hard one."

"All right," said Appekunny, "go ahead; I'm no packer. You two fellows will have to run the train."

The morning was devoted to laying out the packs and loading the remainder of their possessions into the boat. Then Jack and Appekunny rowed off to a point on the lake where the shore was steep and rocky, and the timber so thick that no prowling Piegan would be likely to venture near the spot, and made a cache. This took them some time, and before they returned it was high noon. While they were absent Yo had driven in and caught the riding and pack animals and put the saddles on them and had partly made up the packs. Just after the men had returned and the boat had been hauled out and hidden among the willows, Lieutenant B. was seen approaching over the flat, and before long the work of packing the animals was under way. While this was going on a string of riders made their appearance over the bluffs, where Swift Current comes down from the mountains, and it needed but a glance to show that they were Indians. Then a sadness fell upon the four white men, for if a lot of Indians had been hunting on the head of Swift Current it would not be easy for them to get any game there. Still, as Appekunny suggested, they were probably Piegans, for it was too late in the season for the Kootenays to be about the lakes, and the Piegans are notoriously poor mountain hunters and do not penetrate far into the frowning rocky cañons, nor climb high on the jagged icebound peaks. There were fifteen horses, of which nine were ridden and six packed. They rode toward the river, but three of the men galloped over to the camp, dismounted and soon were exchanging salutations with Appekunny. At first they amused themselves by lying and swore that they had not been up on Swift Current at all, but gradually as they became more confidential, they acknowledged that they had gone to the camp at the head of the trail, but said that there was no game to be seen and that they had slept there only one night. They took an especial interest in the field glasses carried by the white men, and one of them offered Yo a horse for his long spyglass, which greatly astonished him by its power. After more or less chat with these men, who proved to be North Piegans on their way to visit their relations at the Agency, the packing was completed and the white men rode away, leaving the Indians still sitting on the ground.

The trail up Swift Current mounts the bluffs ascending to the river's flood plain, where it winds along through groves of aspen and pretty open parks for a couple of miles until it reaches the valley of the South Swift Current, where it crosses that stream and soon after the main river, passing over to the north side and following it up between the mountains on the one hand and the stream on the other. Some of the features of this ride were detailed in a series of letters written by Yo to Forest and Stream during the winter of 1885–6.

The sun was low in the west when they reached the first of the Swift Current lakes, in the lower end of which great numbers of Canada geese were resting and feeding. These as the train came in sight began to call to each other in tones of alarm, and at length took flight, passing up from one lake to another until they reached one bordered by a wide expanse of beaver marsh, in which they sat uneasily until the travelers had disappeared beyond them.

Before a satisfactory camping ground could be found it was quite dark, but it took only a few moments to unpack, get a fire started and supper cooking. The camp was a couple of miles below the ordinarily used ground near the fifth Swift Current lake, and at this season of the year, after the Indians had been occupying the old ground through the whole summer, and feeding their stock there, it was likely that grass would be scarce anywhere further up the stream.

The next morning the camp was astir before daylight, and preparations were made to start off on an exploring trip to see if a way might be found which would lead the traveler near to the ice which lies at the head of the great gorge whose waters flow through a considerable lake into the fifth Swift Current lake from the southwest. The saddle animals had been brought in and tied up and breakfast was being cooked, the men were rolling up their blankets and pushing them under the shelter of the low pine trees which grew on three sides of the little opening where the fire was burning. There was no sound heard but the crackling of the fire, the footsteps of the men and now and then the clear tones of the geese which floated faintly on the still air from the lakes below. Then a cracking of sticks sounded at a little distance, and presently Jack marched up to the fire with an armful of wood. As he threw it down he said:

"Yo reminds me of Gwenwynwyn the Bold."

"How so?" grunted Appekunny, who was kneading the bread for breakfast in the spare frying-pan.

"Why, don't you know?" said Jack, "the Welsh hero 'sought night and day the philosophers' stone,' and Yo is just as bad about glaciers. He has been talking about them more or less ever since we've been out, and durned if I don't believe he dreams about 'em nights." Jack had been reading a copy of "Crotchet Castle," which happened to be in camp.

"Well," said Appekunny, "he'll find one up above, if we can only get to it. We could see it plain when we were up here two years ago, but we weren't fixed so as to go to it. This year may be we will get there."

"Get there," said Yo, who had been listening with a smile on his face while he filled his pipe, "of course we will. If we can't make the trip with the stock, I believe we can afoot; but it will be a long, hard march if we have to leave the animals and pack our grub and blankets on our backs. I would have tried that when we were here two years ago if we'd had anything to eat."

"Well," said Appekunny, "we'll soon know anyhow; and now, Jack, if you'll just watch those two frying-pans of bread while I go down to the water, we'll have breakfast before you know it."

Breakfast eaten, the four men started, following the trail which led up through the much used camp ground, under the frowning face of Appekunny's Mountain, and by the shores of Fifth Lake, until they had passed above its head; then turning off to the left, they plunged into the forest to try to find a trail toward the ice. It was not easy riding. Sometimes the branches of the pines were so low that they threatened to sweep the riders out of their saddles, or the slender trees stood so close together that there was barely room for a naked horse to pass between them, and the men's knees were savagely ground between the trunks and the saddles; sometimes a close thicket of impenetrable willows barred the way, or worse, an open spot of soft boggy mire necessitated a long detour. Sometimes one man would be in the lead and the others following his tracks, and again two would start out on independent lines to break their several ways through the wall of timber that opposed them. It was slow and annoying work, but it must be done, for only in this way, so far as they knew, could the hoped for valley be reached. At length the timber became a little more open and the willows disappeared; then an old Indian trail, evidently not used in recent years and much obscured by undergrowth and down timber, was met, and followed for a while. It led in the right direction up a slight incline, and then down on another drainage, and presently through the trees gleamed the sparkling waters of the lake, and through openings in the timber one could look up a narrow valley toward the ice. A little later the trail passed into a natural avenue, perhaps thirty feet wide, and bordered on either side by graceful tapering spruces, and this avenue led the travelers directly toward the vertical face of the stupendous mountain which stands between these two branches of Swift Current. This high narrow peak rises straight up for thousands of feet into a slender pinnacle or spire, and, seen through this avenue of evergreens, which shut out every other point of the landscape, is most imposing.

Passing close under this vast mass and through some pines, they presently emerged on a hillside, steeply sloping and bare of timber, along which the only way was a little-used game trail. The going was so bad that all hands were willing to walk, leading their horses, and now and then their laborious advance was made more slow by the necessity of bursting their way through the gnarled and twisted branches of the low wind-swept evergreens, which in several places grew along the trail. Here and there, in some spot where there was a little soil, would be seen a fresh goat track, or in the loose sliding shale a long scratch where the fragments of stone had been freshly upturned by the hoofs of an animal scrambling up the slope. No game was seen, though one of the dogs, which had followed them from camp, evidently scented some animal which had recently passed over the trail.

At length they reached the head of the lake, and descended to the creek by a rough series of steps, down which it sometimes seemed as if the horses must fall headlong on those who were leading them. From the gravel bars where the stream entered the lake a fine view of the glacier was had, and it looked as if in a straight line it was not more than four or five miles distant. What difficulties there were to be overcome before reaching it could only be determined by making the effort to reach the ice. Evidently among these must be counted several thousand feet of almost vertical climbing, for it could be seen that just below the glacier the mountain fell off in a sheer precipice of great height.

After taking one or two photographs from the head of the lake, they mounted their horses again and rode up the stream bed toward the ice. They were soon forced to take to the bank, however, for the creek was blocked with masses of drift timber over which the horses could not pass. Half a mile brought them to the edge of a "snow slide," the path of an enormous avalanche which years ago had rushed down the mountain side, cutting through the timber a swathe several hundred yards in width. Here broken and splintered logs had been tossed about and piled up in confused masses, sometimes as high as a man's head, at others lying one by one, so that it was possible for one to step across them. From this point was had a view of the ice far better than anything that had yet been seen, and it was determined that on the following day a heroic effort should be made to reach it. Then the photographers began to set up their instruments. While they were busy at this, Jack and Appekunny had taken the field glasses and begun to sweep the mountains for goats, and presently a cry of triumph from one of them gave notice that he had seen one. By the time the pictures had been taken they had discovered half a dozen, and before lunch was eaten no less than eleven of these animals had been made out. It was far too late in the day and the goats were too high up for them to seriously consider the idea of trying to kill one, and so presently they packed up their cameras, and mounting, started for camp. One or two of the hunters, however, gave regretful sighs as they looked back at a monstrous male goat, which, lying on a point of rock far above the valley, resembled nothing so much as a huge white buffalo.

At the head of the lake the party divided, Jack and Appekunny following down the southern shore, which seemed to promise the shortest if not the easiest way to camp, while Lieutenant B. and Yo went back as they had come, stopping by the way to take one or two pictures. Jack and his partner found a used Kootenay trail which took them home very easily and quickly, but the others were longer on the way and did not reach camp until dusk.

Early next morning the necessary provisions for a four or five days' trip were put on the two little mules and a fresh start was made for the glacier. Lieutenant B., who was unable to climb owing to an old hurt, and who felt obliged to return to his camp at the lakes, said good bye, and the three men plunged into the forest on the trail by which Jack and Appekunny had reached camp the night before. The way was not everything that could be desired. It was exceedingly narrow, sometimes scarcely wide enough for a man to ride along, and, as the mules were not very experienced pack animals, they had a good deal of trouble in getting through. In order to better distribute the load the blankets had been packed separately, instead of being rolled as usual in protecting canvas, and before they had gone very far Yo, who brought up the rear of the procession, began to notice fragments of bedding dangling from the branches and tree trunks which he passed. He recognized the rags as belonging to the quilt in which he was accustomed to wrap himself each night, and shed a silent tear to its memory. The trail, in fact, was so narrow that it tore the packs to pieces, and progress was so very slow that it was the middle of the afternoon before they reached the head of the lake. Above this there was not known to be any feed for the horses, and it was therefore thought best to camp here. The animals were unpacked, led across the head of the lake, and turned loose on the grassy mountainside. The men spent the rest of the day looking over the mountains with their glasses. Yo.

APPRECIATION OF "UNCLE LISHA'S SHOP."

"UNCLE LISHA'S SHOP" is the title of one of the quaintest, queerest books that has appeared for a long while. At the same time, as a picture of life and manners and thoughts and feeling prevailing among the rural population of New England more than half a century ago, it possesses a historical value which every intelligent reader must at once perceive. The scene is laid in a remote corner of Vermont, among the outspurs of the Green Mountains and within the shadow of the loftier portions of that romantic range so famous in history and song. The book is not a novel although a thread of connection runs through the different sketches, and the same characters appear throughout the various scenes. After a couple of preliminary trials of his powers the writer hits upon the main feature of the book. Uncle Lisha is a shrewd, honest, jolly old Yankee who runs a stony little farm in the summer season and during the winter has a small shop in which he mends boots and shoes and manufactures rough "foot wear" for his neighbors. This shop is the only public resort in the community, and hither on winter nights come his friends and acquaintances, who, seated on rude benches, rolls of leather and the floor, discourse in their provincial dialect of fishing and hunting adventures, exchange simple and primitive views of life and events and beasts and men, and tell each other stories of their experience which are alternately full of sense, nonsense, pathos and laughter. These gatherings, interspersed with a "school deestrick meetin'," a turkey shooting match, a pathetic hunt for a lost child, and the incidents of a rural courtship, continue through the whole of one winter and only cease with the early spring, when Uncle Lisha and his "Jerushy" abandon the scenes of their childhood, the grave of their little girl and the home where they have spent so many years, and leave to join their only son George in "Westconstant." The different characters that act and talk in this rude drama of a by-gone time, are maintained with singular fidelity throughout. With a single exception, that of Antoine, or "Ann Twine," as his neighbors call him, a refugee French-Canadian, the actors are all genuine Vermonters, but each is distinct as a photograph, and the marked individuality of Uncle Lisha himself, of Sam Lovel, the famous hunter; of Solon Briggs, the wonderful manipulator of "booktionary" words; of Hanmer, the greedy tavern-keeper; of "Jozef" Hill, the hero of the owl shooting; of "Granther Hill," the old Revolutionary soldier; of Pelatiah, the long, lank and guileless Yankee youth, and of the inimitable "Ann Twine," forcibly impresses the reader. The writer in his preface says that all is changed in this old-time community now. Danvis, the name he gives to the neighborhood, has laid aside its simplicity, together with much of the honest kindliness and mutual helpfulness that formerly prevailed among its inhabitants. The daily mail visits them and the telegraph is at their doors. An aristocracy has sprung up in a community where formerly there were none either specially rich or poor. "In fact, the Danvis folk are no better now than their lowland neighbors, who therefore no longer despise them."—*Ohio State Journal, Jan. 23.*

The Sportsman Tourist.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

THE ISLAND OF THE HOLY CROSS.

ABOUT fifteen hundred miles in a southeasterly direction across the Atlantic, snugly tucked in among the myriad of small islands forming the Eastern, or Windward chain of the West Indies, lies the mountainous little island of Santa Cruz, let into the deep blue Caribbean Sea like an emerald on a field of sapphire. It is situated about sixty miles southeast of the large and important island of Porto Rico, is only about thirty miles long by twelve or fourteen miles wide, and is directly in the path of the northeast trade winds, which blow gently over its verdure-clad hills and vales, causing a perpetual waving and rustling of palm and cocoanut branches, and making the vast fields of sugar-cane appear like undulating green seas in the landscape.

Of course, being only seventeen degrees north of the equator, the climate of Santa Cruz is ardently tropical, but delicious sea breezes, that never fail by night or day, greatly moderate what would otherwise be almost unendurable heat, and keep the mercury down to an average of seventy-five or eighty degrees in the shade the year around. Anything like humidity of the atmosphere, of which we in this country experienced a "genteel sufficiency" last summer, is absolutely unknown there, and it is doubtful if the most ancient inhabitant of the island could assert the occurrence of a dozen thunder storms during the whole period of his existence; in fact, no cloud bigger than the fleecy balls of vapor, called by mariners trade-wind clouds, ever appear in that sky of "blue tranquility" during ten out of the twelve months, nor are the lovely shores ever washed by waves more formidable than those of crystalline blue that musically tinkle on the palm-fringed beaches of white coral sand. The climate is one of the most perfect on earth, and I never see a poor fellow whose hollow cough and hectic flush betray the sad work of destruction going on within by that dread enemy of mankind, consumption, without heartily wishing him in Santa Cruz.

But my object in writing you is not to "boom" Santa Cruz as a health resort; I don't run a hotel on the island, nor have I a brother or uncle or friend who does, and, by the way, there are no hotels there; nothing but a few good, genial-hearted souls, who will take you into their private houses for the pleasure of your company—and $7 a week. So, I am not after a free "ad," Mr. Editor, but having been put up to many a serviceable "wrinkle" through the pages of good old FOREST AND STREAM (without at least a three years' subscription to which I consider no man's education complete), it becomes my duty as well as pleasure to communicate to those fellow readers whom it may concern my discovery, that in this little island, only six days' sail from New York, there exists for the lover of dog and gun a veritable "happy hunting ground." If the place were much easier of access I should hesitate to publish this piece of information broadcast, for the island is so small that it would soon be depleted of its best game by a large influx of sporting visitors, but for the few who are able to make the trip, better shooting may be had for less trouble and at less expense than can be found in any part of the United States that I have ever heard of.

Not long ago affairs obliged me, very reluctantly, to visit Santa Cruz, and more from force of habit than any anticipation of having much use for them, I stowed in my trunk a shotgun and rifle, with a plentiful supply of ammunition. The matters which claimed my attention need not have detained me on the island longer than the month of March, but it was the first of June before I succeeded in tearing myself away from the beautiful place, and such a profusion and variety of game as never before fell in my way. Santa Cruz is now under Danish government, but something like one hundred and fifty years ago, when the English held temporary possession, an old colonial Governor of sporting proclivities conceived the idea of introducing an old-world institution in the shape of a deer forest, for the exclusive amusement of himself and his court. To this end he dispatched a schooner to the coast of North America, from whence she returned freighted with a large and lively cargo of Virginia deer (*Cervus virginianus*) of both sexes and all ages. These were turned loose in a well-wooded and watered tract of land to multiply and increase after their kind, but hardly had he begun to enjoy the fruit of his enterprise when this energetic old Governor was gathered to his fathers; and the sport of deer hunting fell into desuetude. Freedom from molestation, abundance of food and a perfectly congenial climate have caused the deer to multiply to enormous numbers, until at the present time they are more common all over the island than cotton-tails in New Jersey.

Besides deer there are quail, wild pigeons, several varieties of doves, and, in the winter months, ducks, plover and snipe swarm in the canefields, woods, mountains and lagoons. On one occasion, during a ride of fourteen miles, I counted dozens of flocks of quail by the roadside, and no less than seven deer in sight at various periods of the journey; one of the latter a superb seven-pronged buck, descended the grassy bank into the road not a hundred feet ahead of me, stopped half way across, stared inquisitively, and then leisurely continued his way up the opposite bank, attaining the eminence of which he took another another deliberate look at me and then with a frisky toss of his head and a wiggle of his white tail, trotted into the dense growth of sugar cane. I was entirely unarmed at the time, but had there been a whole arsenal handy I should not have had the heart to violate his friendly confidence by shooting him.

A favorite resort of mine for deer, where I never failed to get a shot at one, was on the shores of a lagoon which stretches its length of brackish waters along the borders of a pretty plantation owned by my genial friend Mr. Henry Brown, may his shadow never grow less. Here, in the flickering shade of a grove of cocoanut trees, bubbled a large spring, which, in the early mornings, was always puddled by the feet of numbers of deer, while a hundred tracks in the soft, damp sand led in every direction from it. I often followed these tracks along the sandy shore, some of them not more than a minute old, for on a close inspection the water, with which the sand was saturated, could be seen gradually filling up the impressions, as if the animal, hearing my approach, had quietly taken to the woods. Frequently the tracks led straight down into the still, dark waters of the lagoon, the maker of them being sometimes visible on the other side, feeding on the leaves of the mangrove bushes.

The principal reason for the existence of game in such quantities is immunity, which is due to the deep-rooted aversion which the good people of Santa Cruz have to exercise of any description. Hunting would require more exertion than they are capable of. I would not like to accuse them of constitutional laziness, so I will put it that they tire easily. One gentleman, to be sure, whose acquaintance I had the pleasure of making, enjoyed an enviable reputation as a mighty hunter; in fact, he was generally regarded as the Nimrod of the island, and, like Mr. Winkle, was looked up to as authority on sporting matters of every sort. The friend who introduced me to "Nimrod," whispered impressively that "he would show me how to kill deer." There were living witnesses to the fact that on one occasion he had actually been known to bring down a deer with a charge of buckshot—but the deer got away. Of course I was glad to know a man of such distinction, and my happiness was materially increased when he promised to take me hunting with him. His vivid delineations of how he was accustomed to "bowl them over" impressed me deeply, and I looked forward with eager anticipation not unmixed with trepidation to the slaughter which I was convinced would ensue upon his taking to the field. After keeping me in suspense a tropical length of time, I was notified one evening to be ready to start next morning at 8 o'clock, which occasioned some surprise in my mind, as I always believed the early mornings the best as well as the pleasantest part of the day to look for game in that climate, but I cheerfully acquiesced, deferring to "Nimrod's" superior intelligence in such matters.

About two hours after the appointed time (the dislike of exertion in the Santa Cruzians begets a supreme indifference to punctuality) the famous hunter appeared in a heavy two-horse trap, armed with a double-barreled breech-loader (one of the cheap and villainous few that have reached the island). He was attired in a style that suggested a picnic with ladies rather than a hunt for deer. He was accompanied by two negroes; one of them, he explained, was to load his gun and extract empty spells as fast as he knocked over a deer, the other to care for the inevitable hamper, the contents of which on such excursions, as I subsequently learned, are invariably three-fourths liquid. Our destination seemed to be nowhere in particular, so after passing the outskirts of the town we drew up at the first likely looking spot where a deer might possibly pass some time or other, and deposited our entire outfit in the shade of a wide spreading tamarind tree. The horses were unharnessed and tied to trees some distance off; a snowy cloth was spread on the grass and a banquet, elaborately supplemented with decanters, disposed thereon. A pail of ice, from which peeped the necks of a couple of bottles of champagne, was placed on the grass near by. One of the gentlemen, as if the display of liquids were not already sufficiently varied, proceeded to brew a bowl of Santa Cruz punch, the rum used being nearly a quarter of a century old. We spent a couple of hours very pleasantly, if not profitably, in lunching, and after luncheon the well trained attendant opened a box of cigars, removed the debris, and we proceeded to await with much fortitude the coming of the game. The soothing influence of this method of hunting can hardly be conceived until it is tried. With a rifle across my lap, my back against the tree, an uncommonly pleasant cigar between my teeth, the droning hum of insects in the sleepy air about me and the soft twittering of birds overhead among the branches, I fell sound asleep, and was dreaming of tropical landscapes, coral strands—of anything but deer, when the sound of a familiar whistle awoke me and I opened my eyes to stare straight at a big buck standing up to his knees in the waving green Guinea grass about thirty yards away, broadside to, head up, and regarding our encampment with startled amazement in his luminous brown eyes. Flecks of sunlight striking through the branches of a neighboring tree played upon his smooth hide, and a swift impression crossed my mind that in all my days I had never beheld so beautiful a sight as this. Cautiously, but with reluctance, I slowly began to raise my rifle, and the big fellow stood as motionless as a statue, when the mighty hunter at my elbow suddenly woke up. "The devil!" he ejaculated, and *whang, whang*, went both barrels of his gun. The deer glanced about as if wondering what on earth the fat party under the tree was shooting at, and then, before I could recover from the momentary confusion into which the double and unexpected report of my companion's gun had thrown me, there was a vacuum where the buck had stood. With conflicting impulses to laugh and swear at the same time, I helped them search for possible traces of blood, but none were found, for the price of good marksmanship is practice, and that the gentleman was precluded from having by reason of the ennervating effects of the climate; though it might be open to conjecture how 18 buckshot at 30yds. could possibly be misplaced. I had expected to hear curses, both loud and deep, follow this failure to score, but our disappointment did not by any means depress the spirits of my friend and his sable henchmen—on the contrary, it was as near as they ever came to killing anything, and the hamper was repacked with as much jubilation as if it was the deer they were packing; and at his invitation I accompanied "Nimrod" to his home to dine, where a wondering and admiring circle of friends listened to the thrilling account of how near he came to killing a buck. If this should ever meet his eye he must admit that my exposure of his foibles is not entirely undeserved, for he owned up with some contrition before I left the island that he had never succeeded in shooting a deer in his life, and never expected to.

Besides the sort of hunter above described, the only disturber of the tranquillity of the animals is the plantation hand, who occasionally succeeds in catching a fawn alive and bringing him to town on market day, usually disposing of him to some person zoölogically inclined for a quarter of a dollar. It is not surprising that under these circumstances the deer have multiplied to such numbers as to have overflowed from the wild and steep mountain fastnesses to the cultivated plains below, where they prove a nuisance to the planters, for they eat the young and tender shoots of the sugar cane, and play havoc with vegetable patches.

Santa Cruz, small as it is, was at one time an island of considerable commercial importance, having been largely productive of sugar, molasses and rum, the last of world-wide celebrity; but now, partly through exhaustion of the soil and partly on account of the periodical recurrence of severe droughts, the annual yield of these staples has greatly decreased, and of course the bank accounts of property owners have become correspondingly attenuated. Thousands of acres that once waved with the bright green of sugar cane have been given up to the wild ass, deer and hog, and are now overgrown with dense masses of sprouting, creeping and climbing tropical vegetation. The crumbling remnants of demolished sugar works are to be seen dotting the landscape on all sides, while from the density of dark green orange, mango and palm foliage surrounding them peep the stately, vine-clad ruins of once noble mansions, whose disintegrating walls are now tenanted only by bats and owls, and in whose unkempt, but still sweetly blooming, flower gardens the wild doe rears her young.

As the almost inevitable consequence of vanished wealth and prosperity, with absolutely no hope of retrieving them, the native whites have gradually descended almost to the bottom of the intellectual and physical scale. The planters, who are nearly all Irish and Scotchmen, still retain the vital qualities of their northern blood, and are a hearty, honest lot of fellows; but the "creoles," as they call themselves, whose ancestors originally came from Europe and America and brought the island to the climax of its prosperity, are a handful of ignorant, thin-blooded, helpless, and altogether degenerate, scions of their worthy forefathers; and unfortunately this degradation is not only physical and intellectual, for visitors to the island are unavoidably disgusted by the revolting moral obliquity exhibited by these white men, who, though affecting to loathe and despise the negro, do not hesitate to avail themselves of every opportunity the negro quarters may afford. They still call themselves the aristocracy of the island, and an excruciatingly funny one, were it not for the element of pathos in it, would be the spectacle of these people riding about in their crazy vehicles drawn by under-sized and distorted specimens of horse flesh, which are usually clubbed along by dilapidated colored drivers, the chalky-complexioned occupant of the ambulance fully believing that he or she is creditably sustaining the ancient grandeur of the family, and striking awe and admiration to the hearts of all plebian beholders.

But actually an ethnical revolution of a decided nature has occurred in Santa Cruz, for the best educated, most progressive and wealthiest part of the population is the better class of colored people. They are by all odds superior to the whites in every way, and would indeed make creditable citizens of any country under the sun; most of them have been well educated in Europe, and some are ladies and gentlemen of high attainments; they are hospitable to a degree, and strangers invariably esteem them for their sturdy self-respect, but unobtrusive demeanor, as well as for their genial courtesy.

As I said before, there are no regular hotels on the island, but a number of excellent boarding houses supply the want, and as good board can be had there for $7 or $8 a week as could be obtained in the most fashionable boarding house in New York at fashionable New York prices. The blue waters of the Caribbean afford a great variety of delicious fish, as admirable for their gorgeous hues as for their edible qualities, while among the meats green turtle and mutton are simply a revelation.

Though "a hunting trip to the West Indies" sounds big, there is nothing more formidable or expensive about it than attaches to a run down to Florida, while it is far more likely to prove remunerative to the seeker after health or game. The time from New York to Santa Cruz direct by steamer is about six days; by sailing vessel (much the pleasanter way if one has the time, and also less expensive) from ten to fifteen days. CARIB.

THE MYSTERIOUS MISSTISSINI.

Editor Forest and Stream:

Referring to my files of the FOREST AND STREAM, I happen to see for the first time a long article in the issue of Nov. 19, 1887, written by "Adirondack" Murray and copied from the Boston *Herald*, which is well worthy of the discoverer of "Phantom Falls," the "Nameless Lake" and sundry other sylvan mysteries which he has brought to notice in the course of twenty years, and caused to materialize in a dim and somewhat uncertain light, to the amazement of the well-informed as well as the ignorant and credulous. This article naturally treats not so much of what is actually known of Misstissini Lake as of what is unknown and hypothetical, for there is usually very little romance in hard facts. Were the narrative not purely speculative, its interest would cease. To deal with the commonplace time-worn history of the lake would be dull enough to the writer, while to follow the hard beaten trail which the annual brigade of Hudson's Bay voyageurs has traversed over the heights of land between Lake St. John and Misstissini for fully a hundred years, would be as monotonous to the reader as to the hardy men themselves.

The "heft" of Mr. Murray's complaint is that Lake Misstissini, although admitted to have been discovered 250 years ago by a French missionary who crossed from the Saguenay River to Hudson's Bay, has scarcely been visited since, and is not even known officially to the Dominion government in whose domain it lies! A marvel of unconscionable apathy, in view of the fact that the lake is supposed (?) to have an area as large as that of Lake Superior, while it is but 500 miles distant from Quebec. Furthermore, the most energetic explorers of the Canadian Geographical Survey and of the Geographical Society of Quebec, have scarcely been able to more than reach its hithermost shore line, observing its distant expanse only as the bold Arctic navigator Lockwood viewed the open Polar Sea. And consequently deploring this long neglect and failure to accomplish a work apparently so feasible, he (Murray) was about to undertake to explore this incognita himself except that he was deterred by the lateness of the season and the warnings of old men and maidens who had read the fate of the youth in "Excelsior."

Now, if the indefatigable Mr. Murray is really disposed to risk his life in the interest of science and the Canadians, I will tip him a few points to help him through,

In the first place, if he will examine a common Mitchell's school atlas, published in 1855; he will find his mysterious body of water located exactly where it belongs, across the Laurentian watershed in latitude 51°, and its dimensions given at 125 miles long by 25 wide. I would then advise him to obtain a letter from the Hudson's Bay Company's headquarters at Montreal to its agent at Misstissini Lake, and, as soon as the excursion steamboats begin their trips up the Saguenay from Quebec, to take passage to Ha-Ha Bay, whence, if he cannot go by steamboat, he will find a caleche and a most admirable road over his "sixty-mile portage from Chicontimi to the Grand Discharge," which is the outlet of Lake St. John. There are thrifty hamlets of French *habitans* all the way, and *églises*, where the priests will give him shrift if he desires. From this point there is a very good road along the lake shore to the Indian reserve at Pointe Bleue, on Lake St. John, where there is a thriving village of 350 Montagnais, who have a hospital, church, school, twenty-five comfortable houses, some thirty barns, 100 head of live stock, and an abundance of farm implements. They are well advanced in agriculture and crop about 150 acres.

From this point one of the smaller Indian pupils, if he can be spared from school, will conduct him to his mysterious Misstissini Lake, or if not, Mr. Otis, the agent, will go himself. There are no telegraph poles set along the 120 mile intervals, but there are lots of standing spruces which will answer the purpose when cut, and when he reaches the end of his journey he will find comfortable quarters at the Hudson's Bay post, from whence, if he chooses, he can take a batteau down the St. Rupert River to James Bay, which is the southernmost projection of Hudson's Bay, not far from the latitude of Winnipeg, from which it is nearly due east some 600 miles. On the opposite side of James Bay are Fort Albany and Moose Factory, and a direct land and water route to Fort William, on the north shore of Lake Superior, where one can take the Canadian Pacific Railroad, and continue his journey as he may elect. CHARLES HALLOCK.

SALT-WATER SKETCHES.

I.—AN UNLUCKY VOYAGE.

ON the 24th day of November, 1854, the ship Mountain Wave, of Boston, commanded by Captain John Humphrey, sailed from that port for San Francisco. She was a comfortable ship of the old fashion, a little over 800 tons burthen, and rigged in the old style, with single topsails. On board that ship I held the high position of a "boy." I always considered the position a high one, for I had to do the highest climbing; and the first officer, a pious example of the old school, early introduced me to the main royal, committed its care to my tender mercies. He especially delighted in criticising its furl and in calling me out in my watch below to repair deficiencies in that line, if he could find any. This officer was a character in his way. At home he was a bright and shining light in the church, but on board ship the contest between nature and grace in his case was sometimes very severe. He could, when excited, use scriptural language after the manner of seafaring men, and to hear him apostrophizing men aloft sometimes was entertaining to his audience, but would have horrified the brethren in his church.

The ship was deeply loaded with coal and a general cargo, and as the weather was stormy, she labored heavily as soon as she went to sea, and we had much discomfort. Before we had been a week at sea she began to leak, and in heavy weather constant pumping was required to keep her free from water. The leak seemed to increase, and at last the community forward formed itself into a "committee of the whole house," and proceeded aft to confer with the captain and officers on the state of the ship and to declare our opinion of affairs in general. Such interviews are always interesting. The party of the first part, or those aft, generally resent any movement on the part of the crew of this nature as an attempt at dictation, and much diplomacy is required to prevent explosions or violent breaches of the *status quo*. The younger members on each side generally view any chance of a row with huge delight, and sometimes hurl a firebrand into the debate that raises things a little. Prudent counsels prevailed, however, on this occasion, and after some discussion it was resolved to return to our port of departure. The ship was accordingly put about, and we stood back all that night. A further consideration of matters during the night, however, caused the captain to determine on again pursuing the voyage. The party of the second part was accordingly summoned to the sacred precincts of the quarter deck, and the following *modus vivendi* (I took this from the fishing treaty) was promulgated, discussed, and finally agreed upon and fully ratified.

First—The way back was stormy and hard.

Second—The way ahead was toward fine weather and balmy breezes.

Third—The latter course was easier than the first.

Therefore it was resolved to continue the voyage, and if the ship still leaked put into Rio de Janeiro for repairs.

So we once more pursued our way, pumping a good deal in bad weather, but not so much when the wind and sea were moderate. One day, wind fresh and abeam, the ship staggered along under topgallant sails, the cry was heard, "Man overboard." Those only who have been at sea know what this means. It has been written up many times, but no writing can express just what the cry and the fact convey. You stand on deck and watch the ship cutting and sheering through the boisterous waves. You smoke the pipe of peace and thank your lucky stars that you are not on shore, exposed to dangers from horse cars, policemen, fire engines and the like, but safe on board a good ship with a strong breeze and a clear sea. But look, if you please, beyond the lee bulwarks, and picture if you can, the small chance a man would have if tossed into that churning mass of fierce waves. They seem to leap up and grasp out for a victim. They would seize you, if they could, and toss and buffet you about, twist every joint and limb until it ached, and dash their mad foam across your face until no more free air could fill the poor gasping lungs, no more free action could be had from the tired limbs, and the wave-fiends would dash over you and engulf you in their mad triumph. Every sailor knows all this, whenever he goes aloft, or pursues his calling in any part of the ship, and so he is careful and alert, and tries for safety all the time. But when the running ship, towering on the crest of a lofty wave, dashes suddenly onward and down, burying her head booms in the boiling sea, and tears them out again with a terrible strain, as was the case on this occasion, no living thing can hold on, and so our poor shipmate was dashed into the sea, was struck and passed over by the ship and was never seen more by any living man. It occurred instantly and was over in a second. It was seen and the cry raised "Man overboard." Sailors must act promptly at all times. In less time than I can write about it life buoys were thrown over, the ship hove to and a boat was overboard manned by determined men, resolute to rescue a shipmate if possible. The effort was vain; the boat returned, was hoisted again with difficulty and we proceeded on our course, one man less.

In the fine weather of the tropics and the trade winds the leak did not trouble us so much, but it was sufficient to cause us to run for Rio Janeiro for repairs. One fine evening we stood in for Cape Frio, the bold headland sixty miles east of the entrance. After dark the wind fell, and as it became calm a strong current set the ship in until we found we were getting unpleasantly near the rocks. The face of the cliff is perhaps 600ft. high and perpendicular. We scratched the mast and whistled for wind to take us out of our dangerous proximity to the land, but no wind came, so we, in a desperate hurry, hauled up chain and let go anchor. In seventy-five fathoms of water our anchor hooked on to something below and the ship swung around with her stern about 200ft. from the frowning cliff where a goat could find no footing.

Fortunately the sea was smooth, and all hands "stood by" all night for a jump, for if the anchor did not hold on, we should be against the rocks in five minutes, with the spars tumbling about our ears.

In the morning a light air sprung up. All sail was spread, and as the ship began to gather way, the chain was slipped, and we drew slowly off from our dangerous position, minus one anchor and 90 fathoms of chain. That day we arrived in Rio Janeiro, and anchored in the harbor. Examination proved that the leak was in the rudder case, so the rudder was unshipped, the leak stopped, the rudder re-shipped, a new anchor and chain procured, and after a delay of three weeks, we sailed again on our voyage.

We had a long stretch around the Horn into the Pacific, and running up the west coast, one day we saw a vessel heave to, with the U. S. ensign flying. She was a whaler and the captain came on board with a boat load of squashes and other vegetables, and wanted candles. The hold of his ship was nearly full of the best illuminating oil of those days, but he evidently was in search of more light, so we stretched forth our hands and gave it to him. We may yet "carry coals to Newcastle."

On the 22d of May, 1855, we entered San Francisco harbor, after a passage of 179 days. I could entertain you with some account of that city as it then was, and may do so some time. When I left it I did not see it again until 1879. What a change! If I had invested ten cents in real estate there in 1855, I should probably be in Congress now. I was only prevented from doing so, by the fact that I didn't have the ten cents. While lying at the wharf in San Francisco I saw the beautiful ship Metropolitan capsize and fill with water at the wharf. Her spars were all aloft. Too much cargo was taken out. Her side port was open, and over she went. It cost a fine sum to get her up again. She was chartered to take a load of Chinamen to China. After her disaster not one would go in her. They said she was unlucky.

We were chartered to go to St. Bartholomew's Bay and load guano for home. This bay is on the coast of Lower California, and the guano was taken from an island on the coast and brought to us by a schooner. There were two ships of us; ours and the Harriet Hoxie of Mystic, Capt. Manwaring. There was also an old whaling bark there, catching whales when any came, and building a schooner on shore from materials brought out from home. St. Bartholomew's Bay is called Turtle Bay by the whalers, from the large numbers of turtles found there. We had great sport catching them. The process may be new to the readers of FOREST AND STREAM. We took a piece of rod iron 6in. long and filed a point on one end. Above the point a recess was filed in the iron, ¼in. deep, going all round the bolt, so as to make a kind of shoulder. A piece of cod line about a fathom in length was firmly secured to the bolt, and to the end of this a stronger line. Then a pole was found, like a harpoon staff, and a hole bored into one end of it. The bolt was put into this hole loosely, and the line hauled taut along the pole to keep it in place. Then sailing or pulling along slowly, the turtle would be seen asleep on the water. A sharp thrust would drive the peg or bolt through the shell of the turtle, the pole taken into the boat, and the game was fast to the line. If it proved to be a large one it might take some time to get it into the boat. It was necessary to strike them well forward of the center, so that pulling on the line would bring them head up. If struck aft they would make such vigorous use of their flippers that it was difficult to get them to the surface so as to seize them.

While lying in this bay a large whale came in one Sunday. Some of us managed to jump into the whalers' boats with the crew and take a hand in his capture. After a long chase, old Bowser, the mate of the whaler, succeeded in shooting a bomb into this whale, which killed him, but he sank to the bottom, and the sharks tore the carcass in pieces. Not much profit in that cruise.

When we were about half loaded, the Mexican Government suddenly woke up, and a schooner came from Mazatlan with officers on board who warned us to cease taking the guano, under pain of seizure. The captains told them to go to—Mazatlan; but after the schooner had sailed for reinforcements a serious conference was held, and it was resolved to clear out for home with what cargo we had before they could return.

So on a pleasant day both ships got under way, gave three cheers to the whalers and went to sea. That afternoon, when well off the land, both ships going free, about eight knots an hour, the Harriet Hoxie bore down on our quarter. A man went out on her jibboom and cleverly threw a small line on board of our ship. A hot loaf of bread was wrapped in a piece of canvas, secured to the line, and sent on board for the officers' supper. It was a clever piece of handling of ships. We parted with a cheer and saw each other no more. In 107 days we arrived in Hampton Roads, and found that the Harriet Hoxie had beaten us two days. Our ship was ordered to New London to discharge her cargo, but our troubles were not yet over, for standing in for New London light on a cold, dark night, with a fresh breeze blowing, again the cry rang out "Man overboard." It appears that as the crew were clearing away an anchor to be in readiness to anchor, the ponderous mass of iron had slipped, struck a handspike in the hands of one of the men and knocked him clean off the ship with great force. We hove to, lowered a boat, and five of us, half clad, pulled away into the wintry gloom to try and rescue a shipmate. There was no light in the boat, and of course we were soon lost sight of from the ship. After an ineffectual search of a long time we gave it up and endeavored to regain the ship. Wet through and benumbed we were scarcely able to pull the oars and the ship was a long distance off. Wind and tide were rapidly carrying us out to sea. The people on the ship could not see us, although we could plainly see them. They were firing guns and showing many lights. At last they filled the sails and stood away from us. The cold was bitter; we were all wet as we could be; the boat was making water fast, and the ship standing away from us. Think what our feelings were. The ship soon tacked and stood toward us, but on such a course as to pass well to windward. We pulled our best, shouted until we were hoarse and did all we could to attract attention. Just as the captain was about to give us up, go into port and get a steamer to come out after us, some sharp eyes on the ship made us out, and we were able to get alongside; none of us could get on board unaided. Our poor shipmate was lost in sight of port and our hearts were very heavy.

The next day was Thanksgiving day. Our thanks were due that those alive had returned safe. We had been gone a year, had made a broken voyage out, a broken voyage home and had lost two men overboard. It was truly an unlucky voyage. CHATHAM.

BIRDS AND SPECIMENS.

Editor Forest and Stream:

Aside from the bad taste displayed, the peculiarly arrogant and exasperating tone in which your correspondent, Mr. Hasbrouck, speaks in your issue of to-day on the subject of collecting bird specimens, challenges a reply.

In spite of the truth of his premise that "there are men, and there are men," he, nevertheless, forgets to draw the *ergo* that "there are scientists, and there are scientists." When, in the field of ornithology, such men as Wilson, Audubon, Baird and Coues are mentioned, no one questions their right to the title of scientist, for they labored in their branch of knowledge reverently, unselfishly and intelligently. But is not each one of these qualifications an essential element in the character of a true naturalist? Should he not have reverence, that he may approach the world of nature, not with sacrilegious impulse to touch, to handle, to destroy, but with some feeling of its mighty meaning and of man's relation to it. Unselfishness, that he shall not deplete nature and invade the rights of his fellows simply to educate himself, but may be able to sacrifice convenience, gratification and gain whenever they are opposed to the true interests of his science; and finally must he not have intelligence, that he may know the purpose of his pursuit and therefore know what acts of his would further, which frustrate, its attainment?

And must not this intelligence be, too, of an order high enough to know the very *raison d'être* of his employment to be that it is for the enlightment of those of his fellows who in the division of labor have been allotted to other places; that the test is, not whether the information will be "thankfully received by ornithologists," but whether at the price paid it is a gain to those for whose advantage he labors?

If such are scientists, then to scientists it is right to intrust, and it was intended to intrust, the task of winning for us a knowledge of nature; but as the beneficiaries of the power given them in trust, the power to kill if necessary, we still retain the right to demand an accounting. But it was never intended to give this power to every one who flippantly arrogates to himself the name of scientist. They should first prove their right to the title, and for such proof the law should provide, and also for every available guaranty that the power it gives shall not be abused.

"If in accordance with the doctrine of 'O. O. S.' the study of birds had stopped with these naturalists [Wilson and Audubon], where pray would our ornithology be to-day?"

If, as "O. O. S." intended, it had stopped with, and were now limited to, men of the stamp of these naturalists, does any one doubt that the world would have, not only all the valuable knowledge of birds that we have to-day, but would have the birds, too, where in many instances we have them not to-day? Why should the claim of every half-grown boy who has just opened his natural history, or of every crank with just brains enough to ride this hobby, be preferred to the rights of the rest of mankind in the creations of nature? What can profit us the gropings of men to whom the science of ornithology consists simply in killing one of every kind and one of every variation of that kind? Suppose they do note the variations in the coloring of birds or in the measurement of their parts? Is that the full scope of the science, or is it only a machinery by which to further another object, the study of the life and habits of the living creature? And is not this in turn but the means to a still greater object, the attainment of some light on the purpose of creation itself? Truly with such sponsors the science of ornithology is in the position of the man who had the bear for a friend. They aim at mosquitoes, but they crush with their stupidity the cause that they espouse. Of such the proper sphere is collecting stamps and old coins, where at least they will do no harm.

YONKERS, N. Y., March 8. EVERETT MASTEN.

OTTER ON CAPE COD.—Taunton, Mass., March 12.—*Editor Forest and Stream:* From a letter recently received from an old gunner at South Wellfleet, I quote as follows: "One of my friends killed a fine otter a short distance from my house last week, and I understand there has been two otters killed in Wellfleet this winter over by the Long Pond." It is unusual for otters to get as far down on the Cape as the above-mentioned towns.—JOHN C. CAHOON.

THE WILLET (SYMPHEMIA SEMIPALMATA) ALIGHTING ON TREES.—While collecting in the vicinity of Charlotte Harbor, Florida, in the winter of 1883-84, I was surprised to see the willet, or semipalmated tattler alight on trees. Although willets were common at many places visited on the coast between Cedar Keys and Punta Rassa, I noticed this habit in only one locality, which was near a small creek extending a short distance into the mainland opposite Gasparilla Island. This creek was navigable for a small boat nearly its entire length at high tide, but at low it was merely mud flats. The trees near the creek were scattering pines, several of which were dead, with only a few limbs remaining. The willets were abundant along the creek, and when any number were started from the flats one or more were almost certain to alight in the dead trees. One tree, situated on the edge of the flats with the top broken off about twenty feet from the ground, was the most frequently chosen. In nearly every instance the birds would alight on the lowest limb or stub, and on several occasions I saw two on the same bough. For a few moments after alighting they would keep their wings elevated and extended, as if to aid in getting a balance on the perch. I do not remember of seeing this habit mentioned in any of our works on ornithology, excepting in the far North, where most of our shore birds breed.—JOHN C. CAHOON.

WOLVES AND THE TONKAWAYS.—*Editor Forest and Stream:* If "N. A. T." will consult back files of *Harper's Magazine*, I think he will find an illustrated article in which is given a wolf dance of the Tonkaways. As I recall it, the Tonkaways believed that the first Tonk was discovered and dug up by wolves; so to commemorate it they privately buried a man in the medicine lodge floor and a group of Tonks disguised as wolves loped around for a while, and finally, amid impressive ceremonies, resurrected him, a sort of reversal of the "laying the corner-stone" business. One of the illustrations represented the new-dug man as being gravely shaken, pawed by a set of wolfish individuals with long noses. Such a legend would account for any unusual reverence or familiarity with the tribe *lupus* on the part of the Tonkaways.—JOHN PRESTON TRUE (Boston).

THE PARK PETITIONS.

Editor Forest and Stream:

I am greatly in favor of the bill that is now before Congress, in regard to the protection of the Yellowstone Park. Please send me some of your blanks and forms of resolutions, and I will see how many names I can get outside of our own club. If I cannot ever enjoy the pleasure of the Park, I hope I can aid in its protection for my fellow-sportsmen, as well as others.

S. S. HUDEPOHL, Sec'y.

JOLLY HUNTING AND FISHING CLUB, Creighton, Pa.

MAINE LARGE GAME.

RECENT reports from the Maine lake regions indicate a vast body of snow. The late storm, which was so severe in New York and in southern New England, was of less importance in the Maine woods, though there was a fall of heavy snow, which continued over three days. Contrary to the usual plan of the weather in that part of the country at this time of the year, the storm was not followed by a freeze. Hence there is little chance that a crust was formed sufficiently strong for moose and deer crusting. This is as it should be, but the deer have yet a month of danger. The snow is very deep in the woods of that State. There was from three to four feet before the last storm, but this did not increase it a great deal. The threats and boasts are numerous from nearly all the Maine backwoods sections that the deer will be "crusted." The Commissioners have no money with which to enforce the law. The wardens cannot work without pay, and the last Legislature provided that the fines for breaking the game laws shall go to the counties, instead of the wardens who do the work. The result is that there is not a game warden in Maine who is putting any soul into the enforcing of the game laws. One or two are working, but such are receiving some special incentive or pay from persons deeply interested in the preservation of the game.

The lumbermen have generally about completed their contracts, and they are getting out of the woods. They do not like to be at their work later than the 20th of March, for at that time and later there is much danger of such thaws as will almost cut them off from civilization, by ruining their winter roads and breaking up the ice in the lakes and streams. Many of these lumbermen claim that the moose and deer have not been molested by their men this winter. Their tracks have been numerous; the location of their yards have been known, but generally the bosses have given orders to their men that the deer be let alone. This is doubtless true in the cases of the lumber bosses who make the assertion, but there are many more yet to be heard from. Indeed, if law breaking has been done no more than these lumber contractors are willing to admit, it is plain that the deer and moose have been left to increase. But alas for human nature! Men will tell lies. It is a great pity that gangs of men should be at work within such easy reaching distance of the moose and deer during the time when they are entirely helpless from the deep snows, but it cannot be helped. Still there is growing a better feeling, even among the lumbermen, in the direction of letting the deer alone during the seasons of deep snows. In some cases this winter strict orders have been given by the contractors to their men not to molest the deer. Would that as much could be said of every case.

Mr. Jonathan Darling, of Nicatous Lake, claims that a good deal of crusting deer is being done in his section this winter. He also says that the lumbermen are slaughtering them. In one case he visited a lumber camp himself. In the cook camp the cook was boiling something in a big kettle over the stove. Mr. Darling, removing the lid, asked the cook if he did not know that he (Darling) was a game warden? The cook answered, with an oath, that he did not care if he was. The pot contained all the ingredients for a venison stew. Mr. Darling does not want the lumbermen to kill the deer, but he is in favor of allowing the hunting of them with dogs, by the sportsmen who visit his camps at Nicatous Lake. He will not admit that there is danger of dogging the deer all out of the country. He excuses the unsportsmanlike and cruel method of driving deer to the water with dogs, there to be clubbed to death by sportsmen who haven't the skill to still-hunt them—he excuses this brutal sport with the plea that the deer cannot be got in any other manner. He asks other sportsmen to mention the number of deer that have been killed in the Maine woods without dogs. He asks this with the assurance that he can show that it is next to impossible to still-hunt deer in those woods.

Well, it can be said in reply that the number of deer shot by the only true sportsman's method, still-hunting, in the Maine woods during the past two years is numerous. But they were still-hunted in parts of that State where dog hunting is not tolerated. I have a record of three or four in the season of 1887 before the close time. Are the deer so wild in the Nicatous region that they cannot be still-hunted? Ex-Governor Connor, of Maine, formerly had a record of having still-hunted his deer every fall and that too, though very lame—almost a cripple. Maine is suffering to-day rather from the non-enforcement of her game laws than from any fault that Mr. Darling can find in them. It is only to be hoped that nature will favor the deer this season by not providing the crusts and that the Legislature of that State will, by the time another crusting season comes around, have provided the means for so thoroughly enforcing the law that both the crusters and dog hunters may be brought to justice.

SPECIAL.

DESIGN OF AUDUBON MONUMENT.

See notice of proposed Audubon monument in our editorial columns. The monument will be 20ft. in height.

COUNTY GAME LAWS.

AUBURN GUN CLUB, Auburn, N. Y., March 18.—*Editor Forest and Stream:* In a recent issue of your valuable paper you speak editorially of the advisability of the New York State Association for the Protection of Fish and Game changing its name to that of some trap-shooting association. Your suggestion is a good one, and I think it would be well for the convention to consider the matter.

However, if all the clubs in New York State, and especially those who are members of the State Association, would take the action that the Auburn Gun Club has taken there would be no need of your suggestion. At a recent meeting of the club it was passed by a majority of the members of the club present that a committee be appointed to secure the passage of a law that would affect the county and prohibit the killing of game for market. At a special meeting of the board of supervisors of the county of Cayuga, held Feb. 7, a law was passed to prohibit killing or exposing for sale any partridge, grouse, quail, rabbit, gray squirrel, mud hen or woodcock, and making it a misdemeanor punishable by fine or imprisonment, one half of the fine to go to the Auburn Gun Club.

If a law could be passed similar to this in every county in the State it is reasonable to suppose the shooting would improve and those concerned in securing the passage of such laws would earn well merited praise.

CHARLES E. KERR, Sec.

A CHALLENGE ACCEPTED.

MY friend Mud left on the train last night, for Sandford, at the invitation of Fred Pusher, for a trial at the birds which are said to abound on Deep River, in the northern part of the county of Moore. During a recent hunt in Chatham Fred was victorious over Mud; and our hero thinking it was only an accident, not depending upon superior skill on the part of his antagonist, indicated his desire for another encounter. For this reason Fred, at the suggestion of others, and not out of malice or even a laudable desire for triumph, was induced to send a challenge. Mud is the owner, and has been for years, of a 16-bore Scott Premier, which, so far, he has not succeeded either in swapping or selling, however nearly he may have approached it, and by neglect the gun has become very unsightly on the inside. He says that it does not shoot hard enough, and in consequence of that defect he often wounds but fails to bag his game. He alleges that this was the cause of his defeat in the late contest. This time he took a Lefever 16-bore hammerless, somewhat choked, and felicitates himself that, thus armed, he can make Fred yield the banner. Perhaps so. But Mud has not become fully acquainted with the hammerless manipulation, and sometimes forgets whether the gun is safe, when the sign stares him in the face, or when it does not. At Georgetown, S. C., not long ago, while he sat cramped up in what the boy Hux called the starn of the boat, waiting for ducks, contending that his gun could not be fired when he could not see the letters indicating safety, he pulled the trigger in entire confidence. But the gun did shoot, discharging the contents in the marsh. So soon as he put in a fresh shell he shoved the button forward, having forgotten what his experience should have impressed upon his mind, and pulling the trigger, wasted another load. Now he may, for aught I know, have the gun safe when the birds rise, and not shoot at all, and thus become so completely demoralized that he cannot hit a hogshead from a rest.

In anticipation of the contest, Mud says that his nerves have become unstrung, and he has slept badly ever since he determined upon the trip. So I am apprehensive that when he returns with his tail feathers all bedraggled and torn, he will ascribe his discomfiture either to his nerves or to his hammerless gun. If to the latter, then we shall probably hear at an early day of another gun swap.

Our season is now nearly over. I do not know that I shall hunt again. The birds now "get up and get" in a hurry, and a man who expects to kill has no time "to swap knives" after they take to flight. Despite the fact that many of them have been killed, there will be an abundance left to fill the fields when the middle of October comes.

WELLS.

ROCKINGHAM, N. C., March, 1888.

ADIRONDACK DEER.

Editor Forest and Stream:

The present winter has been a very hard one for the deer in the Adirondack region, for the deep snow and heavy crust has made it next to impossible for them to travel any distance in search of food. There is a heavy penalty for killing deer on the crust or in their yards, but it is difficult for the game protectors to get around in the woods in the winter, and the result is that immense numbers of deer have been slaughtered by the pot-hunters. For two or three winters past not so much of this kind of killing was reported as had been the case in years before, but this winter, if reports are true, the law-breakers are disposing of the deer at a very rapid rate. I learn that lumbermen hailing from the vicinity of Glendale have killed the deer in one or more yards in the wilderness east of that town. It also stated on the best of authority that the middle of last month a party of a dozen or more men from Piseco completely cleaned out a deer yard at the foot of the Upper Stillwater, on the east branch of the West Canada Creek, above Pine Lake. A very plain trail led from the scene of the slaughter eastward to the head of Piseco Lake, and persons who ran across it and followed it a short distance found the heads of twenty or twenty-five deer lying about on the snow. The deer had been butchered, their heads cut off and their carcasses dragged on the snow to Piseco Lake by the trail alluded to. The law-breakers were very careless and evidently expected that a heavy snow storm would cover up all traces of their villainy before they were discovered. The men engaged in the slaughter did not make any pretense at discrimination, but killed old and young, does and bucks alike. The pot-hunters wore snowshoes, and their trail was easily followed, and had there been a game protector in that part of the country it would have been an easy matter to have caught some one of the offenders. It seems as if the people living in that part of the woods might be content with having driven the speckled trout out of Piseco Lake by stocking it with pickerel without making such strenuous efforts to exterminate what few deer remain in that locality.

UTICA, N. Y., March 7.

ABOUT SIGHTS.—*Editor Forest and Stream:* In your issue of March 1, Mr. W. D. Zimmerman says that in my communication in your issue of Feb. 23, I fell into a somewhat singular error. He is right; and it happened in this way: In your issue of Feb. 9 there is an interesting article from Mr. Zimmerman, and just preceding it is one of interest from Col. Cecil Clay. The blank space between the two articles is so small that in glancing at the page to get the author's name I thought the article of Col. Clay on "The Hunting Rifle" was Mr. Zimmerman's. I now wish to amend by saying, "That Col. Cecil Clay should prefer Capt. Clay's peep sight to the Lyman is to me a little queer."—DYNAMITE (Hillsdale, Mich.).

BENTON HARBOR, Mich., March 1.—The Berrien County Sportsman's Club, organized Jan. 27, met on March 7 and elected officers for the coming year: H. W. Ray, President; James R. Clarke, First Vice President; C. Colby, Sr., Second Vice-President; Geo. B. Thayer, Secretary and Treasurer. The objects of this organization are to render all possible aid to the deputy game and fish wardens of this county in the enforcement of the laws of the State; to aid in the introduction and propagation of game birds and fish in our fields, forests and waters, and the formation of a local shooting club with the view of improvement in the art of fishing and shooting for our enjoyment.—GEO. B. THAYER.

BUSH RIVER BIG-GUNS AND BOX-BOATS

Editor Forest and Stream:

The bill presented by the Hon. Walter Preston, of Abingdon, Harford county, Maryland, to allow the use of box-boats on Bush River one day in the week (Wednesday) has caused great excitement among the club men and property owners on Bush and Gunpowder rivers. A few words to the honorable member for his earnest consideration. There are a few facts that he has entirely lost sight of. The first and most important one being that the bill as presented allows all of the box-boat owners, lessees, big-gunners from Havre de Grace, the uninterrupted use of Bush River for the one day (Wednesday). Ducks being driven from the head of the bay (the flats) will resort to the lower rivers, Bush, Gunpowder, Back, and Romney Creek.

Such men as Wash. Barnes, Jake Poplan, Wm. Moore and two or three more of these big-gunners will box in the river during the day allowed and at night use their big-guns in any and all such coves as the ducks will bed in. After driving the ducks out of the coves they will quietly sail up bay the following morning and be all ready to drive the ducks from the flats on Friday, the box-boat day on the flats.

The intention of the bill is to allow residents to kill a few ducks. While the bill, if passed, is productive of a little good, it will be the means of destroying the fowling in Bush River. If the bill was for residents of the western and southern part of Harford county, and those not making a business of the thing, it would be practicable; but when it allows the whole of Harford county, the bill should not be allowed to pass.

Just imagine, honorable sir, thirty box-boat craft sailing down the bay on Tuesday morning, their destination being Bush River. Then look upon the scene on Wednesday, the whole river being monopolized by box-boats from Harford county and Cecil, too; for they will creep in.

Woe be to the duck that enters Bush River, for, with the box-boats by day and big-guns by night, the poor fowl would surely have a rough time of it. True, there are big-guns being used in Bush, but don't let us encourage any more.

Let us have one river between the head of the bay and Virginia where the fowl can rest comparatively.

TEN-BORE.

LIMA, O., March 12.—Dec. 5 my brother and I took a trip to Van Wert county, this State. We made our home at Mr. Henry Rumble's. His son James, or Jim, as we nicknamed him, is quite a hunter and knows where the best shooting may be found. Tuesday we started for Scott, a small country town about three miles distant, to get some ammunition for Jim: we took a short cut across the country expecting to find some game, in which we were disappointed. On our way back home we came across a bunch of quail, and Jim scoring two the bevy flew for the timber and the dogs failed to find them. After an early breakfast we started out again. Although we saw plenty of game, we did not make a big bag, only securing four rabbits, one quail and one pheasant among us. The birds seemed to be very wild and would not lie for the dogs. Once a pheasant was flushed and shot at, but missed; it was marked down, and we circled him and let the dogs find him. Jim's pointer Fanny straightened out first, so we were all anxious to get first shot, but in this we were doomed to disappointment; when she was given the word to flush it she ran forward two or three yards, and just as the bird was ready to fly nabbed it and killed it. Is this not a strange freak for a dog to do? The next day was worse than the preceding, only yielding one squirrel. We hope to try the birds next fall with better success. In a letter before me, Jim says he has been out twice; the first time he got eleven quail and one pheasant, and the last time eight quail, four pheasants and one rabbit. Van Wert county is a No. 1 place for pheasants and quail, and the law is strictly adhered to. From reports quail have wintered well around here so far, and if nothing happens we will have good shooting next fall.—F. M. L.

STOCKING GAME GROUNDS.—*Editor Forest and Stream:* Will not some of your correspondents give the results of their experience in stocking depleted grounds with quail and grouse? There are many grounds in eastern Massachusetts, especially in what are known as the Fells of Winchester, Stoneham and Saugus, that seem to afford admirable cover and food for quail. Some bevies are still found, but much shooting has led to the natural result. Can such grounds be successfully stocked? If so, how? What precautions should be taken? When should the birds be let loose, and will birds transported from Virginia live if exposed to our climate in March? Would it be a good plan to provide some food for them? If so, what food? Are any precautions necessary in reference to mating and the number of birds in a place? There are many localities where the expense of stocking could readily be met. I have written this communication, hoping some of the readers of FOREST AND STREAM may give practical information and thus encourage what would prove a blessing to many who cannot get to favored grounds far from home.—ORTYX.

GAME AND SPORT IN MISSISSIPPI.—The following extract from a private letter, written under date of March 11 by the well-known artist, Mr. J. M. Tracy, from his home at Ocean Springs, Miss., will interest many of our readers. He says: "The big ducks have all gone north, but the teal flight has hardly commenced. Snipe shooting is very good. Quail are abundant, though I think this has been an unfavorable year for them. We shoot them right along until April 1, and there is no reason why we should refrain, as they do not pair until after the middle of May. High water has driven the game out of the swamps into the highlands, so a good many deer and turkeys are being killed by the farmers. One man killed five deer in a day's hunt. So you see there is plenty of sport about if I only had time to enjoy it.—J. M. TRACY."

CAMPING SITE FOR "O. P."—Belmont, N. H.—I see by the FOREST AND STREAM of March 8 that "O. P." and his friends wish to know where there is a good camping ground within 300 or 400 miles of New York. If "O. P." and his friends will go to Rocky Pond in Belmont, N. H., or Shell Camp Pond in Gilmanton, N. H., they will find all they ask for. For any other information address C. O. JUDKINS.

THE INDIAN.—I don't know whether in a previous note I mentioned the Indian as he has appeared in FOREST AND STREAM, but I have intended doing so. I have seen a good deal of the Indian, here in Washington, on the plains, and in the mountains; and I indorse fully, without reserve or qualification, all that has appeared in FOREST AND STREAM in reference to the injustice that has been done the Indian by the Government and the people; and sincerely hope the time has come when he will have a better knowledge of good faith and decency on our part when business is transacted with him.—B.

MR. HENRY J. THAYER, of Boston, who was for a long time the secretary of the Massachusetts Fish and Game Protective Association, having retired last January, has just been reminded in a very pleasant manner of the way his fellow members appreciated his efficiency while in office. At the suggestion of Mr. Fred. R. Shattuck, the members of the association subscribed for a handsome .32-caliber Winchester rifle, which was presented to Mr. Thayer last week as a testimonial of esteem for his three years of official duties in advancing the interests of the society.

THAT PRIZE GUN.—Bridgeport, Conn.—Noticing an inquiry in the FOREST AND STREAM several weeks ago, perhaps I can give a little light on the subject. It was from a reader in Texas in regard to a gun with an inscription that he had come in possession of. The gun undoubtedly had been owned by Lieut. Frank Silsby, of the firm of Silsby & Co., steam fire engine manufacturers, of Seneca Falls, N. Y. If he is the same genial fellow that he was during the war, he will, if addressed, give any further desired information.—S. H. W.

DELAWARE GAME.—The late storm was not at all destructive to the partridges in the opens. In some sections a large percentage of the birds that were here when the shooting season opened, remain. Many coveys are as tame and as easily approached as if they never before had been disturbed by man. Along the Delaware Bay ducks are numerous. Regret to say that some parties are pursuing the unmanly practice of capturing them in nets.—DEL A. WARE (Dover, Del., March 17).

COLORADO SEASON.

Editor Forest and Stream:

In your issue of July 21, 1887, in the list of close seasons for game in several of the States, so far as Colorado is concerned there was a mistake. In view of the fact that you might desire to make another announcement this summer, permit me to give you a corrected synopsis of the law for this State:

Bison or buffalo protected for ten years, mountain sheep for eight years, ibex or Rocky Mountain goat for ten years, from March 22, 1887.

Deer, elk, antelope and fawn may not be killed at any time, for any purpose, except for immediate use for food, confined in quantity to the necessities of the person killing. In other words, market hunting is prohibited; also the killing for hides or horns of deer, antelope or elk. Under the aforesaid restrictions the open season for deer and antelope begins Sept. 1 and ends Dec. 1. For elk from Oct. 1 to Jan. 1; and the killing during the season must be confined to animals with horns.

Close season for ducks and geese begins March 22 and ends Sept. 1.

Taking trout or other food fish for other purpose than food, and then only for immediate use, prohibited. Method confined to hook and line. Close season from Nov. 1 to June 1 of the succeeding year. The beneficial effect of cutting off fishing for market was plainly manifest last summer. L. B. F.

DENVER, March 12.

THE ALBANY GAME LAW MILL.

[Correspondence of Forest and Stream.]

ALBANY, March 10.—Senator Dean has introduced a bill which prohibits pound-net or purse-net fishing in the Hudson River from March 15 until June 15. There is a fine of $400.

Assemblyman Brundage has introduced a bill to make the time in which it is lawful to catch, etc., salmon trout include the months of September and October.

Assemblyman Aldrich has introduced a bill which provides that no person shall kill salmon trout, landlocked salmon or lake trout caught in the waters of Lake George in the months of September, October, November, December and January of each year.

A bill introduced by Assemblyman Savery prohibits fishing, except with hook and line, in the Bays of Lake Ontario or the northern border of Cayuga county and one mile from the shore on a parallel with the east and west boundaries of the county. This is to prevent net, fyke, spear, etc., fishing.

Assemblyman Tallmadge, of Kings, has introduced a bill from New Utrecht to make the season for quail, hare and rabbit, Nov. 15 to Jan. 15. It also amends Section 12 of the same act so that eagles, song birds, etc., may be killed on premises owned or occupied with the consent of the owner; also so that the possession of any such bird may be excused by any person proving the same to have been caught or killed as herein permitted.

The bill introduced in the Senate by Mr. Sloan, and in the Assembly by Mr. Ainsworth, providing that the appropriation for the Forest Commission may be used as it desires, instead of being cut up into amounts for specified objects, is likely to become a law. This will be a very great relief to the Commission, for it will thereby be enabled to carry out its work to its own satisfaction.

The Assembly has passed Mr. Cromwell's bill prohibiting the disturbance of oyster beds.

The Assembly committee on game laws has reported favorably the Ainsworth bill.

Senator Coggeshall and the Assembly committee on game laws have introduced a bill from the Hon. Richard U. Sherman, which is expected to take the place of all other bills introduced thus far relating to fish and game protectors. The bill provides that: There shall be appointed by the Board of Commissioners of Fisheries, fifteen game and fish protectors, whose jurisdiction shall embrace the whole territory of the State. They shall hold their office respectively during the pleasure of the Board of Fish Commissioners, who may summarily remove any one of their number. One of such protectors shall be designated by the said Board of Commissioners as chief game and fish protector, and the other protectors shall be under his direction and supervision. The chief game and fish protector shall issue to his subordinates such general and special orders and instructions in the execution of their duties under the law as he shall deem necessary; and he may in his discretion assign any or all of them to duty in districts to be prescribed by him, subject to the approval of the Board of Commissioners of Fisheries; but such assignment shall not relieve any protector from the performance of duty in any other part of the State where his services may be needed. No protector shall be engaged in any business or employment which will hinder him at any time from attending to his official duties. The compensation of the chief game and fish protector shall be $2,000 per year salary, and he shall be allowed his actual expenses of travel in the performance of his duty, not exceeding $1,000 per year. Each other protector shall receive an annual salary of $500, and shall be allowed for his actual expenses of travel in the performance of his duty, not exceeding $300 per year.

Neither of the game committees were able to have a meeting during the past week on account of the storm keeping so many members away. Practically the session of the Legislature was crowded into Thursday and Friday. No game bills were introduced in the Senate. In the Assembly Mr. Hornidge introduced a bill prohibiting grants of land under water near Richmond county by the commissioners of the land office to any other than the riparian owner for less than $50 per square. Mr. Knapp introduced a bill extending the laws relating to the forest preserve so far as to include Delaware county within its limits. Mr. Brundage's bill amending the general laws so as to give more liberal provisions (as he asserts it), which had been already advanced to the order of third reading, has been recommitted to the committee on game laws for a hearing, which will probably be given some time during present week. A bill by Assemblyman Cornwell requires all dogs to have a collar with the owner's name or they will be killed. Mr. Maynard, of Madison county, introduced a bill providing for a fishway in Chittenango Creek, in the town of Bridgeport. It is said that there are a great many fish in the lower waters of the creek who would like to rise to the upper waters if they had a chance.

ALBANY, March 20.—*Special to Forest and Stream:* Assemblyman Savery's bill regulating fishing in the Seneca River in the counties of Cayuga and Seneca. Endre's bill makes homing pigeons private property if identified. Cromwell's bill from the Oysterman's Association forbids oyster taking by non-owners on a penalty of $500 or $1,000, or imprisonment from six months to twelve months. The oyster protector shall enforce this and have $2,000 salary. The expense of boats and assistants not to exceed $7,000. Fort's bill prohibits bullhead fishing in Lake George between April and July.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

FLY-TABLE NOTES AND TALK.—II.

WHAT a hard thing it is to destroy letters and how they accumulate. Here are three. It was only a few days after the last was written that the hand which penned them was cold and still; and since then I cannot destroy them. Reading them, their eager, earnest enthusiasm, it is almost impossible to realize that it is all ended now; they speak so clearly of the frank, cordial writer that they seem almost living themselves. They were written to me after seeing the little account I had given in the columns of the FOREST AND STREAM of my experiments, trying to produce gut from the American silkworms. Some of you may remember that I succeeded perfectly in raising great numbers of the worms from the cecropia and polephemus moths, and in drawing from them strands of unusual length, but the silk was not strong. The cause was difficult to decide upon, and my time was too limited to continue the experiments. Since then others have written to me in regard to the matter, having the same faith that I had that it can yet be made a success.

A German scientist is much interested and proposes to try and raise the worms. For this purpose cocoons of several varieties of the American moths have been sent to him. I await with much interest the result of his trials, and wish most heartily that on this side some of us could continue investigations and make completely successful what seems to me very near it. Perhaps these letters which I had thought to again lay away will arouse some one. If not, I know the many friends of Mr. Backus will surely be thankful to see something more from the pen which has so often given them pleasure:

"NEW YORK, Dec. 17, 1886.—*My Dear Mr. Orvis:* I wish to thank you personally for your very interesting and intelligent article in the FOREST AND STREAM of this week on the subject of the "American Silkworm," and to add that in my judgment you are on the right track to initiate and establish an important branch of industry. The very difficulties you have met and so successfully overcome should encourage you to persevere. The essential fault of brevity in the Spanish silkworm gut (if all the other faults were removed) is sufficient to call for a change. That any gut can be called fine, when at every foot you have to make an angler's knot that at least is four times the size of the gut, seems to be absurd. Reason about it as we will, it remains a hard, unsightly knot and should be removed.

"You have undoubtedly hit on the cause of the weakness of the gut as obtained by you; it is due to the kind of leaf on which it fed. It is so with the *B. mori;* and the first effort seems to me should be to follow nature with the cecropia and feed the worm on the kind of leaf it prefers in nature and under conditions in which it so thrives. Thus far that leaf is invariably said to be the button bush (*Cephalanthus occidentalis*), a shrub found in swampy places. In your article there seems to be some confusion as to this shrub, as you speak of the button-wood†, a tree and an entirely different species.

"You might correct the impression that would otherwise mislead some new experimentalist. If you have no button bush around Manchester, your State of Vermont owns half of Lake Champlain, and there must be many a swampy place along its shores to furnish them, and if you still ask for one you can follow down the Otter Creek, which rises near your place, and at its mouth you will find the coveted bush, and I hope you will be able to gather it to your entire satisfaction. There are some mosquitoes in that swamp but not very savage on the cecropia. 'Awahsoose,' a correspondent of the FOREST AND STREAM, knows the swamp. You could probably procure his address and could write to him. Yours very truly, M. M. BACKUS."

"DEC. 29.—I am still of the opinion, after reading your kind reply, that you ought not to abandon the experiment at its present state, and hoping to have you continue it, I add a few suggestions. If you discover 'Awahsoose,' and find him an intelligent naturalist, try to get him to discover under the button bush at the mouths and swamps of the Otter some of the cocoons. If found there, I would urge you to prosecute your experiments with renewed zeal. It would settle the point that the silk formed from the button bush leaf was strong enough to enable the larva to spin a cocoon; if it had been too fragile the cocoon would not have been spun and the chrysalis have been formed for its future life. It seems to be not a survival of the fittest, but a survival in the fittest way. One leaf, as you recount, may be as palatable to the larvæ as another, while one may give a very strong, tenacious viscous fluid and another may fail entirely. As all accounts refer to the button bush as the place of its orignal find, it shows that the American silkworm survives its various changes through that food. If none were found by 'Awahsoose' in the locality indicated, you may conjecture the climate is too severe in your latitude.

"If you have never been in Vergennes, and have only

---

*This will recall Dr. Stirling's counsels, part of which I gave in the article mentioned.

†This mention of button-wood was entirely unintentional on our part, a pen slip.

known of the Otter as it runs through Middlebury, you have only a feeble conception of the stagnant, muddy, swampy affair it becomes after tumbling over the falls at Vergennes; these swamps are the habitations of many and various birds not found at that season at any other parts of the lake. Among them blue herons and widgeons (sheldrakes are of course there). In the fall it is a favorite ducking ground for sportsmen.

"You do not mention the fact, but I suppose, of course, that in drawing the gut you had delayed the matter until, from the appearance of the spinnants, you had reason to believe the fluid to be ripe and the worm about to commence its own spinning. An article in the FOREST AND STREAM, noticing your paper, seems to lay great stress on the vinegar applied, its strength and its duration. I do not see any good or reason in the suggestions.

"There may be something in the confinement of the moth, but it is hardly possible. If you can find the cocoon in the Otter swamps, no doubt the ripe larvæ might be obtained there next summer, and you could then test the strength of the drawn gut without extra trouble or waste of time.

"In connection with this subject may I ask if you have tried yourself or read of any one trying to draw the silk fluid from the spider? It suggested itself to me in reading the article 'Arachnida' in Encyc. Brittan., Vol. II., p. 295, where are detailed the experiments of Dr. Wilder to draw or reel silk from the *Epeira*. Of course he failed in reeling silk, but what could be done in it for silk gut for anglers? The spider silk is both stronger and finer than that from silk worms. It is worth while to chloroform a large spider and open him scientifically and get at his inner consciousness. If you can get three feet, strong and fine, that is victory.

"Now please do not be impatient at all this, but as a final topic please answer if you ever handled a strand of transparent gut. You have handled a thousand hanks for every single strand of mine, and ought to know. I have the notion the name or quantity is a misnomer, if the strand is round and were made of glass it would not be transparent, just as drawn glass is not; it cannot be transparent by the laws of reflexion from a small or round cylindrical surface. When the gut is flat our eye declares it opaque, not even translucent. As a help toward a solution, please write me if the drawn gut in your experiments was in any just sense transparent.

"This thing is spinning out like a love letter and ought to stop here. So wishing you a very happy New Year, I am, yours very truly, M. M. BACKUS."

Mr. Backus's statement in the foregoing where he says "If it (the silk) had been too fragile the cocoon would not have been spun, and the chrysalis have been formed for its future use"—presuming as I understand that, if strong enough for the cocoon it would be strong enough to produce good gut—reminds me of an old story current in our town of a well-known justice of the peace. As you are aware, only certain cases come within the jurisdiction of such officers. There was a case to be tried which should be taken to the higher court. The counsel for the defense came before the justice a little late and said, "You understand, of course, that the case mentioned cannot be tried before you." He was interrupted by the indignant response, "I'd like to know why I can't try this case. I tell you I just have."

Akin to this are the facts relating to the cocoons: the silk drawn from the worms which I raised lacked strength and tenacity, as stated; but regarding the cocoons, they just did weave them as strong and beautiful and firm as any ever seen. We also experimented thoroughly regarding the vinegar and acids used, and the various lengths of time the worms were immersed. Mr. Backus was quite right in his questionings regarding the calling of gut transparent, for it is more really transparent. His last letter to me was written Jan. 3, 1887, and reads:

"Many thanks for your letter, and most glad am I that you have decided to prosecute the investigations until it is a pronounced failure or success.

"I have spent the last two summers fishing on Lake Champlain, at Barrie Harbor, seven miles from Vergennes, and only four from the mouth of the Otter, and I know of what I speak about the button bush, but have never thought or had occasion to look for the moths, or the cocoons. There is now living at the very mouth of the Otter a Dr. Dickinson, a very intelligent, and well read man, formerly he had a sanitarium on the Split Rock range near Westport; last year he disposed of it to Dr. Hemenway, of Boston, and purchased a small, elegant spot on the Otter. I think he does not practice medicine any longer. I know him slightly, and as I intend, if living and well, to go to Barrie Harbor for the summer, I will try to interest him with and for you on the subject of the American silkworm. So we will keep up the music until we get to the end of the score.

"What you have noticed lately about the remark of a silk manufacturer, is only a further confirmation of my judgment of the average commercial mind. What it does not know is the most. It handles the filaments of silk and knows its windings and twists, can tell of its reels and re-reels, its trams and its organzines, and is *au fait* on looms, Jacquard, etc., the market demand and the market price, but positively knows nothing of the silkworm of any class or country. As an example, I applied one day to a large dealer in raw silk in this city for some specimens, and on conversing with him found him entirely ignorant of silkworm gut of any character. He called on me subsequently to learn if I had not been hoaxing him, and was more surprised than ever to learn it was honest fact and science; his intelligence was above the ordinary.

Mr. W. W. Cross is an old and intelligent angler of Cleveland, also Dr. Stirling. Stir them all up and try to interest them in your experiments, and let this year of 1887 be the one that shall find a solution to your investigation. Yours heartily, M. M. BACKUS."

It is saddening to lay these letters away and with them the plans and hopes for success. I sometimes think it happier and easier to drift on through life without ideas than to have them continually rousing and stirring one to restlessness and leaving them with disappointments. But present needs and duties are always imperative.

To the present belongs this other letter, unmistakably English in chirography and whole appearance. The writer is a stranger to me, but writes most cordially of many matters, finally saying:

"Multiplying reels seem to be common in America. They are almost universally condemned here. Nearly every book on angling advises the fisherman to have nothing to do with them.

"Mr. Wells boasts that our English split-cane rods cannot be compared with those of American build. He may be right. But I have a 10ft. 6in. trout rod by Hardy, of split cane with a steel wire through the middle, which I think would be difficult to beat. English rods are finished with bronze work, rarely with German silver, and the opposite of this obtains in America. The German silver rod may have a more sparkling appearance but this is precisely what the English angler objects to.

"I do not know whether what is known as the Nottingham style of angling is practiced in the States and Canada; and thinking you might like to read what has recently been written on the subject I beg to forward for your acceptance as a present Mr. Martin's book. As Mr. Martin is an uneducated man and quite incapable of writing such a book I am inclined to believe that he supplied only the notes while Mr. Marston, proprietor of the *Fishing Gazette*, was the chief author. There are some wonderful fishermen in the Nottingham style to be found on the Kent."

Now, was not this thoughtful courtesy a pleasure? I am constantly indebted to some good fisherman. Such kindness from strangers warms your heart and widens your life. Another letter from England is beside the one I have quoted from. The latter is from Mr. W. W. Sabin. Many of the books on flies, fishing and fishes are published in limited editions, and once out of print are extremely difficult to procure. Mr. Sabin has been most kind in obtaining for me any that I have wished. He recently sent me such a beautiful copy of "The Erne: Its Legends and its Fly-Fishing," by Rev. Henry Newland. The book is rare; but my copy is fresh and perfect, and beautifully bound. I wished it chiefly on account of its colored plate of flies, as I hope in time to have all books having in them anything of that kind, and I had, too, its companion volume, "Forest Scenes in Norway and Sweden." This gives me both of the author's books on fishing, now out of print.

Mr. Sabin thanks me for the beautiful Florida volume, which, he writes, "I have taken home to keep in our family library." The book was one which many of you have seen, that describing and announcing the beautiful new hotels in Saint Augustine—the Ponce de Leon and Casa Monica. It is the acme of luxury when even our advertisements are so daintily bound, exquisitely printed and engraved, as to be well worth keeping in a family library.

Everything conspires to remind me of a warmer climate to-day, and set me longing for softer air, bluer skies, and pine leaves. I shiver with the cold. I shall lay aside my writing, and draw the easiest chair I can find close to the crackling fire and read. There is one book which always transports me, that is Mr. Reynolds's little history of "Old Saint Augustine." It rests me, too; its smooth, well-turned sentences are a melody, delightful as the best written verse. Each page leaves you with a picture in your mind. Listen and enjoy with me again these its closing paragraphs:

"Amid its garish surroundings the old fort stands to-day. Its outlines are softened by the elements; its moat is choked with the drifting sands; its turrets are crumbling; its walls seamed with the ravages of decay. The fig tree springs out from the rents in its curtains; tiny flowers peep up from the rampart; and summer grasses clothe the escarpment with their luxuriant growth—time's banner of peace on the outer wall. Drawbridge and portcullis long ago disappeared from the sally-port; the legend on the escutcheon we may no longer read; nor ascend the inclined plane to the ramparts. Gratings have given place to window frames; ponderous doors have been demolished, sunlight has been let into the dungeons. Stalactites depend from the casemate ceilings; parti-colored moss and mould bedeck the damp walls; owls nest in the crannies.

"Crossing the wooden bridge which spans the moat and stretches over the centuries, you may leave behind the St. Augustine of to-day, and in court, casement and dungeon, summon once more the shadowy forms of mailed warrior, manacled captive and dark-robed priest. As, lost in revery, you muse on the ramparts, the pleasure fleet vanishes from the bay and a phantom sail looms up in the offing; and as you look, the strains of the distant band on the plaza die away amid Spanish cries of alarm; and you catch the melody, now faint and indistinct, then shrill and clear, of the Frenchman in his little boat, 'playing on his Phyph the tune of the Prince of Orange his song.'"

As I took the liberty of quoting the statements of other people in my fly-table notes, published in your last issue, I must ask you to correct two typographical errors, due no doubt to my hurried penmanship and the detention of your proof-reader in the storm.

The letter to me mentioned John Danforth as a "most *delightful* companion," an adjective which conveys to him even higher admiration than the one used in the paper; and later "Bourgeois" said, "In the matter of *lures* the taste of the trout must be considered; as to all else you may consult your own." I ask you to correct the misprint because the use of the word hues would convey that he ventured to decide the oft-discussed question among fishermen of form versus color, which would undoubtedly raise for him arguments and opponents troublesome to encounter. C. F. ORVIS.

MANCHESTER, Vt., Feb. 19, 1888.

OCEAN SPRINGS, Miss., March 11.—Fishing has been very good. Redfish are abundant and biting freely. One man caught thirty large ones on Friday last. Sea trout have not been abundant for the last fortnight, but we get several every time we go for redfish. We get them from 2 to 3lbs. weight. Large-mouthed black bass are abundant in all the streams, but do not bite so well now as they will next month. Still a good catch can be made with shrimp or crayfish bait.—J. M. TRACY.

THE TARPON RECORD.—Mr. John G. Heckscher, of this city, has beaten the record on the tarpon. He writes from St. James City, Fla., March 8, to Messrs. Abbey & Imbrie as follows: "On the 6th inst. I killed on one of your tarpon rods, my model, a splendid tarpon, weighing 184lbs., length 6ft. 10in. I brought the beggar to gaff after thirty minutes of the best and gamest sport I ever had. The rod cannot be beaten; and has killed the largest game fish in the world."

MAINE SALMON.

THERE is a good deal of interest in the salmon waters of Maine; waters natural to the true salmon (*Salmo salar*), as well as the waters which contain the landlocked salmon. A double interest has been inspired by the wonderful success which has followed the protection of salmon in the Penobscot, now almost the only river in that State which retains something of its former value as a salmon river. But although Bangor is now noted as having, right in its midst, one of really the best salmon pools in the world—the wonderful success of anglers at that point for the past two seasons demonstrates that claim—yet there are other rivers in Maine which are naturally as good salmon rivers as the Penobscot. The Kennebec was once noted for its salmon. Tons of those fish which delight the angler's heart were once annually taken from its waters, all along from the falls at Augusta, even up to the rapid waters at Bingham, nearly fifty miles above. But the net and the spear years ago reduced their numbers, and later impassable dams, to the number of six or seven, put a stop to their ascending to their natural spawning grounds at the head of this river, and its tributaries. In fact the Kennebec is most particularly adapted to the habits of the sea salmon, and to the sport of taking them with line and rod. In the first place there is the rapid water at Augusta, regular salmon waters, nearly equal to the celebrated pool below the dam at Bangor. But alas, the dam impassable long since discouraged this migratory fish. Then follows Ticonic Falls at Waterville, with the two miles of rapids above. Here were once some of the best salmon pools that the world afforded. A lady was telling me not long ago of the number and size of the salmon which her father used to take annually in these pools. But the dam at Augusta stopped them from coming into the pool below the falls, and the dam at the falls made it entirely sure that no salmon could go into the rapids above. Also the rapid waters at Fairfield were effectually cut off from the salmon by these dams below. The fall at Skowhegan, with rapids which used to be full of salmon, were also shut off. Here are two or three of the best natural salmon pools to be found in the country, but mills and manufacturing have for a long time shut them out. Norridgewoc Falls, four miles above, are wonderful in the way of salmon pools. Then come Carratunk Falls a few miles above. Here a vast volume of water makes some of the most wonderful salmon pools. But it has been nearly twenty years since any number of salmon have been seen or taken here; formerly the waters were "black with them," to use the words of an old resident. Some twenty years ago some large salmon were taken below the dam at Skowhegan. By some means they had passed the dams at Augusta, Waterville and Fairfield, and were evidently trying to go up still further. But the spear of the Canadian Frenchmen brought them to terms. These salmon must have weighed some 15 or 20lbs., since they were, in the recollection of the gentleman who remembers them—then a boy—"as high as my head when they were held up by the gills."

Noble fish! Why do they not run up there to-day? Because the builders of dams have shut them off. From a natural law, which always sends the members of the salmon family back to the haunts of their youth to breed, they have become discouraged by the dam at Augusta, till it is probable that there are very few salmon living which were born in the upper waters of the Kennebec. Hence very few salmon annually try the rapids below the dam at Augusta. It is claimed that this dam is impassable to the salmon. It is true that a fishway has been put in there, but the claim, by those who pretend to know, is that it is of no service. An old gentleman, of undoubted integrity and judgment, for many years a resident of Waterville, and thoroughly familiar with the habits of the salmon, epecially in the Kennebec, gave a newspaper reporter the other day the idea that the fishway at Augusta is not of the slightest use. He says that the lower end of the way does not reach the bottom of the rapids by three or four feet, and hence, as the salmon always run up stream with their noses to the bottom, they fail of finding the fishway. Even if they try leaping their chances are very small of leaping into the fishway. It is a fact that these fishways on the Kennebec are entirely inadequate to the purpose for which they are intended. The mill owners and manufacturers are, as a rule, "down on them," and though the State in a measure compels their construction, they are generally built in about the right way to still keep the salmon back. In any case where the Commissioners have attempted to build fishways the appropriations have been too niggardly to more than half pay for such a structure as should be made. In saying what I have about these fishways, I am prompted by nothing beyond giving the feeling and the belief of those interested in the restoration of the salmon to the Kennebec. They also claim that small fry should liberally be deposited in the small streams at the headwaters of this river each year; there to grow and finally to return to the same waters to breed. The process of restoring these most valuable of fish to the waters of the Kennebec might be a longer one than was the restoration of the salmon pool at Bangor, but it is the belief of those most interested that it might be accomplished by the proper fishways at the dams, and the putting in of small fry at the headwaters. The river is a very remarkable one for its many falls and rapids, and it should be noted, as it once was, for its salmon fishing. In this way the salmon fishing would become a source of wealth to the towns at the several points mentioned above, and hence to the State. An army of sportsmen would be rejoiced to annually visit those waters, were the fishing only what the river is in every way capable of. It is hinted that some sportsmen in the young city of Waterville are to take interest in this matter, but will they be defeated by the corporations of manufacturers at that point and at Augusta? It is devoutly to be hoped not. SPECIAL.

MUSKOKA.—A gentleman known to us, who has spent months camping in the Muskoka Lake region of Canada last year, desires a companion to join him there this season. We shall be happy to forward any letters addressed in our care to "Muskoka Camper."

BETHABARA RODS are the specialty of Messrs. A. B. Shipley & Son, of Philadelphia, and they have just issued a little flyer giving the views of a number of anglers who believe in bethabara.

TALK ABOUT TACKLE.

Editor Forest and Stream:

When an angler declares his preferences, objections or prejudices for or against any certain kind of fishing tackle, or its appurtenances, he lays himself open to the criticisms and corrections which are generally forthcoming. "Percyval" with his usual diplomacy thought to avoid this by "decrying endless discussions," etc., but I fear the results.

A few years since an old angling acquaintance (a machinist of inventive genius) astounded me by the inquiry why a useful rod could not be made of hollow metal cylinders, preferably brass or steel, made as light as consistent with safety, and with telescopic joints. My rather abrupt reply to this man was that I did not consider the scheme feasible, and even if it were such an implement would not receive favor at the hands of anglers. To prove that this conclusion was hasty and unwarranted one has but to refer to the Horton steel rod and the flattering success attending its introduction. Though yet a novelty, this rod promises future possibilities that may give it precedence over all others. In fact with many anglers it has already reached that point. Some day I propose giving one a trial myself. The rod I now possess, a lancewood California general, is an old battle-scarred veteran, whose defeats have never been humiliating, and which has scored victory after victory under the most adverse circumstances. The treatment and exposure received by it had warped it out of all semblance to its former self. When put together its curvature forms almost a perfect quarter circle. During action its contour is ridiculous. As a remedy for this annoyance peculiar to the wood rod, how would it do for manufacturers to build them with a graduated core of spring wire through their centres, nicely adjusted of course so as not to interfere with the balance or pliancy of the rod, yet always to insure a maintenance of its proper position? It seems to me such a plan would not only give increased strength, but considerably retard the influences of sun and elements in producing these effects. We now have lines, etc., with metal centers. Why not give our rods an artificial backbone?

Here is a notion of mine in regard to the whipping of rods and securing the guides. Instead of using silk thread for this purpose, I obtain at the hardware or millinery store fine steel wire of about the same size and substitute for the thread. I find it makes just as neat a tie, is more convenient to handle, and above all is absolutely reliable. No chafing and fraying out in two or three weeks' time; it is there to stay. To more closely resemble the thread it should then be painted the same color. A mixture of crimson and scarlet lake tube paints will produce the exact shade, but either alone is near enough. My rod has been in the hands of many clever anglers, but none have ever discovered the deception.

My ideas of a bass reel par excellence is one similar in model to Wm. Mills's "imperial," differing in these particulars: It should be a four-multiplier with click and drag transposed to left side. The crank post should then be shortened enough to secure the advantages of a protected handle. It should be noted that this reel is almost entirely composed of hard rubber with only enough metal in its construction to warrant perfect strength and solidity. This material is preferable for various reasons, one of which is its exceeding lightness. The necessity of a light reel was impressed upon me after witnessing a favorite rod weighted down by a heavy metal reel (a veritable millstone about its neck) disappear in the raging waters of Big Beaver forever. Another commendable feature is the stylish and clean appearance it always presents. Any ordinary dent or scratch can easily be rendered unnoticeable, while on the plated reel it remains there always as evidence that you are either very careless or awkward. Again, how frequent in making the spring inventory of duffle, we find our German silver or nickle plated reel tarnished almost to blackness by atmospheric action or destructive gases from stove and chandelier. It is a singular fact too, that once allowed to get in this condition the original lustre can never be fully restored.

There are many superiorities that could be urged in favor of the rubber reel with left hand operating devices, and when better known I believe they will supplant many of our present ones that have only loud sounding titles, and little practicable merit to recommend them to the angler. Defend us from all so called automatic reels.

Jo.

WELLSVILLE, O., March 10.

Editor Forest and Stream:

Referring to the request of "O. O. S.," who asks, "Will those who have used the automatic reel please add their testimony pro and con," I take pleasure in saying that during the summers of 1886 and 1887 I used the automatic reel exclusively in black bass and pickerel fishing in Lake Harriet, Bush Lake and Prior Lake, in Minnesota, with perfect satisfaction. I have used it in fly-casting and live bait fishing (using frogs and minnows) and have caught bass weighing anywhere from ¼lb. to 3lbs., losing very few fish. When fishing with bait I used a short lancewood tip on my fly-rod. The reel never failed me, and I hope to use it this summer in the Maine lakes. I consider it the ideal reel. It is manipulated by the little finger of the hand which holds the rod, and if properly managed will save every fish that is at all well hooked. By letting the spring do its proper work as soon as you are fast to a fish, the liveliest bass can get no slack line on you, and his leaps and gymnastics only tire him out more quickly and induce him more quietly to come to net. I have heard objections urged against it, but from personal experience know of none that would induce me to give up using mine. P. L.

FORT PREBLE, Me.

Editor Forest and Stream:

In reply to the inquiry of "O. O. S." as to the automatic reel I may state that I have used one for seven years. It has never been out of repair but once, and that came from my own carelessness. I use no other. To fish with one successfully, first learn the principle of how it is constructed and what it is intended to do; then quietly go to some open water, where there are no bushes nor any one to annoy and make you nervous, and practice with your rod and line until you have the thing perfectly under your control. Unless you do, you will be very likely not to like it. One thing you must be on your guard against; the spring works very quickly and should you allow it to get the start of you without doubt you will have a broken tip.

The advantages of an automatic reel are; (1) the spring in the reel after a fish has been hooked and after the brake has been removed is so much quicker than any fish can be that it is an impossibility for a fish to get any slack line; (2) when making long and short casts on streams it does away with that everlasting crank winding; (3) after hooking a large and hard fighting fish you have both hands to handle your rod and line and if you do not lose your head, you will save many fish you would be very likely to lose with a crank reel. I know some anglers have said it is fun for them to twist or reel a fish in by turning a crank, but for me I had enough of that when a boy turning grindstone to sharpen scythes. I will venture the assertion that when any angler once gets used to a good automatic reel, and thoroughly understands its workings he will use no other. Life for me is too short to spend much of it twisting an old crank reel.

SKILL BACK.

GREENE, N. H.

MASSACHUSETTS BASS IN MARCH.—The Worcester, Mass., *Spy* of March 16 reports: "E. W. Plumley, manager of the Spencer Telephone Exchange, enjoyed an extraordinary day's fishing on the North Podunk pond at Brookfield last Saturday. His catch included four black bass, the total weight of which was 14½lbs.. The fish weighed respectively 2¾, 3, 4 and 4½lbs. To these was added a large number of pickerel and perch. H. L. Gleason and a companion who were fishing beside Mr. Plumley, caught two bass, one weighing 5lbs. and the other 4lbs. The largest one measured 22in. in length and 7in. in width. A few days previous a party of three, on the same pond, caught 99 pickerel, the total weight of which was nearly 80lbs. The largest fish tipped the scales at 4lbs." As the black bass season is now closed and will not be open before July, it is in order for Messrs. Plumley, Gleason and the other man to walk up and settle for their law breaking. They will not be likely to do this unless some one points out their duty. No doubt the Worcester Sportsman's Club would make its influence felt in this case; and we commend to it the task of seeing that the penalty is enforced.

THE PRINCETON COLLEGE CAMPERS.—East Saginaw, Mich., March 17.—*Editor Forest and Stream:* As to the Princeton College men, it depends on what time they want to come to Michigan. If they want to rough it any time from July to September, to fish only, let them go to Sault Ste. Mary or to Detour, which is at the entrance of the St. Mary River, and there they can engage guides and boats and go on sort of a wild roving expedition to the many charming islands of the St. Mary River. Trout fishing can be had in the many streams that put into it, bass and larger fish can be got in the waters near the islands. I think it is one of the prettiest spots for a veritable camping out I know of.—W. B. M.

MR. RUSHTON advertises a cottage on Star Lake, where the fishing is good. This appears to be a desirable piece of property for one with a penchant for fishing.

Fishculture.

Every person who it sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

THE MENHADEN QUESTION.

Editor Forest and Stream:

The question of the menhaden steamers being permitted to destroy the food supply as well as taking the bread from the mouths of thousands of hardy fishermen along the Atlantic coast, is one that does not appeal alone to the millions on the immediate seaboard, but to as many within hundreds of miles in the interior, because they are now, and greatly from the selfish action of these corporations, forced to pay prices for fish that should and would never obtain, were a proper restriction put upon the catching of fish for manufacturing purposes.

To any one who is the least acquainted with the habits and mode of capture of the striped bass and bluefish, it really seems too utterly ridiculous that they should be required to believe that the menhaden is of no importance. Still the men representing these grasping corporations, in their testimony before Congress, assume the right and arrogate to themselves the forming of public opinion and seem to imagine that whatever they may have to say in the matter must without question or debate be accepted as the true facts of the case. Now just see what buncombe it is to state that the men at Fulton Market do not find any traces of this fish when cleaning either striped bass or bluefish, among others. By this we are led to suppose that the search is a *sine qua non* of the business and that the cleaning is quite a secondary matter.

At the proper season of course and during the run of the menhaden I venture to say that it would be almost an impossibility to clean either of the fish in question and not find parts of the mossbunker present. Again, the statement that they do such valuable service in catching sharks, from the fact that a pair of these fish will destroy more food fish in twenty-four hours than they catch in an indefinite period, is not borne out by the facts.

We are also told that the menhaden is the only fish suitable to their business on account of the large percentage of oil that it yields, and that the taking of food fish is much against their desire and in fact almost worthless for the purpose. Then, such being the case, why, when they make hauls of tons of Spanish mackerel, bluefish, weakfish, etc., in the place of what they profess to be after, do they not release them instead of grinding them up for fertilizing purposes? Here there are two "niggers in the fence." One is that they do not perform as they preach for obvious reasons, and the other I know something about.

As to the lack of bait for the regular market fishermen which, according to their version, would be one of the evil effects were they forced to keep outside of a three mile limit, that is bosh, pure and simple. There have been and there are at present plenty of sailing vessels that make a specialty of procuring bait for this very purpose; is it therefore to be supposed that these men will sell their outfits and go out of the business from a brotherly feeling for these fellows?

And this man who went on one of these steamers to investigate, who is he that because he reports that hardly sufficient food fish were secured to supply the table, we are to believe that this is therefore the rule and not the great exception? Why does he not give us the data from his note book, perhaps then it would be an easy matter to explain the occurrence?

When fishing on the Jersey coast, I have sent men out to these steamers to buy bait, to have them return without a fish, saying that the haul showed tons of weakfish and Spanish mackerel, but not a single mossbunker; and to prove the correctness of their story they showed over fifty of the finest Spanish mackerel I ever saw. These beautiful fish were being pitched into the vile smelling hold of the steamer to be ground into fertilizers.

I have seen them come inshore so near that I could with ease cast my hook in their boat; it mattered little to them that my fishing, as well as others near me, was spoiled by their action; they wanted it all and were doing their best to get it.

That the bays are the natural spawning places of the menhaden is a well known fact, but let me ask, how are the adult fish to get there if ten steamers cover the mouth of an inlet not over 400 feet wide? And if it so happens that the water on the bar would be right for the fish to pass in at about daybreak, these fellows come down the night before and anchor near by. It is a sickening sight to see, and shame to think that such outrages can be permitted in this era of enlightenment.

A thorough and persistent ventilation of the question through the press is the only way of obtaining the necessary relief, and although at times this may seem a somewhat slow method, it is positive in its eventual effect.

BIG REEL.

NEW YORK, March 12.

Editor Forest and Stream:

I am not a champion of the bluefish nor of any other food fish alone, but stand squarely and frankly for all edible fish, and further, for those who catch, or desire to catch these fish with hook and line, either for a livelihood or for recreation, in the waters of the Atlantic coast. My aim is, and has been, to avoid misstatements and to so write as neither to mislead, misinform nor mystify such of your readers as may not have directed their attention especially to the subject of the conservation of the Atlantic food fisheries. I write by the record, and with that I am content.

The tendency of the operations of the menhaden oil men is adverse to the best interests of the food fisheries. These interests, then, can be better advanced by those whose inclinations harmonize therewith. If this defense traverses or runs counter to the ways of the oil men, it does so simply to secure an equal benefit to all from the menhaden run. Is this unfair? Should the greed of the oil men be encouraged by non-action?

The question of the decrease of food fishes, so ably presented to the Massachusetts Legislature last winter by Mr. George H. Palmer, of New Bedford, and the publication of which recently graced your columns, carries its own conviction.

Has that argument been assailed? Yes. "The trapmen produced a man from Wood's Holl who testified that the season before he and his boy with hook and line caught one sugar barrelful of sea bass per day, not failing a day during the season." That evidence was indisputable for there was the man! Splendid evidence this to prove the abundance of food-fishes of that particular kind, on that particular ledge and at that particular time, but, oh, of such small proportions that it may never be properly appreciated.

It seems to me that the oil men are somewhat inclined to be disingenuous. Appropriating the menhaden yield almost bodily, prospering at the expense of many thousands of hook and line fishermen and unheedful of the equal rights of others, they express solicitude lest their investments and operations shall become subject to lawful restraint. Were they thus solicitous when adopting the appliance of the menhaden steamers, lest they might injure the hand line fisheries or deplete the inlets and estuaries of the Atlantic coast? Standing on unstable foundations, they shift from position to position as they think the exigencies require. This statement cannot be disproved. Witness: "The menhaden is rarely found in the stomach of a food-fish. * * * They (menhaden) are the bait or food of most every fish in the sea," *vide* Capt. Church. "If we were forced by law not to fish inside a one-half mile limit it would ruin our business. * * * For the last ten years (1867-1877) have found immense beds of them and apparently inexhaustible amounts, three and four miles off shore. * * * They are caught (1883) from the shore to thirty miles at sea. * * * In 1885 between Fire Island and No Man's Land, and between Newport and twenty-five miles off shore there were over 1,600 square miles of water that swarmed with menhaden," *vide* Capt. Church. In your issue of 15th instant Capt. Church writes: "Their claim is that the menhaden is the food of food fish, which we deny." Does he disprove the claim? No. He writes: "There is not a single food fish on our whole coast that depends on the menhaden," etc. No one claims that the food fishes depend on menhaden for food; but that they do feed largely on them when available.

Assuming that the bluefish is the one fish which it is especially desired to protect, the oilmen in a dogmatic manner boldly assert that it has now been agreed that bluefish do not eat menhaden. In other words, from the earliest observations down to the year A. D. 1888, the impression that has prevailed is erroneous. The investigations that were thought to be thorough, made at large expense to the Government by the very first fish scientists in the world, all are deceptive and that every one has been misled heretofore. Can any sensible man confide in this new gospel regarding the bluefish? At the risk of prolixity I desire to quote not the familiar statements, but others bearing on the fact that bluefish eat menhaden.

Prof. Goode: "It is possible that the presence of their favorite food, the menhaden, has as much influence upon their movements as water temperature. * * * Not content with what they eat, which is of itself an enormous quantity, at least one-fourth of the fish devoured by bluefish on the shores of New England are probably menhaden."

Prof. Baird: "They appear to eat anything that swims of suitable size, * * but perhaps more especially the menhaden."

Now in this connection here are quotations from men along the coast in answer to the question, To what extent do they (menhaden) suffer from the attacks of other fish or other animals, as sharks, bluefish, porpoises, etc.?

"Whales live on them and sharks and bluefish devour them * * they suffer to a great extent from bluefish * * * all other fish feed on them * * largely from sharks, bluefish and porpoises * * bluefish destroy more than all other fish * * to a very great extent, especially bluefish * * * the bass, trout, bluefish * * feed on this species of fish * * I noticed that each bluefish caught had from one to three fatbacks in the stomach."

A trip on a menhaden steamer would probably reveal to the careful observer the mode of surrounding and securing schools of menhaden and the visible proof that but few food fishes are captured with such schools. On stepping ashore from such a trip the observer, on reflection, would naturally ask of himself what have I learned about the abundance of food fishes? Capt. Church states that "Mr. Wells said he was surprised, for our statements were so contrary to what he had heard," etc. He well may have expressed surprise; many others have done so. The title pages of the reports of the U. S. Fish Commission from the first volume to that published in 1887, bear as the leading sub-index these words: "Inquiry into the Decrease of Food Fishes." Many believe that the conditions still exist for the retention of that phraseology. ARTHUR MARTIN.

FIXTURES.

DOG SHOWS.

March 20 to 22.—Inaugural Show of the Renssalaer Kennel Club Troy, N. Y. Alma M. Ide, Secretary. Entries close March 10.

April 3 to 6.—Fourth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

April 17 to 20.—Fourth Annual Show of the New Haven Kennel Club, New Haven, Conn. E. Sheffield Porter, Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5981.**

PACIFIC COAST FIELD TRIALS.

SACRAMENTO, March 8.—*Editor Forest and Stream:* In compliance with your request, I will endeavor to give your readers an account of the late field trials of the Pacific Coast Field Trials Club, held in Kern county in January. To enter into all the usual details of such meetings, however, would at this time be out of the question, for nearly two months have elapsed, and many things that go to make up a full report cannot be recalled in their order of occurrence. It was understood during the trials that a properly accredited correspondent of the FOREST AND STREAM was looking after its interests, hence your humble servant had no occasion to equip himself with complete notes of the work. To properly report a field trial is, as you are aware, one of the most difficult and onerous duties connected with sportsmen's journalism, and as the reporter must necessarily carry many of his notes of each heat in his head, he should, in order to do justice to his report, write up each day's work as he goes along, while the several events and incidents are fresh in memory. For myself, I regret that any misunderstanding occurred to prevent our late trials from having been fully reported for the sportsmen's journals in the East, as the meeting was an exceptionally pleasant and successful one.

The number of entries this year was larger than for any previous trial, the Derby nominations amounting to thirty odd, and the All-Aged to something like twenty. However, there were the usual troubles with the puppies. Some fell sick and died, and others failed to come up to their owners' fond expectations and were relegated to their kennels. Perhaps the most conspicuous losses (from distemper) were those sustained by the California Kennel, which had to cancel the entries of three promising young English setters. The Bassford brothers were also deprived of a couple of their Derby entries by the failure of their handler to appear at the trials. This handler lives off in the foothills of Solano county, and neither messengers nor telegrams succeeded in fetching him to the scratch. He was notified to send the dogs, in case he could not come, but he neither forwarded them nor sent any explanation of his strange conduct. These young dogs were sired by Vandevort's pointer Don, their dam being Queen, one of the Bassfords' best bitches. Hence the Derby had but ten starters, and the All-Aged stake had seven, including some of those in the puppy stake.

The trials were held in the vicinity of Bakersfield, Kern county, which is in the southern end of the great San Joaquin Valley. The country about there is very level and splendidly adapted for field trials. The only timber is a sparse growth of scrubby willows and cottonwoods, where the overflow from Kern River sometimes runs across the broad plains in narrow streams. Outside of these belts of willow is a kind of sage weed from one to two feet high. In some places it is quite thick and heavy, and in others sparse, but in either case affording excellent cover for the birds. Where this sage is not found, the ground is covered with a short salt or alkali grass, from four to eight inches high. In this cover the birds lie closer than in the sage, and as the country is so open spectators have an excellent opportunity to witness the work of the dogs (and, I might add, of the handlers, which often varies in character more strikingly than that of the canines). There are no burrs, thistles, briers, nor anything whatever to interfere with the dogs' work. One can follow in a wagon, buggy, on horseback, or afoot, and be in sight of the contesting brace all the time.

At the time of the trials (which commenced on Monday, January 16, and lasted all the week) we were having the coldest snap experienced in the lowlands of California since the country was settled by the whites, and it continued during the first three days of the week, when it broke, and from that time on it was almost summer weather. The ground selected was some thirteen miles from Bakersfield, and the drive out and back each day in that nipping weather was rather trying to all of us. Some of those mornings the mercury was down to 25 degrees above zero, and this, mind you, is what we call "blizzard" weather. On Wednesday new and better grounds were found within half an hour's drive of town, and this fact, together with the moderation of the weather, served to render the remainder of the meeting enjoyable. Among those who came from a distance to witness the week's events in the field was a young lady from San Francisco, chaperoned by the stalwart and handsome field marshal, Colonel Linville. While great, burly men complained of the cold or fatigue, this charming young lady—with cheeks glowing with crimson and eyes sparkling with delight—was scampering across the fields on horseback, or interestedly watching the graceful maneuvers of the dogs as they dashed hither and thither in their work. Not a day in the field nor a heat did this young lady miss, and more than one sportsman cast envious glances at the lucky dogs whose success won for them the smiles and caresses of the lovely Diana.

The judges selected for the trials were R. T. Vandevort, of Pasadena, Fred. A. Taft, of Truckee, and Frank Satterthwaite, of New York. These are all gentlemen well known to old-time Eastern sportsmen, and it would be difficult for any club to find men more competent for such duty. The last named, however, failed to reach here, and in his stead Mr. Joseph A. Bassford, Jr., and ex-State Railroad Commissioner W. W. Foote officiated alternately. Probably there never was a field trial the results of which did not occasion more or less individual fault finding, and there probably never will be. It is quite natural that men should become so interested in their own dogs as to be blind to some of their faults. Were it otherwise, men might engage in contests of this kind and permit each to judge his own dog's work. Hence the necessity for having gentlemen to judge the dogs who have no personal nor pecuniary interest in their success. But even they are not infallible, and it may be that the judges on this occasion made mistakes. At all events, some little fault has been found with the decisions in some instances, but the "kicking" has not been at all vigorous nor of an offensive character. Indeed, there was not, during the entire week, an unpleasant incident. On the other hand, it was full of delightful episodes.

Then there was the annual business meeting of the club; the election of new members and collections of funds; the distribution of purses; speech-making by Messrs. Judge Foote, Briggs, Vandevort, Judge Post and others, etc. One pleasant incident was the awarding of ribbons and rosettes, handsomely inscribed, to the winning dogs in both stakes—the handiwork of Mrs. Judge Post, of Sacramento. And while mentioning some of these little outside incidents, I cannot help referring to one that occurred at the close of the annual business meeting. Mr. Vandevort was called upon to relate some of the incidents of the great race (in 1883 I think it was) between his celebrated pointer Don and the equally noted setter Gath. You are probably aware that Don died only a few months ago, and so deeply was his owner affected by the loss that he has foresworn dogs for the future and turned his attention to horses. He talked for some time on field matters generally, giving good advice to the novices present, and only switched off to the Don—Gath race at the repeated and urgent calls of those present. He was giving a most minute and graphic account of the contest, and had reached that important point in the race, where Don did some of his grandest work, and for which, it is claimed, the judges did not give him credit, when the narrator, overcome with emotion, broke down. He struggled hard to regain his composure, but the memory of that December day in the far-off East, when his noble dog covered himself with glory, only to be denied its legitimate fruits, and the fact that the beloved companion of his former days was now no more, came all too vividly before him, and his voice continued broken with emotion, while he recounted the remaining incidents of the heat and its disheartening result. During its recital he seemed to forget his surroundings and for a time appeared to see only the old battle ground in North Carolina. He knelt upon one knee, and with his left hand pressed upon his brow, with his right he drew imaginary lines upon the carpet indicating the courses pursued by the canine gladiators, his utterance all the time broken by sobs that could not be mastered. Coldly stated on paper the incident may not strike the reader as one of such pathetic interest; nevertheless it was one of the most touching and dramatic the writer ever witnessed, and there was not a dry eye among those present when Vandevort had concluded his story. All who know him are aware of his retiring and unobtrusive manner, and it was with the greatest difficulty that he was persuaded to talk on the subject, which it appears was so painful to himself. But, all unconsciously, he touched the deepest chords of the sportsman's heart with a master hand, and the sympathies of that little party went out freely to their bereaved companion, whom to know is but to love.

In this connection there was a very singular coincidence. The first brace of dogs drawn that evening to run on the following morning was Judge Post's Harold and L. J. Rose's Point. Harold was sired by Gath, and Point was sired by Don. So here were the sons of those two noted dogs to come together under Vandevort's judgment, some 3,000 miles distant from the scene of that (to him) ever memorable contest.

It was determined at the annual meeting to hold next year's trials on the same ground, commencing on the third Monday in January. The superintendent of the ranch, Mr. Houghton, got the trials fever, joined the club, and promised to have the grounds preserved for its uses. No better arrangement could possibly be made, as there are lots of birds on the place, excellent cover, etc. The grounds are less than half an hour's drive from the thriving town of Bakersfield, a burg that boasts of three newspapers, several good hotels, stables, etc. An idea may be formed of the number of birds in that locality when I assure you that on one morning a covey of not less than 200 birds was flushed, and the natives say that early in the season that would be called a small covey.

Having covered many of the incidents collateral to the trials proper, your correspondent must, for reasons given at the outset, depart from the usual custom of reporting minutely all the work of each individual dog, and give only a general resumé thereof. Following was the result of the drawing in the puppy stake:

HEROLD.—H. Gerber's blue belton English setter dog (Har old—Janet)

against

GALATEA.—J. M. Barney's liver and white pointer bitch (Nick of Naso—Temptation).

BLOSSOM.—G. W. Bassford's lemon and white pointer bitch (Glen R.—Josie Bow)

against

HIDALGO.—J. E. Edwards's lemon and white pointer dog (Vandevort's Don—Beautiful Queen).

HAROLDINE.—Wm. DeMott's blue belton English setter bitch (Harold—Janet)

against

POINT.—L. J. Rose's lemon and white pointer dog (Vandevort's Don—Drab).

SUNLIT.—California Kennels' black, white and tan English setter bitch (Sportsman—Sweetheart)

against

DOTTIE SHAFTER.—Wm. Kaeding's black, white and tan setter bitch (Regent—Fanny).

MAID.—W. S. Kittle's lemon and white pointer bitch (Lemmie B.—Surf)

against

DICK.—W. W. Foote's black, white and tan setter dog (Royal Duke II.—Adams's Nelly).

A rather late start was had on Monday, and it was nearly noon when the party reached the grounds. After a nice lunch had been partaken of the dogs were put down on the spot, a covey of quail having been driven off the lunch ground as the crowd pulled up. P. D. Linville, of San Francisco, was unanimously chosen as marshal for the week.

HEROLD AND GALATEA

are both of medium size in their respective classes. Herold was handled by Mr. H. Clay Chipman (his owner being absent), and Galatea by her owner. Herold's handler was an utter stranger to him, and as the puppy had been broken to obey commands given in the French tongue, he of course was badly handicapped. Although a young dog of palpable merit, he did not do himself justice. Broken to work in the close cover of the foothills, his range was limited, but he showed good style and hunting instinct. Galatea was a little bundle of concentrated chain lightning. The dogs, handlers, judges and spectators were soon all among the birds, but Galatea was everywhere seemingly at the same time. She was very short of work, and so rank that for a time she seemed to be having a sort of private circus with the quail. In the meantime Herold was doing a little quiet work on his own hook, coming to a stand on a couple of birds, which rose as the handlers approached. Galatea, in one of her wild sweeps, swung to a very stylish point on a single bird. The bird was flushed and both were steady to wing. Both halt pointed on several occasions, but the birds flushed wild, the dogs generally being steady to wing and shot. After being down one hour the dogs were taken up and the heat awarded to Galatea.

BLOSSOM AND HIDALGO.

At 2:35 Blossom, handled by owner, and Hidalgo, handled by Allender, were put down in a wide field of sage weed. Both showed good action and ranging qualities. Bassford soon flushed a bird and shot. Blossom dropped, but Hidalgo came to heel, evidently afraid of the gun. His handler explained that the puppy was short of work and had not recovered from his first gun shyness, and was drawn to run against his advice, simply to gratify the desire of his owner to have him go. The dogs were ordered up and the heat awarded to Blossom.

HAROLDINE AND POINT.

Haroldine, handled by her owner, and Point, handled by Allender, were put down on the same ground at 3:10. Haroldine showed the greater speed at the start, and both covered their ground nicely. As the heat progressed the pointer, a big, slashing fellow, increased his pace and range. Both dogs made points to which no birds were found, and at other times stopped as the birds rose wild. The birds seemed to be restless and moving, and the dogs were greatly bothered. Their handlers were constantly claiming points, but the judges seemed to regard many of them as flushes, though doubtless excusable ones. In one instance Haroldine pointed on the outer circle of a wide cast, and some time was lost in a vain attempt to call in the dog to back her. She held her position staunchly for many minutes, but when it was sought to flush the bird none could be found. A little later the dog came to a fine stand. The bitch was brought up and she backed him. Allender put up a covey of birds in front of the dog, shot and killed, both dogs being steady. This was really a grand bit of work, and one of the features of the trials. After being down an hour and a quarter the honors were so nearly evenly divided that the conclusion of the heat was postponed, and at 4:30 the party set out on the long ride to town. On Tuesday a half hour was devoted to the unfinished heat, which was awarded to the pointer.

SUNLIT AND DOTTIE SHAFTER.

The next brace to run was the California Kennels' setter bitch Sunlit, handled by Judge Post, and Wm. Kaeding's setter bitch Dottie Shafter, handled by Allender. This was altogether a one-sided contest, Sunlit outranking her adversary in every way. She showed speed, range, scenting qualities and staunchness of a high order, and readily won. Dottie, however, gave evidence of a future of usefulness in the field, and will yet doubtless justify the high estimate set upon her by her owner.

Owing to the loss of time in reaching and returning from the grounds, and the fact that one of the next brace to run had not arrived, no further work was done on the second day.

MAID AND DICK.

On Wednesday the trials were held only four miles from town, and an earlier start was had. The first dogs put down were Maid, handled by Allender, and Dick, handled by J. G. Edwards. Some time was spent in finding birds, as no one was familiar with the grounds. The pointer showed speed and ranging qualities, but when birds were found neither showed sufficient merit to warrant a long heat, and they were ordered up without any point having been made, and the heat declared off. It must be said, however, that neither dog had much chance. The birds on which they were worked were found on ground that was almost bare, and flushed before the dogs could get near them. Under more favorable conditions better results would no doubt have been obtained.

Second Series.

GALATEA AND BLOSSOM.

At 11:20 Barney's pointer bitch Galatea and G. W. Bassford's pointer bitch Blossom were put down, handled by their owners. The former cut out her work on the same scale as on the first day, going like a shot through the cover, while Blossom worked closer, but still with good speed. She was far more tractable than her high-mettled competitor, and made the greater number of points. Both dogs were steady to wing and shot, except on one occasion, when Blossom chased a winged bird a short distance. At one time the dogs got among an immense covey that had scattered in the short grass and sage, and seemed to become rattled by the numbers that rose on all sides. Just as they were ordered up after a fifty-minutes heat, Galatea made a grand point on the bank of a slough, but it was just a few seconds too late to go to her credit. The heat was awarded to Blossom.

SUNLIT AND POINT

were started at ten minutes past twelve. Both went off at a rattling gait, and throughout the heat worked both wide and fast. Some of the neatest work of the entire week was done in this heat. It was a succession of points from the start, Sunlit having the best of it, although both put up birds which it seemed they should have stood. After running an hour they were ordered up for lunch. At two o'clock the heat was resumed in another part of the ranch and continued for fifteen minutes. During this time Sunlit pointed a covey, and was handsomely backed by Point. The bitch won the heat. One of the features of this heat was a "rank" flush made by the field editor of the *Breeder and Sportsman*, who almost stepped on a polecat, and that too while working up wind. To his credit, however, it can be said that he didn't break in and chase.

Third Series.

SUNLIT AND BLOSSOM

next came together and were sent off at 2:20 to contest for first place. This heat lasted an hour and was well contested. The pointer showed perhaps the better style, but the setter was faster and ranged wider. Both were obedient and gave evidence of careful handling. Each made a number of points, but the setter had the best of it. Once she found a covey and was neatly backed by Blossom. Neither was disturbed by shot or wing. Sunlit was awarded the heat.

Fourth Series.

POINT AND BLOSSOM

then ran off for second place, starting in at 3:30. They were down about an hour and did some very creditable work. The dog first nailed his bird and Blossom honored it and this was repeated later on. Allender shot and killed and both dogs were steady, but on one occasion each broke in on moving birds. The dog had a little the better luck in finding birds and was awarded the heat.

The owners of Blossom and Haroldine held a consultation and agreed to divide third instead of running it off.

SUMMARY.

First Series.

Galatea beat Herold.
Blossom beat Hidalgo.
Point beat Haroldine.
Sunlit beat Dollie Shafter.
Maid and Dick heat off.

Second Series.

Blossom beat Galatea.
Sunlit beat Point.

Third Series.

Sunlit beat Blossom and won first.
Point beat Blossom and won second.
Blossom and Haroldine divided third.

ALL-AGED STAKE.

Two of the Derby entries by the consent of the owners of the other dogs were permitted to enter the All-Aged stake, as several of the regular entries failed to put in an appear-

ance. These two were Rose's Point and Barney's Galatea. The drawing resulted:

POINT—L. J. Rose's lemon and white pointer dog (Vandevort's Don—Drab)

against

HAROLD—California Kennels' orange belton English setter dog (Gath—Gem).

RIP—C. L. Ecklon's red setter dog (Count Rouge—Queen)

against

SOLANO B.—H. A. Bassford's liver and white pointer dog (Glen R.—Josie Bow).

GALATEA—J. M. Barney's liver and white pointer bitch (Nick of Naso—Temptation)

against

ROYAL DUKE II.—J. G. Edwards's black, white and tan setter dog (Regent—Dolly).

FRAIL—J. M. Bassford, Jr.'s liver and white pointer dog (Vandevort's Don—Bassford's Queen), a bye.

First Series.

HAROLD AND POINT

were started at 9:35 on Thursday morning, the former handled by Judge Post and the latter by Allender. Harold is a very handsome type of the modern English setter, and is said by those who have seen his sire, the celebrated Gath, to greatly resemble him. He is a speedy dog, shows excellent judgment in hunting for birds, and is staunch enough to suit the most exacting. His style is good, with perhaps the exception that he lacks in tail action. Such trifles, however, go for little so long as a dog's work brings the desired results. Harold has also shown his value as a sire, his daughter Haroldine (out of Janet) giving promise of a brilliant future in field trial performances. Point, his competitor—winner of second in the Derby—has already been sufficiently described. Both are of royal lineage, and justify their owners in the admiration bestowed upon them. The pointer was the wider ranger. Moving through a low bottom of scrub willow, Harold was making game when his handler put up a bird, shot and (strange to say) killed. The dog was steady to shot, and neatly retrieved to order. A little further on, in the edge of the swale, Point pinned a bird, which soon rose and was killed by Allender. Another flew from a tree overhead, which was also grassed, and Point being sent on to retrieve, brought both in at once. Working out into the open, Harold found and pointed a large covey, which soon flushed wild as his handler approached. Going over a little grass-covered rise, Harold wheeled on a point just as the bird arose, and was steady to wing. Down in the swale Point came to a stand, and held his bird until Harold was brought up to back, which he did in good shape. The bird rose just then and was not shot. Going on through some rather high but bunchy sedge, Point stood staunchly, but the bird was seen by his handler and the judges running 10yds. in advance, and Allender shot it on the ground. Point was at his best in this heat, which was awarded to him after a race of 1h. 20m.

RIP AND SOLANO B.

entered the lists at 11 o'clock. Rip was reared and broken by his owner, the same person that had broken Herold (who ran the first heat in the Derby), and understood commands given only in French. He was handled by Mr. Chipman, who is not up in that language, although a worthy member of the board of education of Sacramento. Both Rip and Solano B. had done most of their work in the foothill section where the cover is close, hence they did not cut such wide swaths as some of the others. Both are very comfortable dogs to hunt over, and on their native heaths have elicited the admiration of their owners and their owners' friends. Solano is a large dog and a merry worker. He ranged wider than his little red adversary, and secured the most points. Both dogs were steady to shot and wing and retrieved well. On one of Rip's points he was neatly backed by Solano, but the bird skulked away through the sedge and was put up some yards off by the crowd. The dogs were down 1h., and the pointer won. Five minutes later Edwards's

ROYAL DUKE II. AND GALATEA

were put down, handled by their owners. The latter's general style has already been characterized. Duke is a stocky, nice-looking dog of wonderful speed and energy, and on this occasion showed considerable rankness. The stickler for speed in hunting dogs should have gone wild with enthusiasm over the performance of this brace. Barney flushed and killed a bird, which fell some distance off, and both dogs broke for it. It was a tight race, but the pocket edition of Naso got away with it. Little Galatea did some good work, however, in the heat, but Duke was a little the steadier and outpointed her. A halt of half an hour was had for lunch, after which the brace were put down again, and at the end of fifteen minutes the heat was awarded to Duke.

Frail, the odd dog, had a bye.

Second Series.

FRAIL AND POINT.

Frail was handled by his owner and Point by Allender. Frail is a much lighter dog than his half-brother competitor, and a very merry worker, while not ranging so wide. He was under excellent control, but was at a great disadvantage. Point had been worked in the neighborhood of the trials for a week or two before the trials, and had had the benefit of the exercise and work of previous heats, while Frail arrived from the North only on the day the trials opened, and had been shut up in a barn in town for four days. Still he showed that he was capable of excellent work. Birds were found in goodly numbers, and the heat was a rapid succession of points and backs. On one occasion, however, Frail came suddenly upon his adversary while on a point, and slipped in and stole the point. The heat was a close and protracted one, lasting for over an hour and a half, and was finally awarded to Point.

ROYAL DUKE II. AND SOLANO B.,

handled by their owners, were started at 3:35. This was a long and tiresome race. The birds had gotten somewhere out of the way, and but little oppertunity was given the dogs. Such work as was done, however, was in the pointer's favor. At five o'clock the dogs were taken up, to be put down the next morning on new ground. On Friday the heat was protracted for another two hours in heavier cover, where the birds were quite wild. Here the setter had the best of it and was awarded the race.

Third Series.

HAROLD AND POINT.

After a free lunch and a good rest, J. G. Edwards's setter Royal Duke II. and Rose's pointer Point were put down at 2 P. M., Duke handled by his owner and Point by Allender. There was some excellent work done in this heat, both dogs finding and pointing their birds in nice style. The spectators were divided as to which was entitled to the heat, the first honors and money, but the judges called the dogs up after running 1h. 40m., and declared the pointer the winner.

Fourth Series.

HAROLD AND FRAIL.

At 4 o'clock Harold and J. M. Bassford's pointer Frail were started, handled by their owners. Harold was the wider ranger, but Frail pressed him hard in the work on birds. The dogs were both steady to wing and shot, retrieved well and showed good style. After a half hour's heat the judges held a long consultation and finally declared Harold the winner.

HAROLD AND DUKE.

On Saturday Harold and Duke were put down to run for second place. Duke did better work in this heat than on the preceding day, but he was outclassed by the son of Gath, who won after a half hour's run.

As many of the party desired to leave for home on that evening and both men and dogs were fatigued with the work of the week, the owners of Duke and Frail decided to divide third place and money without further running.

SUMMARY.

First Series.

Point beat Harold.
Solano B. beat Rip.
Royal Duke II. beat Galatea.
Frail a bye.

Second Series.

Point beat Frail.
Royal Duke II. beat Solano B.

Final for First Place.

Point beat Royal Duke II. and won first prize.

Ties for Second Place.

Harold beat Frail.

Final for Second Place.

Harold beat Royal Duke II. and won second prize.
Royal Duke II. and Frail divided third prize.

THE WATERLOO CUP.

OWING to a long continued period of severe weather, the Waterloo meeting, advertised to begin February 22, was postponed from day to day until March 3, the delay making a second draw necessary. We clip the following from the London *Field:*

"Never before in the history of the Waterloo Cup has there been so many postponements, disappointments and general confusion as this year, and at one time a third draw seemed imminent. But the finale in point of weather, good management, and every other accessory to make a meeting pass off successfully, was more than vouchsafed to us, and the Waterloo Cup of 1888, with all its drawbacks, will not form a disagreeable reminiscence. A good deal of the eventual success was no doubt due to the persevering efforts of the hon. sec., Mr. Harold Brocklebank, and his office on the present occasion was no sinecure. Seldom have we seen such a fine stock of game on the estate, and this, in conjunction with the capitally arranged beats, reflects great credit on Flatman, and when it is considered that the last two days' coursing came off over the same ground, it will be perceived that this praise is not undeserved. Glancing at the competition, the winner of the cup, Burnaby, belongs to a very consistent supporter of coursing, not only in Lancashire, but generally throughout the country, and few will grudge him his success. Burnaby, who is now in his third season, came into the possession of his present owner at a comparatively small figure, and considerably less than Mr. Pilkington has hitherto tried to secure the object of every courser's ambition. Burnaby was purchased out of a selling stake at Haydock Park for £30, and since he came into his new owner's possession his record has been extremely brilliant, and it is a curious but not unusual fact in connection with the Waterloo, that it was only at the last moment that his owner decided to run him in preference to Penelope II.

"The runner up, Duke MacPherson, ran in Ireland in the early part of the season with great success, having won the Brownlow stakes at Mourne Park, and within a fortnight also placed the Holstone Derby to his own credit. Since then he appeared unsuccessfully at Haydock Park, and was brought out again at the late Kempton champion meeting, where, it may be remembered, he went down after a good struggle before Holmby, the subsequent winner. Soon after this Duke MacPherson became the property of Col. North at a stiffish figure, with contingencies, and was within an ace of carrying off the highest honors of the leash for his new owner. The dog undoubtedly possesses fine pace, is very handy and resolute when behind his hare, and with better killing powers, which he may acquire in time, lacks none of the attributes of a first-class greyhound. The third in the Cup, Dingwall, impressed me very favorably when I saw him make his *début* at Plumpton, and the position he obtained here was reached by merit alone. He can go a good pace, has ready killing powers; at times perhaps he may not be so tight on his hare as one could wish, but altogether Dingwall looks like furnishing into a more than useful greyhound. The surprise of the meeting was Caterham Apostle, whose first two victories were of a very stylish kind, but a rare hare gave him and Falernian Flask such a dressing in the third round as would seem to annihilate his chance of ultimate victory. He, however, evinced a deal of resolution when he met Galfride, and was again severely run. The betting on the four left in on the night of the draw was 50 to 1 each against Burnaby, Duke MacPherson and Dingwall, while Caterham Apostle stood at 100 to 1.

"The repeated postponements no doubt tended in a great degree to upset previous public form, and too much notice need not be taken of the displays of several of the fancied candidates. The ailment which a couple of months since visited the Birkdale Kennel no doubt interfered materially with Herschel, and although the crack might have looked well, experience teaches that distemper, even in its mildest form, visiting a kennel, leaves its traces behind for a long time. The Climber's severe course in the first round over hard ground acted prejudicially to his chance. Still he was not disposed of at the end without making a game effort. Falernian Flask won a couple of courses in fine style, and the Irish puppy Warboy bids fair to creditably sustain the reputation of his sire Pinkerton. That grand greyhound Miss Glendyne has now added another wreath to her laurels in carrying off the Waterloo Purse, and her displays in each course were quite worthy of her previous high fame, and she now retires as one of the best greyhounds of modern times. Winfarthing, after being beaten in the second round of the Cup, ran through the Plate in his best style, and his success was some consolation to the south country division. The confidence reposed for the past fifteen years in Mr. Hedley was not misplaced, and never since he was first elected has a Waterloo meeting been better judged. Tom Wilkinson's duties were discharged in such a manner as to enhance his already well-earned reputation. To Mr. A. Brisco, the gentleman who discharged the duties of flag steward, the Waterloo Cup nominators and the general coursing public owe a deep debt of gratitude."

Burnaby, the winner of the Cup, is owned by Mr. L. Pilkington. He is a black and white dog, whelped June, 1884. His sire, Be Joyful, is by Bedfellow (Contango—Bed of Stone) and out of Revenge (Regulator—Victoria). His dam, Baroness, is by Grand Vizier (Brigadier—Sal Volatile) and out of Rosalie (Wolsey—Rosette).

The winner of the Waterloo Purse, Miss Glendyne, is a brindle bitch owned by Mr. C. Hibbert. She is by Paris and out of Lady Glendyne.

The winner of the Waterloo Plate, Winfarthing, is a black and white dog by Millington and out of Match Girl, and is owned by Mr. H. Wansborough.

WANTS A DOG TO BARK.—Is there any way to make a dog bark at the partridge, so as to tree them? I have "Dog Training," by S. T. Hammond, but it does not tell how to make them bark.

ARNOLD BURGES.

AFTER an illness of eleven days Arnold Burges died at his residence in Hillsdale, Mich., March 10. He was born Sept. 12, 1839.

Mr. Burges was in early life a devoted sportsman, spending much time in the field. When the *American Sportsman* was started in Meriden, Conn., he was a contributor to its early numbers, and on the death of Mr. Parker assumed for a time its editorship. He was well known as a prolific writer on field topics, especially on kennel affairs. He was the originator of the term "Llewellin setter." Messrs. Burges, Smith (of Strathroy, Ont.), and others, who owned setters of what was known as the "field trial breed," bred by Llewellin, wrote to that breeder asking his permission to name the dogs Llewellins. Mr. Burges was a dog trainer of much experience. He believed in and employed the force system, and held that unless a dog was thoroughly subjugated by this method it could not be made into a good fielder. In 1876 Mr. Burges published his book, "The American Kennel and Sporting Field," which had a large sale. It contained the pedigrees of 332 dogs.

Mr. Burges was extremely youthful in appearance. We recall an incident at one of the New York bench shows turning on this peculiarity. Ethan Allin, who had never seen Mr. Burges, wished to meet him; and when we introduced them Mr. Allin exclaimed, "It isn't the boy but the old man I want to see."

Mr. H. E. Cook, of Hillsdale, sends us the following paragraph, which was the last written request of Mr. Burges:

"I would like the notice of my death sent to the different sporting papers, with the request that their editorial notices state, that I desire them to convey my farewell to the brotherhood of sportsmen, for whose interests I have labored long and always honestly, and to assure all, that whatever may have been my faults, or however sharply I may have written, I have never intended to wrong any man; and have been influenced solely by a desire to advance true sportsmanship, with its generous, manly characteristics, among my fellows."

Mr. Cook advises us that he has had placed in his hands for sale the entire kennel of dogs owned by Mr. Burges.

POACHED REPORTS.

Editor Forest and Stream:

Allow me to suggest that in the future your criticisms on dogs exhibited at our shows be deferred until the show season is over. I, for one, am tired of having my reports copied into a Western paper by a fellow who does not possess either common courtesy or ordinary knowledge of journalistic etiquette.

Is it not an old and well established rule that copied matter shall bear the name of the source from whence it emanates, or be given in quotation marks? The brazen disregard of the rights and privileges of the press have been carried to such a length that reports of dog shows in a certain bunkum paper are held over until the week following the publication of FOREST AND STREAM, when they appear, interwoven with a few slang phrases from the English papers, in the garb of original, and over the signature of an individual who, when in England, was unknown in connection with dogs or with any and all matters pertaining thereto.

Few men object to instructing those whose opportunities of acquiring information have, owing to circumstances, been limited; but fewer still care to have their labor of years paraded as the work of hungry impostors whose lack of knowledge of dogs is only equalled by their consummate cheek and total disregard of everything worthy the name of sportsmanship.

Unless this vicious and growing evil can be checked I fear that my contributions to your instructive columns will be less numerous in the future than they have been in the past. What can you suggest? CHARLES H. MASON.

INDIANA FIELD TRIALS.

Editor Forest and Stream:

Ever since this club opened its trials to the four adjoining States we have been solicited by the sportsmen of other States of the Northwest to allow them to be admitted also. The board of control has weighed these solicitations carefully, and has concluded that the best way to do is to make the Derby and All-Aged Stakes open to the world. The Indiana Stake will be confined to dogs owned in Indiana. By doing this the club feels that it is acting fairly by all, and our awards will be recognized the world over, and a dog winning in these trials will gain as great a reputation as if he were to win in any trials in America or England. We have selected the following named gentlemen as judges: D. C. Bergundthal, Esq., of Indianapolis, who is president of the club, and is recognized as one of the best judges that ever followed a brace of dogs; Mr. James L. Anthony, of New York, proprietor of the celebrated Graphic Kennels, who has kindly consented to act, and that prince of good fellows, Col. A. G. Sloo, of Vincennes, who will keep every person in a good humor, even if their favorites fail to win. While I am aware that the best dog does not always win I am satisfied that the judging will be conducted without fear or favor, and every dog will have a fair and honest chance, and we hope to see the best dogs win. The grounds are first-class in every particular, with plenty of birds and no sand burrs. Entries for the Derby close June 1, and the All-Aged Oct. 1. The entries for the Indiana Stake close Sept. 1. Running rules and entry blanks are now ready.

P. T. MADISON, Secretary.

JOHNNY.—*Editor Forest and Srteam:* Mr. Mason's strictures on the height and weight of champion Johnny require a reply. What the dog measured under the beagle standard measure with the spirit level on top is nothing to me. He has frequently been measured by myself and others, and has marked 18in. Some years ago I asked FOREST AND STREAM to tell me the orthodox manner of measuring a dog's height, and was told to place a straight edge over the top of the shoulder blade, first making the dog stand against a wall, bend his head until the occiput was on a level with the back, and measure from the floor to the under side of the stick. This method I have ever since followed, using a standard surveyor's tape. If the dog weighed 57lbs. at Philadelphia, he was certainly not in "fair good condition." That is his weight after a couple of weeks' hard work. I don't know who could have told Mr. Mason Johnny weighed 69lbs., as never, to my knowledge, has he gone over 67lbs., although he would be in better shape at that weight. Mr. Tallman told me he weighed 66¾ at last year's W. K. C. show, and he has weighed ¼lb. more. He scaled 62lbs. when leaving here ten weeks ago, and was then a long way from being right. It seems strange that he should have lost 5lbs. since then. Mr. Tallman writes that the dog is not in good condition, and the animal being in his charge, he ought to know. With regard to the "very elastic tape," I have always been under the impression that an elastic substance expanded.—F. H. F. MERCER.

DEATH OF CROXTETH.—The well-known pointer dog Croxteth died last Sunday at the kennel of Mr. A. E. Godeffroy, Guymard, N. Y. Croxteth was whelped in January, 1878, and was bred by Rev. J. C. Macdona, who brought him from England to this country in 1879. He was by Young Bang (Price's Bang—Luna) and out of Jane (Lord Sefton's Sam—Flirt). His performances in public are well known to our readers. We have received no particulars as to the cause of his death.

ENGLISH DOG CHAT.

AND peace reigned all over the land when over-worked 1887 made way for the new year, and in "Canine land" no event of importance occurred to mar the festive season of plum pudding and grog.

Paisley and Dunfernshire, in bonnie Scotland, and Newcastle-on-Tyne, began the round of dog shows in the first week of January; 200, 346 and 250 exhibits were respectively entered at these meetings, the latter, however, only confined to terriers and collies. Two gentlemen, well known in bulldogdom, Messrs. Jackson, got up a very nice little show confined to that breed alone at Bath, which was, taken all in all, a success. Mr. A. Hodgson, who had entered a dog in the class where the weight was limited to 45lbs., kept him "low" for two or three days before the show, and on arriving at Bath had him weighed by the committee and the weight (44½lbs.) registered. Then did this clever exhibitor procure a few pounds of good rump steak and his tyke was regaled to such a feast as not often falls to the lot of even pampered dogs, and after leaving the judging ring, where he was awarded first, he was objected to for being over weight. Mr. Hodgson laughed at the whole thing as a good joke, and as he had taken the precaution of registering the dog's weight on the day before the show when he brought him, the objection was overruled.

Liverpool had a good show in January, and like last year, so also this, a sensational price was paid for a puppy. Then Mr. E. Buckley bought the renowned Welsh terrier Mawddy Nonsuch for £200, now the young collie Caractacus was sold under the hammer for £350, the largest sum ever paid for a collie pup. The incidents of the sale are already known to your readers. Mr. Megson, the purchaser, had only recently bought a collie from Mr. Sam Boddington for £250, the vendor clearing a clean £150 over the transaction. Climax, the dog in question, though winning in the open class, was defeated by young Caractacus when competing for the cup for best collie in the show, and immediately Mr. Megson, who also owns the phenomenal Metchley Wonder, was seized with a desire to buy the pup. But there were other connoisseurs present besides himself, and the consequence was that the dog was put up for auction with the result that from his catalogue price of £100 he was knocked down at an advance of £250 on that sum, half of which and 10 per cent. went into the coffers of the Liverpool show committee. Good biz, that. Climax, by the way, a very good dog, was immediately sold by Mr. Megson, and at the Kennel Club's show got only a vhc. card. *Sic transit.* Caractacus caught a severe cold at his new home and inflammation of the lungs set in, which prevented his being shown at the Agricultural Hall, but I am glad to say with careful nursing he has quite recovered and is ready to break a lacee with the old stagers on the show bench and keep up the prestige of his master's kennels.

Mr. C. A. R. Hoare, of banking repute, and an enthusiastic Irish terrier breeder, whose name is to be seen in the prize lists of almost all shows where he exhibits, made his *début* in the judging ring at Liverpool, and was greeted with the most flattering entry of 111 Irish terriers. But little grumbling was heard at his decisions, except by little Billy Graham, who was left out in the cold, and begorra Oi belave he will not show again under Mr. Hoare. Ebbw Vale in Wales had a nice little show the first week of February, but in order to economize the committee had the dogs tied to stakes driven in the ground, with wooden partitions to separate them. Several nasty skirmishes took place among the exhibits, and we hear the committee is very likely to have to pay damages to at least one owner of a dog, which was so severely bitten that it died a few days after the show. False economy.

Of course your readers have heard of Dr. Walsh's death. All who have had the honor to know "Stonehenge" will understand the loss the sporting world (of which he was one of the most prominent pillars) has sustained by his death. His successor at the *Field*, the editorial chair of which paper the deceased gentleman occupied for over thirty years, is Mr. Toms, who has been sub-editor and Dr. Walsh's confidant for many years.

In pug circles there is a little stir owing to the resignation of the Honorable Secretary, Mr. W. L. Sheffield, who has severed his connection with that club. From murmurs that have reached my ears, there is something rotten in the State of Denmark, *qui vivra verra.*

The Kennel Club show has come and gone, and was with only one exception (the Jubilee show last summer), the best ever held both as regards the number and quality of the exhibits. The *locale* was a convenient one for everybody, the management under the Kennel Club Secretary, Mr. Aspinall, simply perfect, and had there only been one, instead of two, admissions charged to the show, no grumbling at all would have been heard. In order to get to the dog show visitors had to pay one shilling to pass through a sportsman's exhibition, and another price of admission to the dog show, although not one in twenty took the trouble to look at the so-called sportsman's exhibition, a private speculation, a number of stalls in which were displayed articles to be seen any day in shop windows. What connection "spectacles," "bells," pencils *et hoc genus omne* have with "sport" I should very much like to know, yet these formed part of the exhibition.

However, to return to the Kennel Club show. Two new judges made their bow before the public for the first time, the Rev. W. Kent, a young parson, to whom the task of judging the collies, some two hundred in number, was intrusted, and naturally the mistakes this novice made were not a few and caused a great deal of grumbling. The other new judge was Mr. Weager, a stock broker, who some time ago bought a bobtail sheep dog, which he subsequently lost, and who has since suffered from "bobtail mania." He searched the records and read up what he could find of bobtail lore, asked Tom, Dick and Harry's opinion about the points of this breed, and then having posted himself up on this subject as well as he could, and by word and deed done his best and succeeded in starting a specialist club for the old English sheep dog, he accepted the invitation of the Kennel Club to judge this breed. More than twenty dogs were entered, and it was most amusing to see Mr. Weager straddle the dogs, while the owners held the animals' heads, to feel their hindermost extremities to find out whether they were natural or docked bobtails. Altogether, however, his judging gave satisfaction, and I hear that he is going to give a similar exhibition to Midlanders at the Warwick show, where he will judge the bobtails. Champion Result had his colors lowered a bit, Mr. Vicarey's lovely Vesuvienne beating him for the Grand Challenge cup for best smooth fox-terrier in the show. Three members were elected on the Kennel Club committee, the well-known red Irish setter breeder, Mr. C. C. Ellis, Mr. P. Beresford Hope, of bulldog fame, both gentlemen in every sense of the word, and a Mr. Drew.

The Dublin dog show is not likely to be any great shakes, as it will not be held under Kennel Club rules, owing to the charter of the Royal Dublin Society not allowing any appeal from the society's decision to any other body. This is a pity, as I know of a good many dog men who would have exhibited there, and of several specialist clubs that would have offered prizes for competition had it been otherwise. Another injustice to Ireland.

Warwick, however, promises to beat the record of provincial shows this year. The popular chairman of that fixture, Mr. Evans, who was manager to Greenway's Bank, which failed in the autumn, has been well backed up by the town authorities, and the fears that there would be no meeting at this popular place have thus happily been dispelled, and all the principal exhibitors intend rallying around Mr. Evans to make the show a successful one.

The show at the People's Palace in the east end of London will most likely be a fairly good affair. About 400 dogs are entered. They have appointed as manager Mr. Boardman, the late head clerk in the Kennel Club office.

The City of Glasgow Canine Club's show will take place in the middle of March, and as Mr. John Pirie is going to judge collies, a bumping entry is expected, at any rate in the classes he is to handle.

Just as I am about to finish this chat I am informed of a rather curious performance played by a judge, Mr. J. A. Doyle, at Ebbw Vale show, who also is a member of the committee of the Kennel Club. Mr. Doyle was judging a class of collie puppies, dogs and bitches, when he awarded the first prize and cup to one named Prince Charlie, and after the judging claimed him at his catalogue price of twenty guineas. Some time afterward Mr. Doyle saw fit to alter his mind, cancelled the purchase, which had meanwhile been telegraphed to the exhibitor, and because he thought the winner was a bitch rejudged the class, with the result that Prince Charlie was left out in the cold. The dog was returned at the finish of the show to his owner, who refused to take him back, and now holds the committee of the Ebbw Vale show responsible for the twenty guineas, and also for the prize money and cup, and quite right, too. He then appealed to the Kennel Club against the rejudging of the class, but, strange to say, the committee of the Kennel Club upheld their brother committeeman's action, much to everybody's surprise. The matter is going to the law courts, and in my next chat I will report progress. We are all looking forward with much eagerness to the report of the New York dog show, and hope that it was a great success.

Mr. H. St. James Stephens, the late secretary of the Kennel Club, who has been over your side of the water, has returned to the old country. Judging from the prosperous air he carries, and what people who have seen him tell me, he must have made his little pile of money out there. It is said he has returned to stay.

BOSTON DOG SHOW.

BOSTON, Mass.—*Editor Forest and Stream:* Since my last letter dog show matters have boomed satisfactorily. Entries received warrant the statement made in your editorial columns. Boston wins are of great importance to the ambitious breeder, despite Rule 2. The spaniel classes at Boston will be magnificent in numbers and quality. Boston set the mark for liberal premiums and divided classes; other clubs have been compelled to follow suit, but the "Hub" will be on top.

Several additional specials have been received, so I am been informed by the bench show committee. One of $25 in value, viz., a free service by either champion Johnny or Drake, is offered by Mr. Mercer, of Ottawa, Canada, for the best Clumber spaniel bitch in show. The club adds to premium list a class (66⅔) for Clumber spaniel puppies, both sexes, with three prizes.

I had a glimpse to-day at a letter from one of the best known breeders of cockers, saying: "Send me twelve more blanks."

To the already phenomenally liberal prize list the club adds a kennel prize of $25 for greyhounds, conditioned upon entry of three kennels.

A friend of the breed sends his contribution from Bangor, Me., viz., $5 cash for the best Yorkshire terrier.

The Brant Cocker Kennels offer a $25 cash prize to the breeder of the best pair of cocker spaniel puppies, dog and bitch (from one or two bitches), sired by their champion Brant. Donors not to compete.

Others of importance are promised, and, as heretofore, the New England Kennel Club will be in the van of the kennel club shows. HUBITE.

NEW HAVEN DOG SHOW.

THE premium list of the fourth annual dog show of the New Haven Kennel Club is now ready for distribution. The show will be held at the New Haven Polo Rink, Chapel street, April 17 to 20. Entries close April 5 and should be made to the secretary, E. S. Porter, P. O. Box 481, New Haven, Conn. As the Rink is limited in size the club reserves the right to return all entries received after the number decided upon has been reached. The premium list provides for 97 classes and the club announces that in the classes not divided by sex, such division will be made when there are six or more entries. The American Spaniel Club's classification No. 2 is adopted. A large number of special prizes will be offered including valuable kennel prizes for the more important breeds. The New Haven Kennel Club, by its straightforward course and well known care it has taken of the interests of the exhibitors in the past, has earned for itself an enviable reputation in the dog world, and we have no doubt that at the coming show we shall see the benches well filled with the best representatives of the different breeds.

TROY DOG SHOW.

Editor Forest and Stream:

The show opened this morning and is a grand success. Owing to the large entry, over 450, the management was compelled to secure a larger building than the one arranged for, and was very fortunate in being able to get the Troy Bicycle Club's rink, where the show is held. Even this building was not large enough and a number of entries had to be returned. The benching is excellent and Tallman is on hand looking after the feeding.

I did not commence judging until 3 P. M., and as the building was literally packed with visitors, work proceeded slowly, and the judging was not finished. The entry is the largest, in proportion to the amount of premiums offered, ever made in this country. CHAS. H. MASON.

TROY, N. Y., March 20.

DEATH OF TILESTON'S LOU.—Mr. James Mortimer informs us that the Gordon setter bitch Lou, well-known ten years ago as Tileston's Lou, died at the kennel of the Westminster Kennel Club, at Babylon, last Sunday, probably of old age. She was whelped in England, September, 1874, and imported to this country the next year. In 1876 she won first prizes at Springfield, Mass., Geneseo, N. Y., and Baltimore. She was exhibited at the first six shows at New York, but not for competition. She was undoubtedly well bred, although her pedigree was unknown. She was an especial favorite of her former owner, the late Wm. Tileston, and at his death she came into the possession of Elliot Smith, who owned her at the time of her death.

BORN BLIND.—A good story is told of a bank official in Utica who the other morning discovered a litter of puppies which his faithful setter had presented to the establishment, and which had not yet opened their eyes. His joy at the discovery was turned to chagrin when he found that all the puppies had been "born blind." So with a sorrowful heart, not wishing to raise a litter of blind dogs, he dumped the valuable brood into a pail of water and drowned them all. *Hæc fabula docet,* that the law's delays often protect the innocent by refraining to punish the appearance of evil.—*Utica Herald.*

ROBINS ISLAND CLUB.—Election, March 5, 1888. President, S. Fleet Speir; Vice-President, H. D. Polhemus; Secretary and Treasurer, Samuel B. Duryea. Directors, S. Fleet Speir, H. D. Polhemus, Henry Cullen, Jr., Alden S. Swan, Chauncey Marshall, Samuel B. Duryea, William Stanley.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Ilford Sohrab. By Howard H. Burden, Troy, N. Y., for brindle mastiff dog, whelped Nov. 18, 1887, by Ben Adam (A.K.R. 4733) out of Lady Zara (A.K.R. 2627).

Druce, Elise and Else. By Dr. L. A. Kittinger, Wilmington, Del., for fawn mastiff dog and two bitches, whelped Nov. 1, 1887, by Don (Major—Beauty) out of Clytie (Grip—Juno).

Ben II. By Clumber Kennels, Ottawa, Can., for lemon and white Clumber spaniel dog, whelped Feb. 25, 1888, by Drake (A.K.R. 5560) out of Madge (Ben—Joan, A.K.R. 5961).

Floss II. By J. D. Sperry, Iowa City, Ia., for black and tan Gordon setter bitch, whelped May, 1886, by Lulex II. (Lulex—Mag) out of Maud (Judge—Pride of Glencoe).

Juno III. By Rockdale Kennels, New Bedford, Mass., for white bull-terrier bitch, whelped Nov. 11, 1887, by Rex (Plunger—Prudence, A.K.R. 3615) out of Vixen (Ben—Juno).

Nettie III. By Rockdale Kennels, New Bedford, Mass., for white, black and tan head, black markings, fox-terrier bitch, whelped May 27, 1887, by imported Foxie out of Lilly IV. (Jake—Nettle II.).

Lilly IV. By Rockdale Kennels, New Bedford, Mass., for white, black and tan head, fox-terrier bitch, age not given, by Jake (Holderness Lad—Olvys Lilly) out of Nettle II. (imported Nailer—Nettle).

Chautauqua Gladstone and Marcella Gladstone. By F. M. Shelley, Sheridan, N. Y., for lemon and white English setter dog and blue belton bitch, age not given, by Gladstone's Mark (Gladstone—Bessia A.) out of Chautauqua Belle (Ted Llewellin, A.K.R. 599—Marcella).

Rex and Mustard. By Rockdale Kannels, New Bedford, Mass., for white bull-terrier dog and bitch, whelped April, 1886, by Barnard's Plunger (Little Victor—Midget) out of Prudence (A.K.R. 3615).

Menthon Kennels. By K. Croskey, Phœnixville, Pa., for his kennels of St. Bernards.

Rockdale Kennels. By Geo. L. Fish, New Bedford, Mass., for his kennels of bull and fox-terriers.

NAMES CHANGED.

Perseus to Confucius. White, with black and tan head, fox-terrier dog, whelped Nov. 28, 1886 (Bacchanal—Hazel), owned by C. Eschenbach, New York.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Pet Obo—Pete Obo. C. E. Gilchrist's (Charlestown, Mass.) cocker spaniel bitch Pet Obo (Shady—Edith) to G. F. Willard's Pete Obo (Black Pete—Miss Ginger), March 14.

Edith—Pete Obo. R. S. Jaques's (Charlestown, Mass.) cocker spaniel bitch Edith (Brush II.—Olivia) to G. F. Willard's Pete Obo (Black Pete—Miss Ginger), March 13.

Gyp—Bradford Harry. J. C. Cullen's (Pittsfield, Mass.) Yorkshire terrier bitch Gyp to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady, March 9.

Lady Brighton—King Fred. F. M. Shelley's (Sheridan, N. Y.) English setter bitch Lady Brighton (Prince Phœbus—Rosey) to J. V. Patterson's King Fred (Ted Llewellin, A.K.R. 599—Marcella), March 10.

Jura—Barry. A. Laidlaw's (Woodstock, Ont.) St. Bernard bitch Jura (Apollo—Lorne) to F. R. Close's Barry (A.K.R. 2154), March 2.

Devon Beauty—Robin. A. Laidlaw's (Woodstock Ont.) cocker spaniel bitch Devon Beauty (Lad o' Devon—Dinah) to his Robin (Obo II.—Dinah), March 12.

Nell Gwynne—San Roy, Jr. Taylor & Davis's (Philadelphia, Pa.) English setter bitch Nell Gwynne, (Racket—Moxie) to their San Roy, Jr. (San Roy—Cora), Feb. 20.

Cora Lee—Ted Llewellin. W. B. Peet's (New York) English setter bitch Cora Lee (Cambridge—Cassie Lee) to his Ted Llewellin (A.K.R. 599), Feb. 27.

Blanche II.—Gladstone's Mark. W. B. Peet's (New York) English setter bitch Blanche II. (Ted Llewellin—Blanche Lewis) to Geo. Jarvis's Gladstone's Mark (Gladstone—Bessie A.), March 4.

Bessie B.—Theo. Edwin Still's (Philadelphia, Pa.) English setter bitch Bessie B. (Bango—Nellie) to his Theo, March 7.

Fanny—Gath's Joy. F. H. Fernald's (Haverhill, Mass.) English setter bitch Fanny to D. A. Goodwin, Jr.'s, Gath's Joy (Gath—Gem), March 12.

Lady G.—Gath's Joy. D. A. Goodwin, Jr.'s (Newburyport, Mass.) English setter bitch Lady G. (Gladstone—Cornelia) to his Gath's Joy (Gath—Gem), Jan. 17.

Blue Queen—Gath's Joy. G. L. V. Tyler's (West Newton, Mass.) English setter bitch Blue Queen (Druid—Leda) to D. A. Goodwin, Jr., Gath's Joy (Gath—Gem), Jan. 25.

Hazelnut—Glenmar II. Berkshire Kennels' (Hinsdale, Mass.) red Irish setter bitch Hazelnut (Berkley—Madge) to Onota Kennels' Glenmar II. (Glencho—Red Lassie), Feb. 19.

Allameda—Naso of Devonshire. Floyd Vail's (leased) (Jersey City, N. J.) pointer bitch Allameda (Mark—Birdie) to his Naso of Devonshire (Nick of Naso, A.K.R. 4591—Devonshire Queen, A.K.R. 3127), Feb. 27.

Lady Snow—Bracket. Floyd Vail and Geo. L. Wilms's (Jersey City, N. J.) pointer bitch Lady Snow (A.K.R. 3651) to Graphic Kennels' Bracket (Graphic—Bloomo), March 20.

Vesta—Wacouta Nap. C. Altmannsperger's (Minden, Ia.) mastiff bitch Vesta (A.K.R. 1154) to Wacouta Kennels' Wacouta Nap (A.K.R. 5435), March 3.

Spot—Drive. Harrison Fox Hunting Club's (Harrison, Me.) foxhound bitch Spot to A. M. Gerry's Drive (Roderick—Nellie), March 8.

Dixie—Silver Shoe. Frank F. Bock's (Battle Creek, Mich.) pug bitch Dixie (A.K.R. 4894) to Midget Pug Kennels' Silver Shoe (A.K.R. 3758), Jan. 15.

Bradford Thera—Silver Shoe. C. A. Peterson's (Albany, N. Y.) pug bitch Bradford Thera (A.K.R. 5521) to Midget Pug Kennels' Silver Shoe (A.K.R. 3758), Feb. 8.

Lilly IV.—Rattler. Rockdale Kennels' (New Bedford, Mass.) fox-terrier bitch Lilly IV. (Jake—Nettle II.) to H. G. Vinal's imported Rattler, Feb. 23.

Fan Tan—Foxie. Rockdale Kennels' (New Bedford, Mass.) imported fox-terrier bitch Fan Tan to C. A. Case's imported Foxie, Feb. 20.

Mustard—Benjo. Rockdale Kennels' (New Bedford, Mass.) bull-terrier bitch Mustard (Plunger—Prudence, A.K.R. 3615) to their Benjo (Count, A.K.R. 3178—Little Nell, A.K.R. 2905), Feb. 20.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Nellie Laverack. Jos. H. Brady's (Pawtucket, R. I.) English setter bitch Nellie Laverack (Perfection—Lit Laverack), March 9, nine (three dogs), by C. Fred Crawford's Royal Albert (Sir Allister—Novelty); two dogs and one bitch since dead.

Lucy. F. C. Rochester's (Logan, O.) beagle bitch Lucy (Drive II.—Fanny), March 15, five (three dogs), by Geo. H. Hill's Banker (Rattler—imported Actress).

Clytie. Dr. L. A. Kittinger's (Wilmington, Del.) mastiff bitch Clytie (Grip—Juno), Nov. 1, ten (five dogs), by Rudolph's Don (Major—Beauty).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Jackson. White bull-terrier dog, whelped Feb. 29, 1887, by Prince out of Fanny, by C. D. Cugle, Hartford, Conn., to A. L. Bosley, Baltimore, Md.

Tostig. White, brindle face markings, bulldog, whelped Aug. 2, 1885 (A.K.R. 2925), by C. D. Cugle, Hartford, Conn., to A. L. Bosley, Baltimore, Md.

Sir John. Black cocker spaniel dog, whelped Sept. 17, 1886, by Obo, Jr. (A.K.R. 1481) out of Dido, by A. Laidlaw, Woodstock, Ont., to J. E. Weston, Utica, N. Y.

Maple Grove Duchess. Black and tan head, white body, black marks, fox-terrier bitch, whelped May 2, 1887 (A.K.R. 5293), by Maple Grove Kennels, North St. Louis, Mo., to Associated Fanciers, Philadelphia, Pa.

Richmond Tyrant. Black and tan head, white body, fox-terrier dog, whelped September, 1885 (A.K.R. 4114), by Maple Grove Kennels, North St. Louis, Mo., to Associated Fanciers, Philadelphia, Pa.

Gipsey. Black, white and tan beagle bitch, whelped May 15, 1887, by Rover out of Silk, by P. M. Carman, Wrightsville, Pa., to Associated Fanciers, Philadelphia, Pa.

Flaunt and Sprite. Black, white, tan and ticked beagle bitches, whelped June 7, 1887, by Bob out of Mary, by P. M. Carman, Wrightsville, Pa., to Associated Fanciers, Philadelphia, Pa.

Marion B. and Miss Mame. Black, white and tan beagle bitches, whelped July 5, 1887, by Little Ned out of Spangle, by Associated Fanciers, Philadelphia, Pa., to E. R. Coleman, Lebanon, Pa.

Victor. Blue ticked beagle dog, whelped Dec. 26, 1887 (A.K.R. 3191), by Associated Fanciers, Philadelphia, Pa., to P. M. Carman, Wrightsville, Pa.

Maple Grove Countess. Brindle, with white markings, St. Bernard bitch, whelped Feb. 22, 1887, by Duke of Lancaster out of Lyra, by Maple Grove Kennels, North St. Louis, Mo., to Associated Fanciers, Philadelphia, Pa.

Driver. Black, white and tan beagle dog, age not given, by Warrior out of Fanny (A.K.R. 1718), by Geo. S. King, Richmond, Pa., to Associated Fanciers, Philadelphia, Pa.

Rollo. Black and tan Gordon setter dog, whelped Jan. 18, 1887, by Rollo out of Floss, by J. C. Ovis, Luray, Va., to Associated Fanciers, Philadelphia, Pa.

Esc. Dark fawn mastiff bitch, whelped Nov. 1, 1887, by Don out of Clytie, by Dr. L. A. Kittinger, Wilmington, Del., to Jos. Shaw, Washington, D. C.

Elise. Light fawn mastiff bitch, whelped Nov. 1, 1887, by Don out of Clytie, by Dr. L. A. Kittinger, Wilmington, Del., to S. M. Donnell, Newark, Del.

Druco. Dark fawn mastiff dog, whelped Nov. 1, 1887, by Don out of Clytie, by Dr. L. A. Kittinger, Wilmington, Del., to George B. Kittinger, Seattle, W. T.

Viking. Red Irish setter dog, whelped March, 1884, by Blucher out of Zulu, by Taylor & Davis, Philadelphia, Pa., to J. W. Bodine, Brighton, N. J.

Belle M. Liver field spaniel bitch, whelped May, 1887, by Bob, Jr., out of Sutherland's liver bitch, by A. Laidlaw, Woodstock, Ont., to R. Tivey, Peterboro, Ont.

Una. Black, white and tan beagle bitch, whelped Dec. 24, 1883 (A.K.R. 1324), by Frank P. Quinby, White Plains, N. Y., to C. S. Wixom, Covert, N. Y.

Sport. Black, white and tan beagle dog, whelped April 12, 1886, by Bounce out of Jessie, by C. S. Wixom, Covert, N. Y., to F. P. Quinby, White Plains, N. Y.

Rattler II. Black and tan head, white body, fox-terrier dog, whelped Sept. 7, 1887, by imported Rattler out of imported Fan Tan, by Rockdale Kennels, New Bedford, Mass., to Edward Vinal, Plymouth, Mass.

Venus. Black and tan head, white body, fox-terrier bitch, whelped May 27, 1887, by imported Foxie out of Lilly IV., by Rockdale Kennels, New Bedford, Mass., to Chas. A. Case, same place.

Chief—Bizrcena whelp. Dark red Irish setter dog, whelped Oct. 13, 1887, by Onota Kennels, Pittsfield, Mass., to C. H. Willis, Stockbridge, Mass.

King Marsh—Nova whelps. Two liver Irish water spaniel bitches, whelped Aug. 4, 1887, by Great Western Kennels, Moberly, Mo., to Associated Fanciers, Philadelphia, Pa.

Lord Ragian—Juno whelp. Fawn mastiff bitch, whelped Aug. 11, 1887, by D. A. Goodwin, Jr., Newburyport, Mass., to Associated Fanciers, Philadelphia, Pa.

DEATHS.

Pretty Polly. King Charles spaniel bitch, 5yrs. old (Reuben—Daisy), owned by Miss Belle A. Borrowscale, Boston, Mass., Feb. 15, in parturition.

Lou. Gordon setter bitch, whelped September, 1873 (known as Tilston's Lou), owned by Elliot Smith, New York, March 19.

Croxteth. Liver and white pointer dog, 10yrs. old (Young Bang—Jane), owned by A. E. Godelfroy, Guymard, N. Y., March 18.

Pandora. Fox-terrier bitch, whelped Nov. 28, 1886 (Bacchanal—Hazel), owned by C. Eschenbach, New York, from distemper.

Primrose and Mischief. English setter bitches (Ted Llewellin—Marcella), winners of 1st and 2d, puppy class, Hornellsville, 1887, owned by F. M. Shelley, Sheridan, N. Y.

KENNEL MANAGEMENT.

No Notice Taken of Anonymous Correspondents.

C. E. B., Charlottesville.—We have a pointer who seems to be in perfect health and condition, but for some weeks past the pupils of his eyes have become greatly enlarged, and he does not appear to see well. The pupil almost extends over all the iris, which makes his eyes look very blank and staring, but at the same time are clear. He had distemper last July. Do you think he is affected by this, and what do you advise? Ans. Consult an oculist or a vet. or both. His brain may be affected. Belladonna produces such an effect, so also does tumor or hemorrhage of brain.

SUBSCRIBER, Newark, N. J.—I have a fox-terrier 6 months old which is in poor condition, and will eat nothing but meat or cake. I have tried Spratts biscuits and boiled tripe, but she will not eat it. She is lively and has plenty of yard room, but does not care to go out unless some one goes with her. You will oblige by answering this in your valuable paper, telling me what I can do for her. Ans. Probably worms. Purge with castor oil (two teaspoonsful), and look for worms. If found, give 20 grains of powdered areca nut made into a pill with lard.

Rifle and Trap Shooting.

RECENT RIFLE TALK.

DURING the dull days of the past winter several men in a position to talk understandingly on rifle topics have been giving their views on one or another aspect of the large subject. Capt. S. A. Day, of the U. S. A., with his collection of fine rifles as a text, spoke of them historically and critically. He had seen twenty-seven years' service with the army and could speak of small arms with a knowledge of how they had been found wanting or otherwise in the hands of troops. He found the Springfield to be a good gun, which had done good service, but was a little out of date. It was good for 800yds, but not a foot further, and at the extreme range of 1,000yds. the only hope with it was "scratching" or accidental scores.

The Martini-Henry rifle of the British service drew out commendation from Capt. Day. It was, in his opinion, an excellent gun. The barrels well made, the British manufacturers having the knack of grooving it very effectively. American riflemen should have great respect for this gun, for it is the one with which national teams have been twice defeated by British volunteers. It is a handy gun—it is a "gunny" gun. It feels like a gun in the hand. "A man would trust that gun almost anywhere if he had plenty of ammunition," thought Capt. Day.

The reliable Sharp-Borchardt came in for its merited commendation. In its action it was declared to be excellent, having a square, falling breechblock, containing the hammer and lock. It strikes the primer in the prolongation of the bore, thus causing the least possible disturbance of the piece in firing.

The Remington was instanced in its cheap military form. In the model which with various modifications has been sent here, there and everywhere over the globe. Its simple action commended it, but its light barrel was an objection. The question of magazine guns brought but three types. The Winchester; the Lee and Spencer. The Winchester with its tube magazine, the Lee with its detachable magazine which Capt. Day, as a military man, thought as proper a military device as a fixed bayonet. When an order to "fix bayonets" has been given and obeyed, an officer knows that his men are prepared to make a charge at the word of command. Why should not similar security be felt when waiting to repel an attack? After the command "fix magazines" an officer may rely upon all his men having their magazines full and in position. Nothing could give him greater confidence in a crisis. The Spencer rifle, with the improvement of Col. Geo. V. Fosbery, was the other type of magazine gun, and this was a type because it was new and novel. The electric rifle, in which the ignitions of the charge is not brought about by percussion acting upon a fulminate, but through the well-known device for ignition by a spark. In the models shown there was a small battery similar to the Leclanche in the stock. It was a chlorate of silver battery, and there is no consumption of material except when the cartridge is in place and the finger on the trigger. There is no cocking or uncocking. The electricity ignites the powder directly, without any hammer or mainspring whatever. This device quadruples the life of an ordinary shell. The igniters used are not more expensive than the present percussion caps. One of these little batteries has been subjected to a test of 53,000 shots without being recharged.

The tendency which has been so prevalent abroad and in this country as well for a rifle of small caliber was not favored by Capt. Day, who feared that small caliber men would find themselves in trouble, since reducing the caliber necessitates the sharpening of the twist. This increases the tendency toward the "stripping" of the projectile, and the consequent "leading" of the barrel, which makes some harder coating, like steel, necessary around the lead. This, again, destroys the fine edges of the grooving, reducing the life of the gun and making it but little more effective than a smooth-bore.

Agent Chapman, for many years of the Winchester Arms Co., explained recently something of the dullness which is ruling in the gun trade. He found that in 1877, when the Russo-Turkish war was on, that American arms were in great demand by European consumers. Then came the demand for an arm more effective than the carbine-built Winchester. The next change was the demand for smaller calibers, and the large-bore weapons became unsaleable, and brought rifles down to being the cheapest product of fine mechanism in the market. The introduction of a powder producing far less smoke than that formerly used was one of the results of the Soudan campaign, as the smoke hanging over a line firing fifteen to eighteen shots to a man per minute was found to form an almost impenetrable veil in front of the troops, hidden by which an enemy could charge home almost uninjured. The manner in which the English squares were broken by Arab sword and spear men showed that something must be done to do away with this cloud of smoke, and the powders recently invented, while not fully accomplishing this object, are in the direction of the ideal powder, which is to be one compact in form, proof against moisture, very powerful and entirely smokeless.

Another curious obstacle which rifle makers meet was pointed out to be the risk of an infraction of a previous patent since the patents had become so many that it was difficult to make a new model without using some secondary feature found in a previous model.

Another interesting talk on topics connected with the rifle was with Capt. Chas. R. Huntington, of the regular army on post in Arizona. He pointed out that within the last three years most noticeably the soldiers of the regular army have developed a skill in marksmanship which makes them the best shots of any military force in the world.

Since the concentration of troops at a few large posts, and the opening of sources of supplies by the railroads, it has been possible to devote a great deal of time to rifle practice, and the result is as stated. At long ranges, 800, 900 and 1,000yds., the best men are still inferior to the Creedmoor small-bore riflemen, but at military ranges, from 300 to 600yds., the position being either kneeling or erect, they are far superior shots to any other body of men in America, or indeed elsewhere. The scores made in the post contests compare favorably with those made in New York or at Wimbledon, in England, while the division matches, not to speak of the annual competition between the chosen men of the entire army, show an average far better than that made by any troops in the world.

This is the fact touching shooting at fixed distances, and on the Western posts the men have gone further, and their particular excellence is in skirmish firing, where they have to alternately advance and retreat over a space of ground several hundred yards in extent, firing twenty shots in sets of four, at different ranges, and at distances which they must judge for themselves. This is far more difficult than fixed-distance firing, and the best Eastern shots failed lamentably when brought into competition with the soldiers, trained as they now are. Some of the scores made in skirmish firing are wonderful, being nearly as good as the best made at equal measured distances, and the general proficiency of the men is most admirable.

The result of this training was strongly manifest in the last Apache campaign. In the old days the Indians had but little fear of the marksmanship of soldiers at long range, and ventured on very daring ambushes, trusting to their superiority as shots to save them from serious loss. But one or two experiences of the sharpshooting abilities of the troops effectually cured them of any such idea, and the consequence was that in a country probably the most favorable in the world for ambuscades, but one was attempted, the Indians never daring to come within range of the military rifles.

To Captain Turner is due a great deal of the very great proficiency of the cavalrymen in pistol practice. Before his day the men were taught to aim a revolver as they did a rifle—by sighting along the barrel, bringing front and rear sights in line with the object. Turner changed all this, teaching the men to look at the object, and not at the pistol, firing without direct sight. This innovation was very hard to be introduced, but the results accomplished were such, especially at mounted drill, that the superiority of his system was universally admitted, and to-day is taught throughout the army.

RANGE AND GALLERY.

OWENSVILLE, Ind., March 13.—The Owensville Ballard Rifle team, Hinman target, 10 o'clock wind, 200yds. off-hand:

J Montgomery	10	7	5	6	10	7	0	7	8	9—75
	8	8	6	4	5	9	10	7	9	7—74—149

BOSTON, March 17.—A large number of riflemen went out to Walnut Hill on the early trains to-day to shoot in the regular matches of the Massachusetts Rifle Association, but owing to the very high wind only a few good scores were made. Following are the scores finished to-day:

Off-hand Decimal Match—200yds.

H Hawley	5	6	8	10	9	10	10	6	7	10—81
B G Warren	9	9	5	7	6	9	9	10	7	9—80
T Day	7	8	10	9	5	8	10	9	6	7—79
M Jackson	7	9	8	7	7	7	8	9	6	10—78
D L Chase	8	6	7	8	8	6	7	8	10	7—75
F D Hart	8	6	7	5	10	7	10	6	7	8—74
A Newman	8	7	6	7	10	7	4	6	7	10—72

Revolver Match—50yds.

J B Fellows	8	6	9	8	10	9	9	7	8	10—84
F Carter	8	7	9	8	10	10	7	5	8	6—78
H L Lee	5	9	10	6	9	9	7	8	8	6—78
M Howard	6	8	8	8	5	6	9	7	9	6—72
B Rudge	6	10	8	10	7	4	7	10	0	3—65
M Jackson	4	4	4	8	5	7	6	7	6	9—60

Military Match—(Creedmoor target).

J P Nowell	4	4	4	5	4	4	4	4	4	4—41
S Holmes	4	4	4	4	3	4	4	4	4	4—39
J Sampson	4	4	3	4	3	4	5	4	3	4—38

Rest Match—200yds.

B G Barker	8	10	9	12	12	10	11	7	10	10—99
J N Eams	9	8	9	10	9	9	12	9	9	10—94

F D Hart	11	11	9	9	8	9	9	9	9	6—90

PROFESSIONAL RIFLEMEN.—Newark, N. J., March 12.—*Editor Forest and Stream:* In one of the Essex County Rifle Association matches the question arose in regards what constitutes a professional rifle shot, and to settle the dispute it has agreed to leave the decision to your judgment. Now, sir, you would greatly oblige this club and numbers of other clubs in Newark and vicinity, to answer this in the next issue of your paper.—OUR OWN GUN CLUB (F. C. Knothe, Sec.). [The simpler way would have been to have defined the word "professional" where it was used in drawing up the conditions of this particular series of matches. It is manifestly impossible to offer the old time athletic definition of one who competes for money or who takes money as a prize. There is such an established system of sweepstakes both in trap and target shooting that the money-taking test cannot well be applied. It is possible, however, to offer a rule which with very few exceptions will cover. One who makes his living by the use of the rifle may properly be classed as a professional. Thus we can readily separate the professional hunter from an amateur one, a rifle gallery keeper who is an instructor in shooting would be styled a professional, even though he might have dozens of patron pupils who possessed greater skill. Oftentimes it will be difficult to draw the line, as of a man nominally in one calling yet giving much time to and deriving a goodly income from his skill with arms. The better plan in all this question of the classification of marksmen is to avoid the use of such indefinite words as "professional" and depend on classification of shots. Each man in a public match makes a record; upon this he may be handicapped, so that men of about the same degree of skill compete one with another. There is some sort of chance at the prize list, and the shooter as he gains in skill goes to a higher class, meets contestants more difficult to overcome and the question of professional and amateur does not come up to perplex and annoy.]

NEW BEDFORD, Mass.—Since Christmas time target practice has been all the rage among the firemen in this city. Great rivalry exists between the different companies, and an inter-company match for the championship of this city is the thing proposed. For convenience of arrangements, No. 6 company leads, as in all the other houses the range is in the cellar. A 200yds. target has been reduced to a size equaling a distance of 55ft., the length of the range. This target is suspended from the floor directly under the repair shop, and a board in this floor has been hinged and so arranged that the target can be swung up through the floor to the room above. The marker sits in this room and sees the effects of the shots at once when the target is thus swung up. He is in electric communication with the marksman at the firing point, and by the pressure of a button causes a dial to drop upon an electric communicator, thus telling the marksman the result of his shot in an instant. If any doubt is felt as to the result by those at the firing point, they have simply to press a button, which causes a bell to ring near the marker, who upon this signal repeats the score. A rifle association has been formed of eighteen men belonging to the company, who have formed a stock company. Each has contributed his share and purchased one Ballard rifle. The earnings of this rifle, however, have been sufficient to purchase an additional rifle. The best shots made at No. 4's range are given below:

W A Gibbs	4555554555—48	D D Briggs	4555455545—46
John Backus	5454555455—48	Alonzo Jason	4535545556—46
Clifford Bayliss	4454555557—47	George Parker	5455525435—46
J B Bradford	5544555545—47	Paul Wing	4545445455—45
T R Almy	4455555554—47	David Piper	4455445554—45
Wm D Ashley	4455555455—46	Charles H Card	5545535544—45
Sam'l Watson, 2d	5445545455—46		

The number of cartridges shot per week is 5,000 at this range.

No. 6 company has an excellent gallery in the basement of its house. The shooting at this house was begun last Christmas time, when an old saw plate formed a target. This was shot out in a little while and a new target was procured. The range is 45ft. in length. The target is so arranged that it can be easily swung round in front of the marker, who stands behind a wooden shield and calls out the result to the marksman. An improved marking dial is being made for use at this range. "You may get some idea of the number of cartridges we use here," said Engineer Chas. G. Taber, as he dragged a bushel basket nearly full of empty shells from a dark corner. Friday evening, March 16, an interesting match took place at this range. A team composed of seven non-members of No. 6 company, challenged a team of seven composed of members of the company. Ballard rifles were used, the vanquished to furnish a barrel of choice Vineyard clams. The scores follow. The highest possible is 50: Non-members of the company—Capt. John Welch 44, W. Cunningham 40, William McIntyre 46, Daniel Leary 38, George Bayliss 45, A. T. Studley 40, Chas. McBay 46, total 299. Members of the company—Capt. George W. Parker 38, Thomas Wood 44, C. G. Taber 46, T. K. Wood 45, Walter Almond 43, H. M. Mosher 42, R. N. Allen 43, total 285.

At Onward engine house a 40ft. range has been constructed in the cellar, where practice goes on constantly. The marker is protected by a brick wall from the bullets of the Ballard rifle used at the range.

No. 2 company at the central engine house rejoice in being high hook on the score book. The range is located in the cellar under the floor of the machine room. It is 40ft. in length and very conveniently arranged. Some of the scores made at the house have been:

K Pierce	5455555555—49	Samuel H Mitchel	4455455554—46
G W Parker	5554545555—48	Chief Macy	4444555545—45

The sport is greatly enjoyed by the firemen, who are glad of anything which will lessen the tediousness of their long hours of waiting for an alarm to strike.

SAN FRANCISCO, March 10.—The monthly medal shoot of the California Schuetzen Club took place at Harbor View to-day, the match being warmly contested by a number of the crack riflemen of the city, and from 10 o'clock in the morning until darkness put a stop to the sport the crack of the rifle resounded in the range and the talliers were kept busy recording the several scores. The following were the winners in their respective classes: Championship class, A. Rahwieler, 443; first class, A. T. Fields, 412; second class, H. Heeth, 387; third class, A. Kurlfinke, 382; fourth class, T. Carroll, 377. Mr. Rahwieler, having made the best record of the day, was awarded the medal. In the cadet class A. Ehrenfort scored 367, placing him in the championship class of the cadets, the other winners being I. Wortheimer of the first class, and J. Stetten, Jr., of the second class. On Sunday week, the 25th inst., the Schuetzen Club will give a picnic at Harbor View, when thirty cash prizes will be given for target practice, together with special prizes, consisting of silverware, jewelry, etc., under the following rules: All shooting off-hand at 200yds. distance, at targets 37in. in diameter, divided into 25 rings, and all rifles not over .45-cal. and sights (telescopes excepted) allowed.

AMHERST, Mass., March 10.—At a regular meeting of the Amherst Gun Club, March 6, the name Mountain View Range was adopted. Eleven new members were admitted. While the club have a fine house and grounds, and are in a flourishing condition, there are, unfortunately, few who can spare the time for rifle practice, much as they may enjoy it. The following scores were made at the range March 6:

Henry Adams	10	7	9	8	8	6	8	7	7	8—78
	9	9	10	9	7	5	7	8	7	7—78
	9	7	9	8	10	8	7	8	10	4—78
A F Bardwell	9	10	8	7	7	6	7	9	10	4—76
	10	7	9	8	9	8	7	7	4	8—77
	8	8	9	6	6	6	9	10	5	7—74
J S Thomas	10	9	7	7	6	7	8	9	6	8—72
	9	7	7	6	5	6	9	7	3	9—68
	9	6	8	6	7	9	5	4	7	6—67

GARDNER, Mass., March 15.—Regular meet of the Gardner Rifle Club, Hackmatack range, standard American target, 200yds. off-hand:

H G Knowlton	79	84—163	C J Crabtree	72	79—151
A E Knowlton	79	80—159	F E Edgell	70	75—145
C N Edgell	76	81—157	C L Leland	69	73—142

SCARBORO RILE CLUB.—The shooters have been busy of late; on Saturday, March 10, a rifle match was shot at Highland Creek between teams of 10 a side from Highland Creek and Scarboro, the result being a tie as follows, 5 shots per range per man, 100 and 200yds.: Highland Creek, 174, 205—379. Scarboro, 176, 203—379. On Friday, March 16, a match with the Newtonbrook Rifle Club was shot at Agincourt, 10 men on a side, 5 shots per man per range, 100 and 200yds., which resulted in a victory for Scarboro by 57 points; Scarboro, 184, 203—387. Newtonbrook, 153, 177—330.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

CANADIAN TRAP NOTES.

TORONTO, March 10.—To-day was a grand field day at McDowall's shooting grounds, the occasion being a friendly shoot between the Toronto and Owl Gun clubs of this city. By 2 o'clock both clubs were down in full force, and the new grounds were fairly alive with gunners, over two hundred being present. The match started promptly at 2 o'clock with Ald. Maughan as referee and Messrs. Pearsall and Humphreys as judges. The teams were divided into four squads, each club sending five men to the traps. The shooting all through was very even, for when fifteen men on each side had shot the Torontos were only two birds ahead. Darkness set in soon after the last squad had gone to the traps, and after the tenth round it was impossible to follow the birds, so by mutual consent the competition was closed, the Torontos being the winners by ten birds. The strong wind that prevailed carried the birds (which were thrown from five screened traps set 5yds. apart) to a great distance, some falling over 75yds. from the score. The score—20 men per team, 20 birds per man, from 5 screened traps, 18yds. rise: Toronto G. C. 204, Owl G. C. 194.

MONTREAL, March 13.—A new gun club has been formed as the outcome of the dissention in the Montreal Club. It was organized last night, when the following officers were elected: President, Ald. A. W. Morris; Vice-President, Dr. Barnes; Captain, C. H. Wallace; Secretary-Treasurer, L. T. Trotter; Committee, A. H. C. Walpole, W. Edmond, S. Allen. The new club will be known as the Dominion Gun Club, and its grounds will probably be in St. Henri.

TORONTO, March 14.—The first shoot for the Enos James gun, presented to the West Toronto Junction Gun Club, took place to-day. The following scores were made: At 20 Canadian blackbirds—D. Black 18, D. Blea 17, E. Dollery 14, T. Wakefield 13, H. George, 13. J. Bailey 15, E. DEye 12, W. Jones 10, D. Walton 9, C. Hinton 7. The third shoot for the President's medal was held on the same day with the following result: At 15 sparrows, 18yds.

rise—J. Bailey 11, D. Black 11, P. Wakefield 10, C. Hinton 8, E. Dollery 7, H. Newman 7, H. Power 7, E. D'Eve 7, H. George 5, D. Walton 5. In the shoot-off Bailey won with 3 out of 5.

MONTREAL, March 17.—The second shoot for the Boyd cup came off this afternoon on the grounds of the Lachine Gun Club, they being up to-day the holders of the trophy. The weather was clear and cold, but not good for shooting, the wind being very strong and gusty, and the sun and snow making it very difficult to gauge distance. The shooting, particularly of the members of the Lachine Club, was not nearly up to their usual form. W. Cameron, of Ottawa, was referee. There were seven teams competed, and the following is a summarized score:

Cote St Paul	38 St Laurent
Lachine	32 Dominion
St Laurent (second team)	27 St Hubert
Cote St Paul (Second team)	21

The conditions were 15 Peoria blackbirds, 18yds. rise, National Club rules. There will be no more shooting for this cup until the snow is off the ground.

The Toronto Gun Club commenced a series of six fortnightly shoots at McDowall's grounds on Saturday, March 17. The afternoon was pleasant, although cold. There are 5 prizes in this competition; the first is a handsome shotgun, presented by Mr. Chas. Stark, the other 4 are silver prizes given by the club. The 5 highest total scores in the 6 contests will win the prizes. The following are the scores to-day. Conditions, 20 Canada blackbirds from 3 screned traps, 18yds. rise:

W Alexander	17	J Jackson	15
W Bugg	16	W Pearson	12
H George	14	W Sandys	12
G Pennell	14	D Wright	11
D Blea	14	D Black	11
R Charles	14	B Pearsall	11
W Felstead	13	J Townson	11
F Martin	13	W McDowall	11
J Forman	13	T Thompson	11

The next competition will take place on Good Friday.

SOLOMON CITY, Kan.—At a meeting of the Solomon Gun Club, Feb. 28, the following officers were elected: Pres., C. F. Dewar; Vice-Pres., B. Johnson; Sec.-Treas., T. J. Edworthy; Standing Com., John Kranechi, H. Gould, E. E. Crooks. During the year club shoots will be held alternate weeks on Tuesday, at 8 A. M., all absentees fined twenty-five cents unless sick or out of city. National and Hurlingham rules; all disputes to be left to FOREST AND STREAM's decision. Vote of thanks extended by club to editor of FOREST AND STREAM for encouraging the recreative sport of the shotgun through their trophy match of 1887, and its enlightening columns of sporting records and information.

Regular semi-monthly shoot, 21yds., blue rocks and Peorias:

C H Smith	1111111111111111111111111—25
H Gould	1001000011100101001101111—18
T J Edworthy	1111110110111111111111111—23
E E Crooks	1110001111111111111101011—20
C F Dewar	1111111111111001101111111—22
B Johnson	1111000101011111111101111—18

E Crooks	0010100101000000w— 5

At 8 blue rocks, 30yds. rise:

C H Smith	11110111—7	B Johnson	10111010—5
T J Edworthy	01011111—6		T. J. E.

CALIFORNIA SHOOT.—The open pigeon tournament at Fairfield, Solano county, on March 10 and 11, brought together a most notable congregation of brilliant trap shots from all parts of the State. There were the Bassford brothers from Vacaville, the local Donaldsons, Haas from Stockton, Knight, the celebrated quail shot, from San Bernardino, Mann from Napa, and a select and strong delegation from San Francisco, including Dr. Carver, Ed. Fay, W. L. Eyre, W. Wattles, H. H. Briggs, Felling and Charley Laing. The weather during the two days was simply perfection. There was a red-hot sun and very little wind. The opening shoot on Saturday had a $5 event at 10 birds, in which 10 shooters took part. Dr. Carver, shooting under the name of "Jackson," tied Ed. Donaldson with 9. The second shoot was also a $5 entrance, with 11 subscribed, at 12 single birds each. Frank Bassford only lost his eighth, using his first barrel with great effect the latter part of his string. In shoot No. 3, Knight made a clean score, though run pretty hard by Frank Bassford, who won only 1 astern. Knight's single-barrel kills towards the end of the event gained him many admirers for his coming shoot against Dr. Carver. The final shoot on Saturday terminated in a tie and division for first coin between Henry Bassford and Ed. Donaldson, who both obtained clean scores. The day's sport was carefully satisfactorily judged by Wm. L. Eyre. Jas. Collins pulled the strings, and the entire management of the whole events was efficiently cared for by A. L. Donaldson. Following are the scores of the first day's shooting, the figure 2 in each case denoting the use of second barrel:

First shoot—10 single birds, 30yds. rise, 80yds. boundary, 3 prizes, $25, $15 and $10:

Jackson	9	Knight	8
Eddy	7	Haas	7
C Bassford	8	E Donaldson	9
Thompson	6	Mann	8
Fay	6	F Bassford	6

Second shoot—12 single birds, similar rise and conditions:

A Donaldson	10	Knight	10
Jackson	9	Fay	9
F Bassford	11	Eddy	7

Third shoot—Same conditions:

A Donaldson	9	Eddy	9
F Bassford	11	Knight	12
Jackson	9	E Donaldson	10

Fourth shoot—8 single birds, same subscription and conditions:

Knight	6	Eddy	2
F Bassford	6	E Donaldson	8
Jackson	4	H Bassford	8
Fay	6		

An immense gathering of shooting men went down to Fairfield on the 11th, but unluckily the supply of birds fell too short for such a reckless clutter of sport. The opening event, at 8 birds each, drew a large field, seventeen in all. H. Golcher made a clean score and secured $35. Frank Bassford scored one less and obtained $25. In the second effort Carver, Frank Bassford and F. Butler, of the gun club, tied with half a dozen apiece, and divided $75 between them. A freeze-out followed, won by Knight on the fourth bird. Wattles stayed with him to the last round, and then fell like a soldier. Carver broke on his second. In a blue rock shoot afterward Baker won with 14 out of a possible 15, Laing and Wallace shooting up. The second day scores stood:

First shoot—8 single birds, $5 entrance:

F Bassford	7	Wattles	8
E Donaldson	5	Donahea	5
Laing	6	Schwerin	6
W Golcher	6	Eddy	6
H Golcher	8		

Second shoot—6 single birds, $5 entrance:

Carver	6	Butler	6
F Bassford	6	Mann	5

LA SALLE, N. Y., March 16.—Monthly shoot of the Niagara River Shooting Club for seven prizes furnished by the club, each member to shoot at 45. Owing to the stormy weather the attendance was smaller than usual and the scores low, 15 Niagara blackbirds:

S Kellogg	111001111110110—11	Martini	101001101001000— 6
Gunther	100010000030011— 4	Moody, M H	001000111001110— 8
Treat	000101010100111— 6	Moody, E M	100011110110100— 8

Green	011111100001110— 9	Thompson	011100101001011— 8
Shirley	100111111000111—10		

Rose first, 82; Kellogg second, 27; G. Moody third, 26; Martini fourth, 26; Shirley fifth, 22; Treat sixth, 21; Gunther seventh, 19.

MURPHY—GIRTON.—Cincinnati, March 18.—Between 250 and 300 shooters presented themselves on the East End Gun Club grounds, situated at Columbia, St. Patrick's Day to witness the shoot at live birds between W. Girton, a farmer from Hopkinsville, O., and Geo. Murphy, a leading member of the East End Club. The weather, though clear, was raw, and the ground damp from a heavy rain of the day previous, which made it a bit unpleasant for the spectators. "Twenty-five dollars to ten on our man, Murphy, gentlemen; who'll take it? Even money he scores better than 20," and like remarks greeted the ears of a couple of hundred spectators gathered about with few or no takers, owing to Mr. Girton not being well known among the shooting fraternity here and still less about his shooting qualifications. However, he placed every cent he had and considerable borrowed money on himself with the greatest of confidence, and at the finish of the match all he did was to smile and hand his card around to the aspiring and already aspired shooters present:

W. GIRTON.

CASH PAID FOR WHEAT, HOPKINSVILLE, O.

One Square South of Town Pump.

Whatever induced the big odds offered against him is hard to imagine as he outshot his opponent, Murphy, in every particular and that too with luck against him as regards birds. Murphy was supposed by his friends, who were by the way in the majority of course, to have a walk over. The winner had the worst, the most difficult birds allotted him, getting 11 good strong tailers out of his 25. The birds were an extra strong batch selected for the occasion and proved as erratic of flight as bull-bats. Al Bandle coached Murphy while the winner acted in that capacity for himself. Mr. Edwin Taylor, an old time pigeon shooter, of Buffalo, N. Y., but now a resident of this city, officiated satisfactorily as referee. The match, 25 single live birds, 30yds. rise, from 5 ground traps, Hurlingham rules governing with exception of gauge and weight of guns, both using 10 gauges:

G Murphy	2200100222121012202012211—18
W Girton	2121212210021022120212220—20

Flight of birds—Right quarterers, Murphy 6, Girton 6; left quarterers, Murphy 4, Girton 3; tailers, Murphy 7, Girton 11; incomers, Murphy 8, Girton 3; hoverers, Murphy 0, Girton 2; used second barrel, Murphy 11 times, Girton 12 times. Time of match, 1 hour and 35 minutes. Referee, E. Taylor.—C. G. NEWSBOY.

SAN FRANCISCO, March 10.—A large number of the members of the Alameda County Sportsmen's Club assembled at Bird's Point to-day to participate in the first monthly prize shoot of the club for this season. Seventeen names were entered for the contest and with a few exceptions the scores were good, some of them remarkable. The prizes competed for were a beautiful silver tankard won from the San Francisco Gun Club, to be taken only on condition that the claimant average 66, or over, per cent. for the season, and four handsome medals. The pigeons were in the main strong birds and gave the shooters considerable trouble, many getting just outside the 30yds. bounds before flying. The best score was made by S. I. Kellogg, who succeeded in dropping his 12 birds without a miss, and in only one instance did he use his second barrel. Not one of his birds was challenged. Appended is the official score:

C B Gould	012220210110— 8	A F Adams	111121021112—11
S E Slade	222112121000— 9	J O Cadman	011121011010— 8

Ties on 17:

S F Touchstone	11110 10 01—6	R Miller	01111 00 10—5

BROOKLYN, March 10.—The members of the Unknown Gun Club turned out very strong on Thursday at their third regular shoot of the year. Only 24 were able to enter in the contest for the club badge on account of the scarcity of birds. Chris Durler had selected a fine, fast lot of flyers, and some of the best shots made poor scores. H. Knebel, Jr., killed 6 out of 7, and won the emblem. Eight tied with 4 each for second prize, which was finally divided between E. Vroome and C. Plate, who killed 6 out of 7 more shot at. The other ties could not be shot off until the next meeting. The score of shoot is as follows:

H Van Sicklen (22)	1101000—3	F Dellifsen (23)	1000010—2
J Paulson (23)	1001110—4	H Knebel, Jr (24)	1111110—6
H Rankin (25)	0011100—3	H Harnett (23)	0000100—1
H Knebel, Sr (25)	0010111—4	J Rathjen (28)	1000101—3
J Skidmore (25)	0001101—3	A Haas (23)	0001001—2
H Lee (23)	0111103—4	W Tomford (25)	1111000—4
M Brown (25)	1001011—4	H Bohling (25)	0001000—1
H Smith (23)	1003010—2	H Behrmann (22)	1000110—3
W Gilman (22)	0001111—4	D Smith (28)	1000100—2
E Vroome (28)	1001110—4	Capt Meyers (23)	1010000—2
A Schwartz (25)	0000111—3	R Stillwell (23)	1000110—3
C Plate (26)	0101110—4	C Link (25)	1000100—2

Referee, Mr. H. Knebel, Sr.; scorer, Mr. J. Boyle.

NEWARK, March 15.—The regular shoot of the West Newark Gun Club to-day at the club's grounds, No. 616 Springfield avenue, at 25 bats, 21yds. rise, American rules, resulted as follows:

G Deisler	7	M Ulbright	20
F Hillers	20	F Schmidt	12
John Heldmann	23	C Von Lengerke	15
Ben Ulrich	21	F Compton	19
M Adelmann	19		

Sweepstake shoot, 10 bats.

Chip (divided)	8	Hilfers (shot off)	3
Schwartz	1	M Adelmann (divided)	5
Jackson	9	Ben Ulrich (shot off)	4
M Adelmann, 1st	10	J Adelmann (shot off; won)	4
F Hilfers	7	Jackson (divided)	5
B Ulrich (divided)	8	Compton (shot off)	3
J Adelmann 2d	9	Von Lengerke (shot off; won)	3

SOUTH SIDE GUN CLUB, Newark, N. J.—It is the intention of the management to hold, during the coming season, a series of open shoots at artificial targets, to take place once a month. The programme for each shoot will be announced. All will be class shooting under club rules. Prizes divided 40, 30 and 20 per cent. Targets, three cents each. Loaded shells on hand. Shooting will take place rain or shine. The grounds are situated on New Jersey Railroad avenue, near Lehigh Valley coal depot, and may be reached via the Pennsylvania Railroad, Emmett street station; Newark & New York Railroad, Broad street station, and Delaware, Lackawanna & Western Railroad. W. R. Hobart, Isaac H. Terrill, Oswald Von Lengerke, committee. The second shoot of the series will take place on Thursday, March 22. First event, 10 single Ligowsky clays, 50cts. Second event, 15 Lockport bats, $1. Third event, 10 single Ligowskys, $1.50. Fourth event, 5 pairs bats, $1. Fifth event, 10 single and 5 pairs Ligowskys, $1.50. Sixth event, 15 bats, $1.50. Seventh event, 20 Ligowskys, $2. Eighth event, 5 pairs bats, $1.

NEW JERSEY CHAMPIONSHIP.—A grand pigeon shooting tournament for the championship of the State, open to all comers, is announced to take place at Hall's Hotel, Eatontown, N. J., on Thursday, March 22. Prizes aggregating $1,100 are to be awarded the winners of the first and the second place, while a few prizes of lesser amounts will be distributed among the next three highest scores. The entrance has been placed at $25, half forfeit, and the match is to be governed by the new Long Branch rules. Miles Johnson, of Robbinsville, will furnish the birds and attend the traps.

NEW YORK STATE SHOOT.—The Auburn Gun Club has already under way preparations for the annual meeting of the State Sportsmen's Association, which will be held the second week in June. Recently the club was notified that Devine Hayes, an eccentric coffin manufacturer of Oswego, had given a $75 coffin for a prize at the shoot.

shot of this city, won on a handsome run of 20 straight birds. The conditions of the badge shoot were 20 blue-rocks, 3 traps, 18yds. rise. Five visiting shooters from the East End and Cleveland clubs made scores alone with the club shoot. The score:

Club Shoot.

W Bell	17	J Honecker	16
J Wade	16	T Cloose	19
W Bennett	15	F Fothert	9
H Holt	13	J McGuire	11
J Prechtel	20	C Willard	18
W Towns	13	W Bentley	15
J Philips	13	G Probst	14
J Decker	10	C Roof	18
L Newell	13		

Visitors.

W Tamblyn	11	F Brown	17
H Lee	18	J Martin	12
J Mosar	16		

A sweepstake shoot at 6 blue rocks, to which the entrance was a half dollar, followed the club shoot and almost every body entered. Roof and Forrester tied and divided first money, both men breaking 6 straight. J. Warden and Willard shot Knight, Andrews, Lee and J. Honecker out of the 5 hole and divided second money, both breaking 6 straight in the shoot-off. C. Honecker won third money. The score:

F Knight	5	Willard	5
L Newell	4	Forrester	6
W Bell	4	Probst	3
J Wooden	5	Lee	5
Andrews	5	J Honecker	5
Martin	3	C Honecker	4
Smith	2	Towns	3
Roof	6	McGuire	2
Prechtel	4		

MONTICELLO, Fla., March 10.—The event of the week was the match for the individual championship between members of the Monticello Gun Club. The score was made over 5 traps, American clay-birds, 50 singles and 25 pairs, total 100 shots. The conditions were that the winner is subject to a challenge from any member of the club, at any future day. The first fifty birds were divided into thirty singles and ten pair doubles. Upon the finish of the first fifty Messrs. Hoey and Crosby pulled out. The total score showed:

	Singles.	Doubles.		Singles.	Doubles.
Harned	34	33	Durrance	25	16
Partridge	34	27	Hack	16	12
Metcalf	35	24	Hoey	8	8
Gregg	33	22	Crosby	7	5

R. F. Harned was declared the winner, and will wear the honors subject to challenge at any time. The club has not been able to make a match this season with any other clubs. It challenged Palatka, which was excused on account of "business." It is open to a challenge from Jacksonville, which it has "downed" in four straight matches.

WELLINGTON, Mass., March 17.—Thirty-five gunners faced the traps at the grounds of the Wellington Club to-day, and several of them made good scores in the merchandise match. Points were scored in this match as follows: Schaefer first, with 17; C. B. Sanborn, Scott, Chase, Swift, Dan and Hart second, with 16; Snow and Bond third, with 14; Beaudry, Shumway, Lee, Wild and James fourth, with 13; De Rochemont, Brown and Moore fifth, with 12; Bill, Phelps and Stanton sixth, with 11; Short, Nichols and Chapin seventh, with 10, and Bradstreet, Baxter and Melcher eighth, with 9. Following are the winners in the sweepstake matches: First, 6 clay-pigeons, Wild, Chase and Chapin first. Second, 6 blue rocks, Phelps, Wild, Swift and Chase first. Third, 6 blue rocks, Moore first. Fourth, 6 blue rocks, Grimes prize, W. A. Sanford first. Fifth, 10 clay-pigeons, merchandise match, Swift and Chase first. Sixth, 10 blue rocks, merchandise match, Schaefer and Hart first. Seventh, 6 clay-pigeons, Stanton and Chapin first. Eighth, 6 blue rocks, Baxter first. The eleventh competition for the Climax diamond badge will take place next Wednesday. The badge is now held by H. W. Eager of Marlboro. Beaudry, Eager and Wheeler have each won it twice, and as there are but two more shoots for it the chances are in favor of one of these shooters getting it.

WORCESTER, Mass., March 17.—Last year the members of the Worcester Sportsmen's Club arranged and had a very interesting and successful series of meets, and the executive committee of the club have a series for this year. Last year the prizes, aggregating $350, were raised largely by subscription. The first meet will be March 27. There will be fourteen meets in the series, and will occur once in two weeks. The conditions are as follows: Classification scores of 30 birds, all credited with 20 or more breaks to shoot in Class A, all scoring 19 or less to constitute Class B. To determine distribution of prizes, two strings of 5 birds each from open traps must be shot at. The sum of $25 for each shoot, Class A to have $15, divided—first, $7.50; second, $4.50; third, $3. Class B, $10—first, $5, second, $3; third, $2. All members of the club are cordially invited to participate in the sport. Sweepstakes on each event in the classification scores are optional in every instance, and no member of the club need have the slightest hesitancy in competing for the prizes. If in any instance the number of contestants in either class falls below six, 20 per cent. will be deducted from the sum allotted to that class and another prize added, making four prizes for the largest class. The largest portion of the sum for the prizes has been contributed by voluntary subscription, with the sole object of fostering and keeping alive the interest which all lovers of trap shooting possess.

MERCHANTVILLE, N. J., March 15.—The second match, at live pigeons, between the young and ambitious trap shots, Frank Kleinz, Jr., and S. Merchant, took place here to-day. The first match was won by Merchant. The conditions of the second match were to have been 15 birds each, but owing to a misunderstanding the number was changed to 10 each. The score, amid a great deal of excitement, resulted in a tie. Kleinz was unlucky again, having three birds fall dead just out of bounds. Merchant had two. The score was as follows:

Kleintz	1110100001—5	Merchant	1100110001—5

It is probable that another match, at 15 birds, will be arranged.

CLEVELAND, March 15.—Kirtland Club members were busy from early this afternoon until dusk, and the Kirtland Club grounds were strewn with shattered birds of pitch and paint. The turnout of shooters proves that the old-time Kirtland Club's vigor and life has been completely revived. The marksmanship was fine, and according to the verdict of those taking part in it, everybody "had a glorious time." Seventeen Kirtlandites contested for the club badge, which J. Prechtel, the crack West Side

LONG BRANCH SHOOT.—Lafayette, Idd., Feb. 28.—*Editor Forest and Stream:* I see by the FOREST AND STREAM of Feb. 23, in the report of the Long Branch shoot, that you have Fred Erb, Jr., of Lafayette, Ind., shooting with a Lefever Arms Co. gun, 7½lbs., 10-bore, and 3½oz. Schultze powder and 3½drs. of dead shot. Mr. Erb, Jr., used a Lefever Arms Co. gun, 7½lbs., 12-bore, 3drs. of Schultze powder in right barrel, 3½drs. dead shot in the left.—W. S. CRAIN, Sec. West Side Club.

AVON, Conn., March 12.—The annual meeting of the Avon Gun Club was held March 5. The following officers were elected: Cleveland Capen, Pres.; James N. Bishop, Vice-Pres.; Dr. R. W. E. Alcott, Sec'y-Treas.; Holey C. Woodford, Field Captain.

People who happened to be on Washington street near Hollis street a little after 10 o'clock Monday night, witnessed a sight that they will not soon forget, though it was only the death of a dog. The animal was a handsome mastiff, standing certainly three feet and a half high, whose noble appearance attracted general attention as he trotted along behind the car on which his master was riding. Suddenly, for reasons unknown, he bounded to one side and directly under the wheels of a car coming in an opposite direction. The cry uttered by the poor creature as the car passed over him was almost human in its expression of agony, and those on the street for some distance either way involuntarily started forward, thinking that a human being was in mortal pain. The dog was fatally wounded, and police officer 217, who happened to be on the scene, prepared to put him out of misery. He stooped and placed his hand on the dog's head, accurately to locate the place through which to send a bullet, when the animal, fastening his great, piteous eyes on the officer's face, raised himself slightly and licked the hand that was to end his life. The mute appeal was almost too much for the policeman, and his resolution was temporarily shaken, but in a moment more he had performed one of the most humane duties that it is possible for a policeman's revolver to accomplish.—*Boston Transcript.*

Yachting.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

YACHT BUILDING ON THE CLYDE.

THE sixties were years ago the boats—Mosquito, Vanguard, Neva were the arrivals at racing anchorages that stirred the crews. The nineties took their place, and the sixties were forgotten, unless Neva ran up her colors and kept the big ships going at their best. The building of a new racing sixty in these times is a nine days' wonder, and at Partick the wonder may be seen. Messrs. Henderson are going on with a new composite sixty in their yard at Meadowside, and a handsome vessel the new racing cutter is. With a rake in her bow and the longest and most attenuated of counters, the cutter looks wonderfully small for her tonnage. Indeed, yachting experts passing overhead on the Underground are constantly mistaking her for a ten, which abundantly testifies to the symmetry and grace of Mr. G. L. Watson's design. The cutter is broader than the old rule sixties, but is narrower in proportion than Thistle, the designer being satisfied that "Yankee notions" are not so exceptionally perfect as certain admirers insist they are. The cutter is all in frame, and is being reticulated with angel steel in all directions—steel bulkheads, floorings, and newly-devised "cranks" for the blacksmith. The keel, of solid wood, looks rather old-fashioned, but with tons and tons of lead bolted on to it, will be quite in keeping with modern requirements. The lead keel, for convenience, has been cast in sections in sand moulds alongside, where a lead furnace has been built for lead keels, into which the pigs were being dropped when our survey was made as ruthlessly as they are at Chicago. Of course, the lead keel for this new sixty is an "unknown quantity," and information about the fixings generally is impossible, since the hands at work belong to the "know-nothing" side of affairs. As to measurements, even the fabulous figures available in former years are not to be obtained, and it must suffice to say that this sixty, measured under the existing rule of the Yacht Racing Association, will be entered in regatta programmes as 60 sail tons. The cutter is being built for Mr. Paul Ralli, of London, a Greek merchant, who intends racing the yacht in British waters. To Americans who were scandalized at the secrecy observed in the building of the Thistle it will be of importance to know that this new sixty is a sister cutter to the cutter Mr. Sweet, of London, intended to build and challenge with for the America's Cup, had the new deed of gift not shut out any chance of a fair contest for that trophy. Mr. Sweet has not canceled his order as placed in Mr. Watson's hands, but it is not possible to premise whether in the event of some modifications of American restrictions the intended challenge is to be renewed with the next season. Mr. Ralli's cutter, like other racing craft of late years, may suffer from the absence of an antagonist, unless it so happens that the 40-ton May is put under her racing flag.

Mr. Watson has at last got a 20-tonner in hand, the craft being built at the Ailsa Shipbuilding Company's yard at Troon. According to the Y. R. A. measurement this cutter will be 20 sail tons, but by the old rule will be about 18 tons, and is, consequently, included in the class between 10 and 20 tons, which means that she will go with the tens and the cruiser. This cutter is wholly built of steel, and with long counter and rake in stem, will resemble Mr. Watson's 10-ton Ulerin, but will have some more beam. She will, consequently, be more comfortable in the rough water of the Irish Channel, her destination being Kingston. Her owner is Mr. Thomas Hodgens, who will put her in charge of the man who sailed his 3-ton Pitti Sing, and he will race her at the Irish Channel and Clyde regattas. The same designer has sent the lines of a 10-ton cutter for racing to Mr. Hintz, of Helsingfors, in the Gulf of Finland, where the craft will be built. She has been designed for the girth measurement, and is intended to defend the Challenge Cup of the Finland Y. C.

For Count Landberg, who sails on the Stanberger Lake, Mr. Watson has designed a 25ft. pleasure boat of a fast model. He has also in hand a 17ft. boat for Mr. H. W. Robinson, which is being built by Macfarlane at Kilcreggan; and another of the same dimensions for Mr. N. B. Stewart, Jr., which Adams at Gourock is building. Both boats will be half-decked, and have lead keels, with other appliances for racing. For a new fancy class Mr. Watson has designed two 15ft. centerboards for Glasgow owners. The conduct of these two boats will be narrowly watched, since any advantages they may show will lead to the further use of centerboards. Besides racing yachts Mr. Watson has been applied to for designs for a cruising yacht, to be used also for fishing, for Mr. Bailey. This cutter, now being built at Brixham, will be 40 tons builders' measurement, and will be a very handsome craft. Mr. Donovan, of Cork, has also got designs for a powerful yawl of 70 tons to be used either for fishing or for a pilot vessel as may be required.

For Mr. Baird, of Knoydart, Mr. Watson has in hand a 70-ton cruising steam yacht of steel, with engines by Messrs. Muir & Houston on the triple-expansion principle. This steamer will be schooner rigged, have staight stem and resemble the s.s. Bessie, owned by Mr. John Clark, of Paisley. She is intended to lie in Loch Nevish, and will be a good sea boat for passages around Ardnamurchan. Mr. Watson has another steam yacht on hand for a Glasgow owner. In addition to the yachts referred to he has also building at Fairlie a centerboard 10-ton cutter, which in form and draft resembles the 10-tonners built a few years since. She is intended only for cruising, the centerboard having been adopted on account of the shallow harbor where she will be located. It will be seen that yacht building, although in a depressed state, is not altogether stagnant.—*Glasgow Herald, March 8.*

SINGLE-CYLINDER COMPOUND LAUNCH ENGINE.

CORINTHIAN Y. C. OF CHICAGO.

WE have received the year book of this club for 1888, containing a full list of the club's races in 1887, its first year. The success of this club so far shows what may be done by men who really desire to race. The races were sailed under the following agreement: "We, the undersigned, do hereby agree to enter our yachts in a series of regattas to be sailed at Chicago, commencing on July 16, at 1:30 P. M. * * * over a course of ten miles, these regattas to be sailed every other Saturday at the same hour and starting place until the entire series of five races has been sailed. The yacht crossing the home line first shall receive 3 points; second, 2 points; third, 1 point in each race, the yacht winning the greatest number of points to be awarded the first prize, next greatest the second prize and the third greatest the third prize. Open to all decked yachts 14 to 18ft., both inclusive, whose owners shall sign this agreement and pay the entrance fee before the starting of the first race. There shall be no time allowance and time shall begin for all yachts as soon as any yacht shall have crossed the starting line after the signal to start. All yachts to be sailed by their owners and volunteer crews, no paid crews allowed. An entrance fee of $5 to cover the entire series, shall be charged. Measurements shall be made on waterline, with one-third of overhang added. Should two or more yachts win the same number of points, the tie shall be sailed off on the following Saturday at the same hour and place. No prize shall be divided, but shall be sailed for or forfeited. In cases of ties upon the completion of the series the prizes shall be awarded as follows: The winner of the sail-off shall be entitled to the prize for which he was tied; the second yacht to sail off the next lower, and so on. This rule shall hold good in all cases of ties. The first prize shall be $75; second, $50; third, $25. All entries to be made before July 16; the course to be sailed over twice, with one-quarter windward work if possible; actual sailing time of at least one yacht not to exceed three hours to make a race. Ballast not to be moved during any race; number of persons on board not to exceed five. The race of July 16 to be sailed with mainsail and jib in regular position; after that date no restrictions as to canvas. All buoys to be left to port; the rules as to right of way, etc., to be those of the Chicago Y. C. Any question as to violation of any rule during sailing to be decided at once by majority, each yacht sailing being entitled to one vote."

Seven yachts entered under this agreement, the result being a very exciting series of races lasting until Sept. 18, five regular races being sailed, besides ten extra ones. Some of these were in connection with excursions to neighboring points for clambakes and fish dinners, with a race home for some prize. The record of every yacht was kept for each race, the result being a sharp competition among the fleet. It is needless to say that the experiment was a complete success; there was plenty of racing, the interest was well kept up through the season, while the social features aided greatly in strengthening the club. This season the same plan will be followed, with revised rules. The prizes will be $75, $40, $25, $10. A silver yacht, valued at $150, will be offered to any yacht winning the first prize for two successive seasons. A gold medal will also be given to the new yacht, built this winter or prior to the opening of the season, which shall make the best score in the series. The entrance will be $10 for the five races; 10-mile course, 3-hour time limit; no race to be postponed except by a two-thirds vote of owners entered. All ballast must be carried below the floor, and no change shall be made in it during a race. The sails are unlimited, a crew of five is allowed, but one of the owners must sail the boat, no professional being allowed. Under these rules a successful season may be looked for; new boats are now being built, and yachting in Chicago, after failing to make headway under the direction of the owners of large yachts, is taking a new and healthy growth in the hands of the Corinthians. Their example can well be followed in scores of other places where there are a number of men fond of sailing and racing. The institution of a class of 18ft. boats, costing at the most under $500 with racing outfit, will with good rules give plenty of racing, bring in new men, and lay the foundation for yachting on a larger and more elaborate scale.

YACHT BUILDING IN BOSTON.—The recent severe weather has caused a change of plans as to Mr. Seccomb's steam yacht, and she will be finished inside by her builder, being kept on the stocks until she can be towed at once on launching to Philadelphia, where Neafie & Levy will haul her out and put in the shaft and engines. It was intended to have her joiner work put in at Newark, N. J., but it will now be done, as far as possible, while on the stocks. She will have a main saloon 15ft. long and 10ft. 6in. at fore end. The owner's room will be to starboard, and a guest's room and steward's pantry to port, with two quarter staterooms. 8ft. The galley, officers' and crew's quarters are forward. The load displacement of the yacht is 165 tons, her boiler weighing 26 tons 3 cwt. She will be fitted with electric lights and bells.... At McKie's yard Mr. Fabyan's steam yacht is partly planked. The main companion will be at the fore end of the saloon, a room 13×16ft., the headroom being 6ft. 4in. There will be four staterooms, 6ft. 6in.×8ft., with toilet and bathrooms in the run. The engines will be 15½ and 30in.×15; the boiler 6ft. 6in. diameter and 20ft. long. The shaft will be 6½in.... At the Atlantic Works the keel, stem and sternpost are up, and the frames are partly bent. Mr. Stetson's steamer, Sapphire, is partly planked.... At Lawley's yard Marguerite is painted outside. Sawyer will make her sails.... Smith has finished the caulking on Mr. Bryant's schooner.

YACHT BUILDING AT BORDENTOWN, N. J.—Mr. Ford is now busy with a single-hand yawl for Mr. J. D. Green, of Woodbury, N. J. She will be 28ft. over all, 24ft. 6in. l.w.l., 9ft. beam, 4ft. draft, with 3,000lbs. of iron in keel and a board beneath the cabin floor. She will carry 3,000lbs. inside. At the same shop is a shoal catboat for Mr. J. W. Hammer, of Beverly, 20ft. 6in. long, 9ft. beam, and 18in. draft, with an iron centerboard, a racing boat. Besides some alterations in the steam yacht Sunset Mr. Ford is building a tender for her, a very light boat 10ft.×4. He has also been busy with repairs to two steam yachts.

EASTERN Y. C.—At the meeting lately held the following committee on classification was appointed: Vice-Com. Forbes, Gen. Paine, Messrs. Burgess, Richards and Hemmenway.

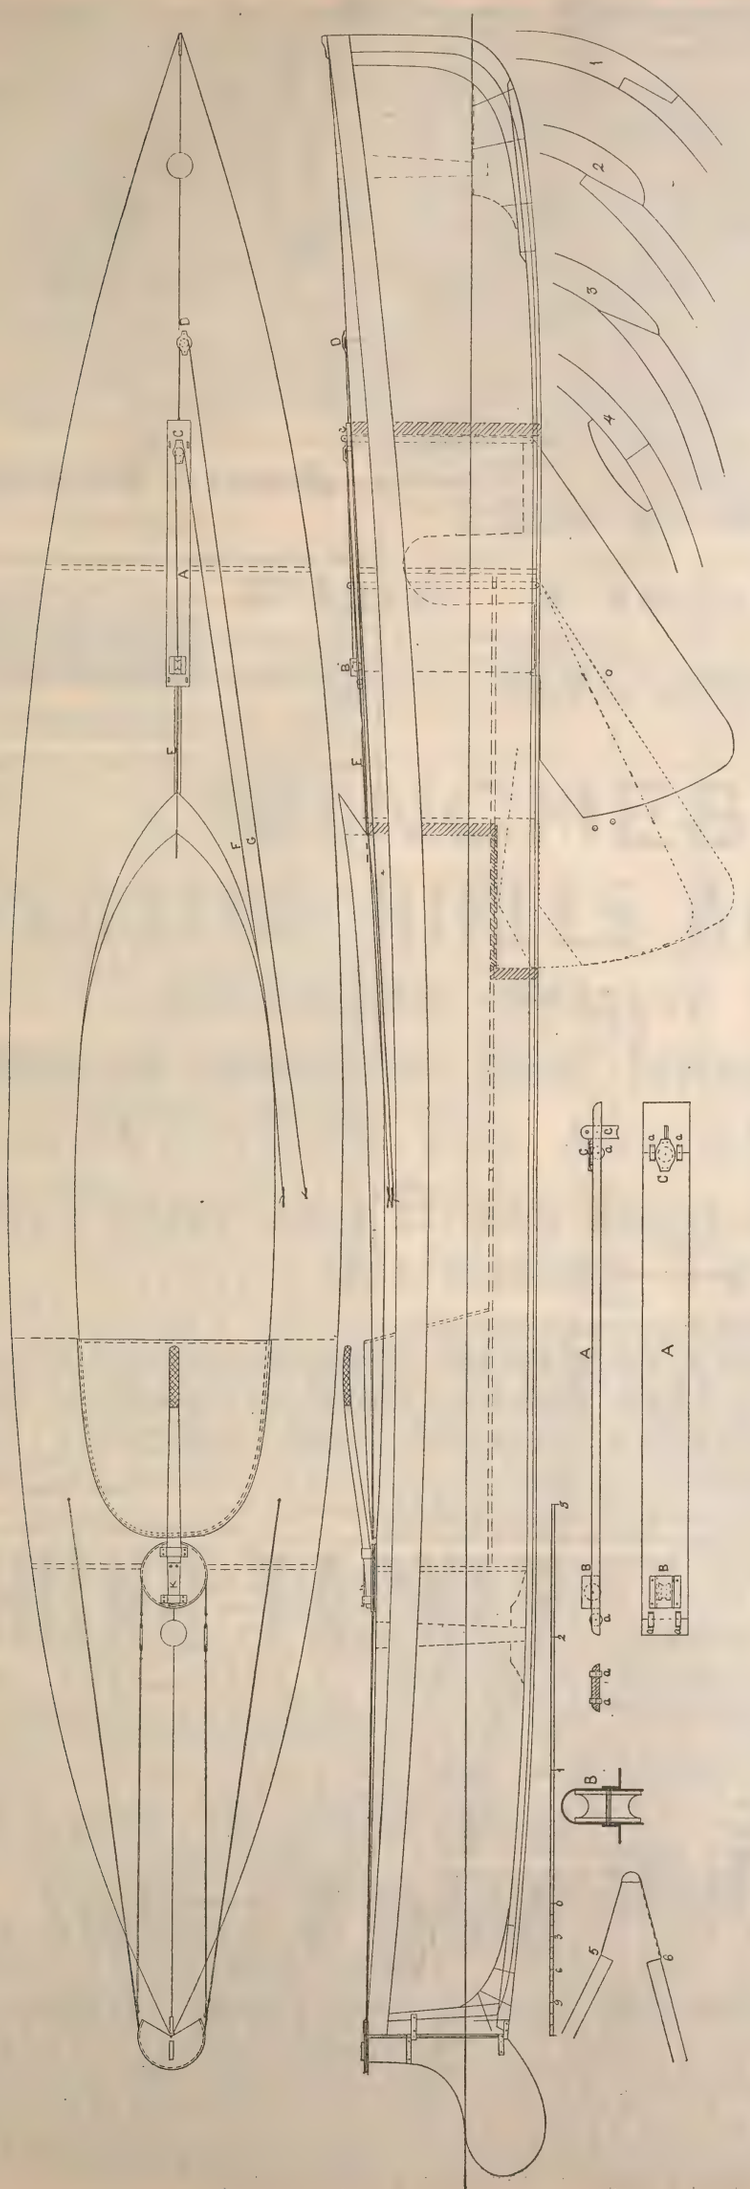
STEAM YACHTING.

A NEW STEAM LAUNCH.

THE engine shown in the accompanying cut is the invention of Mr. F. W. Ofeldt, the mechanical engineer of the Hohenstein Mfg. Co. of Newark, N. J., and is used in the steam launches built by the firm. The engine and boiler have been specially designed for steam launch use, the ends in view being economy in space, weight and fuel, with safety and a strong and simple construction, so that the services of a skilled engineer are not necessary. The motive power is steam, generated in a boiler composed of vertical stand pipes and a large number of small tubes surrounding them. It is claimed that water pumped in at the base of the stand pipes will pass out at the top in the form of steam in from three to five minutes. Any fuel may be used, naphtha, gas, kerosene, wood or coal, as desired. The engine shown is a single cylinder compound marine, the firm also building stationary engines for offices and small shops where power is required. There is but one piston, working in the upper or low pressure cylinder, the lower part, in the form of a trunk piston, working in the high pressure cylinder, the area being about one-third of the low pressure. An oscillating valve admits the exhaust from the high pressure into the low pressure cylinder. The reversing gear is very simple, with but one eccentric. A loose hand wheel, easily turned, serves to reverse instantly. The engines are built with one, two or three cylinders in the same bedplate. The company has lately established large works on the Passaic River, at Newark, with boiler, machine and boat shops, where steam launches of all sizes from the small steam tender to those of 40ft. can be seen in stock. These launches are specially recommended for yacht tenders, as they are very light, powerful and fast. They can be carried at the davits, steam being raised in a few minutes, before lowering away. Besides their use as tenders and for shore duty they can be used for towing in a calm, a great advantage in a sailing craft in summer. Besides the regular line of open launches the company is prepared to build to order small cabin yachts and special craft of all kinds.

AMATEUR YACHT BUILDING.—A correspondent in Hamilton, Ont., writes us as follows concerning the little cutter St. Elmo: "In looking over the FOREST AND STREAM of Dec. 2, 1886, I was much pleased with the lines of the 53ft. cutter by W. Fife, Jr., and decided to reduce them and build a yacht of about 4 tons, though but an amateur builder and not even a carpenter. The dimensions as reduced were 31ft. over all, 26ft. l.w.l., 5ft. beam and 6ft. draft; least freeboard 18in., greatest freeboard 3ft. 6in., iron keel, 4,400lbs., with a cavity large enough to hold 1½ tons of lead if needed. With two friends to help, both amateurs, the work was begun on Feb. 1 of last year, and working only by lamplight the yacht was launched on May 28, and made her trial trip on June 11. The keel was of white oak, 16ft. 6in. long, 16in. wide and 4½in. deep. Stem and stern sided 5in., frames sawn, moulded 3in., sided 2in., spaced 24in., garboards, sheerstrake and covering board of white oak, 1½in., deck frame oak, 3×2in., deck of 1in. clear pine. The deck is flush, with small well for steersman, self bailing; a circular hatch abaft the mast gives plenty of air below. She has a pole mast with 600ft. in lower sails. The ballast was insufficient, so she was hoisted with a large crane, a hole was bored in the wood keel, and 800lbs. of melted lead poured into the iron keel to put her a little by the head. She is fast, though rather under-canvassed, and she is both dry in heavy weather and close winded, in spite of the cutaway forefoot. We have comfort, safety and speed, no holding on to the sheets, and we fear nothing so long as we have 6ft. of water under us."

YACHT BUILDING AT HAMILTON.—Besides the cutter for Mr. Kilvert from Mr. Kunhardt's design, Mr. Thos. Dalton, builder of the Mollie, is at work on a cutter 30ft. over all, 25ft. l.w.l., 8ft. beam, and 5ft. draft, with 3½ tons of iron on keel. Mr. Wm. Patterson is also building from his own design a cutter 30ft. over all, 20ft. l.w.l., 6ft. 6in. beam, 6ft. draft, with 1½ tons of lead on keel. The model is cut away below water and of small displacement. The planking is in narrow strips, ¾in. square, each edge nailed to the preceding one. Messrs. Arthur Molley & Co. are building a compromise centerboard sloop, 34ft. over all, 26ft. l.w.l., 9ft. beam, 5ft. draft, with 2 tons of iron in keel. She will make a roomy cruising boat. Messrs. Smith & Hunter are building from a design of their own a centerboard sloop 32ft. over all, 26ft. l.w.l., 11ft. beam, 2ft. draft, with a wide counter. Mr. H. L. Bastein is building for Mr. Wyland a steam launch of American design, 33ft. over all, 30ft. l.w.l., 6ft. 6in. beam, and 2ft. draft.



WEST LYNN, Y. C.—Officers for 1888: Com., Ozro Rideout; Vice-Com., Ed. F. Rich; Fleet Captain, Wm. Sproul; Sec., W. Francis Robinson; Treas., F. G. Olin; Meas., Samuel Guilford; Fin. Com., Wm. Sproul, H. W. Robinson, A. T. Brown; Reg. Com., W. S. Sawyer, Earnest Howe, P. S. Rideout, Geo. W. Oliver, Fred Smith; Amuse. Com., Ed. F. Rich, Ozro Rideout, J. Fred Tarbox: Trustees, Chairman, B. Spurr, J. Fred Tarbox, James Bessom, Wilber Warren, Geo. W. Oliver.

CRUISING.—Wanderer, schr., Mr. G. W. Weld, was at Barbadoes on March 13.... Ladoga, steam yacht, Mr. J. S. Hutchinson, arrived at Morehead City, N. C., on March 16, from Charleston, having encountered some heavy weather on the way, anchoring for 60 hours.... Montauk, schr., Mr. J. E. Brooks, arrived at Charleston on March 14 from Fernandina.... Comfort, of Trenton, N. J., has been cruising all winter in the Chesapeake.

YACHT BUILDING IN ENGLAND.—The 60 rating cutter building at Fay's yard, Southampton, from Mr. Richardson's design, is for the Earl of Dunraven. She will have a lead keel of 37 tons, cast in one piece. Fay will also build a 40 rating racing cutter, to be named Mohawk, from Mr. Clayton's design, and a 10 rating cutter for Mr. A. D. Clark. Irex is now fitting out at the same yard.

SHEERWATER.—Mr. J. M. Forbes's steam yacht was fitted last year with a Belleville boiler of French build, which failed to comply with the U. S. Government regulations. The yacht was allowed to run, though the dome of the boiler was said to be of defective material, but in order to secure a licence this year the boiler is being altered at the Atlantic works, in East Boston.

A NEW CUTTER FOR LAKE ERIE.—Hepburn Bros., of Toledo, will build a cutter from the lines of a four-beam yawl in "Small Yachts." She will be 29ft. over all, 24ft. l.w.l., 6ft. beam and 5ft. draft.

CLASS B. CANOE—WITH STEPHENS' CENTERBOARD AND STEERING GEAR.

NANITA-MADGE.—A match for a handsome piece of silver will be sailed early in May, between the cutter Nanita, Mr. Chas. Coughtry, and the cutter Madge, Mr. W. G. Newman, both of the Knickerbocker Y. C., the cruise being from Port Morris around a stakeboat off New Rochelle. The two yachts are of the same size, 18ft. l.w.l., 6ft. beam, and about 5ft. draft, Nanita being built from the lines of the Windward, in the FOREST AND STREAM, while Madge was built from the lines of the Irish yacht, Heathen Chinee.

NEW YACHTS.—Mr. Burgess has an order for a yacht 39ft. 6in. l.w.l. and 6ft. draft for Mr. Horatio Hiskock, of Burlington, Vt. She will have a centerboard in her keel, like Vandal. He also has an order for a yacht similar to the Merle, for Mr. Robert Shoemaker, Jr., of Philadelphia. She will be 36ft. l.w.l., 13ft. beam, 5ft. draft, and will have a centerboard.

CHANGES OF OWNERSHIP.—Hinda, steam yacht, formerly owned by Dr. Dawson, has been sold to go to Chicago.... Bohemian, sloop, formerly the schooner Caroline, has been sold to W. T. Lambert.... Signal, sharpie, has been sold by T. B. Williams to G. E. Riesthal.... Madge, cutter, 10 tons, is reported as sold to Rochester parties.

SEAWANHAKA C. Y. C.—An amateur musical entertainment will be given on Saturday evening at the club house, under the direction of the Committee on Music. Ensign Hayden's lecture on Saturday last was well attended and was one of the most interesting yet delivered.

"RUDER ALMANACH."—We have received a copy of the "Ruder Almanach" for 1888, published by the *Wassersport* in Berlin, a useful little book for sailors and oarsmen, containing full lists of all the European rowing and sailing clubs, with the races of 1887.

SACHEM.—Lawley & Son now have men at work at New Bedford casting about 10 tons of lead on Sachem's keel. This will give her about 36 tons outside. She will also have a larger mainsail and jib.

PSYCHE.—This is the name selected for the cutter building at Hamilton, Ont., for Collector Kilvert. The burgee will contain a butterfly. Over 200 members have joined the club.

BARRACUDA, steam yacht, now being lengthened by Smith, at South Boston, will have a new engine by F. O. Wellington & Co. Her name will be changed to Corona.

VOLANTE, sloop, will have an iron shoe of 2,000lbs. put on by Pryor & Co., and her mast will be shifted aft 2ft.

GALATEA AGAIN.—It is reported that Lieut. and Mrs. Henn will sail for America in Galatea on May 3.

CORONET.—Mr. Bush's schooner was to sail to-day from New York to San Francisco.

FORTUNA.—Captain Newcomb sailed on March 17 for Southampton to fit out Fortuna.

TITANIA.—Mr. Iselin's yacht will sail with a white hull this year like all of her sisters.

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neidé. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON.....} Albany, N. Y
Secretary-Treasurer: F. L. MIX.....}

	Vice-Com.	*Rear-Com.*	*Purser.*
Central Div.	R. W. Bailey.....	W. R. Huntington.....	J. K. Bakewell, 110 Diamond St., Pittsburgh.
Atlantic Div.	Henry Stanton...	A. S. Pennington	E. W. Brown, 146 B'way, N.Y.
Eastern Div.	L. Q. Jones.....	Geo. M. Barney...	W. B. Davidson, Hartford.
N'thern Div.	A. D. T. McGachen.	W. G. McKendrick.	S. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Central Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—James Fanning Latham, Chicago, Ill.
Vice-Commodore—J. R. Bartlett, Fremont, Ohio.
Rear-Commodore—T. J. Kirkpatrick, Springfield, Ohio.
Secretary-Treasurer—Geo. A. Warder, Springfield, Ohio.
Executive Committee—H. G. Hodge, Dayton, O.; C. F. Pennewell, Cleveland, O.; C. J. Bousfield, Bay City, Mich.

The annual meet for 1888 will be held at Ballast Island, Lake Erie, July 7 to 23. Regatta begins Tuesday, July 10.

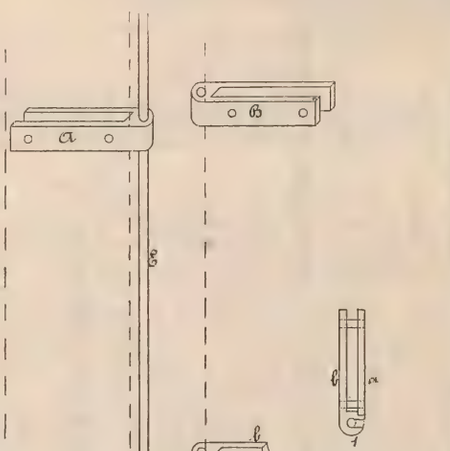
CANOE BUILDING AND FITTING UP.

THE large and increasing demand for canoes of all sizes has stimulated the inventive powers of builders, both amateur and professional, with the result that many new methods of construction have of late been tried with more or less success. The first American canoes were all lapstreak, and when, in 1881, the writer first introduced the ribband-carvel method of building a smooth-skin boat, then used in England, it met with no favor from American canoeists, there being a strong prejudice in favor of the lapstreak. Fashions change in canoes as in dress, and for the past two years smooth-skin boats have been the rage, perhaps for no better reasons than those once urged against them. There are to-day half a dozen excellent methods of construction from which the canoeist can choose with a fair certainty of having a first-class canoe, and it would be a very difficult matter for an unprejudiced judge to say which, if any, is absolutely the best. After some experience in building and using canoes, and some familiarity with the different methods of construction, we feel safe in recommending the lapstreak, if properly built, as the best for cruising; whether she will prove the fastest alonside of some of the smooth-hulled racers is still an open question, and most canoeists would say "No" to it, but some badly built lapstreaks have done so well in the races at times that there is every reason to think that an absolutely smooth skin counts for little against fine and well laid laps, even in the closest races.

Of lapstreak work there are all kinds, from the clumsily-built pram of the Norwegians, with wooden plugs in place of nails, to the carefully planked canoe with a land something like that shown at 3. The edges of both plank must be very accurately beveled, the outer edge to a thickness of 1-16in. or a little more, being rounded off as shown in sandpapering. The common lap is shown in 2, a strong joint, but giving a poor surface. The strength of the lapstreak has repeatedly been proved beyond question, it will stand both wear and hard knocks, while it is very light. With the requisite care and skill the bottom of the boat may be made to compare very favorably with any of the smooth-skin methods, and after a season of rough cruising the lapstreak canoe will probably be in better condition than the others. One method of securing a smooth skin is shown in 1, the plank being cut with

a special plane, taking half out of each. The ribband-carvel canoes built by the writer in 1881 and 2 had a strip inside the seam, as in 4, both planks being nailed to the strip, the ribs were put in afterward, being jogged over the ribband. The Albany canoes are built now on a similar plan, but by a method hardly suitable for amateur work. A strong mould or last is first constructed of the shape of the inside of the canoe. The deadwood and all the ribbands are fastened to this last, the ribbands are cut away so that the ribs can be let in flush, then the planks are laid and screwed to ribbands and ribs. The construction of the mould or last over which the canoe is built is almost as troublesome and costly as the canoe itself, so this method is only practicable when a number of canoes are to be built of the same model. In the method shown in 4 the usual plank moulds are used, as in lap-streak work, so the process is well adapted to the needs of the amateur. The details of this method are fully given in "Canoe and Boat Building for Amateurs."

The canoe shown in the accompanying plans was illustrated in the FOREST AND STREAM of Jan. 5, 1888, a Class B craft, 15ft.×31in. The lines were designed by Mr. John Hyslop, but the details of board, rudder and steering gear are all original with the writer. They are unpatented, and at the service of all. It is but fair to state that the method of moving the board aft has not yet been tested in actual use, but it is in every way practicable and can be tried without any material alteration of the hull in any canoe having a trunk open on top, so it is given in hopes that canoeists will test it and perhaps improve it in some way.



In the construction of a canoe of this size, presumably to carry some ballast, the following scantling will give strength with little weight. The stem and sternpost will be of hackmatack, sided so as to end all lines fairly at the extreme ends. It has been the custom to make these pieces of 1in. stuff, which in most cases makes an angle in the waterlines at the rabbet in stem and stern. To avoid this they must be sided as shown by the full size plan which will be laid down before building. The stem will be ¼in. on its fore edge, the sternpost ⅜in. The stem band will be made from ¼in. half round brass rod, and after it is screwed in place the wood and brass will be filed down together until the lines are carried out straight and fair. The usual method is shown at 5, the proper one at 6, the dotted line in the latter shows where the stem is left a little thick in cutting the rabbet, being filed and planed down after the planking is completed and the stem band in place.

The keel is usually made at least 1in. thick, but this is in no way necessary. It is better to make it as thin as possible and quite wide. In the present case it is shown 3in. wide and ¾in. thick, but it might well be 4 or 5in. wide outside and but ½in. thick. The stiffness of the bottom depends but little on the thickness of the keel, the main point being to brace the whole floor system thoroughly by the ledges which carry the floorboards. The keel may be regarded simply as a wide bottom plank, and so need be but little thicker than the other planks. It is here shown ¾in. thick, or ¼ inside of boat, forming the rabbet, ¼ for thickness of garboard, and ¼ projecting outside of garboards. Really all that is needed is ¼ for rabbet inside and ¼ for garboard, leaving no projection outside. If at the same time the keel be 5in. wide it makes a wide, flat surface on which the canoe will rest when ashore, or on which she may be easily dragged over rocks or logs. It often happens that while a canoe can be dragged easily enough, there is great difficulty in holding her upright on her keel and at the same time dragging her, but with a wide keel she will always keep upright with little aid. In a canoe with much deadrise the keel if very wide may be slightly rounded, and in any case it should be protected by ⅜in. strips of flat brass 1-16 thick, screwed to the entire length and soldered or brazed to the stem band. With such protection and a similar strip 4ft. long on each bilge, the boat will stand safely a great amount of hard work, and as for racing, the lessened damage to the planking will more than compensate for any slight friction of the brass. The keel should be worked from an inch board, leaving the full thickness at the ends to aid in forming the deadwood, but planing down to ½in. or a little more at the middle half of the boat, say for a length of 8ft. The scarfs of stem and sternpost as well as the fastenings are shown. It is now the fashion to place the mainmast as far forward as possible, to do which the step must come in a part where the lines are very fine, which necessitates a very thick step. The one shown is of clear white pine, to save weight, and is fastened in when the frame is put together. It must be very securely bolted and must be trimmed carefully to shape just as the deadwoods are, so that the planks will fit accurately against its sides. The step for the mizen may be put in afterward, in the usual way.

One method of setting the trunk is described in "Canoe and Boat Building," but a simpler yet tight method is to put the sides of the case together with the headledges between, riveting them up, then to get out a piece of pine as wide as the top of the keel and ½in. thick, which piece is screwed fast with long screws to the bottom of the trunk. The lower side of this bedpiece is then accurately fitted to the top of keel and screwed fast by short screws passing through it into the keel. The labor of rabbeting is avoided and the joints, if laid with white lead and Canton flannel, will be perfectly tight. The sides of the case will be of clear white pine, ⅜in. on lower edge and ⅝in. at top. The headledges will be 1in. wide and thick enough to allow ample room for the board. The planking will be ¼in. of white cedar. The upper strake, of the width shown in the drawing, will be full ⅝in. thick, being rabbeted on the lower edge so as to lap over the strake below, showing ⅜in. outside. There will be no gunwale, the deck being screwed to this upper strake. The ribs may be a little less than ⅞x¼in., spaced 6in. with two rivets between. The bulkheads will be ⅜in., of clear white pine. The deck will be of ¼in. mahogany. The ledges for the floor will be of spruce or hackmatack, as deep as the distance from floor to garboard, and ⅜in. thick. They should be very securely fastened with long rivets through each lap and the keel, at least two through the latter. If long nails cannot be had, copper wire can be used, with large burrs on each end. These ledges should be placed alongside the trunk, of course being in two pieces each, and a stout one should be placed against the after side of the trunk and screwed to the headledge. If well fastened they will make the bottom perfectly rigid, no matter how thin the keel may be, while boats are often found with a keel 1¼in. thick that will constantly work under the strain of the board or when ashore. The centerboard trunk itself plays a very important part in strengthening the hull, if properly built into the boat and coming up to the deck.

The shifting bulkhead is placed with a slight slant, to accommodate the back better than if vertical. In planning the arrangements, every effort has been made to give plenty of room for cruising, not a mere hole where a man may stow himself for half an hour, but room to carry stores and bedding, to cook, to change one's clothes and to sleep in comfort. At the same time the sailing qualities could not be neglected, and the board has been placed as far aft as possible, with a provision for shifting it still further aft in sailing, as will be described later. The distance between bulkheads is 7ft. 5in., and as the boat is both wide and deep, this space should give plenty of room for all stores; but the after compartment might be fitted with a hatch if more room were desired. As now arranged, the mess chest could fit on one side of the trunk, the clothes bag on the other; while the tent and the bedding, the latter tightly strapped in a waterproof bag, would be in the locker under the movable hatch. In sleeping, there would be a clear length of 5ft. 5¼in. from bulkhead to after end of trunk, and the feet could extend for a few inches into the space beside the trunk lately occupied by the clothes bag, now doing duty as a pillow. The tent, of course, would be set, the bedding spread, and the hatch and bulkhead removed for the night. The space under the side decks affords plenty of room for oilers, spare gear, apron, etc. The well is large, as in summer cruising a man requires plenty of room, and if the feet and legs are kept continually below deck they will be very warm. Sleeping, cooking, and the positions one naturally takes to obtain a rest when afloat all day, demand more room than some racing men seem to think necessary. To close the large well in stormy weather, the best plan is an apron of heavy drill, fitting over the pointed coaming and tightly laced along the sides to screw heads outside the coamings. The apron may extend as far aft as the cleats shown. The mast tubes are 2¼in. at deck, tapering. Both are of the same depth, so that the masts may be interchangeable. It will be noticed that the coaming is cut down very low at the after end. It was formerly the custom to make the coaming as high there as anywhere, but this is not necessary, as little water will come aboard in the center of the deck, and by cutting the coaming down low the need of raising the deck tiller is avoided.

The arrangement of the centerboard is peculiar and entirely novel. The usual arrangement familiar to canoeists has a movable pulley for the lifting pennant, which pulley fits in a brass plate on deck. This plate is apt to work loose under the strain of a heavy board, to avoid which the writer devised the plan of fastening both lifting rod and pulley in their correct relative positions on a strip of hard wood. By this means the two are always in place; the board may be lifted out or dropped in with a certainty that pulley and lifting rod are in their correct positions. The board is hung by two strips of sheet brass, the upper ends of both coming through the strip mentioned, being secured by a rivet. In use the board is hauled up, the pendant belayed on a cleat on the strip, and all may be lifted out together. With a board of 50lbs. it is sometimes all that a man do can to ship the lifting rod and pulley properly, but with this arrangement no special adjustment is necessary, the board and strip are dropped in place and all is ready. In trying this arrangement the idea of moving the board forward and aft suggested itself and the following details were devised to accomplish it. The strip was provided with four small wheels *a a a a*, sections cut from a ¾in. brass rod, with a ⅛in. hole drilled in the center. These wheels work in slots cut in the slip A. The lifting pendant leads through the cheek block C, or through a double block if more power is needed, or the line may lead directly aft, without a purchase. A line G, is attached to the fore end of A, leading through a cheek block D, on the deck, thence aft to a cleat, as shown. A third line E, is fast to the after end of A, and leads through a hole in the coaming, as shown. In operation, the board is first dropped, then by casting off the line G the strip A, with board suspended from it, will run aft until the lifting pendant reaches the after end of case, when the board will be in the position shown by the dotted line. This will carry the center of the board aft about a foot at least, and will make a material difference in the balance of the hull and sails. The line E is used to draw the board aft if necessary, or a rubber spring may be attached to it, so as to act automatically. In hoisting, the board must first be hauled forward by the line G, after which it may be raised by E. There is this objection—the board cannot be raised if aground until it is hauled forward, but as the device is for sailing, usually in deep water, this is of little consequence. If the device is to be placed in a new boat, the case may extend as shown about a foot further aft, to the height of the floor boards, in which event the board may be raised some distance while in the after position, or may be easily cleared in case of grounding. The main use of the shifting board is to improve the balance of sail, allowing full or reefed sail to be carried at will, and giving just so much weather helm as may be at any time desirable. By its use the centerboard trunk can be placed well forward, and yet in racing the board itself may be readily adjusted to one of several positions, and may be thrown at least a foot further aft. Two points are necessary; the case must be wide enough to allow the board to move freely, and the lifting pendant must be made fast so far aft that the board will not rise at the fore end through the after end being the heavier.

STEPHENS' RUDDER FASTENING

The cheek blocks may be cut out of mahogany, with brass sheaves, or they may be cut or sawn out of 1-16in. sheet brass, filed up neatly and bent in a vise to the proper shape to fit the sheave. Sheaves of this kind are readily made by sawing with a hack saw pieces from the ends of brass rods of various sizes, holes are drilled in the centers, the pieces are held in a vise and the score or groove cut with a small round file. With a very few tools for working brass both blocks and sheaves with many other small fittings may be easily made by the amateur. The hoisting pulley B is shown on a large scale to illustrate the construction. The main part of the shell is made from a piece of sheet brass doubled over in the form shown, the upper part being a half circle. To each side a strip of brass bent at right angles is riveted, a mortise is cut in the the strip A, the brass case is set in until the side pieces rest on the strip, and then fastened by screws through these pieces. The pulley is put in place and the pin on which it turns is run through holes drilled in the sides of the case, the ends being then riveted up.

The rudder shown is of mahogany, a cruising rudder, but as effective for ordinary work as a drop rudder. The lower side, below the keel, is sharpened to a fine edge. The rudder hanging is shown in the small drawing. The part attached to the boat or canoe consists of an upper and lower brace of the usual form. A and C, with a rod E, ½in., running through them and screwed into C. On the rudder is a common brace, B, at the top. At the bottom is a split brace, D, made of two castings, *a* and *b*, both exactly alike, but fastened on opposite sides of the rudder. The upper sides of the pair are shown at 1, the fore ends at 2, and the lower sides at 3. It will be seen that by laying the rudder horizontally with the port side, D uppermost, the opening between *a* and *b*, Fig. 2, will admit the rod E. Now if the rudder be raised to a vertical position, the two hooks embrace the rod E, the upper brace B is dropped over the top of E, and the rudder is fast, only to be released by raising B off the rod and dropping the rudder horizontally. In practice the split brace can be put on or off the rod by inclining the rudder to an angle of 45 degrees, without laying it horizontal. With this gear there are no detached parts, the work may all be done at the upper part of the rod, just below A, and it is not necessary to grope under water to ship the lower pintle. The rudder can only be detached by raising B from the top of the rod, and the rudder lines when attached prevent it rising so far of itself.

The deck tiller and gear shown have been tried in practice and found to work perfectly, the whole arrangement being very strong, while there is not the least chance for lines to foul the rudder yoke or deck yoke. The former is in the shape of a wooden wheel, 6in. diameter and ⅜in. thick, turned in a lathe, with a groove ⅜in. deep around it, large enough to take the rudder lines of 3-16in. copper wire rope. This wheel is fitted on its lower side with the usual dovetail plates, one being fastened to the deck and one to the wheel. The deck immediately beneath the wheel should be leveled, so that the wheel will bear on its entire lower surface. On the upper side of the wheel are two hasps, bent out of sheet brass and screwed fast to the wheel, in which the tiller ships. The tiller is reduced at the after end, where it fits into the after hasp, but on top of it is a spring, K, of flat spring brass, turned up at a right angle at the after end, as shown. This hook on the spring serves to hold the tiller in place, and further acts to raise the fore end of the tiller. By this means some spring is allowed in the latter, and in case of any weight being suddenly thrown on it, it will give until the hand touches the top or the hatch and will not break off. As the wheel has a bearing 6in. long, no matter what position it is in there is no danger of twisting off the plate. The weak point of most deck tillers is the long pin and high block on which they are mounted to enable the yoke and tiller to clear the hatch, and with such a rig breakdowns are frequent. The present rig is both strong and compact, the long grotesquely curved arms that foul sheets and halliards are absent and, if fitted closely to the deck, no lines can foul.

On the rudder head is a similar wheel, of the same size, but with the fore side cut away as shown, so as to allow it to be placed below the level of the deck. The angle allows ample play for the rudder. In order to insure perfect action the center of the wheel must coincide exactly with the center of the pin on which the rudder is hung, then the lines will be of the same length, no matter how far over the helm may be thrown. The lines for the foot gear, also wire rope, run round the rudder wheel, being fastened at one point only, so that they cannot slip on the wheel. The two ends are led forward and down through the deck, as shown. A brass ring is securely lashed to each line near where it leaves the wheel, and a strong hook on the end of each of the short lines from the deck wheel will hook into the ring. The short lines are each provided with turnbuckles, as shown, by which they may be tightened. When the deck tiller is not needed the turnbuckles are slacked up, the short lines unhooked, and the deck wheel may be removed, leaving only the lower plate set in the deck. The rudder wheel should be set as low as possible and yet allow the lines to clear the deck; there is no need to have it, as is often seen, far up in the air. If the two wheels are anywhere near the same height there will be no possible chance for the lines to run out of the grooves; in fact, if thrown out in any way they at once spring back. Of course there is nothing to catch the mizen sheet, as the lines will keep it from getting under the wheel. With a 6in. wheel there is power enough to turn a much larger rudder than is needed on a canoe; in fact, the wheel might be even smaller if desirable for any reason. One great advantage of a wheel over the ordinary arms is that the pull is always the same, no matter how far over the rudder may be.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

H. S. S.—Write to W. Wallace, North William street, New York.

E. J. T., Little Falls.—You can order the target through any dealer in sportsman's goods.

F. E. N., Oswego.—We cannot yet say just when "Sam Lovel's Camps" will be put into book form, but due announcement will be made.

SNAPSHOT, Vermont.—The wildfowl season in Vermont will open May 1. There is a law against taking pond pickerel save with hook and line.

GILBERT, New York.—1. Do fresh-water black bass run over 4½ lbs. in weight? How heavy are the largest? Will they reach 8lbs.? 2. A friend tells me that all great shots sight with both eyes open. I say it is not so. Who is right? I feel certain that all wing and rifle crack shots close the left eye. Am I right? Ans. 1. We have a stuffed black bass from Rice Lake, Ont., which weighed 6lbs.; and the head of a black bass from Florida which weighed 23½lbs. 2. Some sight with both eyes open, some with one eye closed.

J. G. B., Rock Island Arsenal, Ill.—I find that there is in my gun a small hole in the left barrel about half way between the muzzle and the breech, and extending into the rib connecting the two barrels. When I clean the barrels with water the water comes out at the extractor. I would like to know if there is any danger in firing the gun. Ans. A hole as described is not necessarily dangerous. It may be a pin-hole, which will in no wise interfere with the shooting of the gun or its safety. Submit it for opinion to a gunsmith. We have used a gun with a pin-hole in the barrel through which smoke would puff out when the gun was fired; this was in old muzzleloader days, when shooters were not always so particular as they are nowadays.

JORBISH, Glenn's Ferry, Idaho.—1. Are the salmon that ascend this river (Snake River) and begin spawning here about Oct. 6 the same as the Atlantic salmon (*Salmo salar*) and can they be caught with a fly? 2. What is the cause of the mortality among them and do they all die or do some get back to the sea? 3. What species of salmon is *Salmo quinnat*? I do not see any mention of it in the "The Game Fish of the North." 4. What species of salmon is it that are ascending the river now, called here salmon trout, and make their way up to the headwaters of the mountain streams and spawn there about the month of April? 5. Can you name any book which treats of the fish of the North Pacific slope (fresh water)? 6. Can you give me any receipt for preserving fresh the ham and loin of venison so that they would keep for a period of a month or so, when boxed or shipped across the Atlantic during the month of September, and what is the best way to pack them? Ans. 1. The *Salmo salar* is not found on the Pacific coast. There are six species of salmon described by Jordan and Gilbert which inhabit the western coast, but we cannot say to which yours belong. Some of these will take the fly. Try them and report your success. 2. This is not known. The "salmon disease" has attracted the attention of naturalists and anglers in Europe for many years, but the cause of it has not been discovered. It manifests itself in a fungus growth, which may be caused by bruises. 3. It is the chinook salmon (*Oncorhynchus chouicha* or *O. quinnat*) the common salmon of the Columbia and Sacramento rivers. 4. Possibly it is the *Salmo purpuratus*, if it has red blotches on the lower jaw. Common names vary so much that little dependence can be placed on them to determine species. When "The Game Fish of the North" was written there was little or nothing known of the salmons and trouts of the Pacific slope and of the West, it is an entirely Eastern book. 5. Get the "Synopsis of the Fishes of North America," by Jordan and Gilbert, Bulletin of the U. S. National Museum, No. 16, published by the Smithsonian Institution, Washington, 1882. 6. No; we know of no means by which the meat can be kept fresh for that length of time at that season of the year.

Take him out of his little round and the average individual is very ignorant. Of five newspaper men, who were asked the other day to tell what a swath was, only one could give an intelligent answer, or who knew anything whatever about it. The vocabulary of the field, of terms used in connection with hunting, shooting and fishing, is "all Dutch" to the multitude.

A Bangor man recently was going to spend the day fishing, he said to his wife, and after starting out, followed by her sweet assurances of success, he leisurely made his way to a fish market and ordered a liberal quantity of pickerel to be sent up to the house for supper. Coming home at nightfall, the pleasant smile which his wife gave him assured him that he was successful in his scheme and had pleased her. He said he left the fish at the market and inquired after their safe arrival. His wife sweetly invited him to the kitchen to see them. No man is ever unwilling to see the result of a day's fishing, but the present instance is an exception. The day's batch proved to be a peck of clams. The supply of pickerel had been exhausted, and the market boy, supposing something was wanted for supper, took up the unfortunate substitute.—*Springfield Republican.*

The insight which one gets of a phase of civilization in America that has now nearly passed away, through such books as "Old New England Days" and "Uncle Lisha's Shop," is well worth having. Even though the stories, considered merely as such, are without literary form or finish, and could more properly be called a collection of anecdotes, there is about them the spirit of the sturdy, honest simplicity which has for so long characterized the rural population of New England, and which makes one regret, in spite of Matthew Arnold, that the statistician is busy with noting its decadence and gradual absorption, while the realist novel writer is describing its demoralization by the march of progress and the city boarders. It was a phase of civilization, it is true, which was far from perfect; there was much in it that was hard, and but little light or sweetness. Yet there was an independence, coupled with a neighborly helpfulness, about it, a morality which, while it was intolerant, was nevertheless sincere, and a respect if not an appreciation for higher things, for which, one sometimes thinks, the new and growing communities of the West to-day might advantageously exchange a portion of their push and energy.—*The Nation, March 15.*

QUEEN & CO. 924 CHEST. ST. PHILA.

The Fluttering Fly.

PATENTED MAY 4, 1886.

THE FLUTTERING FLY.
Patented May 4th, 1886.

With the exception of our Patent Compensating Reels and Section Bamboo Rods which we introduce to the public, this fly, invented by Mr. Wakeman Holberton, is unquestionably the greatest and most radical improvement in fishing tackle ever made. The chief points of manifest superiority of this method of tying flies over the old-fashioned way are:

1st—The wonderfully life-like and fluttering motion this fly has when moved on the water.

2d—The fish is almost certain to be hooked if it touches the fly.

3d—Any of the present favorite combinations of color and form can be tied in this way. Thus, those who believe that fish are attracted by particular colors or forms of fly, can have their old patterns in the patent style.

4th—These flies not only offer less resistance to the wind in casting, but more resistance to the water in drawing. Hence one can do as good work with a small hook tied this way as a large hook tied as before. Experience proves that flies dressed this way can be tied on hooks two sizes smaller than one would use on old-fashioned flies.

We take this means of notifying dealers and fly-tyers that we shall prosecute any infringement of our rights under this patent to the fullest extent of the law. Our course, in regard to the protection of our patents and copyrights, is known to some people. We assure such people that the same old course will be pursued by this firm.

We add a few extracts selected from the numerous and unanimously complimentary press notices of this fly. We could add many letters from well-known and expert anglers if we were willing to drag the names of private gentlemen into our advertisements.

Scientific American: "When so arranged the wings offer less resistance to the air in casting. As the fly is slowly drawn toward the angler the wings expand, and give it a fluttering, life-like motion, much more alluring to the fish."

Forest and Stream: " * * * more like a natural insect than the old patterns whose wings close when being drawn through the water. * * * Great merit lies in its superior hooking qualities. A fish cannot nip at the wings or tail, but swallows the hook before any part of the fly."

American Angler: "There is no question as to the killing qualities of this fly. All fish are attracted more by the action of the fly than by color or form. * * * This fly will certainly, when drawn against the current or over a placid pool, *seam* the surface with an attractive wake, and its expanded wings will create a fluttering motion, assimilating the struggles of a live insect. * * * We are told that few fish are lost by those who use this fly. We do not doubt it.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the large sale of this magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

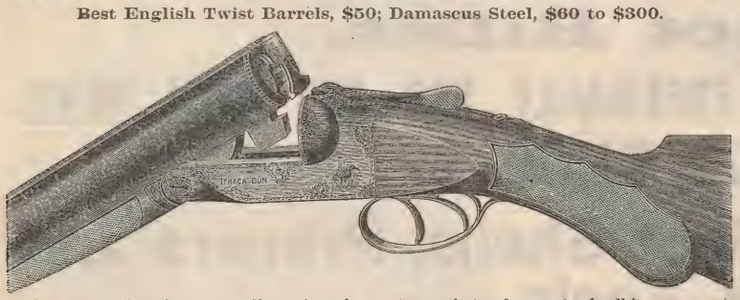
The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 186 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.



LIST OF PLATES.

I. The Sloop Yacht Schemer.

Yacht and Boat Builders, etc.

Steam Yachts and Launches;

THEIR

MACHINERY & MANAGEMENT.

A Review of the Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc., Etc. With 96 Illustrations

By C P. KUNHARDT.

CONTENTS:—Theory of the Steam Engine; Boiler Efficiency; The Engine and Its Parts; The Screw; Laws Applicable to Steam Yachts; Extracts from Lloyd's Rules; Racing Steam Yachts; Management and Care of Machinery; Principal Types of Yacht Machinery; The Design of Hulls; Addenda; Tables; Etc.

SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice. —*From Author's Preface.*

CLOTH, 240 PAGES.

Yachts and Canoes For Sale.

MESSRS. COX & KING ARE FAVORED with instructions to sell by auction at their offices, 5 Suffolk street, Pall Mall, London, on Wednesday, April 11 1888, at 3 o'clock precisely, unless previously sold by private contract, the very desirable and first-class cruising steam yacht **OSSIAN, of 147 Tons Y. M.** The vessel is in the very best possible condition in all respects and amply found, has recently been entirely refitted and the cabin accommodation most conveniently arranged, including spacious deck saloon. Is an exceptionally powerful vessel for her tonnage, and especially suitable for foreign cruising and to make the passage across the Atlantic, and therefore well worth the attention of every American yachtsman desirous of obtaining a steam vessel of about 150 tons Y. M. Plans, particulars, photographs and conditions of sale may be obtained from the auctioneers as above. Telegraphic address, "DERAT, LONDON." Scott's code used.

Cruising Yacht for Hire or Sale.

The owner of a cruising yacht, 47ft. long, 14ft. beam, 6ft. draft (with centerboard up), perfectly fitted out for the accommodation and comfort of 4 to 6 persons in the cabin and 3 men in forecastle, pat. W.C., and all modern improvements, will hire or sell for a reasonable price, important business engagements preventing him from leaving the city. The yacht was specially built of the best material for comfort and safety during the winter of 1886, under owner's personal supervision, and is suited for excursions in the Gulf of St. Lawrence. Arrangements will be made to afford all the sea trout and all other fishing required; salmon may be included. This is an opportunity seldom offered. Address Post Office Box 1081, Quebec City, Canada.

FOR SALE.—FIRST CLASS NEW FLUSH-decked iron steam yacht, 130ft. long, handsomely fitted, schooner rigged; speed 17 miles per hour. Steam vessel circular. SAMUEL HOLMES, 120 Front st., New York. feb9,3mo

CASTINGS FOR SMALL ENGINES AND propeller wheels. Send for circular. F. W. ADAMS, Watertown, N. Y.

CUTTER FOR SALE.

26' 6" over all, 22' w.l., 8' 6" beam, 5' draft, 5' 11" headroom; built 1886. Address
W. D. ANDERSON, JR., East Orange, N. J.

FOR SALE CHEAP.—RUSHTON CANOE, Mohican No. 1, outfit complete. Good as new, address JAS. E. MELVILLE, Sandusky, O.

WANTED—A STIFF CRUISING CANOE. Send full particulars to PRESCOTT BRADLEY, 205 E. 106th st., New York City.

THE YACHT CLUB ARGENTINO IS INTERested in small centerboard yachts up to about 40ft. long, to follow up what has already been ordered. Builders so disposed can send photographs, plans and specifications to the President, Yacht Club Argentino, 10 Bolsa, Buenos Ayres, South America.

FOR SALE.—CANOE DAWN, BUILT BY Ruggles last June, designed by W. P. Stephens, in good condition; won ten prizes last year. Cost $190; price $100. Apply to W. A. LEYS, 277 Jarvis st., Toronto.

Syracuse, N. Y.,

CAMP STOVES. LIGHT, SUBSTANTIAL, no bottom to rust or burn out, telescopic pipe that never falls down, carried inside the stove, with or without oven. Takes least available room and largest wood pan. Any stove made. Manufactured and for sale by D. W. CREE, Griggsville, Ill.

DECOYS.

Send for price list of the finest decoy ducks in the world. H. A. STEVENS, Manufacturer, Weedsport, N. Y.

Wanted.

WANTED.—A GOOD, RELIABLE MAN who understands taking care of dogs. Address with full particulars and reference, JAS. W. DUNLOP, Utica, N. Y. 1t

For Sale.

Trout Farm For Sale.

A farm of 325 acres in Hampshire County, Mass., five miles from Amherst and 1½ miles from nearest railroad station. Has three ponds of some 4 acres, well stocked with trout, and contains and controls 2 miles of the finest trout brooks in the State. Game, preserved for several years, is abundant, and shooting excellent; 250 acres are covered with heavy timber of chestnut, pine, hemlock and yellow pine. The improvements consist of a pretty cottage of 11 rooms, suitably furnished, piazzas, a good barn and outhouses, icehouse; a noble spring of cold, pure water is carried through the house and barn. The buildings are in perfect repair. The land is 720 to 900ft. above tide water. Extensive and fine views on and from it. Cool and healthy and will make a delightful residence, independent of its fishing and shooting advantages. Apply to
mch22,3t WALCOTT HAMLIN, Amherst, Mass.

A FEW SHARES IN THE RENOUS SALMON Club for sale. The Renous River and branches afford about 75 miles of salmon fishing. The club's lease covers about 20 lakes and 40 brooks in addition, and as they contain quantities of large sea and brook trout, the fishing is good from the time the ice leaves until the season closes. This is the most accessible and least expensive salmon fishing to be had. Maps, etc., can be seen at Thos. J. Conroy's, 65 Fulton street, Abbey & Imbrie, 18 Vesey street, and for fuller details address E. HURTZIG, 351 West 123d street, or FRED. D. STOREY, Supreme Court, New York.

Salmon Pools for Rent

About 12 miles finest salmon fishing on Restigouche River; can be divided. Lock Box 35, Savannah, Ga.

SEA TROUT.—PERMITS FOR THE SEAson's fishing on Tracadie, the best sea trout river in New Brunswick, Canada, will be given on application to the subscriber, who will give all needful information as to the obtaining of men, supplies and board at the mouth of this river, which is 40 miles long. Reference as to its character, J. H. Phair, Esq., Fishery Commissioner, New Brunswick, Fredericton, Can. EDWARD JACK, Fredericton, New Brunswick, Canada.

FOR SALE.—ONE REMINGTON RIFLE, about 6lbs., 28in. barrel, .32-cal., rim fire, with peep and globe sights, canvas cover, cartridges, etc. One Raub magazine trap complete with revolving base, used but once. Also FOREST AND STREAM from Dec. 13, 1883, to date complete. WM. S. FRENCH, 336 Alexander ave., N.Y. city. 1t

PROTECT THE PARK.

ALL READERS who are interested in the protection of the Yellowstone National Park are invited to co-operate with this journal in the endeavor to secure needed legislation. Petitions will be sent to all who will undertake to have them signed and forwarded to Washington.

OPENING THE TROUT SEASON.

ON Monday next the trout fishing begins, by law, in many parts of the State of New York. It has already opened in New Jersey, but none but those who never miss the first day will be likely to take advantage of the legal opening, because the chances are all against anything like decent weather in which an angler may be free from the discomforts of chattering teeth and mittened hands, in the raw winds left over from March. In most parts of the State the streams are still covered with ice, and there can be no sport on them. The Long Island brooks are not frozen, but the banks are covered with snow in many places, and there is much snow water in the streams, the effects of the great storm not having yet disappeared.

It is true that trout can be caught under such circumstances, and many anglers think that most of the big fish are only to be had during the first ten days of the season, but this is not always so, and, as so many of the craft will wait for decent weather, it might be well to go back to the old time of opening, May 1. There will, in all probability, be no good trouting in the streams of Sullivan county, N. Y., before the last of April, and it is only on Long Island that there is a prospect of decent fishing before the middle of next month, at least. By making the opening day May 1 the trout would have a longer time to get in good flesh, although they are not really poor now, and the angler would not look forward to the chances of an east wind and rheumatic pains, while trying to believe that he is enjoying one of the greatest pleasures of his life.

There will be a good display of trout in Fulton Market, Mr. Blackford having been promised specimens from many places, and eggs and fry from the Long Island hatchery will also be shown. Lovers of trout who do not care to tempt the chilling winds can thus look at the trout which they are too wise to expose themselves to catch.

A METROPOLITAN SHOOTING GROUND.

THE suggestion made by a correspondent that the city of New York should have a shooting ground, is a good one. He rightly says that there are thousands of men in and about the city owning guns and anxious to shoot them, but who find it impossible, owing to the fact that there is no ground easy of access, and where one may be assured of finding opportunity at any visit, and all appliances for an hour or more of practice. It could be made the recognized locality for the shooting off of matches, and by a division of the time, not a few clubs could make it their regular resort for the shooting of stated matches.

It frequently happens that it is desirable to try a new gun or to test some new ammunition, and it is difficult to find a spot where one may go without fear of interruption and fire away to his heart's content. Our correspondent thinks there are many who go out for field shooting in season and would like a chance at such shooting from traps to keep the hand in, the eye sharp, and the joints limber.

At any rate, properly managed and discreetly run, such a ground ought to find paying clientage among New Yorkers who love the sport of trap-shooting. It must not, when established, carry about it the least taint of trickery, nor of low associations; nor should it be run in the interest of any one make of artificial bird, nor of this or that manufacturing concern of any sort. The newspapers will give ample notice to the doings at such a resort when public matches are indulged in. Yet a good share of its revenue ought to come from catering to private practice in a quiet way. At present there is no system whatever. Clubs scurry away to some nook, generally in the back yard of a country roadside hotel; but this is unsatisfactory, and with the boom in trap-shooting, the time seems appropriate for a new and more systematic departure as suggested.

TO DESTROY THE SEALS.

A BILL providing for the destruction of seals in Massachusetts waters was recently favorably reported by the Fish and Game Committee of the House of Representatives of the Commonwealth. It provides for the payment of a bounty of $2 on each seal killed, the tails to be presented as evidence of the killing, and all sums disbursed on this account to come out of the treasury of the Commonwealth. The reason for this bill, brought forward by those who urge the adoption of the measure, is that the seals found along the Massachusetts coast destroy great numbers of food fish, which is no doubt true.

Without at present considering the wisdom of procuring the extermination of the seals of the New England coast by such a step, it may be remarked, as suggested by the Boston *Herald*, that the passage of such a law would open wide the door for fraud, and would make a market in Massachusetts for the tails of seals captured far from her coasts. The sealing fleet of Newfoundland would, no doubt, be very glad to have such a law passed, for it would add materially to the value of its annual catch. It might cost Massachusetts some hundreds of thousands of dollars each year. The Committee on Finance, to which the bill was referred, has reported that it ought not to pass, and it may be presumed the Legislature will agree with this view.

The offering of bounties without considering the results which are to follow is too common among our State Legislatures to excite much surprise. A recent example occurred in Pennsylvania, where an ill-considered move in this direction cost the State many thousands of dollars in cash, and no doubt many thousands more in the increase of grain-devouring small mammals whose most efficient checks, the hawks and owls, were destroyed under the operation of the law. In Wyoming and Montana not very long ago, laws were passed offering a bounty for the heads of gophers, ground squirrels, prairie dogs, and other small burrowing rodents. The result was that all the small boys and idle people in the Territories took to hunting these "small deer," and made good wagess, nearly bankrupting several counties, while the gophers seemed to be as numerous as ever. It will be well, therefore, for the Massachusetts Legislature to consider the subject carefully before passing any law offering a bounty on seals.

SNAP SHOTS.

SPORTSMEN, naturalists and all other people who are interested in the preservation of game and birds, will be sorry to learn of the action of the Ontario Legislature referred to in another column. It will be seen that the bill as reported does not forbid the dogging of deer, nor does it provide that the intending hunter must procure a license. The provision that only five deer may be killed by one or more hunters from one camp will be a dead letter, since it can never be enforced. The section requiring three months residence in the Province before any person shall be at liberty to kill deer, or other game, amounts to a practical barring out of all residents of the United States from shooting privileges in Ontario, and will seem a severe hardship to those clubs whose members reside on this side of the line. Some of these clubs have spent large sums of money in the purchase of extensive tracts of wild and worthless land, and have gone to considerable expense in putting improvements on such property. A bill such as the one reported would, if it became a law, mean little less than confiscation of the property of these associations. The matter will no doubt receive attention before long from persons interested. There can be no question about the wisdom of absolutely prohibiting the killing of moose until 1895. These grand animals are growing scarce in Ontario; indeed, by some they are said to be almost extinct. The failure of the bird protective bill is a misfortune, and emphasizes again the point which we have so often urged, that the people at large need to be educated as to the enormously important part played by our small birds in the economy of nature. If the people of America cannot be brought to comprehend the value to agriculture of these indefatigable aids to the farmer, the United States and Canada as well will ere long have to pay a heavy penalty for their heedlessness.

The constant demands received by us from clubs and individuals for copies of the petition relating to the Yellowstone Park bill shows how widespread and general is the interest felt on this subject by people all over the land. The plan which we have adopted with regard to this petition puts it within the power of every one to do something toward helping forward this good work, and as every American citizen must feel a pride in this magnificent possession of our nation, all should be willing to lend their aid to the accomplishment of so desirable an object as the protection of the National Park. We print this week the names of a few of the signers to the earlier petitions which went out, and shall continue the list each week.

A correspondent elsewhere implies that market-shooters are a selfish class, destitute of true sportsmanlike feeling. This may be a general idea, but it is an erroneous one and does great injustice to a large class of men, as any one who has done much shooting knows. We have found, among those whose circumstances obliged them to sell their birds, as true-hearted men with as high an ideal of sportsmanship as among any class with whom we have ever shot. Pot-hunting is by no means confined to people who wear shabby coats.

The *American Kennel Register* carries the roll of the dogs entered up to over 6100; a remarkable record. Since its enlargement to twenty-four pages, the *Register* for each month contains valuable material aside from the record of registry and dog shows, which makes it indispensable to any one who owns a dog.

In view of the severity of the past winter, the prospects for good fall shooting are not bright. It must be remembered, however, that while the snows have been heavy and continuous, they have not been crusted.

THE ROCK CLIMBERS.

XIV.—A RIVER OF ICE.

THE moon, nearly at her full, had almost reached the tops of the western mountains when the Rock Climbers rose from their bed of boughs, and made ready for a long day's work. Deep silence lay over the narrow valley where they, perhaps the first of all white men, had slept. There was no noisy babble of brook, nor soft wash of wavelets upon the beach, nor any cry of bird or beast to break the stillness. Day was not yet near, and the sounds of the forest which herald the coming of the light were as yet unheard. The men moved quietly about as if loath to break this stillness. They seemed to feel and to be awed by it. But, little by little the fire began to crackle, and the familiar sounds of camp were heard. Breakfast was soon eaten, the beds rolled up, and each man's load made ready. Appekunny put the camera on his back, Jack took the shotgun and a few shells, Yo buckled on his cartridge belt and took his rifle, and then with Jack in the lead, the three strode silently away through the forest on the east side of the stream. At first progress through down timber and brush and snowslide was very slow in the darkness, but as this faded, and the pale gray light of the coming day made their way plainer, they advanced more rapidly. A mile and a half above the camp they came to a wide, rapid mountain stream which enters the valley from the southwest, through a broad cañon. They waded through this, and keeping up the valley of the main stream, soon came to an open meadow dotted here and there with little spruces. Beyond this they could see that there was no timber, and in a few moments they stood on the shore of a beautiful glacial lake.

It was circular in form, perhaps a mile across, and on all sides except that where they stood, was walled in by vertical precipices of tremendous height. Immediately above it, and just opposite them, was the glacier from which flowed the dark green waters of the lake, while on the north and the south were stern snow-wreathed rock walls which seemed to forbid further progress. On every side the walls dropped straight down into the deep waters, and along their smooth sides it seemed impossible to pass. At the head of the lake there is a narrow fringe of willows, then an open meadow of small extent, broken on its eastern side by a low, rocky, pine-crowned promontory, which juts out from the foot of Monroe's frowning peak. Behind the little meadow rises squarely a thousand feet of black precipice, divided into two nearly equal halves by the white waving line of foam—only a line at this distance, but nearer at hand a torrent—which rushes out from beneath the glacier and plunges downward, dashing itself to spray in its fall. On the right, as they faced the ice, or to the north of the lake, another still higher mountain rises abruptly in a series of rocky ledges, one above another, to a great height, and then terminates in a knife edge of naked pinnacled rock, cold, hard and forbidding. Beyond, and most interesting of all, is the tremendous mass of the glacial ice, and about it, holding it in a close clasp, are the snow-patched gray fingers of the verdureless crags.

It was a scene long to be remembered, one of marvelous grandeur and beauty, but its severe majesty and rugged sternness were awe-inspiring. The mountains did not invite ascent, they seemed rather to defy it; to smile coldly and to say in their voiceless speech, "Untrodden by white man's foot we have stood since the foundations of the world were laid, if you can surmount us, do so." And indeed it seemed hopeless to attempt this long climb in the short space of one day.

For awhile the men stood speechless as they looked over the scene. The sun had not yet appeared, but its yellow rays were gilding the tops of the great mountain on the north side of the lake, and little by little the light crept down the mountainside, flashing on one snowbank after another, causing the red rocks, one by one, to glow as they were touched by its rays, and bringing out the vivid green of the alpine grasses on the lower ledges clearly against the white, the red and the gray. How softly the sunlight stole along the mountainsides, each moment revealing fresh beauties. A day might have been spent here most happily, just watching the play of the sunlight, the changing shadows and the mountains brightening or growing cold. But time was short. There, before them, lay the great ice river, near in actual distance, but how far when measured by the steps that must be taken to reach it, none of them could tell. The camera was set up, therefore, and a few views taken; Yo walked hastily along the rough shingle, examining some fresh tracks made on the pebbles, but was unable to determine whether the great animal which had passed swiftly along was a moose or an elk, and then the loads were again taken up and they directed their steps toward the foot of Monroe's Peak, beneath which it seemed that the way was most practicable.

Here, over the talus which in bygone days had fallen from the stupendous cliff above them, they made their slow way around the lake. Sometimes they crept along almost on hands and knees over the steep and slippery rocks, forcing a passage through the thick strong willows and alders which grew in each crevice among the stones; at others, when the way was more open and less steep, stepping cautiously from rock to rock, balancing themselves with extremest care lest a misstep should send them sliding down the slope and into the cold waters below. At length, having passed this talus and out of the entangling shrubs which were too strong to break or bend and must be stepped over or crept under, they reached the rocky promontory, where the going was more open, and passing over this, were soon in the open meadow below the precipice. It was swampy and overgrown with willows, and great bars of gray gravel, the debris from the glacier above, stood far above the level of the soil. Here for a few moments they rested, and then started on, breasting a steep shoulder which gave an easy ascent for a couple of hundred feet to the lowest step of the cliff they wished to ascend. It was very steep, yet the climbing did not seem hard, for it must be remembered that for a month these men had been doing hard physical work, and their brains, lungs and muscles were now far better able to perform this arduous labor than they had been before. They marched steadily on, therefore, stopping now and then for a moment's breath, and at length reached the ledge. Along this they walked until they reached the very bed of the falls, and here began the serious work of the day.

The icy torrent which for ages had been flowing over these rocks, had cut for itself in some places a hollow channel in their surfaces. On one side or the other the rocks had fallen away, so as to furnish here a crevice, there a projecting knob which would give hand or foothold to the climber. Yet sometimes there opposed them only a smooth, naked cliff, which was insurmountable, and then a search must be made along its face for some place over which they could pass. Slowly and carefully they climbed upward, often crossing the stream from one side to the other, clinging with tenacious grip to each little spruce twig, thrusting their fingers into the crevices in the rock, and fitting their feet on every knob or projecting splinter or roughness that would aid them. Sometimes holding on with elbows, knees, calves, yes, even with their chins, as they worked their way along over places which often the dogs would not face, but before which they stood yelping with terror as they were left far behind. So, inch by inch, and foot by foot they made their way upward. The crossing of the stream was perhaps as nervous work as any that they had to do. The boulders which lay in it were worn smooth as glass, and the fine mist which rose from the falling waters froze on them, making them very slippery. Long jumps from one to another of these had to be made, and often in places where a slip would insure a fall of forty or fifty feet sheer on to rough rocks below. About two-thirds the way to the top of the precipice they came out on a shelf, perhaps one hundred feet wide, which was almost covered with high-heaped debris, brought down by the glacier from above. These enormous piles of drift were composed of boulders and gravel of all sizes, from masses as large as a small house to grains no larger than a pin's head. Some of these fragments were as sharply angular as when they fell from their original resting place in the mountain above on to the ice, others were worn and rounded by attrition against the subjacent rock. Most of this drift was large, much of the finer gravel having been carried on and over the cliff into the valley below, where it could be seen spread out in a great mass, covering many acres.

The white, quivering falls are very fine. They rush down the cliff, often by vertical plunges a hundred feet or more in height, or down sharp inclines, and in one case they have worn a deep fissure in the slate, and shoot down with a hissing sound thirty or forty feet back from one who looks in at them from the narrow opening of the crevice. Everywhere there is spray, and often clinging to the vertical walls of the cliff are great masses of white ice, the arrested current of some little spring or offshoot of the stream.

Keeping to the right over this great mass of morainal drift they gradually ascended over alternating ledges and grassy slopes, through deep snowdrifts and around little clumps of dwarfed pine trees, until they reached the level of the lower border of the glacier. Here the drift was spread out far and wide, and they could see, to the right, high ridges, like those thrown up by a plow, lying parallel to the course of the ice river. These were sometimes fifty or sixty feet high above its surface, which came up on the southwest side close to their bases, and were from one-half to one-quarter of a mile in length. At its lower end the glacier had melted so that it was difficult to say just where the ice ended and the drift which it bound together began. For half a mile or more from this lower edge, the ice was bare of snow, dotted here and there with stones, and was grayish-blue as it glittered in the bright sunlight; above this it was for the most part snow-covered. It lies in a basin two miles wide by three or more deep, and consists of two principal masses, the lower of these covering a great extent of ground and running up into the little ravines and gorges of the mountains on either side. The upper mass seemed, though it was not reached, smaller than the one below. It rests on a ledge which runs far back among the peaks, and in its slow motion is constantly falling over the cliff and uniting with the lower mass. Snow-covered on top, the exposed side of this frozen waterfall is blue as the sky above it. From the side of this slow-moving ice river great blocks fell from time to time, and lay scattered about over the snow, on which they shone like sapphires.

It is impossible to do more than guess at the thickness of this ice, but from the edge of the lower mass to its comb the men estimated the vertical distance at about 700ft. The thickness of the upper mass is perhaps 300ft., though from immediately below it, this seems too high an estimate. It is impossible, without going over the ice and visiting the sources of this frozen river, to get any adequate conception of its area and character. The Rock Climbers were unable to proceed further than the comb of the lower ice, and so saw but a small portion of the whole. Viewed from a distance with the telescope it is observed that further to the south the upper ice slopes gradually into the lower mass, and also extends far back on the mountainside, sending off branches into the high narrow gorges among the peaks. The men who had been on the lower mass of the ice and knew something of its size were thus able later when looking at the glacier from the valley with a powerful glass to estimate how small a portion of the whole this formed. It is believed that the whole glacier occupies not less than 3,000ft. vertically on the mountainside. The upper ice can unquestionably be reached without difficulty, but to accomplish this it would be necessary to camp at the glacier's foot, where there is some wood, from which point could be made the excursions which would be necessary to take measurements and generally to probe the secrets of this desolate corner of the mountains.

One feature of this ice mass which at once attracted attention was that, at the time when it was seen, there was in the water which flowed from beneath it no evidence of motion. It is well known that water in glacial streams is milky, thick with fine particles of comminuted rock ground up by the ice in its slow passage over its hard bed. Here, however, the water was clear. Two years before, when Yo and Appekunny had looked down from the mountain tops about Swift Current upon this ice and the lower of the two lakes which receive its waters, the case was different. Then the stream which flowed from it into the Fifth Swift Current Lake was white, so that at the point of entrance a long line of milky water extended out into the lake, and the line of demarcation between the two currents was clearly marked almost to the falls. Such a line of separation may be seen where the Missouri and the Mississippi come together, or the Rhone and Arve, or where the mighty Fraser pours its turbid torrent into the clear, dark waters of the Gulf of Georgia. Two years before, then, in September, when the weather had for some time been warm and rainy, a grinding was going on beneath this mass of ice; now, in November, the grinding has ceased. It was suggested that the bitter cold weather of the past two weeks had frozen up the mass and arrested its motion, and that it would not move again until spring. A learned geologist has expressed the opinion that the motion of some of these Rocky Mountain glaciers may be a slipping and sliding rather than a crushing and tearing one. That there was some movement of the ice even at the time of the men's visit was shown by the fact that blocks of ice were constantly falling off from the upper mass on to the new fallen snow beneath.

An interesting feature of this ice is its seemingly laminated character. By this is not meant the well known veined structure so familiar in glacial ice, which has given rise to so many experiments, but rather a series of layers of ice of varying thickness, approximately horizontal, each of which is separated from the one above it by a very thin layer of dirt. Each of these icy layers was taken to represent a winter's snowfall, and the thin dividing layers of dirt the dust and movable debris from the adjacent mountain peaks which the wind during the summer had blown on the surface of the new-fallen snow. These layers of compacted snow varied in thickness from one to twelve inches, while the dividing line of dark grit and soil was usually no thicker than a sheet of paper.

All this was not seen at once, but was the result of several hours' clambering about the ice, and was interrupted by an episode to be referred to hereafter. After reaching the borders of the glacier the men followed it around to the right, for it was impossible to walk up the steep glare ice which lay between them and the comb of the lower mass. In, close to the rocks, which came abruptly down to the glacier's border, there was new snow in abundance, and this was soft enough to give good footing. At one point Appekunny carelessly tried to shorten the way by climbing up over some old snow, which was quite steep. Before he had gone very far, the others saw him digging his feet into the hard snow, as if uncertain of his footing. Then he slipped, recovered himself, stood for a moment as if doubtful whether to go backward or forward, took another step, his feet flew out from under him, and he began to slide down the steep snowdrift. Under ordinary circumstances the sight of a man tobogganing down a snowdrift with a camera strapped to his back, would have excited the laughter of the onlookers; but now, when it was un-

ertain whether the slide would end against the rough ocks below or in a soft snowbank, they had no inclina- ion to smile. Happily nothing serious resulted. After oing about a hundred yards at a high rate of speed, ippekunny ran into some snow that was soft, and topped, and thence making his way cautiously back to he edge of the rocks, took the safe but longer road fol- owed by his companions.

The way led over snowbanks and ice fields, and over norainal ridges which some large animals, either sheep or oats, had passed but a short time before. The tracks, ndeed, were so fresh that extreme caution was used in assing over each ridge and the ground in sight carefully canned, before the men exposed themselves to view. Nothing was seen, however, and at length, since it was ast noon, they sat down under the lee of one of the idges and with good appetite ate their lunch of bread and heese, and smoked. There let us leave them. Yo.

The Sportsman Tourist.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is in- vited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

FOUR DAYS ON THE UPPER KENNEBEC.

THERE is in the make-up of most human beings a trace of the savage.

It may be latent or active, but every one has it in a reater or less degree, and it is this strain of the old, wild boriginal blood, which makes us tire of the city and its onventionalities, and long for the freedom of the woods nd fields or the boundless waters of the blue sea. The ares and duties of business and social life become irk- ome and we chafe under the bonds which etiquette im- oses; the machinery of body and brain moves sluggishly, nd the wheels need the lubrication which only recre- ation will give. Then the savage asserts itself and there omes a desire to get close to nature's heart and revel in her bounties, the choicest of which are to be acquired far from what we are pleased to term civilization. To the writer, those persons seem very unfortunate from whom the savage has been wholly eliminated or so far subdued that they find no pleasure except in the gay life of the towns or fashionable watering places. Their existence is in a measure narrowed and superficial, for to them nature makes no direct appeal and on them her best offerings are lost.

They go on stereotyped excursions because it is "the thing" to have been there, but they never leave the beaten paths or penetrate to the out-of-the-way places where some of the most fascinating pages of the great book, which is free to all, stand open.

I have had applied to me at times by some of my friends—and good friends, too—that much abused epithet "crank" because of my enthusiasm for the woods and streams, and affection for the rod and gun. They cannot understand or appreciate the taking long journeys, or tramping for miles and subjecting ones self to the discom- forts of wet and cold and fatigue all for the sake, as they say, of a few fish, which, if the Scribe is so fond of them, he might have purchased at a market.

In an honored place on my bookshelves are several volumes which contain within their covers the very essence of the great world out of doors. They are musical with the songs of birds and redolent of the odor of wild flowers and pure sweet air, and in one of the delightful essays the author speaks of the "legend which is written on the back of the wary trout."

I confess myself a subject of this great cosmic king- dom of "out of doors" of which Divine Nature is the gracious sovereign. Do you also acknowledge her rule? Are you a lover of the country and the open air? Have you read the magic writing on the trout's back? Your answer is "Yes," and we know—you and I—that when we go a-fishing there is much to be caught besides trout, and that our creels carry but a small part of what we go for or what we attain. We know that the legend on the trout's back, rightly interpreted, means health, vigor and happiness, a broader philosophy and a kindlier feeling toward our fellow man. We go to the woods with weary brains and tired bodies, but under the subtle influence of the forest, the aroma of the evergreens and the pure element of the mountain streams, the healthful fatigue and dreamless sleep,

> Our cares drop from us
> Like the needles shaken
> From out the gusty pine.

There is, indeed, "a pleasure in the pathless woods" and "a society where none intrude," no less by the trout stream than "by the deep sea." How the clear, cold water which the speckled fish loves so well will wash the sediment out of a man's brain, leaving it calm and cool itself, till he feels capable of coping with the most diffi- cult problems of life. If Ponce de Leon had sought the fountain of youth at the source of one of our Northern mountain streams, his quest would have stood a better chance of fulfilment than under the enervating sun of the land of flowers.

And then, as one reclines at night by the camp-fire, what music is there so sweet and soothing as the soft whispering of the night wind through the pines and the bubbling of the brook that goes tumbling by, while the silver moon floats serenely overhead among the stars? How the best part of a man's nature comes to the surface at such a time as he feels the softening influence of his surroundings. Is there any other time when he so desires universal "peace on earth and good will to men?" A French writer has sung:

> *L'absence est à l'amour,*
> *Ce qu'est au feu, le vent:*
> *Il éteint le petit,*
> *Mais rallume le grand.*

The poet, no doubt, was thinking of his lady love, but his stanza is no less applicable to the love some of us have for *le chasse et pêche.*

Do you not sometimes sit before your open fire with your feet stretched toward the grateful blaze, while the wintry blast screams down the chimney and around the corner and the snow swirls and eddies down to the frozen earth, and dream of the days you have spent with rod and gun? That day when you were caught in the storm miles from home, and got drenched to the skin, does not seem to have been so very bad after all, and when you think of the big fish which you lost after he was all but in your hands, the disappointment you experienced does not affect your reverie, but you feel the ghost of the thrill which ran through you when you struck him, and you decide to try for him again some time. You realize that the day when you had such poor success and hardly got a nibble was not wasted; that was the time when you caught something else. Perhaps you found a rare flower, or made the acquaintance of a bird new to you, or dis- covered the nest of some species for the first time. You recall how you followed a stream amid new scenes, and how the sun gilded the summits of the distant mountains, and how cool and shady were the spots where you stopped to rest, and that the mere fact of being there was pleas- ure enough. You didn't care much that day whether the fish bit or not.

Oh! yes, it all comes back vividly, and perhaps you get out your tackle and look it over fondly, and the wife on the other side of the table laughs at you and says she be- lieves you think as much of that old fish pole as you do of her. You smile back and tell her she knows better, but that there is no denying that you loved it long before you knew her.

You think of the little boy up-stairs asleep, whose am- bition it is to go fishing with papa when he gets big enough, and you say to yourself that some day you will teach him the secret of the magic writing as your father taught it to you years ago.

Then your mind goes back to those early days when you derived as much pleasure from your primitive tackle and the willow pole, which you cut with the jack-knife you had for a birthday present, as you have had since with the best of lancewood or split-bamboo.

Yes, we like to "bring the old time back," and perhaps we are "cranks" after all. Some one defined this word as meaning a person who thinks differently from what we do ourselves, and this definition may not be far wrong.

As I write I am in a cosy hotel, "way down East," with my table drawn up before the fire-place, in which several large birch sticks are burning merrily. All the afternoon the train skirted the snowy banks of the ice-bound Ken- nebec, and as I looked through the windows of the com- fortable Pullman at the noble stream in its winter fetters, the very contrast brought to mind its head waters as I had seen them under summer skies with the sunlight sparkling on the dancing water of rips and rapids.

A very essential thing for the angler to have on his ex- pedition is a friend on whom he can depend for cheerful and congenial company, and I have just such an one. The readers of FOREST AND STREAM have already been in- troduced to William, who is the beau ideal of a companion. He is an enthusiastic admirer of all that is lovely in nature, a patient fisherman, tireless on a tramp, always in good spirits, genial and kind, and when away he gives himself up to the full enjoyment of the journey. It is needless to say that no cloud has ever cast a shadow on the trips which William and I have taken together. Our last excursion was made from the same hostelry where I am now writing. One day as we sat sipping our after- dinner coffee in a Boston hotel, just before the closing of the open season for trout, the arrangements were made, and a few days latter found us with a third friend, Wil- lard, ready to start from this hospitable door.

Immediately after dinner a roomy carriage, drawn by a span of black horses, was driven up, and we stowed away cameras, fishing tackle, guns and "grips," and then piled in ourselves.

Our destination was the "Forks" of the Kennebec, and we planned to cover half the distance that afternoon. Before we had gone half a mile our troubles commenced. The "nigh hoss" began to exhibit traits of character which warned us that we should take little comfort in the way of stopping to take views of the scenery, and that whoever held the office of Jehu would have his hands full. The "critter" had an idea that the proper place for his tail was over the reins, and when the driver endeavored to pull them out he evinced a desire to try the consistency of the dashboard with his hoofs. He also thought that the proper time to back was when his mate was trying to pull, and that it was just as well to go side- ways as any other way. It was concluded that if we wanted to have any comfort, we must go back and change this nag for one that was a little more civilized. So we turned about, and an hour later made a second start and went merrily on our way. Once out of the town, we bowled along at a good pace, our intention being to stop that night at "Carney's," thirty miles distant.

We were on the Canada road, and there were only two villages for us to pass through. At the second one a fair was in progress, but the prize heifer and the mammoth pumpkin had no charms for us, and we kept on, followed by the curious glances of the assembled grangers. After leaving the second village the houses became few and far between, and the road followed the river and in places was close under the shadow of the mountains. We had the unique pleasure of seeing the moon rise twice, as after the first time we lost it behind the range, and then beheld it once more, showing its silver disc above the ser- rated treetops far above us.

In due time we drew up at a two-story white house which stood on a flat piece of meadow land between the hills and the river. This was "Carney's," and we had accomplished the first stage of the journey. After seeing that the horses were well cared for we ate our own sup- per. The evening was chilly, and we stretched our legs before a blazing birch fire, and under the soothing influ- ence of a pipe discussed the plans for our short holiday, which was to end our expeditions for the year. In the morning, while the others were waiting for the team, I took the gun and strolled on ahead, hoping to flush a partridge.

It was a typical autumn morning with just enough tingle to the ozone-laden air to send the blood coursing through one's veins at a quicker rate than usual, and life seemed well worth living. The roadsides were royal with the purple and gold of asters and golden rod, and that prettiest of wayside flowers, the blue harebell, swayed in the gentle breeze. There were birds enough, but not of the particular species which I sought.

Flocks of sparrows and cedar birds flew nervously from bush to bush, as if preparing for their annual migration, a large hawk sailed in great circles overhead, and a flock of garrulous crows were breakfasting in a field across the river. Down by the stream a big blue kingfisher sat on a dead branch over the water, watching for his finny prey, but the prospect of partridge for dinner was rather dubious. Our objective point for that day was Pleasant Pond, and after driving a few miles along the river road we turned to the right into a ranch road which leads to the pond.

This was up-hill most of the way, and followed the course of a brawling brook. This stream was filled with boulders and looked like a good place for trout, but we did not stop to fish, though William took several pictures at different points. At length we came in sight of the waters of Pleasant Pond, and drove up to a small house which stood in a sterile field; the man was away and the sight of half a dozen small children, who evidently be- longed to the ranks of the great unwashed, decided us to try the other and neater appearing place across the lake. We drove around and the people said they would get us dinner and sent for the hired man to get the boat for us.

We took our rods and followed him across a pasture and through a grove of second growth white pine to the pond. Two flat-bottomed bateaux, half full of water, comprised the fleet, and our guide, who was a good speci- men of the Down East Yankee, proceeded to bail out the large one. The clumsy craft was a poor substitute for the light and graceful canoes of the Moosehead waters, but we had not far to go and soon made fast to a buoy in 40 or 50ft. of water.

The watar of Pleasant Pond is remarkably clear and one can gaze deep down into its translucent depths. Rocks and boulders on the bottom can be seen where they are 25 or 30ft. below the surface. A slight breeze which ruffled the surface prevented this in a measure, but still we had the feeling of not floating on water, but on some purer and less tangible element. On the eastern shore were low rolling hills, on which are a few farms, but the land seemed sterile and unproductive. Rising from the western shore is a range of high rugged mountains, which on this day were partially obscured by fog. The shores were rocky, and the constant lapping of the water against the stones, combined with the rustling of the foliage, made music which was welcome to our ears.

As we prepared our tackle for use the Yankee watched us with much interest. My rod especially seemed to strike his fancy, and when it was fully put together he looked at it admiringly and remarked, "That's a daisy, haint it?" and then with true Yankee inquisitiveness. "How much did she cost?" This information being im- parted, he got out his own line which he used without a rod, and we all extended an invitation to the trout to come in out of the wet. We baited with salt pork and let the hooks sink deep down toward the bottom, but after trying in vain for half an hour we transferred our base of operations to another place some distance away.

The author before mentioned has fished in this same lake and says of the trout, "They were to be taken only in deep water and on a hook baited with salt pork. And then you needed a letter of introduction to them. They were not to be tempted or cajoled by strangers. We did not succeed in raising a fish, although instructed how it was to be done, until one of the natives came and lent his countenance to the enterprise. I sat in one end of the boat and he in the other, my pork was the same as his and I maneuvered it as directed, and yet those fish knew his hook from mine in sixty feet of water, and preferred it four times out of five. Evidently they did not bite because they were hungry, but solely for old acquaint- ance's sake." We began to think that our credentials were not to be received by these dainty patricians of the genus *Salmo*, and that the famous silver trout of Pleasant Pond would not form the *pièce de resistance* of our dinner that day. But suddenly Willard became animated and his face became lighted up with a look of eager anticipa- tion, and the writer following with his eye his com- panion's line, saw a dim, shadowy form hovering around the piece of white pork. Then there was a sudden rush and Willard began to reel in, and as he did so something which shone and glittered like polished silver came in a waving line nearer and nearer to the surface, till our comrade lifted into the boat a most beautiful fish. It was unlike any other trout that we had ever seen and we all stopped to examine it. It was about ten inches long and bright and silvery in color and plump and fat. The spots and the lateral line were very faintly marked, the former being barely visible. Its captor was congratulated and then with our hopes raised we sought to inveigle some of its brethren, but for some time without avail.

Then I felt a shiver run up my line, and soon a trout, which was the exact counterpart of the first one, was safe in the boat. This second one completed the catch, for though we fished for some time afterward, and with all the skill we could command, we could not get a nibble. We wished that the photographer might at least have got one to keep us company, but we had the satisfaction of having beaten the native. We returned to the shore and cleaned the two trout, which, if they were silver outside, proved to be gold inside. The flesh, instead of being pink, was of a reddish golden color, and withal, outside and in, these fish were the handsomest we had ever seen, and they were delicious eating; much more dainty and rich in flavor than usual. Our author says those which he caught were uniformly ten to twelve inches in length, as were our two. They appear to be a species peculiar to these waters.

We got back to the house only to find that our dinner was not ready; so while waiting, William, in whom the ruling passion was strong even in hunger, got out his camera and cast about for something picturesque. The clouds which hung over the mountains across the lake prevented getting a view in that direction, and the out- look in other quarters did not appeal to the fastidious taste of our artistic member, who was about to repack his apparatus when Willard called our attention to the five youthful offspring of our host. These scions of the house, who looked to be, as Willard said, "all of an age." were standing by—barefooted and bareheaded—watching us with interested curiosity; they furnished a *motif* for a *genre* subject which William was quick to appreciate. I prepared to focus on the group, while my companions arranged and posed them, but the mother, seeing what we were doing, insisted on combing their hair and add- ing shoes, stockings and lace collars to their scanty ap- parel, thereby spoiling the effect of the picture. At last,

after much watching and waiting, and, if the truth must be known, grumbling, dinner was announced, and we sat down to a *menu* of salt pork swimming in fat, potatoes, and our two trout. The trout we devoured, the potatoes we ate, and the pork we sampled, and then took our departure.

We intended to try several likely looking places in the brook which we had carefully noted in the morning, and on arriving at the first one we stopped. Willard said he would remain with the team, so I jointed my rod and William cut a pole which he carefully trimmed, and attached to it a short line. The brook came tumbling down over the rocks, singing as it came a song to which the whispering pines responded, and which we interpreted to be akin to the legend of the trout. A forest-shaded pool, surrounded by great boulders, was at our feet, and if ever there was a trout hole, that was one. So at last we were ready, and the same question rose to our lips—a very important question to us then—"Where is the bait?"

Yes, where was the bait? Alas, this important adjunct was back at the house, two miles distant. "I thought you had it," said the unhappy photographer. "I supposed you brought it," quoth his sorrowful companion. "The best laid schemes of mice and men gang aft aglee," quoted William as we retraced our way to the carriage, where Willard received us with broad grins and ironical remarks. We climbed in and resumed our way. It was a charming afternoon and the wood road was like a golden tunnel. The autumn foliage ranged through the whole gamut of color from the most vivid scarlet and brightest orange to the palest amber, and the waning sunlight came down as through the stained glass of a great cathedral. And indeed, were we not in a grand cathedral, in which the gray pillars of the tree trunks supported the golden roof, so gorgeously frescoed by the dying year? A cathedral with a choir of birds, and with Nature for a preacher, and who shall say that the sermon we had that day was not a good one, and that we were not benefited by it. We felt the influence of the place, and the world seemed better and life brighter, and we sang softly as we rolled along. Twice we stopped to let the sun do its work on the sensitive plates, and in the early evening we drew rein at the hospitable door of the Forks Hotel, at the forks of the Kennebec, where the Dead River adds its waters to the former stream.

We had a refreshing sleep that night, and in the morning were out early looking at the river, which flows directly by the house. We were going to Moxie Falls, five miles distant, and as we had to traverse a rough logging road we carried as little luggage as possible. William of course took the camera, Willard carried my rod, and I shouldered a gun. Before we arrived at our destination it began to rain, but so softly that we did not mind, and we kept on till the distant sound of the water told us that we were nearing Moxie Stream. We left the road and turned into a scarcely perceptible trail, which led to the top of the fall, and there we sat down on a log to rest.

Moxie Stream, in which the water was rather low, came down between thickly wooded banks, its bed strewn with boulders of all shapes and sizes. The water leaps over the fall, a sheer descent of 95ft., into a circular basin, from which it falls again some 20ft., and then continues on its way down the rock-choked channel. The walls of the channel are precipitous, and on our side there seemed to be no way to reach its foot.

We waded across just above the fall, and by much scrambling and sliding and clinging to trees and rocks roots, and "holding on by our eyebrows," we finally found ourselves below the cliff, over which the water poured. We were in an inclosure shaped like an amphitheatre, on two sides of which were perpendicular walls of gray rock, wet and glistening with rain and spray. At the back was the white drapery of the fall, which had the appearance of coming straight down from the sky, and crowning all were the treetops *en silhouette*.

A number of large logs, which had come over in the spring, remained where the freshets had lodged them. We seemed to be very insignificant as we stood there with the great rock walls towering above us, and as we looked on the picturesque scene we could not help but moralize a little as to the weakness and helplessness of man as compared with the tremendous forces and agencies of nature.

The pool into which the water descended was black as ink. William and Willard unpacked the camera and climbed up the rocks in search of an advantageous place from which to focus on the fall, and I jointed my rod and took position on a log, from which I cast into the cuplike basin below. It was a very trouty looking place and its looks did not belie it. It was not long before the expectant angler felt that thrill come up the silk line, which every fisherman knows so well and which told him of life and motion down there beneath the dark water. How it set the nerves a tingling; it was like feeling of nature's pulse and noting the throbs of the wild, free blood of her great heart. A moment more and a handsome trout was carefully dropped through the orifice in the cover of the creel, and again and again was this repeated, the weight of the basket increasing perceptibly.

They were handsome fish, dark in color with brilliant, vivid spots, as different from their silver cousins of Pleasant Pond as its waters are from those which they so lately sported in. I became so engrossed in my pleasing occupation that I forgot my comrades till I heard them shout to me to come up and give an opinion as to a picture they were about to take.

"Can't come now, I'm busy," was my reply.

"It's no use to talk to him," put in William, "I know him, and you won't get him off that log as long as there is a fish in that hole; he'd rather fish than eat."

"Yes," I retorted, "and the world never looks so bright to you as when you are squinting through that lens of yours."

I was soon interrupted again by a tap on the shoulder, and there stood Willard, who remarked in an insinuating manner, "See here, young man, I lugged that rod over here." There was no resisting such a hint as that, and the rod was handed over and the good work went on. We fished till we had enough, and then, after resting a while and gazing our fill on the beauties of our environment, we prepared to go. William had exposed all his plates, and consequently his mind was relieved.

We dined on partridge and trout, and after our meal William and the writer took the latter's camera and went to "take" a picturesque old mill which we knew of in a solitary place in the woods. The old building stands in a deep and narrow gully, through which flows a brook. The water is conveyed to the wheel through an elevated sluiceway, as the structure is necessarily elevated on timbers high above the bed of the stream. As we walked back the setting sun burst through the clouds, and the sky line of the western mountains came out in bold relief, while the long rays falling on the gorgeous coloring of the forest-covered slopes closed the day in a blaze of glory.

In the evening we drove back to Carney's along the quiet river road. No sound broke the stillness save the rattling of the wheels and the rushing of the river.

> We saw the rippled waters shine;
> Beyond, in waves of shade and light,
> The hills rolled off into the night.

Once in the far distance, there came to us faintly that most lonesome of all sounds, the weird screaming of a loon. After we reached Carney's we sat up enjoying the calm beauties of the night and listening to the soft, rhythmic flowing of the Kennebec. The mountain back of the house rose black and grim, and over all was the cold, mysterious light of the full moon.

It was a perfect night and we quoted the words of our New England poet:

> Life's burdens fall, its discords cease,
> I lapse into the glad release
> Of nature's own exceeding peace.

The next day we journeyed leisurely back, stopping to get a few pictures at Carratunk Falls and other places. We were somewat tired to be sure when we arrived back at our starting point, but a night's sleep regulated that, and what a rest we had had mentally. Perhaps some may fail to see where the fun comes in on such an excursion, but for them I cannot close this paper more fitly than by using once more the language of the author previously mentioned:

"People inexperienced in such matters, sitting in their rooms and thinking of all the poets have sung and romancers written, are apt to get sadly taken in when they attempt to realize their dreams.

"They expect to enter a sylvan paradise of trout, cool retreats, laughing brooks, picturesque views, balsamic couches, etc.; instead of which they find hunger, rain, smoke, toil, gnats, mosquitoes, dirt, broken rest, vulgar guides, and salt pork. But he who goes in a right spirit will not be disappointed, and will find the taste of this kind of life better, though bitterer, than the writers have described." W. A. B.

Natural History.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the Forest and Stream's *petition blanks. They are sent free.*

RIDGWAY'S NORTH AMERICAN BIRDS.*

In Forest and Stream of Oct. 27, 1887, appeared a preliminary notice of this important work, a fuller consideration of the merits of which has been unavoidably postponed until now.

The purpose of the work cannot be better explained than by quoting from the author's preface: "The object of the present volume is to furnish a convenient manual of North American ornithology, reduced to the smallest compass, by the omission of everything that is not absolutely necessary for determining the character of any given specimen, and including, besides the correct nomenclature of each species, a statement of its natural habitat, and other concomitant data.

"Originally projected by Professor Spencer F. Baird, and based essentially upon the grand National cabinet of American birds which his energy, ability and enthusiasm have developed from an unpretentious nucleus into a collection unrivalled in extent and wholly unique in scientific value, this work may be considered as, in a measure, the consummation of a plan conceived by that illustrious naturalist, whose works represent the highest type of systematic ornithology, and have furnished the model from which the younger generation of ornithologists have drawn their inspiration. * * *

"Honored with the privilege of continuing the work commenced by abler hands, the author has endeavored to fullfil his trust with careful attention to the hope of its originator that the 'Manual of North American Birds' may serve as a handy book for the sportsman and traveler, as well as for the resident naturalist, and that all may find it a convenient and satisfactory means of identifying any North American bird in all its variations of plumage."

The present work is in many respects a wide departure from the lines hitherto followed in works on North American ornithology, for it covers vastly more ground, including in the synopses all Mexican, Cuban and Bahaman species of each North American genus, and also, in the keys to the genera, additional Mexican forms. Practically, therefore, the work includes all known forms known to North America north of about the tenth parallel of north latitude. Besides this, in the case of the order *Tubinares*, which consists "wholly of species inhabiting the high seas, whose more or less erratic or fortuitous wanderings render them especially liable to a place in the list of 'accidental visitors' to any sea-girt country," all species belonging to genera which have been taken in North American waters, are included in this work. There is, however, no difficulty in distinguishing the species which are North American in the sense in which the term is used in the A. O. U. Check List from those which are extra-limital, the latter being printed in smaller type and being without a number. The classification and nomenclature correspond closely with the Check List, but of course such species as have been described since the publication of that work are inserted in their proper place. The work thus includes 773 species which are technically North American, while the total number described is 1,028.

The plan of the work has been to attain with the greatest degree of completeness the utmost conciseness possible. There is thus no repetition whatever. At the beginning the book is a "Key to the Higher Groups," the seventeen orders in which our birds are placed. The student with a bird in his hand is referred at once to the group in which it is to be found. Under the ordinal headings is an artificial key to each family, and under the family headings a key to each genus. Under each genus are stated the characteristics common to all the species belonging to it, and then the specific characters follow under the several names. The whole is put briefly and concisely, but—if one uses the keys intelligently and carefully—with great clearness. A number of changes of nomenclature from that employed in the Check List have been made. Four new subgenera and thirty-nine new species and subspecies are described, fourteen of the latter being from North America and defined in the Check List. Two of the species included in the Check List are canceled. Thirty-one species and subspecies are admitted as North American, which were not included in the Check List, and twelve of the names used in that work have for various reasons been changed. These are *Æstrelata scalaris*, formerly *Æ. gularis*; *Somateria mollissima borealis*, formerly *S. mollissima; Ardea rufescens*, in Check List *A. rufa*. The subgenera *Nycthero'dius*, *Rhyacophilus* and *Ulula* become respectively *Nyctinassa*, *Helodromas* and *Scotiaptex*, *Dryobates scalaris* is changed to *D. s. bairdi; D. stricklandi* to *D. arizonæ*; *Molothrus æneus* has become *Callothrus robustus; Pinicola enucleator, P. e. canadensis; Carpodacus frontalis* is now *C. mexicanus frontalis*. The genus *Certhiola* is replaced by *Cœreba*, the subgenus *Oporornis* has its limits extended, and Baird instead of Swainson is given as the authority for the name *Sialia sialis azurea*.

The outline drawings of bills, wings and feet, which number nearly 500 and fill 124 plates, are a very important part of this valuable work, and cannot fail to be of the utmost assistance to every student. The whole work with its 650 pages of text and its abundant illustrations is a most important one. It represents the sum of our knowledge of North American birds up to the last half of 1887, and that knowledge brought together and set in order by Mr. Ridgway, than whom none is better fitted to speak with authority of our birds. It has been well said that this work must long reflect honor on its author.

*A | Manual | of | North American Birds. | by | Robert Ridgway. | — | Illustrated by 464 outline drawings of the | generic characters. | — | Philadelphia: | J. B. Lippincott Company. | 1887. |

A LITTLE GIRL ON SPARROWS.

I was much interested in the English sparrow discussion in the *Audubon Magazine* for February, and as we have a great many sparrows here at Ivystone, I thought I would like to tell what we children have found out about them. We call our home Ivystone, because we have ivy growing over one side and one end of the house. This ivy is infested with English sparrows, and has been for years. It is no wonder though, for they have three or four broods in a season, and four or five young at a time.

In Miss Lydia Very's letter she said "that the sparrows ate the caterpillars, and that they seldom see one now," but at our house it is very different. We have hundreds of sparrows, and thousands of caterpillars every year, and last year we had more caterpillars than ever before. The porch had a great many on it all the time, and within ten feet of the sparrows, but they don't care a bit. After a while the caterpillars became so thick, that my sister (who dislikes caterpillars exceedingly) said she would give us a cent for every twenty-five we killed, and a cousin of mine earned nearly $2.00 in a very short time, and the rest of us considerable, though not as much. It was not from the lack of caterpillars, but rather from the lack of perseverance. Moreover, we have never seen a sparrow with a worm in its bill, so that I fully agree with General Spinner, "that the sparrow is a granivorous bird." The sparrows *do* drive away *our* birds, for since the sparrows have taken possession of our ivy, we have not had any wrens or bluebirds to build around the lawn, but they go out into the orchard where the sparrows do not molest them so much. In one case that I knew of, some wrens built in a box that had been made for them, but the sparrows drove them away.

Perhaps the persons who are not friends of the sparrow, and would like to get rid of him, can do it in this way: Make a dough of cornmeal, and feed it to them until they are used to it, and then put in sugar of lead; one ounce to a quart of dough. After the birds have eaten it, they will fly away and never come back, or, if they do you might put out some more poison, and that will most likely send them away forever.

Though I am only a little girl eleven years of age, and do not know as much about this subject as older persons, yet I am very much interested in natural history, and much enjoy your magazine, and thought perhaps it would do for me to write a little, though I do not know that it will be published. Susie J. Allen.

March 14.

AS TO MOOSE AND CARIBOU.

Fredericton, N. B., Feb. 27.—*Editor Forest and Stream:* The valuable article on the American *Cervidæ*, by R. W. Shufeldt, which appears in your issue of Feb. 23 is a fund of information. Nevertheless, his experience with regard to the moose and caribou is evidently not equal to that of the western elk, blacktail, etc. I feel as certain as I can feel about anything that the reindeer of Norway (*R. tarandus*) and the barren ground caribou are identical, and differ from the woodland caribou. The weight, antlers and habits of the reindeer and barren ground caribou agree exactly, and I have had excellent opportunities for judging.

Dr. Shufeldt states that the female moose "bears but one fawn," whereas she invariably drops two, or (unfrequently) more. Their rutting season is September and early part of October in the provinces and on the Ottawa. The young are dropped early in May, and I should say they are carried about eight and a half months. Caton, if I remember aright (I have not his work by me), distinguishes between the antlers of the European elk and the American moose, claiming that those of the European animal are set with the palmation facing upward, and in the American forward, but my investigations lead me to believe that this is not an invariable rule, and certainly all the heads that I have studied from Manitoba and the Northwest face upward like those of the European animal.

I should not have ventured to criticise Mr. Shufeldt's article had it not been for the desire expressed in the latter portion of it, viz., to hear from practical men on any new or doubtful points. Chas. A. Bramble.

THE AMERICAN SKYLARK.

ONE day during the early part of last spring, while noting the early arrivals, I was agreeably surprised to find my old friends the skylarks flourishing in increased numbers.

My acquaintance with this superb alien songster dates from the spring of 1885. Looking over my note book, I find that I first recognized this bird as the skylark on March 30, 1885. The spring previous I had seen a number, at different times, poised high up in the air, flooding the earth beneath with their incomparable notes; but the authors puzzled me for a long time. The bobolink never gets as far north as this by the first of April, nor do they sing when hovering 500yds. above the ground. Surely the shore lark could not sing with such untiring energy. I was perfectly satisfied that it was neither of these birds, and found myself at a loss for even a supposition when their identity was in question.

One quiet day during the year 1885, I saw several hovering over a field, and determined, if possible, to settle the question. Watching one of them until finished with his song, I saw him gradually drop lower and lower, until when within about 60ft. of the ground he fell as if shot, catching himself two or three feet above the field and sailing off a little distance and alighting. Crawling and sneaking along a hedge brought me within 20ft. of the little Orpheus, and with feelings peculiar to enthusiastic ornithologists, I recognized the European skylark. So close was I to the little beauty that the bright glitter of his little black eyes, the nervous play of the dark crest and the long, characteristic hind toe were plainly discernible.

Here was a novelty in the bird line within a few miles of the city of Brooklyn, and on every opportunity I had during the succeeding seasons I watched with increasing interest their progress toward a secure foothold among the birds of the United States. Judging from last spring's observations, there seems to be no question as to their future existence. They seem to be multiplying rapidly, and if the insatiable brutes, with their cast-iron guns, will but spare our humble-coated and glorious warbler, his career is assured, and a numerous progeny will usher in the return of warmth and sunshine, and delight the student of nature by his penetrating, sweet notes in all the Northeastern States.

The extent to which they have already acclimated themselves, and even the mere fact of their existence, is almost unknown. A few farmers to whom I pointed out the bird soaring far above, admitted the bird was abundant, but called them bobolinks, or sparrows, none of them knowing it as the skylark.

If any other brother ornithologists have observed him, let us hear about it. R. I. B.

[The history of the introduction of European skylarks on Long Island has been fully told in back numbers of FOREST AND STREAM, but it is some time since we have had a recent report on them, and our correspondent's observations are very interesting.]

A WOLF'S CRIME.

Editor Forest and Stream:

In some late letters to FOREST AND STREAM I presented the wolf as on the whole a pretty good sort of a creature, and by no means as bad as popular fancy paints him. But he is sometimes very bad. One of my young country friends has a bitch hound which is quite famous for her excellence as a deer hunter. This bitch lately brought forth a litter of pups, and almost every man in the vicinity was eager to own one or more of them. One night while my friend was away from home, and no one in the house but his wife and little ones, a wolf visited the premises and immediately went to the bitch's bed. A furious fight ensued. The bitch was badly whipped and driven away. The wolf then killed every puppy by crushing its head; which having done he left. The poor bitch was found the next morning more dead than alive, but careful nursing has set her on her feet again. I never heard of a wolf committing such an act as this before, and it is quite unaccountable. It appears that he was wholly possessed by the devil; a most villainous and heartless wretch. But we have heard of men just as bad as this wolf.

I speak of this wolf as a he, but do not know the fact. If a he, I dare say he was one of those unfortunate ones who had not succeeded in securing a female mate of his own race; for at the time of committing this atrocious act, the wolf's season of mating was in full blast and nearing an end. Having failed among his own race, perhaps he thought to secure this bitch, and finding her already supplied with a young family, he may have argued that if he should kill these, the disconsolate mother might be willing to accept his companionship in building up another family. But then I don't know. Let everyone ponder for himself.

I shall be much in the woods this spring and summer, and have hope that I may catch a few young wolves and train them up under my own eye. N. A. T.

ALBANY, Tex., March 18.

MOVEMENTS OF THE BIRDS.—Perth Amboy, N. J., March 23.—On the 20th inst. I saw hundreds of robins in one flock, flying southwest. To-day the mercury is at 18°. Yesterday I observed crow blackbirds (grackles) for the first time, also a flycatcher, and several bluebirds, warbling in spring style. A letter received from Chadwick's reports a good flight of ducks, and in another from Petersburg the writer speaks of having seen several English snipe.—J. L. K.

BETTER LATE THAN NEVER.—The well-know Norwegian naturalists, M. Michelel and Dr. Bahrt, have introduced a bill into the Storthing prohibiting the killing of any birds (except birds of prey, ravens, rooks, and magpies) in the whole of Norway during the period April 1 to August 15, also the taking of eggs or young birds. The chief object of this bill is to put a stop to the present wanton destruction of birds by foreign "sportsmen."

A BLUE HERON ON MID-OCEAN.—In August of last year while crossing the Atlantic from New York to Glasgow in the Anchor Line S. S. Furnessia I was surprised to see a blue heron following the steamer when about half way across. We were passing through light rifts of fog when my attention was directed to the object of attack by numerous seagulls, which to judge by their reception of it considered the heron an unwelcome visitor. Sometimes the bird would be in front and sometimes in rear of the vessel when in the fog, and often crossed the decks not higher than the masts, evidently intent on following in close quarters, and probably wondering if he could "steal a ride." We watched the bird anxiously for a couple of hours, and wondered whether the yard arms would prove to be a resting place for him when night came, but on passing through a dense bank of fog the fog horn alarm had to be sounded, much to our disappointment and that of the bird, for he was very near the coveted resting place. At the alarm he turned and disappeared. When we cleared the fog in the course of half an hour, nothing was to be seen of it. I would like to know from some of your naturalist readers whether these clumsy birds usually go so far from the shore, or if they cross and recross the Atlantic at pleasure. Capt. Heatherwick, of the S. S. Furnessia, will, I have no doubt, bear me out in the above, as he was very much interested, and said he had never seen one so far out at sea, probably not less than six hundred miles from nearest land.—MAC.

AN ALBINO RUFFED GROUSE.—Kingston, N. Y., March 22, 1888.—*Editor Forest and Stream:* During the last week in December, 1887, a friend residing on the line of the Ulster and Delaware Railroad, while out gunning, saw a small covey of partridge get up, and among them was a pure white bird, which he singled out and brought down. It proved to be a pure white partridge, a female. This same bird had been seen by other hunters during last fall, but they had failed to get an opportunity of bringing it to bag. I have learned since that this white partridge is the second one of its kind that has been killed in the same cover during the past two years. I personally inspected the bird, after it had been set up and placed on exhibition in a show window, on the main thoroughfare, in this city. It was a beautiful bird. In shape and size it did not differ from an ordinary partridge. The plumage was a soft white, with slightly pinkish hue. The beautiful borders on the tail feathers were clearly defined by a deeper pinkish cast, differing only in this respect from the rest of the plumage. Will some of your readers please give some explanation of this phenomenon and inform us whether it is a common occurrence or a rarity. This is the first white partridge I have seen in this county (Ulster) in twenty years' hunting.—D. C. OVERBAUGH. [White ruffed grouse are very rare and are only seen at long intervals. They are albinos.]

A MINK FAR FROM WATER.—Verdon, Dakota, March 5. —*Editor Forest and Stream:* I have been surprised to find how far a mink will range away from water. I had a tame wild goose and one morning it was found dead with its head eaten off. My bird dog was put on the track at the goose pen and followed it to a hole under the house, where in the cellar the dim light showed what I thought to be a cat, which I shot with a revolver, but which proved to be a mink, the largest one I ever saw. This was a surprise, as the nearest water is eighteen miles distant, and I never knew that mink strayed so far from it.—J. L. ROONEY.

Game Bag and Gun.

THE GROUSE AND THE SQUIRRELS.

Editor Forest and Stream:

It is the same old story that has been told over and over so many times, but every time it is told it has something new and interesting, even though it be the same. Our friend Jack—who is so well known to the readers of FOREST AND STREAM from former articles as to need no introduction—called on me one evening and wished to inquire if everything was ready for the short vacation trip to New Hampshire which had been talked of so long. Of course things were ready and had been for two weeks or more. The guns and ammunition, together with our "duffle," were packed for the express man to load in his wagon at a moment's notice, and as for ourselves we were more than ready, for it seemed as though the first of October would never come. After a long summer of close attention to business in the hot dusty city, where little but brick and stone could be seen, we were to go to the wild woods once more to get a new lease of life and health.

Morning came at last, and we boarded the train and arrived at our destination without incident worthy of mention. Uncle John, who is also an old acquaintance of FOREST AND STREAM readers, was there at the depot with old Billy and the express wagon to take our trunks up to the old farmhouse, seven miles from the railroad, where shooters from city and town seldom went. After a hearty meal of good wholesome farmer's fare, Uncle John said he would go with us a little way, and show us where the "flocks" of grouse were that had not been broken up and scattered by the few market hunters which sometimes happened that way. Jack and the writer with our 10-gauge breechloaders and Uncle John with a stout cane in his hand—to defend himself against a fall, as he put it—took up the line of march for the "pond lot," where grouse were sure to be found in the spruce woods on the sidehill, or in the alders near the pond in the swamp. There was one small, insignificant being, however, that was in the party that it would not be best to pass by without mention, and that was Jim, a little dog about as large as a small fox and about the color of one. I think his breed is a cross between a hunter and a finder with a much larger percentage of the latter, for we had been in the old cart path in the woods but a very short time before he began to show "signs" of game of some kind, and then a few short, sharp squeaks from him and up went an old cock partridge that took a bee line down the cart road, straight away, as pretty a shot as ever a sportsman saw, and with plain sailing, too, no brush or anything else to obstruct the view. As I was ahead of Jack, of course I came "in battery," unlimbered the old 10-bore, and gave him first the right and then the left barrels at about 20 and 30yds. respectively. And now I want you to please come a little nearer and let me whisper in your ear, for I don't want the whole world to know about it. I will make a full confession and tell you the truth, if you promise not to tell. I missed that bird slick and clean with both barrels, and the worst of it was that when the bird was 50yds. or more away, Jack put in that full choked left of his—loaded with No. 5 chilled shot—and killed that partridge as dead as a stone.

"By gosh!" exclaimed Uncle John, "why didn't you wait till he got to the Vermont line, and then shoot at him? That is the all-firedest shooting gun I ever saw." Jack was happy. He had a good start, and I knew that we should have a good time the rest of the trip. As for myself, I felt ashamed of such shooting, and tried to draw some consolation from the fact that I was out of practice, that I was growing old and clumsy, etc., but no; it was a miss, and the worst kind of one, and so it dropped. We had hardly time to gather in the bird before Jim had a gray squirrel treed, and as the plump little fellow looked down at the dog to see what all the fuss was about, Jack hardened his heart and brought him down. Then such a stroll as we had along the old road, and when we came out into the pasture where the chestnut trees were we found them almost alive with red squirrels, and Jack said that after we came up there with our rifles there would be less of them.

With the maple trees in all colors, the apple trees loaded with fruit, the old shell-bark hickory full of nuts, and the grapevines loaded with grapes, who could suppose that grouse and squirrels might not thrive if they were not hunted too much. Uncle John was in good spirits, and as the sun was getting low, we took up our march down the other side of the pond toward the house.

"We will go down the south side of the pond," said Uncle J., "but you need not look for any more birds, as they never come down this side of the pond, for the very reason that"—*whirr, whirr, whirr* went the grouse from almost under our feet, and both barrels of the writer's gun went off—whether accidentally or not I cannot say—but be it as it may, two grouse were beating the tattoo of death with the wings that a moment before were bearing them so swiftly away toward life and safety.

If Uncle John was excited when the first bird fell, he was fairly wild now, and first his cane and then his hat he threw in the air, and said that he had not felt so good before for "forty year," since he used to hunt moose "down in Maine." As the old gentleman is 74 years old, it shows that the true sportsman never wearies of the rod and gun, however aged he may be. "By the way," Jack inquired, after Uncle John had calmed down a little, "will you please finish your sentence so rudely interrupted by R., and tell us why it is that the partridges never come on the south side of the pond?"

"Well," said he, "they don't usually, but they knew you city chaps were coming, and so came over to get in a place of safety."

After a hearty supper that made us both ashamed of our ravenous appetites, the pipes were filled and refilled, and then, as we lay on Uncle John's "best room" bed, our eyes closed to dream of the morrow, the rifles and the squirrels. IRON RAMROD.

SOMERVILLE, Mass.

ONTARIO GAME LAWS.

Editor Forest and Stream:

Herewith I forward a note from the Toronto *Globe* concerning recent changes in our game law:

"The committee of the Ontario Legislature on Mr. Phelp's and Mr. McAndrew's bills to regulate the killing of deer met yesterday morning. A letter was read from Mr. H. P. Dwight, who has hunted with hounds for a quarter of a century. He urged that hunting with hounds should not be prohibited, as it was not nearly so destructive as still-hunting, and opposed the clause requiring hunters to take out a license, as one that would be harsh to settlers and inoperative generally. Mr. Dwight's idea of the proper open season is from Oct. 1 to the middle of November. He was of opinion that no attempt should be made to collect a license fee from any settler or Indian, or any sum per head for deer killed, and that it should not be lawful to expose or offer any deer or venison for sale after Dec. 7, and if it were practicable or possible to enforce the provision a license fee should be paid by foreigners, and it should be unlawful to export at any time. A uniform bounty on wolves throughout the Province would also have a good effect. Whatever act may be in force some better provision should be made for its enforcement than now exists.

"The committee reported as follows: The deer killing season is to extend from Oct. 15 to Nov. 20. No one person is to kill more than five deer a year; no two persons belonging to the same camp or party more than eight deer; no three or more persons belonging to the same camp or party more than twelve. The shooting of moose is absolutely prohibited until 1895, and during the same period no person is to kill deer or any other game unless he has resided in the Province for three months. The person charged with the offence is to be compellable to give evidence."

You will be sorry to learn that our bill for the protection of birds has been thrown out for this year by means of a shameful double-shuffle to explain which it will be necessary to detail the stages of such a bill in our legislature. First it is prepared by parties interested and given into the charge of a member who introduces it, after which it goes into committee, the member in charge selecting his own committee. A number of experts on the subject are then called up for examination before the committee and the bill is remodeled and perfected, after which it must pass its second and third readings in the house before it becomes law. Now one of the Toronto members, Mr. John Leys, professing an interest in the matter, was allowed to take charge of the bill prepared by the Natural History Society. He then selected a committee to suit himself—violated all his promises of giving us a chance to speak—sent only for our opponents, the representatives of the Gun Club, and succeeded in having the whole thing thrown out.

TORONTO, Can., March 21. ERNEST E. THOMPSON.

SHOOTING FADS.

Editor Forest and Stream:

I think there is nothing so disgusting to any one who has the smallest amount of knowledge possible about guns, rifles or yachts, as to read some of the "wants" and "suggestions" of men who evidently do not know the butt of a gun from the muzzle, nor the bow of a boat from the stern.

About two years ago a correspondent contributed an article on keelless boats, giving diagrams of midship sections, and stated that although he was a tyro in such sports and lived inland (both of which were self-evident facts) it seemed to him that he had solved the problem. "Here you had a boat," which, in the words of the writer, "had no keel, could be built to draw only as much water as the builder should decide upon, and would lie on the mud at low water without legs," in fact the man had something which was too good to keep to himself. That such a craft as he described would do all that he claimed for it is perfectly true. There is nothing that I ever heard of to prevent such a craft from being built of as shoal a draft as required, and as for "lying on the mud," that is the proper place for it, but although I have scanned the yachting columns closely ever since, there has been no description of the launch of this wonder, and I am afraid this man will go down to his grave an unrecognized nautical designer.

In your issue of Dec. 22, "Hal Hellion" wants a three-barreled "combination gun," with a noiseless .22 barrel on top for sitting flocks and rookeries, a central 12 cylinder bore for wing shots, buckshot and explosive slugs for large, dangerous game at close quarters, and a lower .44 rifled barrel for alligator, deer, etc., with a magazine in the stock, holding about four shots for the central barrel, etc., etc. Shade of Nimrod! the man wants an *arsenal.* Did any one ever come across a *rookery* when shooting deer? Did any one ever hear of *explosive slugs?* Fancy shooting hollow buckshot filled with picrate of potash into an elephant. Why, Mr. "Hellion," you might just as advantageously shy a bunch of lighted firecrackers at him, your untimely end would be just the same. Can't you take "your first deer standing, with a charge or two of buckshot," and then reloading, proceed to mow down the rest of the herd? Wouldn't a $13 double-barrel, "top snap, best London twist, all the latest improvements" gun, suit your purpose? Must you have your arsenal? Oh, pause in your fell purpose and do not kill the remaining elephants, tigers, rhinoceroses and rooks, which now roam in peaceful contentment throughout America; do not slay them, satisfy yourself with clay-pigeons, or better still with a .22cal. revolver, and a quire of foolscap; first practicing at a larger mark, such as a barn. And would you consider it impudence on my part were I to suggest your taking your first trial shots inside of the barn? Would you be kind enough to state what the "other advantages" of this fearful weapon are? In taking "your first fowl" be very careful that the farmer does not hear you. Farmers generally keep a long "Zulu" loaded just behind the door, and when they hear a noise in the henhouse are apt to be a little reckless in the direction of their shooting. A good club will take a fowl almost as quickly as a .22cal. "noiseless barrel."

Should you get such a gun built "to special order," you must get a shooting jacket with pockets long enough to carry your "large dangerous game," alligators, etc. Hoping that you will enumerate the "other advantages" at an early date I will close. WIDT.

STOCKING GAME GROUNDS.

YOUR correspondent "Ortyx" asks for information on this point, and if you will allow me I will contribute my mite.

Some years ago I brought from North Carolina to New Jersey some fifteen or twenty pairs of quail to put out on my own place. I kept them in my barn from February to the middle of April, feeding them on split peas, their favorite food in North Carolina, and giving them free access to water. I found they became very tame, and when they were turned out in April they continued to remain for some time in the vicinity of the barn. The place was very favorably situated for stocking, a stream running along the edge of a wood, with cultivated land on one side, at intervals patches of good woodcock grounds, and two or three dry bottoms of old mill dams overgrown with alders and raspberries. I had food scattered in various places for them until they paired. The most of them raised broods, but they continued to be much tamer than the native quail, and as a consequence were nearly all shot the first season, some of them before the law was up, by outside parties, no attention being paid to the fact that the land was posted.

From my observation I would say peas constitute good food for quail. Patches of peas and buckwheat should be sown in sheltered places on the grounds where birds are turned out. When these are fairly started, it is a good plan to scatter light branches and brambles over them, so as to furnish shelter from hawks while the birds are feeding. Thick patches of bramble furnish the best shelter.

There should be turned out as early as possible an equal number of cocks and hens. It is said that unmated cocks break up the nests and destroy the eggs of the mates they could not win.

The birds should not be on hand long enough to become familiar with man, and so become tame and dependent. If they become so—and they can be made as tame as chickens—some method should be used to make them wild before they are allowed to be shot at.

Without any knowledge on the subject, I would conclude that birds would thrive better on the same latitude on which they were raised—or on the same isothermal lines. Hence Western birds would be no better than Southern for the vicinity of New York. AMATEUR.

Editor Forest and Stream:

I have seen the question asked in some paper, "Who ever heard of a market-shooter stocking land with quail?" I have to answer that Mr. Lucius Whitaker, of Hampton, Conn., one of the most genial fellows to be found in a day's march and an expert with dog and gun, whose company is sought by many a Providence and Hartford sportsman, has procured of E. B. Woodward, of New York, eight dozen strong, healthy Western quail, which he will let loose in pairs on unprotected land as soon as the weather will permit. This is being much more liberal and showing a truer sportsman spirit than those who do the same thing on their private grounds: and now I will ask, Who has ever done likewise? "Ortyx" asks, in your last number, if eastern Massachusetts can be successfully stocked with quail. I answer, it can if the winter is not so severe as to kill them. The locality he mentions is pretty well north, but it is perhaps near enough to the coast to get its benefits. The middle of April or first of May is early enough to let them out up there. It is well to feed them on soaked rye and buckwheat. It is best to let out a pair in a place and far enough apart so that they will not hear each other whistle and by that means get together. Before you let them out keep about a dozen in a box, 18in. wide by 4ft. long and 8in. high, covered by wire cloth, 1in. mesh; feed on soaked rye and buckwheat, with plenty of perfectly dried sand to eat and dust in, and fresh water in troughs on the side, about 1in. wide, at suitable height to drink out of and at the same time high enough to keep them from wading in it. There is but little danger of losing them if properly cared for.

YELLOWSTONE PARK PETITION.

WE print below a few signatures of gentlemen who have put their names to the petition asking Congress to act on the Yellowstone Park bill now before the Senate. The time has been so short since the sending out of these papers that there has been time to receive only a few lists, but we are happy to say that great interest is being taken in the matter throughout the whole country:

LIST OF SIGNATURES TO THE PETITION FOR THE PROTECTION OF THE YELLOWSTONE NATIONAL PARK.

New York.

A MOUNTAIN LION.

Editor Forest and Stream:

It is not because there is not news enough to make up an interesting letter that I have not written, but because of the fact that I see your paper is crowded with letters from all parts of the country and I think it best to give you a rest at this end of the line. But having received letters from two friends who have wintered just a little east of the National Park, and knowing every word to be true and worth publication I will write you just what they say as to game and climate.

Mahlon Frost is the father and Jesse the son. The latter is but seventeen years old, and a braver boy is hard to find as this narrative will reveal. They say the winter has been a beautiful one, and when Jesse wrote in February he said, "Yesterday I saw a band of elk, possibly seventy-five to a hundred in the band, as we often do. We do not kill any as we have all the meat we want, having killed all we needed in the fall. We have killed many deer, antelope, mountain sheep, elk, bear and seven mountain lion which I want to tell you about. A few mornings ago I was awakened by the cry of one these night prowlers. When daylight came I found his tracks within 100yds. of our camp. The tracks were so very large that I arranged at once to follow him. I did so, and such a path to follow I have never trod, over rocks and chasms, through piles of rocks I went on hands and knees for thirteen miles, if not more, and we can judge distances pretty well. At first when I would come to a place where he had entered the rocks, my hair would stand on end, and a year ago I could not have followed, but one becomes less fearful as you learn how deadly a well aimed Winchester .45-90 is. After going through brush and rocks—the brush so thick and the rocks piled one on top of the other so that I had in either case to go on hands and knees—I came to an immense pile of rocks, and in looking around I found that there was only the one opening under the rocks that I could see. So I went all around and came back to the place he entered. When within 6ft. of the spot, he sprang out with the awfullest roar I have ever heard. Had I weakened for a single moment I would have been lost, for he was in the very act of leaping for me, when I pulled the trigger of the .45-90. The force and power of this gun is so great that it seemed to lift him off his feet and he fell at mine, and with a few spasmodic kicks was ready to measure. He was 12ft. 7in. from tip to tip, and weighed as near as we could tell 300lbs. Father stalked three the other day, and secured two of them before they got away. The trout fishing has been all and more than any one could wish for."

I send you this, Mr. Editor, because I know these men to be perfectly reliable, and if I live till fall I will try my luck with them. But allow me to assure you that in case I should write you about crawling after mountain lion I will be relating a dream and not an actual experience, for I am not good at that kind of work. I get chills in my back and head too easily. But I will stand up before a bear, or I might shoot at a running lion, or shoot for the tent should he take it in his head to shoot after me. But I will be candid in any event and tell you all about it. W. H. WILLIAMSON.

BISMARCK, Dakota, March 19.

[We print the measurement of the animal above mentioned as it is written, but we presume that an error occurred either in Jesse's letter or in copying it, for the length given is one-half larger than that of any mountain lion or cougar of which we have ever heard. It is conceivable perhaps that the skin of a very large mountain lion might be stretched to measure 12ft., but even this may perhaps be doutbed.]

TURKEYS AND DEER IN MISSOURI.

Editor Forest and Stream:

The hunting season is over, and we have oiled our guns and laid them away. As I do so my thoughts go back to twenty-four years ago, when we had plenty of large game here, such as deer and turkey. Small game was very scarce, and we did not think of shooting quail in those days. If they were protected as well now as they were then, we would have more shooting in season. In those days we never used a shotgun. It was thought to be a useless piece of property for our shooting. I remember very well when I bought a doublebarrel gun. How some of my friends laughed at me and wanted to know what I was going to do with a popgun like that. But I had a good gun, and I soon surprised some of them, for the first time I took the popgun out, I brought in two nice deer in less than a half-day's hunt. I could just leave them all when it came to a turkey hunt, for I could get them either running or flying, it made but little difference to me which. I have killed five turkeys in half a day's shooting with the popgun, as it was called. There was no better sport than for me to get after a nice flock of turkeys, with a good tracking snow, and give them a little run and get them scattered and hiding, and then when they come out of their hiding place they will run a few jumps before they start to fly, and that just gives you good time to get in shape. If a sportsman can hit the front of a barn he can kill a turkey flying.

When large game was plentiful, I was too small to do any hunting, but as soon as I was large enough to carry a gun, I bought myself an old musket, and at it I went. As I grew larger I improved my firearms, and soon traded the musket for a good rifle, and then my first aim was to kill a deer. Winter came and Christmas too, and with it came a good snow. I was up in the wee small hours of the night, and was off long before day to one of the neighbors to go for the deer hunt that we had talked of for more than a month before, and at the peep of day we started for the deer range.

We had not gone far when we struck a trail, and we were soon separated. I was going up a bushy gulch when all at once I came out into an opening, and I saw five deer crossing it ahead of me. They were too far for a successful shot, but I turned loose anyway, scoring a clear miss. It seems that the deer had got separated, and as soon as the shot was fired and my gun was empty, a small one came running down the hill directly at me. I sat flat down in the snow, but it saw me and stopped about forty yards away, but my gun was empty. Oh, how I wished for a breechloader, but not having one I must do the best I could. I poured in a good charge of powder, and just rolled in a ball loose and put on a cap, took good aim and fired. The ball struck where I had aimed, and the deer only went a few jumps when he tumbled. I was on him in short order with knife in hand, but he was dead.

My partner came to me by this time, and wanted me to follow the ones that had passed by, but no, I had all the venison I wanted that day. I managed to get it to one of the neighbors, and there I left it until next day. My partner did not go very far until he came up with the others, and he dispatched one in short order, and he had good luck to meet a friend to help him bring his home. It was a long time before I had a chance to kill another.

It was in the winter of 1879–80 that we were camped in the timber making railroad ties. We were right in a game country, and we always kept our guns close at hand. We had been wishing all winter long for a snow and at last it came. The first fall was a good deep one, so bright and early in the morning we started out to give the turkeys a round-up. We found them without much hunting, and started after them to run and tire them out, but we soon found they were too much for us, so we began to scheme to take them by surprise. It fell to my lot to do the sneaking, and I went down one steep slope and up another until at last I came in sight, and made a sneak up a long hollow and up a steep slope and up I popped within 100yds. of fifteen fine turkeys. They discovered me at once and began to fly, so I only got one shot and one turkey, but the shot did the work, for it scattered them in all directions. Then we began our work. After several wild shots, we got in a few good ones, and about three o'clock we started for camp with five fine turkeys.

Another time we went out deer hunting, and after several hours' hunt without any success we turned toward home, tired and discouraged. On our way home our hopes were brightened up by coming on to the trail where two had gone along about an hour before. We followed them only a short distance, when we saw another lying on a hillside in plain view, and so placed that we could not get within gunshot of him. He ran off and came in on the same trail that we were following. After following them for an hour, we became tired and turned for home once more; but luck was for us that day. We had not gone far, when on turning a steep point we came out directly ahead of our deer and within fair gunshot. We

lost no time in using our guns, and fired four shots with very good effect, but did not get a deer just then. We had one crippled badly. He left the others and ran off across the hills for a short distance when he came down to a walk. The snow was sprinkled all along his trail with blood, and just as we came up to him he had come on to two more, and they had just got up and were looking around to see what the matter was when I spied them just 65yds. away. I lost no time in getting my aim on a fine doe; at the crack of the gun she dropped in her tracks and the others ran on, but their leader being killed they did not go far until they stopped. My partner ran out to get a shot, and I stayed close to the one I had down. He did not go far until I heard his gun belch out destruction to another one. We hung up the two we had already, and went on after the one we had first crippled. It had got better, traveled as fast as we could, so we tried our luck on an old turkey gobbler, but only succeeded in crippling him, and while we were hunting for him I came on to the crippled deer hid in a thick patch of undergrowth. I was about 30yds. away, and he never left his bed. Then came the work of carrying them all to one place, and hanging them up. It was hard, but we did it, and started for camp. When we reached there it was late in the afternoon, but we found a nice warm dinner awaiting, and we were ready to do justice to fried squirrel and food such as campers have. Later we had to take a tramp of five miles to get a wagon and team to haul our game home in. Next day we took the team and went for our game. F.

THE GREENER-SQUIRES ARMS CO.—The increasing demand in the United States for guns of W. W. Greener's manufacture made it necessary to arrange for more direct and rapid communication between the wholesale dealers and the manufacturer than has hitherto been possible. In order to accomplish this it was deemed wise to organize a new company with headquarters in New York city, having direct cable communication with the manufacturer, so that orders could be received the day they were given in New York and work begun on them at once. Mr. Henry C. Squires, by his long and close identification with the Greener gun in the United States, seemed to be the proper person to manage such a branch house in New York, and so during his recent visit in England such a house was formed under the style of the Greener-Squires Arms Co. The company will devote itself entirely to the wholesale gun business and will sell only to dealers. It is the present purpose to have Greener guns on sale in every city and town of any size in the United States. The company's place of business will be at 176 Broadway.

A NEW SPORTSMAN'S CLUB.—From Belvidere (N. J.) comes the report of the formation of a new sportsman's and game protective association composed of professional men of New Jersey and Pennsylvania, known as the Westcolong Lake and Delaware River Park Association. The club has purchased a tract of land five miles long and two wide, containing 4,500 acres, in the heart of Pike county. A club house will be erected in the spring, and the tract kept as a game preserve and private park. Westcolong Lake, noted for its fine pickerel fishing, is in the center of the tract, while black bear, wildcats, foxes, ruffed grouse, and other game are found there. The officers of the new association are: President, Henry E. Clugh; Vice-President, Dr. E. A. Maxwell; Treasurer, William Holbert; Clerk and Secretary, W. P. Holly; Counsel, C. W. Cull.

PORTLAND GUN CLUB.—At a meeting held Monday, March 19, at the Preble House, Portland, Me., was organized the Portland Gun Club, and the officers elected were as follows: President, H. F. Farnum; Vice-President, Chas. F. Gordon; Secretary, Jas. A. Farrell; Treasurer, Frank C. Thornton; Director, T. B. Davis. The membership roll contains about twenty-five names, among whom are some of the best shots in the State. The club grounds will be at Woodford's Corners, and are within three minutes' walk of horse cars. A contract will be given at once for the erection of a club house. Traps and targets will be purchased and everything will be got in readiness for a shoot on Fast Day (April 19). Taking all in all the club bids fair to become one of the best clubs of the East, and you may expect to hear from us in the future.

GAME IN THE NORTHWEST.—A correspondent writes us from a point on Belly River in the Northwest Territories, Canada, under date March 7, as follows: There have not been any deer or antelope killed this winter. In fact, you may say the game is almost extinct in this country. There are very few prairie chickens [sharp-tailed grouse]. Last winter the Indians and also the whites killed a great number, and last fall the hawks played havoc among them. We have had a fine winter here, but for the last ten days it has again been very cold. To-night it looks as though we were going to have fine weather again. The cattle business has "taken a tumble." All these big cattle companies will go to the wall—and a good job too.—FRED.

MASSACHUSETTS GAME LAWS.—The bill to provide a bounty for the destruction of seals has been unfavorably reported by the Finance Committee of the House of Representatives. The bill extending the close season for woodcock to Sept. 15 is strongly advocated by President Samuels of the Massachusetts Fish and Game Protective Association, but a number of remonstrances have been received by the Legislature against the bill. It ought to become a law.

TRUMANSBURG GUN CLUB.—The annual meeting of the Trumansburg Gun Club of Trumansburg, New York, was held Saturday, March 3, for the purpose of organizing and adopting constitutions, by-laws and rules. The following officers were elected: Dr. Claud C. Sears, President; David C. Clark, Vice-President; P. F. Sears, Secretary; Geo. Ogden, Treasurer.

ATHOL ROD AND GUN CLUB.—Athol, Mass., March 26.—The Athol Rod and Gun Club has reorganized for the ensuing year with the following officers: Dr. L. F. Talman, President; A. L. Pike, Vice-President and Captain; C. M. Peirce, Secretary and Treasurer.

HOW BIRDS HAVE WINTERED.—Newburg, Mass., March 12.—There is a good prospect of our having the largest quail crop the coming season ever known to the present generation. The bevies were large and numerous last season, and but few were killed, and notwithstanding the past winter has been a very cold one, and that foxes have been uncommonly plenty, there are many large bevies at present whose numbers are apparently undiminished since last fall.—A. L. L.

One of the members of the Meadow Brook Game Protective Association, ex-Sheriff Rushmore of Hempstead, L. I., says that nearly all the quail on their preserve are dead as a result of the recent blizzard. Three thousand of the birds were let loose on March 1 and sought shelter in the brushwood, where they were smothered by the drifting snow.

SOUTHSIDE (OF NEWARK) GUN CLUB.—At the annual meeting of the Southside Gun Club of Newark, N. J., held March 20, 1888, the following officers were elected: Charles LeRoy, President; Lemuel Thomas, Vice-President; Asa Whitehead, Secretary; E. M. Carrington, Treasurer; R. H. Brientnall, W. R. Hobart, Oswald Von Lengerke, E. L. Phillips, J. R. Burnett, Executive Committee; Isaac H. Terrill, Manager. The rolls showed a membership of forty-seven and the treasurer's report a cash balance of $199.75, with no liabilities. The club holds shooting meetings on its grounds every Saturday and holiday and an open shoot once a month.

VIRGINIA FIELD SPORTS ASSOCIATION—This association has recently issued a neat pamphlet giving the proceedings of its second meeting and its constitution, charter, president's report and list of members. It contains also the game laws of Virginia now in force and on the whole is a very creditable and useful publication.

THE ALBANY GAME LAW MILL.

THE game committee of the Assembly has showed unusual activity during the past week. On Thursday it reported several bills as follows: Fort's, extending the close season for woodcock from Aug. 1 to Sept. 1; Comstock's, relating to fish in the waters adjoining Jefferson county (the St. Lawrence River angler's bill); Endres's, the homing pigeon bill; Thompson's, providing for the destruction of English sparrows; White's, a substitute for his former bill, which substitute repeals the act of 1887, legalizing fishing with nets and fykes in a part of Cayuga Lake. The latter bill was ordered to a third reading. The Assembly committee on ways and means have reported favorably Mr. Husted's bill providing for the purchase, by the State, of the Creedmoor rifle range. The Assembly has passed Mr. Hadley's bill permitting the lease to private parties for pleasure purposes of small plots of land in the forest preserve, the limit not to exceed five acres. The Assembly committee on game laws has reported Mr. Cromwell's bill for the protection of waters in Richmond county.

Assemblyman Endres's bill provides that hereafter any person or persons who shall forcibly and wilfully detain any homing or fancy pigeon which may be identified by any device, mark or seamless band shall be deemed guilty of a misdemeanor, and on conviction thereof shall be punished by a fine not exceeding $50 or by imprisonment not exceeding one month, or both at the discretion of the court.

Assemblyman Fuller's bill makes the woodcock season in Chenango county from Sept. 1 to Jan. 1, and also provides that no quail shall be killed in the county for a period of five years.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

FLY-TABLE NOTES AND TALK.—III.

DO you remember Jack in "Fly-Fishing in the "Yosemite," published in "Fishing with the Fly." Not long ago I was laid up with a severe cold, and to amuse me while confined to my room some one brought to me "Romona," urging me to read it. I had always had a strong prejudice against any of Helen Hunt Jackson's writings, fancying she "preached," and thinking I should find her "draggy" and dictatorial. How I formed the idea I know not; but I began the book upon the recommendation, little prepared for the enjoyment which it gave me. Cold and the dreariness of a stormy day were forgotten as, with window shades drawn down to shut out the sight of winter, I was completely held by the perfect descriptions. Through them I was much interested in the "Old Mission Music" and wondered much if the Sunrise Hymn, the pretty custom of singing which is so charmingly described, was perhaps a familiar melody or something new, or rather old and sweet which I had not yet heard. I thought Jack would know if any one, he having made beautiful drawings of many of the old mission ruins and being well informed in their histories; so when writing I asked him what he could tell me of this Old Mission Music. His reply is one of the interesting letters on my fly-table, so I give it to you, thinking some of you too may have wondered:

"My Dear Friend—It makes me heartily ashamed of myself to reckon up the time since your letter came. I am getting to be about the worst correspondent possible, and believe that in several instances have given mortal offense through my apparent neglect of people. But three-fourths of the time since the arrival of your pleasant letter I have passed in bed, and have had no opportunity of making inquiries respecting the Old Mission Music you are so much interested in. (Hope you appreciate the rhetorical beauty (?) of preceding sentence.) You are right in your idea that I am very much interested in these old remains of the handiwork of a vanished or rapidly vanishing people, only remains now, for most of the mission churches are sadly in ruin, and the accompanying buildings, of which the church was the nucleus, and which were sometimes sufficient to house 3,000 Indians, have generally entirely disappeared. If you had asked me anything concerning the history of the missions, or the manner of conducting them, etc., I might have answered you, but about the mission music I know little, and though I have consulted the libraries and a Spanish priest, as yet know nothing more. I wonder that I never did think of the matter before, and the more elusive it appears the more interested I am, and if there can be learned anything about it, I assure you that I shall find it out.

"The Sunrise Hymn that Mrs. Jackson speaks of in her charming book may have been simply an 'Ave Maria' which the Indians in the few remaining pueblas still sing when the Angelos bell rings, that is, at 6 o'clock, morning and evening, and sometimes at noon, the year around. This is still sung to a simple Gregorian tone exactly like those we used to sing at St. John's. Two or three years ago I spent some days at San Juan Batista, near Monterey. A little agricultural town has grown around the mission, and the mission church has been used ever since the American occupation as the parish church of the village. Consequently, as the church has never been abandoned, its possessions in the way of records, documents, vestments, and so on, have been better preserved than in most instances. I went to church Sunday morning. The mass was not choral, but all the responses, creed, 'Gloria in Excelsis' and a hymn (Spanish) were sung. The music, except the hymn which was sung in parts, was all Gregorian tones sung in unison. After the service I went into the sacristy and had a talk with the padre and took lunch with him. He said the chants used that morning had been in use at that mission from the beginning, and I had noticed that the whole congregation, the oldest Indians and half-breeds had joined in the singing. But San Juan has in its sacristy a very curious book, and I glanced at it that day, but did not pay much attention to the contents as I did not understand them, though I was interested in it from an antiquarian point of view. The book is large, bound in wood and calfskin, the writing on sheepskin or parchment. As near as I can remember, it contained several masses, Te Deums, hymns, etc., composed, I believe, by a neophyte at S. Luis Rey or one of the southern missions and sent to S. Juan. This book is especially prized, and has often been an object of pilgrimage to San Juan by the antiquarians and curious. But the music, however, is written in the old-fashioned manner, with triangles, squares, half circles, etc., and as I knew nothing about it, I paid small attention to the music, but carefully examined the binding, curious illuminations, etc. I am going to Monterey some time within a couple of months and will stop at S. Juan and make some inquiries and copies. On the whole, I think that the church music consisted mainly of Gregorian tones in unison, unless at such missions as S. Barbara, S. Juan Capistrano and S. Luis Rey, which were large and rich enough to pay more attention to all arts. Perhaps at these places masses in parts, possibly Mozart's and Hayden's, obtained from Europe through Mexico, were used. I have no doubt, however, that many hymns of native origin were used, as some of these Indians are only a little less musical than the Southern negroes. Whether any of them can now be obtained I think very doubtful.

"I hope that you are all well and had pleasant holidays. My Christmas dinner consisted of a raw egg and some beef tea, and I have been keeping the mortal coil unshuffled on these dainties ever since. Am better though now, and begin to see daylight ahead."

* * * * * * *

This letter may have but little relation to flies and fishing, but are not all arts interesting to the devotees of the gentle art of angling? CHAS. F. ORVIS.

TACKLE.

COSSAYUNA, N. Y., March 12.—*Editor Forest and Stream:* Your correspondent "C. O. S." asks for information about the Horton steel fishing rod. By the courtesy of the manufacturers I have had an opportunity quite lately of carefully examining it, and in its then confessedly undeveloped state—for the makers intend to adopt the improvements in detail which have been variously suggested to them by practical anglers—I was greatly impressed by its behavior. The first obvious objection to a steel rod is that it would be too weighty. This, however, did not hold, for the rod I handled barely went ten ounces—an ounce to a foot. For my own use I prefer this weight to that of 3½oz., or other ridiculously small weights, possibly because I am an "Englishman you know" and value the impetus that weight gives in the action of a rod. The next objection was that the rod would be too stiff. I did not find that it was stiffer than an ordinary split-cane rod until you got it to describe almost half a circle, and then it certainly showed backbone, as the following will prove. In order to test the perfection of the temper of the steel—I had an idea it would collapse under a heavy strain—the line was attached to an ordinary heavy cane and wood rocking chair, and I purposely tried to lift the chair or break the rod. I succeeded in both lifting the chair and breaking the rod, but the latter smashed in the wood handle, or butt, and the steel rod itself flew back to its perpendicular position as if it had never been strained at all. Then I thought the friction on the tip where the line comes through (for the line passes through the center of the rod) would be too great and hinder the free passage of the line. On one of our number taking the end of the line and imitating the actions of a hooked fish, this did not so appear however, for the rod accommodated itself with great precision, and without any exaggeration of pliability or of stiffness. Finally I objected that it would rust, to which reply was made: We can brown it, oxidize or japan it, so that this will not be the case more than it would be with a fine gun. If a hunter carefully wipes and dries his gun why should not the angler, having a good rod, take equal care?

My opinion, based on this examination, is that the Horton steel rod is liable to make a capital bass rod either for fly or bait, and a very, very good trout fly-rod.

Your correspondent also requests information *re* the automatic reel. I obtained one from Messrs. Spalding which I used for all kinds of fishing all last summer, and I would not now use the ordinary kind in preference. At first it bothered me sadly; but just as soon as the hand gets educated to the regulation of the brake by the little finger, all difficulty vanishes. There is no slack line at any time—one hand plays the fish and the other is at liberty for the landing net or gaff. I do not think the advantages of this can be overestimated if the procedure with the ordinary reel is for a moment recalled—the shift of hands and the nervous pulling in of line and winding of the miniature windlass. As for the objection that this reel plays the fish—as it were by machinery—that is all chips and porridge. There is quite as much of the gentle craft required in using the automatic reel a in the use of any other. J. HARRINGTON KEENE.

A PISCATORIAL ROUND-UP—I.

THE fishing season of 1886 was to the writer colossal with expectations which were carefully watered, weeded, trimmed and nursed. Some scarcely sprouted; some died a quiet peaceful death before putting out a shoot from the main stem: some thrived and prospered to full leaf only to die a violent death in one night from blight; some bore a little measley, watery fruit, very unlike the seed, neither sweet nor sour, and some grew to magnificent proportions, deep-rooted, sturdy-limbed, rich in foliage and flower, and profuse in glorious, luscious fruit, the taste of which yet remains and will remain for many years to come.

From the lake trout trolling in May, our first fishing in this Northern latitude, Judge Ranger and I, who together have thumped the bottom of Lake George with heavy sinkers, and scratched its surface without them for nearly a score of fishing seasons, expected a rich return to repay us for the previous season when the fishing was so very, very bad that it was horrid; but after reporting for duty early in the morning of the first day of the open season, we found the trout coy and hard to please, although one 9lb. fish, which was hooked foul, made me think for a time that it would go into the teens when placed in the scales.

In June I expected a generous yield from some stream fishing for brook trout in Vermont, and although I found the Ondawa as "lovely" as ever, it was not as liberal in giving up its inhabitants as it had been in former years. My journal records that late in June I got one thing that I did not expect, and which certainly was not promised, that one thing being a well conditioned trout of 1¼lbs., which I caught in a New York stream that has been fished threadbare. I was promptly on hand and on the water when the black bass season opened in Brant Lake, but the fishing was not what I have known in that lake. Long Pond (Glen Lake), once the home of monster black bass—and it may be yet in spite of the fact that it would be difficult to prove it by the writer—was not very kind when visited on several occasions. Various other trout streams and black bass waters proved fairly generous or very fickle until the latter part of August came, when Judge Ranger and I embarked on our great exploration for a lake said to contain gigantic black bass, and which was concealed in some very high, very steep, and very rough mountains. We found the beautiful forest-encircled lake, which proved to be little better than a mud hole; we found some black bass which were positively not on speaking terms with the bass of which we went in search, and we and our men are above ground at the present writing in a more or less broken-up condition at the thought of that trip. The particulars of that exploring trip can never be written as a side show, they entitle it to a separate chapter which may be written some time.

My fishing partner, Mr. Wm. D. Cleveland, of Houston, Texas, had been detained at home during the summer by the absence of his business partner in Europe, but we had paid regular and persistent tribute to the Government through the P. O Department, and by the middle of August it was supposed to be settled that he could arrive at the North early in September. For five years in succession we had spent nearly three months of each fishing season together at some resort or other, but had confined our fishing largely to black bass during the hot months, and when we found that we could not meet until late in 1886 we had decided that we would devote as much as possible of September to speckled trout fishing.

Maine was the place of our choice and I had made all arrangements possible, albeit they were somewhat conditional, for going to Parmachenee Lake. Then occurred delay after delay; in Europe, on the ocean, in Texas, and the days of September were being used up before they arrived by events which cast their shadows before. From Parmachenee we came down in our expectations, through the kindly offices of Commissioner Stilwell, to Weld Pond, as being nearer at hand and more quickly reached; for we began to count the days to come before October 1 as something precious. When I found that there would be but a bare week between C.'s arrival and the close season for trout, I made a cast with a letter up into the Laurentian Mountains of Canada and concluded we could there get two or three days of fishing.

About this time Mr. Cleveland wrote: "Book me for any trip you like, but I hope we will be able to get at least one good day with the trout." It was a decided shrinking, from one month to one day's fishing. While I was trying to revise the calendar, the fish laws and the distance in time between States, I received a letter from Mr. W. W. Byington, secretary of the Eastern New York Association, which read: "If you will be in Clayton the 20th or 21st, I will meet you there, and we will go on my yacht to some special places where large black bass do most abound. My plan will be to send the yacht to Kingston, Ont., in advance, to have a few repairs made, and we will join her there by line steamer from Clayton. We can go up the Bay of Quinte for black bass and take in Hay Bay for mascalonge. The most I wish to know now is, what day you will meet me in Clayton." In my reply I told him of my contemplated trip with Mr. Cleveland, and in another letter he said he would wait until C.'s arrival before starting, and added a picture of what we might expect in the way of black-bass fishing that made me think a brook trout was not much of a fish after all. I informed Cleveland of the proposition and the prospects, and he wired me: "Get a good grip on the bass-fishing trip, and for this season we'll let the trout rip."

I thought the dispatch was bogus on the face of it, for the only time I ever knew Cleveland to attempt anything in this line was when he tried to make a white necktie and a starched shirt rhyme with a northwest gale of wind and rain in an open boat on Lake Champlain. Investing a dollar and a half, I found the message was genuine, although written by Mr. Cleveland's stenographer. This gentleman, by the way, is, in the language of the drift period, "no slouch" as a rhymer. All he requires is a subject, and to be informed of the number of feet and inches required, to have it on tap at a designated time in the immediate future. In fact, after our return home he contributed about a score of touching stanzas reciting some of the chief incidents of the very trip I am now trying to tell about.

There was another period, this, however, brief, of backing and filling which was ended by a wire from Cleveland, en route, saying he would arrive at my house the evening of Sept. 25, which was Saturday. I telegraphed to Mr. Byington that we would leave here Monday, the 27th, and meet him at the Delavan House, Albany, the same evening, accoutered as the game law directs for an international fishing cruise. Just as we finished dinner in Albany Mr. Byington and Judge Danaher appeared, and we spent the evening talking over our prospects for sport. The judge took me aside for a little caution. He said in substance that B.'s yacht, which he had had built to order for cruising and fishing, and was really fitted with every comfort and convenience, was the apple of his eye, so to speak, being very fast and seaworthy, and advised me for the sake of peace and harmony to make jokes with anybody or anything rather than even the bilge water of the yacht. I drank it all in and thanked him, promising to caution Cleveland also, for he is rather given to the sort of thing the judge seemed to fear in me

At midnight Byington said he would have to pack a few last things to be in readiness for the 2:10 A. M. train on the Central R. R., therefore the seance was broken up and C. and I retired for a short nap. Upon the arrival of the train we got a through sleeper to Clayton, at which place we duly arrived the next afternoon. The weather for a week or more had been as perfect as an angler could wish for, and we rather feared that there might be a change for the worse, therefore we wished to make all possible speed to the fishing grounds. As the yacht had been sent over to Kingston to await us we concluded to hire a tug at Clayton, go to Kingston, get the yacht, and make a night tow up the Bay of Quinte as far as we wished to go. We could easily get a tug to take us to Kingston, but could not get a tug to tow the yacht in Canadian waters, whether it was at night or in the day. As I recall the occurrence which occasioned the backwardness of the steamboat captains in coming forward to tow us up the Bay of Quinte at that time, an American steamer from Clayton, shortly before our arrival, had discovered a Canadian vessel in distress near the mouth of the St. Lawrence. The vessel flying the British flag was on fire, sinking or something of that sort, and appealed to the American captain for help. The American captain got out his geography and foot rule and "Every Man his Own Lawyer," and found that it was little less than a hanging matter for himself and his crew to rescue the vessel in distress, because she was in Canadian waters. If it had been on the Erie Canal or Spuyten Duyvil Creek he could have saved the lives of the shipwrecked mariners without consulting his law library or thinking of the mortgage on his homestead and his small life insurance for his wife and children. The American captain was a thoroughbred, however, and he hailed the distressed vessel, saying he would stand by, hoping the Canadian could work into American waters, when he would pick her up and take her home, but the Canadian law would not let him save her where she then was. The vessel did work over the line and the American did pick her up and tow her into her home port, and there the American captain got his reward, for the captain of the rescued vessel swore he was picked up in Canadian waters and the American was fined for it. Whether this matter was too highly colored when repeated to me I cannot say, and I only heard the Clayton side of it. It is very possible that the Canadian side of the affair would put a different face upon it, but one has to mind his p's and q's about towing in Canadian waters.

Soon after my return home, "Piseco," who had preceded us to Hay Bay, wrote an article for FOREST AND STREAM, which was, I think, entitled "Hay Bay," and in a personal letter he said he omitted from the article one matter which he related to me. These are his words: "I left out by accident from my paper an item which I meant to have put in, and perhaps you may utilize it—*pro bono publico*—when you come to write up your trip. Starting with a light breeze from Spencer's it nearly died out by the time we had gone five miles. Tom recognized coming down astern, a Clayton tugboat commanded by a friend of his. As it was raining we were glad of the prospective tow and lowered and stowed sail, etc. The tug stopped at our hail. 'What is it?' 'Where are you going?' 'To Stone Mills.' 'Give us a tow?' 'I daresent do it, Tom." There we were. Tom was madder than a wet hen, but I judged from the man's manner that really he dared not pick us up; it could be construed into an American tug picking up a tow in Canada water and make trouble for the tug."

Be it understood that "Piseco" and his boatman were in a fishing skiff and wished merely to get a tow from one fishing ground to another, and, if possible, avoid the rain. The tug with a party of sportsmen from "the States" was also on pleasure bent.

Having several hours to spare in Clayton, we visited the boat builders where the St. Lawrence fishing skiff is made in perfection; Skinner's trolling spoon factory, where we outfitted with mascalonge spoons and induced Mr. Skinner to go with us as far as Kingston. In the office of the Walton House, where we dined, were hung pictures of notable fish, principally mascalonge, of which I made notes and afterward neglected to copy into my journal, but they were monsters of their kind and fanned our fishing fever to a higher temperature than before. Mr. Skinner had a short time before written me that he had a photograph of a black bass for me, and I found it mounted in his office. It is now behind me on the wall as I write, and a better photograph of a fish I never saw, as one can count the fin rays and spines and the rows of scales above and below the lateral line.

The Kingston steamer was late, and by the middle of the afternoon the sky portended rain and perhaps a gale, which we would have to face on the morrow; but we borrowed no trouble on that score, only assembled ourselves and our belongings on the dock as the steamer made fast. Besides the three anglers already mentioned, and Mr. Skinner, who was going over to see us started from Kingston, there were Charlie Steele and Joe Cherco. Charlie was one of the yacht's crew, who had waited for us, and Joe Cherco was a typical St. Lawrence River boatman, who had, with his skiff, been engaged to fish with Cleveland and me. By a typical boatman I mean a man who can row or sail a skiff, cook a meal, fish and shoot, and do it all to a queen's taste, or in a manner to please the gods. We were half way to Kingston when it began to rain; a nasty, driving rain, and the weatherwise were divided as to whether the storm would last until the next day, but agreed as to a head wind. On the Kingston dock we found Capt. Bill Steele and his son Eugene, who made up the yacht's crew, and we also found a customs officer. I have observed that some FOREST AND STREAM correspondents have not found things altogether lovely when entering Canada from the United States, because of some annoyance on the part of the Custom House people. Whether it was owing to Mr. Byington and Mr. Skinner being known, I do not know; but I had the only locked luggage, and the officer merely asked if it contained simply personal belongings and sporting implements which were to be taken out of the country on our return, and I said it did, and that was all there was of it. Byington reported what was on the yacht in the way of guns, but the officer wished only our words that it was a party in search of sport and we were to take our effects back with us; and with a request to report the yacht on our departure from Canada, he took his departure.

We sent some of our baggage to the yacht with the men, some to the British-American Hotel, while we took a carriage and were driven to "Old Sam's" to supper, because it was the thing to do. "Old Sam" no longer keeps the inn which bears his name, but before his death he was a Yorkshireman who had good things to eat, and now Mrs. "Old Sam" reigns in his stead and keeps up the reputation of the establishment. If I should give a list of the things which were served to us on our order and the amount of the bill presented by our hostess, the first would be so long and the second so short as to be inconsistent, but we found other cheap things in Canada. When we went to our hotel it was raining and when we went to bed it was raining, but the next morning ushered in a beautiful day, and a fair sailing breeze had we been in no hurry or had we been going to Montreal instead of in an opposite direction. We were up early and provisioned the yacht for a two weeks' cruise, although when the stores came aboard they looked as though we were to remain much longer. The first domestic storm cloud arose above the horizon as soon as we touched the deck and it was caused by Cleveland. The yacht was in perfect order from stem to stern; staunch, roomy and comfortable, and Cleveland could discover nothing to find fault with until he read her name, Zaidee. He called me aside and said she must be re-christened, that we would just break a bottle of wine over her bow and call her The Punkinseed, as more fitted to a fishing yacht. I told him I should object so long as we had a corkscrew, and Byington, when he was informed, looked the disgust that his tongue refused to utter. Of course when Cleveland found that the change of name did not meet with favor from the owner of the yacht he said the change of name was my proposal, but I am wielding this pen and propose to correct the log. We hoped that we might get a Kingston tug to tow us but could not, and there was nothing for us to do but beat against a head wind.

Leaving Mr. Skinner on the deck, to our regret and his, we made sail; and as the sails filled Cleveland gave his trousers a nautical hitch and exclaimed, "Now, by my tarry toplights, I begin to feel at home; we will grease the binnacle." Byington had scarcely recovered from the "punkinseed" episode, but suggested that he meant oil, not grease, the binnacle.

"I don't care what you call it so that we do it; but I don't like to be corrected, for I am a regular old sea dog except when I am down cellar in the yacht, sea-sick."

"Old sea dog; down cellar. Great Scott!" and Byington retired to the cabin to conceal his emotions. The yacht was a "good 'un to look at and a rum 'un to go," and it was not long before we were in the "big gap" off the lower end of Amherst Island, where we found a good stiff wind. Cleveland interviewed Captain Bill, who was at the tiller. "Isn't the wind a little strong in the nor'-nor'-west by nor'?" "No, just a good wholesail breeze." "Wholesale! That is what I thought from the way she is rearing and pitching, and I would much prefer a retail breeze." When well inside of Amherst Island we saw the smoke of a steamer astern, and when she reached us she proved to be the steam barge Saxon, bound for somewhere, which we did not ask, but at our hail she slowed down and we tacked under her stern and got a line from her at our request for a tow. The Zaidee was towing three skiffs, and as the Saxon boomed along light she had a long tapering tow.

We passed Bath, the "small gap" at the upper end of Amherst Island, Stone Mills (Glenora), the mouth of the chute to Picton, the entrance to Hay Bay, and at nightfall we were off Deseronto, where Mr. Byington and Charlie dropped off in a skiff to get a few things and send some telegrams. Just below Northport we hailed the Saxon to slow down and some one would go aboard in a skiff to pay for the tow. Capt. Steel made for a dock that he said was somewhere out in the darkness while I got into a skiff with Joe to overtake the barge, which I did after a couple of miles or such a matter. I concluded the captain of the Saxon did not want anything for towing us, and he did not want much, he said two or three dollars, and I gave him five, for I thought it would be not less than fifteen. I make a note of the Saxon's small tow bill because our party made two by it. When I returned Capt. Bill had worked into the dock and made fast, and a big fire was started on shore. Whenever we could we took our meals on shore by a big fire, and during the trip we were obliged to take few meals on board, and then only when we were under sail.

The shores of the Bay of Quinte for the most part show a community of prosperous farmers, having well-tilled fields and living in substantial, comfortable houses. The people living on the south shore of the bay depend apparently upon sailing vessels as a means of getting their produce to market, and every few miles there is a small dock which accommodates several farms to this end. It was at one of these docks that the Zaidee was tied up. The weather was as mild as Indian summer, and the fire was only for grandeur and to cook our supper; and such a supper! Capt, Bill and Joe as cooks were artists, although they probably never heard of Soyer. Because the bones of nineteen lamb chops were found behind my camp chair after supper, the two pirates that I was sailing with tried to prove that I ate that number of chops. The last time that I heard this story told, to a good audience, of course, the number of chops had increased to over a score. Before midnight Mr. Cleveland and I went to a farmhouse within pistol shot distance to sleep, which is unadorned truth, for we could easily have remained awake on the yacht.

I like a circus, and am a fairly good performer myself in some parts; but I like either a day circus or a night circus, not the two combined in one at a time when there are fish to be caught. The pranks that were incubated on the yacht should have sunk her before we got home. There were materialized spirits aboard, too; for when I started my clothes were marked with my own name, and when I got home they were marked with another man's.

The farmer at whose house we slept had a map of that region on a large scale, showing several counties, the bay and interior lakes. I thought I could get a copy of this map at Deseronto or Kingston, and be able to give more specific information about the fishing points: but I neglected to do so. With "Piseco's" Hay Bay paper in FOREST AND STREAM there was published a sketch map, and I hoped he had such a map as I have referred to; but he made his drawings from a steamer's chart, and I am a little at sea about supplying information about fishing between stations. A. N. CHENEY.

GLENS FALLS, N. Y.

SUNAPEE LAKE AGAIN.

Editor Forest and Stream:

I have been a visitor at Sunapee Lake since 1877, when I first camped upon its shores. Its beauties are well known to me, and in my opinion compare favorably with those of foreign lakes. The aspect of the New Hampshire Lake is pleasant, not grand as in the case of the Lake of the Four Cantons; nor refined like the scenery about Como, nor impressive as the shaggy mountains that frown upon the Lochs of my Scottish fatherland. Pleasant, content-inducing, soul-satisfying are the qualifying words that my experience leads me to apply to this charming sheet of water. I have found but one spot that I was so reluctant to leave, so willing to return to—the lovely Isle of Wight in the English Channel. But I cannot agree with your correspondent "C. F. G.," of South Sudbury, in regard to the desirability of Blodgett's Grove as a tarrying-place for the angler. This point is the seat of a noisy Spiritualist camp meeting, in session during the whole month of August, and on Sundays is the resort of evil characters from all parts of the adjoining country. A prolonged stay amid the din of the stores and cheap cottages would certainly fit one of delicate nervous constitution for temporary residence in the Brattleboro Insane Asylum, not very far off. There are two well equipped and well conducted houses on the Sunapee or west side of the lake—the Lakeview, and Runals House—at one of which the stranger would be wise to put up, especially if he has ladies in his company. *Verbum sap.* But, good brother of the angle, if you like white canvas as much as I, you will find the choicest spots in the world for camping.

North of Blodgett's a half mile brings you to the beginning of an extensive park owned jointly by Prof. Campbell of Elizabeth, N. J., and Dr. Quackenbos of Columbia College. I have always understood that a select party would be welcome to their grounds, which afford the finest camping sites on the whole line of the shore.

Prof. Campbell's property rises to a height of about 400ft. above the lake, the crest of the hill commanding one of the grandest views in all New Hampshire, not excepting the famous sight from Squaw Mountain.

As to the fish, your various correspondents are all right, but to my taste bass fishing in midsummer with the fly or trolling with fly-rod is the choice. The trout are there, and those who fish with shiners in deep water are sure of success. I was told last season at the lake that two tons of the *new* trout had been taken with hook and line. I emphasize new, for in 1877 there were no such fish in Sunapee Lake; the only trout there known was the common spotted trout of our brooks.

The cheapest, quickest and most comfortable route from New York to Sunapee is via the Connecticut Valley R. R. to Claremont Junction. Train leaves Grand Central depot at 4:30 P. M. and arrives at Claremont at 11:20. Stay over night at the Junction House, and take the morning train to Newbury. Steamers meet the train at 8:30 A. M. and connect with all points on the lake.

RAHWAY, N. J. COLQUHOUN.

THE MASSACHUSETTS TROUT SEASON.

THE open season on trout begins on April first in Massachusetts, and yet again the season is behind the law. Indeed terrible snow storms and the season of ice is scarcely over, and one is struck with the fact that the first of April is altogether too early for the season to open. At last the Massachusetts Legislature, now in session, has hit upon the idea that the season opens to early, and I believe that a bill has advanced so far as to pass the House, changing the opening of the season to May 1. Still how much legislation ever happened to progress even thus far, without encountering opposition from the marketmen, is almost beyond comprehension. One thing is certain, and that is, if opposition of any particular force had come from that quarter, the bill would have met an early death. The Solons who annually win a place under the Gilded Dome on Beacon Hill—win it by political intrigue, and catering to the powers that be—are noted for the amount of wisdom they exercise in trying to please the marketmen, and the people who get a living by trade. These legislators have just refused a bill making a much-needed close time on lobsters a passage. This bill only asked for a close time during what are known to be breeding months with this valuable shellfish, but the opposition said that at that time the lobster is of great value at the seashore hotel, because the guest who has got the money is there, and consequently the Wise Men of Beacon Hill have defeated the bill. The destruction of the lobster is to go on indiscriminately in Massachusetts waters. Why? Because there is a trade in lobsters, and trade is not to be interfered with. The Boston Chamber of Commerce has a standing committee, the duty of which it is to see that no changes in the game laws are sprung upon the marketman. The quiet marketman, ever about his business, selling game that is out of season in most other States, and ought to be out of season in Massachusetts.

But matters are not quite as smooth toward this marketman's purse as he would like to have them after all. The trouble is that he is not getting the amount of illegal game to handle that he would like. His refrigerators are not full this year. Why? Because public sentiment in favor of fish and game protection is growing. The States from which the game is shipped are waking up to the fact that the game is worth far more on the foot than it is shipped to Boston, for these marketmen to buy for almost nothing and sell again at a profit to themselves that averages nearly 300 per cent. The idea that summer travel on railroads, summer guests at hotels, summer jobs guiding and transporting are largely dependent upon the fish and game attractions a State has to offer, is spreading rapidly, and the eyes of those the most interested are opening. Hence it is that game laws are being better enforced in many of the States, and the amount of game finding its way into the Boston market is yearly growing beautifully less.

But I started out to tell about the trouting prospects that are likely to dawn on April 1, and was only turned from the subject because that so wholesome legislation as changing the open season to May 1 had been allowed to make some headway in the Legislature of this State. Even now the bill may be defeated in the Upper Branch, and it surely will be, if those who desire to trade in early trout but put their heads together. But there are only a few trout to catch in April in this State, or in any other month, for that matter. This year more than ever the prospects are unfavorable. Snow is still abundant on the ground in the major portion of the State, and is likely to be till long after the first of April. One gentleman, a lover of the rod and line, suggested to-day that it would be a novel experience to try the trout on snowshoes. But after all it would be necessary to cut the ice out of the stream, in the western part of the State especially.

But the enterprising tackle dealers are not to be baffled by the lateness of the season. They are to make good displays on April 2—the first comes on Sunday. It is pleasing to be able to state that these Boston tackle dealers are in favor of the open season on trout being put back to May 1, though it is of course a matter of trade with them. Mr. Geo. B. Appleton, at the old stand of Appleton & Litchfield, will make the same showing of live trout in the window as last year, though with several improvements. Among the other attractions, he is promised a 7lb. trout, the only question being as to whether it will bear transportation from New Hampshire. But Commissioner Hodge, of that State, is to come with the fish personally. Mr. Henry C. Litchfield, formerly a partner with Mr. Appleton, will make no window display, for the simple reason that he has no ground floor window in which to make a display, though he is nicely fitted up for the sale of tackle in the store directly over Mr. Appleton and his former place of business. Messrs. Dame, Stoddard & Kendall, I understand, have decided to show a good-sized yacht in their window, a little further up Washington street, the sails of this craft to be made entirely of artificial flies. In the fish market there promises to be the usual first of April show of live trout. SPECIAL.

THE COMING TOURNAMENT.

THE committee on rules have met and reported the rules which will govern the contests of 1888. Some important changes have been made which we note. Rule 2 only prohibits those who manufacture fishing tackle for sale from entering amateur contests. Rule 5 allows but ⅛oz. for metal reel seats, instead of 1¼ oz. Rule 7 allows each contestant ten, instead of fifteen minutes. Rule 10 leaves delicacy out of the score of points and more strictly defines accuracy. In salmon casting accuracy shall be contested at 60, instead of 70ft., and changes are made in minnow and heavy bass casting. We give the entire rules as revised:

Rule 1. All persons competing for prizes shall pay an entrance fee in each contest, as follows: Members, $2; non-members, $5. Memberships may be obtained on the grounds from the secretary.

Rule 2. No one shall be permitted to enter an amateur contest who has ever fished for a living, who has ever been a guide, or has been engaged in the manufacture of fishing tackle for sale.

The judges in the different classes shall appoint a member to see that the tackle is at all times during the contests in accordance with the rules and requirements of the association. The judges in any particular class, on appeal, shall have power to decide on all matters relating thereto, and their decision shall be final.

Rule 3. No single-handed fly-rod shall exceed 11ft. 6in. in length, and it shall be used with a single hand.

Rule 4. In single-handed fly-casting any style of reel or line may be used. A leader or casting-line of single gut not less than 8ft. in length will be required, to which three flies, one stretcher and two droppers, shall be attached.

Rule 5. No allowance of distance shall be made for difference in length of rods; but in the contests with light rods of 5oz. and under, an allowance of ½oz. will be made in favor of such rods as have solid reel seats.

Rule 6. Persons entering these contests shall draw lots to determine the order in which they will cast, and must be ready to cast when called upon by the judges.

Rule 7. Each contestant will be allowed ten minutes in which to cast for distance, and will stand aside until called in his turn to cast for delicacy and accuracy. In casting for distance each contestant shall inform the judges of the contest when he intends to begin to compete. His time allowance of ten minutes shall then begin to run, and shall continue to run without interruption until its expiration, or until the contestant voluntarily withdraws from the stand. Should, however, the contestant's rod break, time to replace the broken joint shall be given him. No allowance of time shall be made to any contestant for any other reason whatever, it being the intent and purpose of this rule that each contestant shall abide by his own accidents, except as herein specified.

Rule 8. The distance shall be measured by a line with marked buoys stretched on the water, said line to be measured and verified at least once each day of the tournament by two or more officers to be designated by the president or secretary. A mark shall be made on the stand from which the buoy line shall be measured, and the caster may stand with his toes touching this mark, but may not advance beyond it. Should he step back of it, unless directed to do so by the judges, the loss in distance shall be his.

Rule 9. The stretcher fly must remain at the end of the casting line in all casts. The others are not deemed so important.

Rule 10. In casting for accuracy each contestant shall be allowed twenty casts at an object in or on the water, 40ft. distant from him. The distance at which the stretcher fly shall fall from the mark shall be noted for each cast. These distances shall be added together and divided by twenty. Forty points shall be allowed to him whose averaged aggregate is the lowest. The other contestants shall be awarded lower scores in accordance with their comparative excellence.

Rule 11. The ultimate scores of the various contestants shall be determined as follows: To the distance in feet each has been adjudged to have cast, shall be added the score assigned for accuracy, and prizes shall be awarded in accordance with this aggregate.

Rule 12. To prevent fouling the measuring line and accidents to spectators, in the fly-casting contests the points of all fly-hooks shall be broken off below the barb.

Rule 13. In the absence of an appointed judge, the president or secretary shall fill the vacancy.

Rule 14. Salmon Fly-Casting.—The foregoing rules shall govern where applicable. Rods may be used with both hands, and only one fly shall be required. Accuracy shall be contested for at a mark 60ft. distant from the caster.

Rule 15. Black Bass Minnow Casting.—All general rules which do not conflict with the following special rules, shall govern: No rod shall be more than 10ft. in length; any reel may be used, but all casts must be made from the reel. Lines shall not be of less caliber than No. 6 (letter H) braided silk, nor No. 1 seagrass, or corresponding sizes of other materials, and be of uniform size throughout. The weight of the sinker shall not exceed ½oz., to be furnished by the contestants. In casting, but a single hand shall be used. Each contestant shall be allowed five casts for distance, the average of them to count, and five casts for accuracy. The distance at which the sinker shall fall from the mark shall be noted at each cast. These distances shall be added together and divided by five. Forty points shall be allowed to him whose averaged aggregate is the lowest. The other contestants shall be awarded lower scores in accordance with their comparative excellence.

Rule 16. Heavy Bass Casting.—Rods shall not exceed 9ft. in length and may be used with both hands. Any reel may be used, but the line shall be of linen, not of less caliber than the trade No. 9, with twelve threads throughout its entire length. The casts shall be made from the reel with sinkers not to exceed 2½oz., to be furnished by the contestant. Each contestant will be allowed five casts. His casts shall be measured, added and divided by five, and the result shall constitute his score. No allowance will be made to any contestant for the overrunning or breaking of his line, but the line may be doubled next to the sinker.

Rule 17. Light Bass Casting.—Same rules as in heavy bass casting to apply, except that the weight of the sinker is not to exceed 1½oz., to be furnished by the contestant, and any line of uniform caliber may be used.

AN ODD FISH.

Editor Forest and Stream:

I am a little in doubt whether or not I have opened the fishing season; and if I have I am still more in doubt whether or no I opened it in a legal manner, not to mention the question of its being sportsmanlike. The game laws do not forbid fishing on Sunday, but if I did fish there is a section of the penal code which might make it unpleasant for me. Webster says fishing is "the art or practice of catching fish." Is catching birds with a fish rod, fishing? If one does, with a fish rod, catch on Sunday a bird that is specially exempted from the operation of the game laws protecting birds, is it hunting or fishing, legal or illegal? I belong to several organizations whose object is fish and game protection, and I am a law-abiding citizen. I am also a member of the Audubon Society and altogether I am a little mixed regarding an occurrence which took place to-day, Sunday, March 18th. Soon after breakfast my little daughter told me that there was an owl in a tree near one of the dining room windows, and the little girl's heart was at once enlisted in sympathy for an English sparrow upon which the owl was performing a post-mortem examination. "Couldn't Papa drive that horrid bird away and make it stop eating the poor little sparrow?" I thought I could kill the owl if it were not Sunday, but I had no use for it dead, and there was the Audubon Society pledge looking me in the face. "Can't you poke it away with a fish rod?" Bright thought! of course I can, and if it will sit still I can improve on "poking" it. I got a rod, and with a piece of linen cord made a slip-noose and tied it to the end of the rod; from a second story window I stepped to the roof of a porch and dropped the noose over the owl's head, when it "rose." I "struck" and had the bird around the neck with the cord. I "played" it and "brought it to basket." It was Wilson's "little owl," and when night came I turned it loose to find more sparrows.

GLENS FALLS, N. Y. A. N. C.

PENOBSCOT SALMON.—At the meeting of the Governor and Council in Augusta, March 14, the following petition, numerously signed by residents of Belfast, Searsport, Stockton, Islesboro, Northport and Lincolnville, was presented: "The undersigned, citizens of Waldo county, respectfully petition your honorable body to allow the salmon fishermen on the Penobscot waters to pursue their vocation unmolested, between the first day of April and the fifteenth day of July, as they have for the past fifteen years; till the decision of the Law Court in the case of Thompson vs. Dow shall have been made; and as in duty bound will ever pray." Section 43 of the fish and game laws of Maine, which pertains to weekly close time, has under it several exceptions, the Penobscot river being one. Recently the fish and game wardens have prosecuted fishermen in Searsport and Stockton, and a case has gone to the Law Court to determine where is the mouth of the Penobscot river. The Council could not well grant the privilege asked, and the petition was dismissed, but Commissioner of Sea Fisheries Counce was instructed not to prosecute any of the fishermen on Brigadier's Island at the mouth of the Penobscot river for illegal fishing until a decision from the courts has been obtained.—*Belfast (Me.) Republican Journal.*

FLY-FISHING FOR SHAD.—Baltimore, March 22.—*Editor Forest and Stream:* I would like to have some information in reference to taking shad with the fly. I remember having seen, some years ago, in FOREST AND STREAM articles on this subject. It was stated that shad had been taken with the fly at Holyoke on the Connecticut river. I would like to know with what color fly they are taken? Whether on ripple or in still water? Whether with drowned (sunken) fly, or fly on the surface of the water? If any of the readers of FOREST AND STREAM will kindly give the information I would like to make trial in the waters of the Susquehanna river in Maryland.—E. S. Y. [Shad are most commonly taken in quick water with a "drowned" fly, and a redibis, white-miller, or other light-colored flies are the ones with which best results are obtained.]

PICKEREL THROUGH THE ICE.—Lockport, N. Y., March 21.—As no one has come to the front with a larger true fish story than mine in FOREST AND STREAM of Feb. 23, I shall have to do the enlarging myself, with a fish taken from the same waters. As Mr. Wm. Sharp, of Theresa, N. Y., was fishing through the ice on Crystal Lake a few days since, one of his lines disappeared, the stick to which it was attached having been broken. A few minutes after a fish was hooked on another line, and after a severe struggle a pickerel weighing 27lbs. was secured, as well as the missing line, the hook of which was in the mouth of the presumable father of all the pickerel in the lake, which was first stocked with this species of pike about ten years ago.—J. L. DAVISON.

FROM THE CONNECTICUT LAKES.—Colebrook, N. H., March 20, 1888.—*Editor Forest and Stream:* In chasing a live minnow attached to a large fish hook, an old otter was recently hooked in its side and captured under the ice at Second Connecticut Lake. The lumbermen are not disturbing the forests up the large inlets this winter. Here one must look at the sun to get any evidence of the approach of spring. The old "gee-lang" coach is laid away, and the Upper Coos Railroad is in active service. They have not failed to made daily trips this winter to connect with the Grand Trunk and Boston & Maine Railroads. Game is wintering well. Crust-hunting without a crust is more work than the lawless care to indulge in. —NED NORTON.

THE MENHADEN QUESTION.

Editor Forest and Stream:

To practical disinterested men familiar with existing facts the special pleading of Mr. D. T. Church and others on behalf of their oily and mal-odorous interests will merely call forth a smile that such transparent statements should be produced as good argument to bolster up what is in truth a public nuisance as well as a great and actual damage to our coast fishing interests. Mr. Church states that "our observation leads us to the conclusion that there is not a single food fish on our whole coast that depends on the menhaden for their daily food," etc., etc. I quote the gentlemans literally, and assume no responsibility for the grammar involved. Now, if he is correct in the above statement, how happens it that all the fishermen for bluefish, striped bass, cod, etc., invariably use the menhaden for bait, when they can procure it? For many years I have habitually cruised and fished along our coast, and have always found menhaden to be the very best of bait. Mr. Church and his partners may or may not believe it to be a fact, but the menhaden forms a very large portion of the food consumed by codfish. I have repeatedly taken the latter off Block Island with menhaden, entire and unmutilated, in their gullets. If the practice of pursuing menhaden with purse net steamers into the harbors and close to shore does not drive the menhaden away, will Mr. Church be good enough to inform us why Long Island Sound is always nearly deserted by these fish within a short time of the coming of the menhaden steamers with their nefarious work upon its waters? Also, if, as he tells us, bluefish do not eat the matured menhaden, how will he account for the well known fact that menhaden are often for many days prevented from entering Peconic Bay simply by the schools of bluefish lying in wait for them at its entrance? The greatest damage done by the steamers, however, does not lie in the quantity of menhaden actually taken by them, but rather in the fact that by pursuing their selfish calling near the shore, these men drive the fish away from their accustomed spawning and feeding waters, by frightening them, for they are among the shyest and most timid of fishes. Therefore let all true fishermen protest, and continue to protest against any steamer being permitted to use a net more than 300 feet in length within two miles of the nearest land, also against any pound net being placed with its inner end closer than 300 feet from shore, or in water shoaler than 12 feet in depth, also against any pound nets being set anywhere except actually inside a harbor. The migration of all food fishes along our coast should be absolutely unrestricted, so far as fixed nets and fishing by purse net steamers are concerned, otherwise the fish will leave us for safer waters, just as the sea ducks have done as a result of the stupid selfishness of those who chase them in steam launches and then brag that they have crippled enough birds in an afternoon to load their steamers with the wounded.

Thomas Clapham.

Roslyn, March 16.

HATCHING CODFISH.—At the U. S. station for hatching sea fishes on Ten Pound Island, off Cape Ann, there has been very fair success in the hatching of codfish. About 200,000 have already been hatched and turned out, and the jars contain many fertile eggs which will soon hatch. The severe weather of the early winter killed all the first eggs obtained, by reason of the low temperature of the water, later on the storms stirred up the sediment at the bottom of the water so that many eggs smothered, and it was only the later eggs which hatched. The schooner Grampus is still collecting eggs, but the season is nearly closed and the schooner will then go to Havre de Grace to assist in the shad work at that station. Next summer it is proposed to hatch lobsters and halibut at Ten Pound Island.

PROTECTION OF LOBSTERS AND SCALLOPS.—In the Massachusetts Legislature the Senate bill for the better protection of lobsters was refused a third reading by a vote of 20 to 9, ten members being absent. In the Senate Mr. Cook offered a substitute for the House bill relating to taking scallops in the head waters of Buzzard's Bay. This latter provides that the selectmen of the towns of Wareham and Bourne may grant permits, in writing, to take scallops in such quantities, and at such times, within one year, and by such methods as may be expressed in the permits, but inhabitants of said towns may take them for use in their families between October 1 and April 1, not exceeding three bushels, including shells, in any week, other inhabitants of the State to have the same privilege if permits are obtained.

FISH FOR PENNSYLVANIA STREAMS.—Harrisburg, Pa., March 23.—The State Fishery Commission has arranged to stock the streams of Pennsylvania with rock and grass bass, yellow perch, and pike from Lake Erie, where they will be caught in seines and placed in a Fish Commission car for transportation to the several points in the State. It is intended to place several hundred thousand shad fry in the several streams this spring.

The Kennel.

FIXTURES.

DOG SHOWS.

April 3 to 6.—Fourth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.
April 17 to 20.—Fourth Annual Show of the New Haven Kennel Club, New Haven, Conn. E. Sheffield Porter, Secretary.

A. K. R.—SPECIAL NOTICE.

The American Kennel Register, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6104.**

TROY DOG SHOW.

The inaugural show of the Rensselaer Kennel Club in many respects was probably the most successful exhibition of the kind ever given in this country. Certainly no such number of dogs has ever before been entered to compete for a first prize of $3. Long before the time of closing the entry books, the management discovered that the hall engaged would be too small and that other quarters must be secured. The Troy Bicycle Club's rink was finally chosen, but here again there was not the necessary space to comfortably bench all entries received, and a large number had to be returned. The remarkable feature of the show, however, was the attendance. I have been to dog shows in England, Scotland, Ireland, Wales, France, Belgium, Germany, Canada and lastly in America, but have never before seen a building packed as this was. Usually if one gets up in fairly good time and goes to the show by nine or ten o'clock, he can get around and take notes on the dogs. This could not be done at Troy. As to taking the dogs off the benches to examine them, that was out of the question, and I fancy a number of your contemporaries will supply very queer reports on this show, unless they adopt the poacher's plan of missing the Chicago mail, which, after all, is a most convenient dodge.

Some idea of the magnitude of the crowd can be gathered from the fact that on Wednesday evening it was found to be impossible to get the dogs into the judges' ring. Tallman and other old show-goers said they never saw anything like it. Rain and snow came down in torrents on Wednesday, but did not seem to diminish the attendance; in fact I believe the second was the best day of all for the gate. In regard to the management, I can safely say that I never saw a lot of men work harder, and none have ever treated me with greater courtesy and genuine kindness. The lip-neck-shoulder management, of which New York is such a warm advocate, was not deemed the proper thing at Troy, and Mr. Draper quickly installed himself into the good graces of the exhibitors, and was warmly praised for his untiring efforts in their behalf.

"Billy" Tallman did the feeding, and every dog, from the noble Monte Rosa down to the miserable little mongrel with three legs, licked the platter clean and howled for more. The Staten Island dogs, in particular, seemed to be in ecstacies over the Blackstone Food, and one went home a much fatter dog than he came. Mr. Morris will kindly note.

The Soldiers' and Sailors' Monument Fund will probably be benefited by this show to the extent of over a thousand dollars, and the Rensselaer Kennel Club will be strengthened and encouraged to give another exhibition; and before they do give one, it will be safe to predict that the Trojans who have so generously contributed to the Monument Fund will not forget man's best and truest friend when his turn comes.

MASTIFFS.

The quality was on a footing with the same class at Philadelphia, but the classification put champions and non-champions together. Ilford Caution won handily from Dictator, who is a rather good-looking son of The Prince. He shows true character in head properties, has better loin and quarters, and smaller ears than Caution. In size, bulk of muzzle, volume of skull, wrinkle and carriage of ears the Melrose dog is vastly superior, and is undoubtedly the better dog. By the way, how is it that the report poacher once told the readers of the Chicago Letter Press that Ilford Caution was a duffer, a cripple, etc., when he now has him down a grand dog? And how is it that Minting is the grandest mastiff in the world, whereas only one short summer ago, when the poacher was in England, Beaufort was the best mastiff he had ever seen? You, Mr. Editor, should feel flattered. All you have to do is to say that one of Barnum's elephants is a typical mastiff and the Letter Press will copy. Truly Darwin was a great man. Major, hc., is defective in skull, muzzle and in ears, and is too light and leggy. Tim, hc., is also defective in skull and in muzzle, and in addition is light in bone, sour in expression and full in eyes. I withheld third prize. In bitches, Duchess and Lady Beatrice, that were fully described in your New York report, were first and second. Clara Belle, unnoticed, is a mongrel. I withheld first in the puppy class, and gave second to Nero, a plain-headed son of Ilford Cromwell. All he has to recommend him is size, and size does not make a mastiff. I was on the point of stating that he has a wolfish expression, but as this old saying of mine has been copied by the Letter Press, which never possessed an original idea, I will pass him without further comment.

ST. BERNARDS.

Monte Rosa, who made his debut at New Bedford under my judging, there winning first and special, again came to the front and beat Mount Sion III. and Alvier very easily. Alvier is well-known to your readers. Mount Sion III. beats him in head, carriage of ears and in size, but is not his equal in quarters, hocks, tail or in gait. If Tamtallon, vhc., were as good behind as he is in front he would have been second. He is better in head than Eiger, has more size, and was in beautiful condition; but his weak second thighs, straight hocks and slip-shod gait put him back. Rollo, shown in this class, is a mastiff, and a third-rater at that. Notwithstanding the fact that his owner "controls the Democratic party in this section" I ordered him out of the ring. Lady Flories scored a very easy win in the class for rough-coated bitches, and is a fairly good specimen. Lack of bluntness of muzzle, full eyes, a rather weak back and a coat showing slight curliness are her defects. Vesta, a good-limbed puppy belonging to Miss Whitney, was an easy second, and Nutmeg, undersized, defective in eyes (the left is of lighter color than the right), somewhat sour in expression, and not very good in coat, was third. Buffer, shown in this class, is a dog, but of what breed I cannot say. Vesta, second in the open class of bitches, won very easily in the puppy class. Ben Hur and Valentine, second and third, are not first-class either in head, body or in limbs. Fannie, hc., is very defective in head. Mr. Dunlap's four entries in this class were absent. Hector, having recovered from the trouble which caused him to be shown in such poor condition at New York, was well shown on this occasion, and beat Lodi and the rest of the smooth-coated dogs, with many points to spare. The Letter Press, I see, attributes his victory at New York to "vigor." Instead of "vigor," please read competency, force of character, and love of fair play. Cato, to whom I gave third, has too much coat, is bad behind and rather plain in head. Rigi, the small, but typical, was absent. Daphne won as easily in the bitch class as Hector in his. She is coming into shape again and should be fit in time for her Boston engagement. I need not again allude to her few defects and many excellencies. Thisbe and Beatrix gave me some trouble, and I finally placed them equal. Thisbe is of better type than Beatrix, but undersized and was shown in very low condition. Beatrix is not her equal either in head, expression, color or in markings, but has more height, much more length, stronger loin, and was in tip-top condition. Of the two I prefer Thisbe, but in her present condition could not place her over Beatrix. Bernie, vhc., shows quality, but is undersized and defective in muzzle and in stop. Katrina, the best of the smooth-coated puppies, is not clean below the eyes, and her muzzle shows coarseness. She is very young, and therefore it would not be safe to predict. Of the ten shown in this class I fear not one will develop high class form.

NEWFOUNDLANDS.

Newfoundlands, always a poor lot at American shows, were better than at Philadelphia, and New York Lass, who is undersized, defective in head and light in flesh, won from her larger, but badly coated opponents. Carlo, second prize, would have been first, but for his defective quarters and undershot jaw. Harry is bad behind. Bruno has a small characterless head, poor coat and is dangerous, the latter a very bad quality in a dog of this breed. Keno has a bad head and ears. Rover is an undersized, plain-headed specimen. I would not notice the best of the lot in a good class, but as Newfoundlands go in this county one has to be charitable.

COLLIES.

The Chestnut Hill Kennels made a good entry in these classes, but as their labels, etc., did not reach them in season the dogs were not shown. Clipper, who has changed ownership, scored an easy win in the dog class. Ponto and W. Scott are undersized, defective in head and ears and not first-class in coat. Robin Adair, like his namesake, is defective in coat and is not good in muzzle, ears or in loin. Taff shows Gordon character. In bitches Lady Watson and Della Glenlivat, youngsters by the defunct Glenlivat, were first and second. Lady Watson is a bright sable, showing quality and having a good coat and fair head, but her ears are not sufficiently erect. Della Glenlivat is better in head than Lady Watson, but her coat is too soft and her ears, like her sister's, are not sufficiently erect. Gracie, third prize, is a workmanlike bitch. Her ears are well carried, but too large; muzzle too square, coat scanty. Collie Nicholds, c., is short in face and in coat and defective in carriage of ears. A good headed bitch is Trojan Curley, the first prize winner in the class for bitches with litters. Madge, third prize, in the class for puppies under 12 months is round in skull, short in coat and does not carry her ears in good shape. Ben Franklin, vhc. in the same class, shows squareness in muzzle. Ned's fairly good head is spoiled by drop-ears.

DEERHOUNDS.

Of the seven entries in this class Norval scored first and in my opinion was far away the best. His one prominent defect, and it is one that will always prevent him from winning in hot competition, is his hindlegs; they are straight and light, especially about the second thighs, and his hocks are not right. In head, coat and forequarters he will do. Garroc and Keildar are strong and useful second-class dogs. Garroc, being straighter in front and better in the quarters than his kennel companion, beat him, but it was a close thing between them. Bras is round in skull and was out of coat. Gov is much too small for a show dog. Ponto is under-sized and soft in coat. This was as good a class as I have seen when Mr. Thayer's dogs have not been in competition.

GREYHOUNDS.

There were twelve entries in this class, and I divided it for dogs and bitches. Among the former Balkis, the great quartered son of that sterling dog Clyto, was altogether too much for his opponents. He is the image of his sire and has shown ability to go and stay. He is not first-class before the eyes and is wider in front than I like, but he stands on superb legs and feet, has as strong a back as I have ever seen, and behind the short ribs could not be improved. Tom, second prize, lacks character in head and is much below Balkis's form in legs, feet, back, spring of ribs, loin, thighs and gait. Gip has a Roman nose and is very heavy in shoulders. Tom is defective in eyes and is not strong in back, loin or in quarters. Don is weak behind the short ribs. Dennis is a leggy, tucked-up weed, a pretty dog, but not a greyhound. In bitches, Cassandra, a brindle and white of good hard color won with consummate ease. She has the best head and neck of any greyhound on the show bench in this country, beautiful shoulders, legs as straight as gun barrels, bone plenty, excellent feet, and moves in good style. More spring in ribs and a little more power behind would improve her. I notice that the Chicago Letter Press, instead of saying a dog has good head and neck, puts it "a good look-out." This, gentle reader, is not original. It is an old expression that Tom Sharples (owner of Lauderdale and Bit of Fun) used to apply, and of course, when the poacher saw it in the *Stock-Keeper*, he adopted it for the Letter Press and proudly sent it forth as the offspring of his mighty imagination. Another poached expression is "clever shoulders." Great heaven! Fancy a man who never attended a coursing meeting in his life and never saw a greyhound gallop, writing about "clever shoulders!" Clever shoulders are shoulders that do their work cleverly, and to ascertain that they are clever a man must see them in full motion. A clever greyhound is one that is brilliant in turning, killing and outgeneraling; not a dog that after leading to his hare at a terrific pace is unable to utilize the advantage thus gained. The man does not live that can distinguish clever shoulders and clever dogs from the other sort unless he has seen them at work. He cannot tell when he does see them unless he himself is "clever." Such being the case the readers of the Letter Press will once more be compelled to acknowledge that they have been befooled, and that the reporter, instead of parading his superficial knowledge, has actually been exposing the most pitiable ignorance. This is outside the purport of my report, but unless somebody takes these chaps in hand there is no telling how much mischief they will eventually bring about.

Second prize went to Black Bess. She is defective in head, especially below the eyes, is short of bone and lacking in power behind the loin. The bitch with puppies is an indifferent specimen, wide in front and coarse in head, so I withheld first prize.

POINTERS.

There were nineteen entries in the dog class, including Beaufort, who was of course not for competition. This grand dog, the best I have ever owned, and undoubtedly the best ever exhibited in this country will, next Tuesday morning, be handed over to Mr. Mitchell Harrison, of the Chestnut Hill Kennels. I never expect to own another like him and I doubt if a better ever lived. Such a grand combination of strength, quality and true pointer character has seldom, if ever, been seen. Beaufort is a dog that the merest tyro in pointer lore can judge and judge rightly. His superb head, wonderful chest, back and loin, free shoulders, straight legs, great bone, excellent feet, muscular quarters, well carried stern and perfect gait put him away ahead of all opponents. Like most large dogs that are good in head and in lips he is throaty, and he has the same defect that old Wagg had, viz., throwing hocks out too far when he walks. These are his only defects, and Englishmen as well as Americans have a nice task before them to breed another like him. England has produced but one Wagg, let us see if America can produce another Beaufort. Pedro, first prize, shows character in head, and has a strong well-knit frame, but his high carried stern and wide front will always put him back when he meets good company. I came very near withholding second prize for want of merit. Castor, who got the award, is very crooked in front and his head is decidedly defective. Ino, equal third prize, is much too leggy and light in limbs, and his muzzle lacks squareness in profile; he is also wide in front and straight behind. Frank, equal third prize, is much better in muzzle and has less width through the shoulders, but his coarse skull and stern and badly sprung ribs brought him down to Ino's level, and I found myself unable to separate them. Bang and Bang Grace were absent, the former probably suffering from the effects of a Philadelphia report, wherein it was stated that Jimmie was a better dog. Fancy a son of old Bang and Luna not being able to beat Mr. Peshall's brown dog. In bitches, Snipe, rather plain in head, light in bone and defective in loin, was first, and Nell, of the same

type, second. Belle II., third prize, would have scored an easy first but for her very defective feet and weak pasterns. She is of far better type than either the first or the second prize winners. Juno, hc., is fairly good in head properties (eyes excepted), but her stilty hind parts won't do for me. Clytie, first in puppies, is much better than the average in neck, shoulders, back, chest, loin, quarters, legs and in feet, but her cutaway muzzle, long coat and coarse stern will prevent her from rising above third-rate company. Spot, second prize, is defective in ears, eyes, stern and in quarters. Ned, third prize, has better head than anything in the class, but his cut-up flanks, defective quarters and very coarse stern prevented him from being placed higher on the list.

ENGLISH SETTERS.

The dog class contained seventeen entries, and Count Petrel repeated his New York victory. Champion Bounce—a bouncing name and no mistake—is a useful-looking dog of native origin. He is defective in skull, muzzle, eyes and in stern, but is strong in body and stands on good legs and feet. Dean, third prize, and of the same type as Bounce, was close at his heels. He has the same defects, and in addition is not quite straight in front, or as strong in loin as he might have been. The rest of the class were useful if not ornamental. Fairy Belle, defective in head and too cloddy for my liking, was a rather easy winner in the bitch class. Empress Eugenie would have been first had she been in good condition. She shows more character and is of better type than any of the others. Tiptoe Rose is too high on the legs, and, like Eugenie, not in good shape. The first and second prize puppies are good in body, legs and in feet, but defective in skull and in muzzle. The third prize winner is defective in head and eyes, but fairly good in body and limbs.

IRISH SETTERS.

New York had sixty entries in six classes, Troy had sixty entries in three classes, and the quality was excellent, especially in the bitch class. In dogs Kenmore, first at New York, came out in great form, and after a sharp tussle with Ned, won. Ned is of beautiful color, but he is wider in skull and muzzle than I like and his left foreleg shows weakness. These defects beat him. Rory O'More, not the old champion, but a son of Glencho and Ruby S., was third. He, too, is wider and flatter in skull than he should be, and his muzzle would be improved by less width; shoulders, legs, feet, chest and back all good and strong. Loin and quarters defective, hocks too straight, gait confined. If Rory, vhc., had been in good condition I would have given him the place occupied by Rory O'More. He is not rangy enough, but has fairly good head, stands on good limbs, has a beautiful flag and carries himself very gaily. Tobey, Jr., hc., is rather wide in skull, not quite right in expression and would be improved by more power behind. His color is superb. Max, hc., is also lacking in head properties. Shaughraun, hc , is straight behind, not quite clean below the eyes, a trifle thick and flat in skull and not free of curliness on the loin and quarters. He stands on first-class legs and feet, has good chest and shoulders and beautiful color. This was a better class than the open dog class was at New York. Bitches were a really good lot of twenty, and it is doubtful if a better lot have been seen together.

After considerable weeding out, I narrowed the competition down to Molly and Red Flash, and these two gave me some trouble. Molly has the best of it in skull, muzzle, eyes, set and carriage of ears, coat, color, quality and character. Red Flash is stronger in loin, deeper in chest, better in legs and feet, and is the more stylish goer. I finally gave the prize to Molly, the decision being greeted with loud and prolonged applause. The winner is by the prince of stud dogs, Old Elcho, and out of Ruby S. Red Flash is by Glencho out of Daisy, litter sister to Laura B. and Zella Glenduff. Molly will be shown at Boston, where I shall expect to see her render a good account of herself. Gliona, third prize, is also a useful bitch. If I pull her to pieces, I find her a trifle wide and flat in skull, not quite clean below the eyes, or sufficiently deep in stop, and rather straight behind. Eily O'Connor and Fan, vhc., are not first-class in head, but are workmanlike looking bitches, and have beautiful color. Maud More, hc., is defective in skull and in eyes. Schweitz, hc., is rather weedy, and not what she should be in loin or in head. Winifred, my first prize bitch with litter, has a lovely head, and but for an accident to one of her hindlegs, would be a very hard bitch to beat. Flora and Jennie, first and second in the puppy class, are of the same type, and if all goes well with them they are certain to be heard from in the future. They changed ownership immediately after the class was judged. There were a number of very promising puppies in this class. Molly did not compete for the special for best Irish setter, therefore Kenmore had a walk-over.

BLACK AND TAN SETTERS.

Of the nine entries in the dog class, Beaumont was far away the best, and with the exception of Royal Duke there is not a Gordon in the country that can approach him in build and true character. I gave second to Don. He stands too high on the legs, has not the proper expression, and lacks the excellent limbs of the winner. The rest were workmanlike-looking dogs. Daisy, first in bitches, is better in head than Belle, second prize, but her shoulders are not well placed. Both are light in bone, but are good in color. Puppies were a poor lot and I withheld all prizes. The second prize bitch with puppies is only moderate, and I fear the puppies, which are defective in head, will never make a mark in fairly good company.

SPANIELS.

The three animals catalogued as Irish water spaniels were brown mongrels, but the field class was a good one. Here Newton Abbot Darkie, good in head, superb in ears, long, low and stout in body, and excellent in coat, won well. He is not as straight in front as he should be, and his hindlegs are rather weak; otherwise he is a grand dog, and must always take a lot of beating. Newton Abbot Lord stands too high on the legs, but is a good dog. Newton Abbot Jubilee is undoubtedly the best bitch in this country. I cannot agree with Mr. Astley, who, in his report of the New York show, says she is long in leg. She is a low-standing bitch, faulty before the eyes. The English judge comes nearer to the mark in his pointer criticism, when he says that Bracket beats Robert le Diable everywhere. Brideford Ruby, vhc., has not good Sussex color, but is long, low and stout. Pat, hc., is defective in head and light in bone. Rus, first in cocker dogs, is fairly good in head, but is short in ears, light in quarters, and stands rather high. Rox, second prize, is over weight, light in bone and defective in muzzle. Mr. Fellows must show something better than Bonanza III. if he hopes to get to the front under my judgment. Bitches were not a strong class; all of the winners are defective in head and light in bone. The best-headed cocker in the show was Zelia, second prize in the class for bitches with litters.

FOXHOUNDS.

Big Frank and Jim were undoubtedly the best of the ten that were shown. Both stand on good legs and feet. Frank, being better in shoulders and carriage of stern than Jim, won. They are of the same type. General Grant, third prize, is much too wide in front, and his shoulders would not do for an M. F. H. Nig and the two Fans are much too light in bone for me.

BEAGLES.

Fitzhugh Lee, who stands on a rare good set of legs and feet, but is defective in muzzle, won, with Royal Krueger, a promising puppy, second. The last named gets his brush up too high and would be improved by more bone. Beauty, third prize, is scanty in coat and higher on the legs than I like; her brush is not at all the thing.

TERRIERS.

Jubilee and My Queen were away ahead of the other bull-terriers, but the latter is not a good one. Defective at both ends, Mr. Dole. Judy, second in the bitch class, is good in body, but short in fore-face and cut away below the eyes. Beaverwyck Tippler, a son of Bacchanal and Blemton Thyme, was *facile princeps* in the fox-terrier class. His head is not first-class, and he would be improved by more substance and strength of limbs. Blemton Lilly is too light in all points and her coat is too short and soft. The class for Skyes and Yorkshires was a good one—twenty-six entries—and I divided it. Kirkella, first in Skyes, is a good-looking bitch. Claymore, second prize, is rather short in back. Fennie, third prize, is defective in head and short in coat. Yorkshires were poor as usual; I have never seen a good one in America. What would our exhibitors think could they see such dogs as Little Kate, Huddersfield Ben, Prince, Mozart, Dreadnaught, Dundreary, Bradford Hero, etc.

PUGS.

Miss Whitney won all first prizes with Young Toby, Victory and Billee. Lillie would have been second in the bitch class but for her suspicious looking nails. Let them be either black or white next time, Mr. Gildersleeve. When the color is worn off just near the tips of the toes it looks fishy, to say the least.

TOY SPANIELS.

An excellent class. Roscius, who has been pretty badly used of late, won first. The reporter for the Chicago Letter Press says he has a grand short face. Been reading FOREST AND STREAM, eh? Two years ago, when I showed a toy spaniel under this same poaching reporter, he refused to give it the prize because it had a short face—(see poacher's letter to FOREST AND STREAM). Well, I'm glad to see these chaps are reading up. King Pippin, not first-class in head and on the large side, was second, closely pressed by Nell, who is not first-class in head and is not in very good condition. Charley, vhc., is large and curly and is only moderate in head.

Below are the

AWARDS.

MASTIFFS.—*Dogs:* 1st, E. H. Moore's Ilford Caution; 2d, F. B. Zimmer's Dictator; 3d, withheld. High com., S. W. Barker's Major and E. Murphy, Jr.'s, Tim. *Bitches:* 1st and 2d, E. H. Moore's Duchess and Lady Beatrice. *Puppies:* 1st, withheld; 2d, A. Quandt's Nero.

ST. BERNARDS.—ROUGH-COATED—*Dogs:* 1st, Miss Anna H. Whitney's Monte Rosa; 2d, Mrs. J. M. Nicholson's Mount Sion III.; 3d, Hospice Kennels' Alvier. Very high com., J. Marshall's Tamtallon. *Bitches:* 1st, J. Marshall's Lady Flories; 2d, Miss Anna H. Whitney's Vesta; 3d, Halfway Brook Kennels' Nutmeg. *Puppies:* 1st, Miss Anna H. Whitney's Vesta; 2d and 3d, Halfway Brook Kennels' Ben Hur and Queen Valentine. High com., J. Meade's Fannie.—SMOOTH-COATED—*Dogs:* 1st, Hospice Kennels' Hector; 2d, Miss Anna H. Whitney's Lodi; 3d, Halfway Brook Kennels' High com. Dr. J. P. Prendergast's Bruno. *Bitches:* 1st, Hospice Kennels' Daphne; equal 2d, J. W. Dunlop's Thisbe and T. P. Davis's Beatrix. Very high com., W. D. Holsopple's Bernie. *Puppies:* 1st and 2d, Halfway Brook Kennels' Katrina and Cato II. High com., A. Phelps's Sidney and W. C. Winnie's Victor III.

NEWFOUNDLANDS.—1st, E. H. Morris's New York Lass; 2d, J. Lewis's Carlo; 3d, T. H. Shields's Harry. High com., A. H. Loeble's Rover. Com., J. Bergmann's Keno.

COLLIES.—*Dogs:* 1st, Oak Shade Kennels' Clipper; 2d, A. L. Hotchkin's Ponto II.; 3d, J. P. Lansing's W. Scott. High com., S. F. Ferguson's Robin Adair VIII. *Bitches:* 1st and 2d, Oak Shade Kennels' Lady Watson and Della Glenlivat; 3d, W. W. Byington's Grace. Com., J. J. Dewire's Collie Nichols. *With litters:* Trojan Kennels' Trojan Curley. *Puppies:* 1st and 2d, Oak Shade Kennels' Lady Watson and Della Glenlivat; 3d, A. W. Powers's Madge. Very high com., Oak Shade Kennels' Ben Franklin. Com., A. L. Hotchkin's Ned.

DEERHOUNDS.—1st, C. Rathbone's Norval; 2d and 3d, Ledgetop Kennels' Garroc and Keildar. Very high com., C. B. McMurray's Bras.

GREYHOUNDS.—*Dogs:* 1st, H. W. Huntington's Balkis; 2d, S. W. Bassett's Tom. *Bitches:* 1st, H. W. Huntington's Cassandra; 2d, F. G. Stewart's Black Bess; 3d, H. L. Whited's Nelson. *With litter:* H. C. Miller's Queen.

POINTERS.—*Dogs:* 1st, R. P. Bainbridge's Pedro; 2d, J. L. Breese's Castor; equal 3d, C. W. Campbell's Frank and C. R. Squire's Ino. *Bitches:* 1st and 2d, A. C. Burt's Snipe and Nell; 3d, J. Pickering's Belle II. High com., E. J. Klages's Juno, R. Ham's Nell and C. R. Squire's Annie May. *Puppies:* 1st, O. T. Warren's Clytie; 2d, G. E. Loeble's Spot; 3d, S. S. Moore's Ned.

ENGLISH SETTERS.—*Dogs:* 1st, Blackstone Kennels' Count Petrel; 2d, B. Van DeKar's Bounce; 3d, P. Kearney's Dean. *Bitches:* 1st, Blackstone Kennels, Fairy Belle; 2d, E. H. Morris's Empress Eugenie; 3d, R. Marshall's Carrie M. With litter, withheld. *Puppies:* 1st, R. Marshall, Jr.'s Nellie; 2d, R. Marshall's Mollie; 3d, J. L. Ayer, Jr.'s Bravo.

IRISH SETTERS.—*Dogs:* 1st, Fort Orange Kennels' Kenmore; 2d, J. F. Wolf, Jr's Ned; 3d, W. H. Warren's Rory O'More of Troy. Very high com., E. Hannon's Rory. High com., J. B. Harper's Tobey, Jr., G. A. Rosa's Max, Miss Hortense E. Ferguson's Blarney F. and Miss Bessie Chamberlin's Shaughraun. *Bitches:* 1st, Dr. C. R. Nicholas's Molly; 2d, M. Gifford's Red Flash; 3d, C. L. Pine's Gliona. Very high com., J. Miller's Eily O'Connor and E. D. Green's Fan. High com., T. Donovan's Elcho II., Waruse & Hamilton's Fluff, E. R. Stephen's Schweitz, W. Leland's Fly and K. A. Barret's Maud More. *Puppies:* 1st, 2d and very high com., E. D. Green's Flora, Jennie and Colonel; 3d, W. Gordon's Dash. High com., R. C. Pruyn's Zulu and Tipperary and Dr. C. E. Nichols's Doctor.

BLACK AND TAN SETTERS.—*Dogs:* 1st, E. H. Morris's Beaumont; 2d, Dr. H. Bender's Don; 3d, J. Patterson's Jack. *Bitches:* 1st, A. B. King, Jr.'s Daisy; 2d, J. Kemp's Belle. *With litter:* 1st, Withheld; 2d, T. F. Sigler's Queen. *Puppies:* Prizes withheld.

IRISH WATER SPANIELS.—Prizes withheld.

FIELD SPANIELS.—1st, 2d and 3d, E. H. Oldham's Newton Abbot Darkie, Newton Abbot Jubilee and Newton Abbot Lord. Very high com., E. H. Morris's Bridford Ruby. High com., R. C. Pruyn's Pat.

COCKER SPANIELS.—*Dogs:* 1st, M. Spellissy's Rus; 2d, E. H. Lavery's Rox; 3d, Hornell Spaniel Club's Bonanza. *Bitches:* 1st, G. A. Cluett's Gipsy; 2d, J. P. Davis's Phylis D.; 3d, R. C. Pruyn's Cora. High com., I. F. Cragin's Lassie. *With litter:* 1st, J. P. Davis's Phylis D.; 2d, M. Spellissy's Zella II.; 3d, W. A. Rosekrans's Belle. *Puppies:* 1st, Hornell Spaniel Club's Hornell Martha; 2d, A. Deihl's Topsey.

FOXHOUNDS.—1st, S. McChesney's Big Frank; 2d, I. N. Wiley's Jim; 3d, J. Brown's General Grant. High com., P. Vaughn's Fan and Nig, and J. Calkins's Fan.

BEAGLES.—1st, W. S. Clark's Fitzhugh Lee; 2d, Hornell Spaniel Club's Royal Krueger; 3d and very high com., Dr. C. E. Nichols's Beauty and Dora. High com., G. F. Rising's Cris.

DACHSHUNDE.—1st, withheld; 2d, F. G. Stewart's Katrina.

BULLDOGS.—1st and 2d, withheld; 3d, M. Ford's Billy.

BULL-TERRIERS.—*Dogs:* 1st, F. F. Dole's Jubilee; 2d and 3d, withheld. *Bitches:* 1st, F. F. Dole's My Queen; 2d, Le Grand Tibbit's Judy. *Puppies:* 1st, F. F. Dole's My Queen; 2d, withheld.

FOX-TERRIERS.—*Dogs:* 1st, C. Rathbun's Beaverwyck Tippler; 2d, withheld. *Bitches:* 1st, withheld; 2d, C. Rathbun's Blemton Lilly; 3d, R. A. Dandaraw's Patti. High com., W. J. Murray's Ruby. *With litter:* 1st, withheld; 2d, J. J. Healey's Nance. *Puppies:* 1st, W. H. Holsopple's Dandy; 2d, J. A. Manning, Jr.'s Flip; 3d, W. M. Francis' Bonnie.

IRISH AND ROUGH-HAIRED TERRIERS.—Prizes withheld.

SKYE TERRIERS.—1st and 2d E. M. Oldham's Kirkella and Claymore; 2d, A. W. Power's Teenie. Very high com., Mrs. J. Van DeBogart's Tiney. Com., S. Knight's Laddie.

YORKSHIRE TERRIERS.—1st, Miss Cassidy's Rob Roy; 2d, J. R. Gildersleeve's Don. High com., H. Snyder's Scotty.

TOY TERRIERS.—1st, J. R. Gildersleeve's Monarch; 2d, Miss R. M. Kennett's Teddy; 3d, Mrs. P. W. Hervey's Flappie.

PUGS.—*Dogs:* 1st and 2d, Miss Annie H. Whitney's Young Toby and Billee; 3d, W. H. Lyon's Zeph Magill. High com., Annie Orr McLean's Sancho Panza. *Bitches:* 1st, Miss Annie H. Whitney's Victory; 2d, J. J. Hooly's Gipsy. *With litter:* 1st, withheld; 2d, Mrs. Maggie P. Thayer's Snub II. *Puppies:* 1st, Miss Annie H. Whitney's Billee; 2d, W. D. Holsopple's Beauty; 3d, S. E. Greenman's Smut. High com., W. Godfrey's Dori. Com., H. Lang's Puck.

TOY SPANIELS.—1st and 2d, W. Phillip's Roscius and King Pippin; 3d, F. F. Dole's Nell. Very high com., J. R. Gildersleeve's Charley.

ITALIAN GREYHOUNDS.—1st and 2d, V. Jones's Betsy and Sealy.

GREAT DANES.—1st, Mohican Great Dane Kennels' Lady Bess; 2d, withheld.

MISCELLANEOUS.—1st, M. W. Reid's Fritz; 2d, withheld.

SPECIAL PRIZES.

Mastiffs.—Kennel, E. H. Moore; dog, Ilford Caution; bitch, Duchess; heaviest pair (two), the same; puppy (three), Nero. St. Bernards.—Kennel, Hospice Kennels; dog, Hector; bitch, Daphne; puppy, Vesta; rough-coated dog, Monte Rosa; smooth (two), Hector. Collies.—Kennel, Oak Shade Kennels; dog (two), Clipper; bitch, Lady Watson; with litter (two), Trojan Curly; puppy, Lady Watson. English Setters.—Best, Count Petrel; dog, the same; bitch, Fanny Belle; puppy, Nellie. Black and Tan Setters.—Best, Beaumont; owned by a Trojan, Daisy. Irish Setters.—Best, Kenmore; puppy, Flora; litter, Winifred; bitch with three of her progeny, C. R. Squire's Colleen Bawn; best of these three, Ned; best shown by a Trojan, Molly. Pointers.—Best, Pedro; dog over 55lbs., divided between Frank and Ino; bitch, Snipe; puppy, Clytie; dog and bitch in Rensselaer county, J. Pickering's Dandy and Belle II. Foxhounds—Best (two), Big Frank; second best, Jim. Beagles—Best dog, Fitzhugh Lee; bitch, Beauty; owned by a Trojan, the same. Bull-terriers—Best (two), Jubilee; puppy, My Queen. Fox-terriers—Best, Beaverwyck Tippler; dog, the same; bitch, Blemton Lilly; owned by a lady, Mary B. Gleason's Fly; brace, Beaverwyck Tippler and Blemton Lilly; litter, Nance. Skye terrier dog, Kirkella; bitch, Claymore; Yorkshire, Rob Roy; toy terrier, Monarch; owned by a lady, Teddy; exhibit, J. R. Gildersleeve. Pug dog, Young Toby; owned by a lady, the same; bitch, Victory. King Charles spaniel, Roscius. Blenheim, King Pippin. Spaniel (two), Newton Abbot Darkie. Greyhound dog, Balkis; bitch, Cassandra; owned by a Trojan, Tom. Deerhound (two), Norval. Newfoundland dog, Carlo; bitch, New York Lass. Bulldog (two), Billy. Dachshund, Katrina. Black poodle, Fritz. Largest entry, J. R. Gildersleeve. Largest dog, Monte Rosa; smallest, J. Taylor's Minnie; homeliest, J. Lothridge's Danger.

CHAS. H. MASON.

MANGE AND PUPPIES.

Editor Forest and Stream:

Don't be alarmed at the above heading and think I am going to treat you to another "infallible," but there is one wrinkle that "Ashmont" gave me that is amazing useful very often. We all know how dogs will scratch a mangy spot, keeping it in a continual state of rawness, and how impossible it is to do anything with the animal while this lasts. There was Nevison, that had a nasty raw spot on his hock, and as he would lick it on every opportunity, it couldn't get well. Now my Lion was always mangy, contracted from the foster mother I had to raise him on, and I was in despair, I would sooner lose a horse than him, yes all the horses I have, and after trying a dozen ways to prevent his scratching his skin raw, I appealed to "Ashmont" for help. I even suggested sending him to a veterinary hospital for treatment, but he put me straight by the simple remedy of making a mixture of equal parts Canada balsam and concentrated carbolic acid, dipping a match in it and anointing a space about 2in. in diameter with the mixture. This fixed him and he speedily yielded to treatment. The idea was that the acid paralyzed the nerves of the skin for a few days and the spot didn't itch, and the dog let it alone, and consequently the healing applications had a fair chance to do their work. This seems to have been discovered by "Ashmont" subsequent to publishing his book, as it is not given there; but many a breeder will find it a boon if he only tries it.

While I am at it let me give my fellow mastiff men another wrinkle, a very old one, but one little known or used. We know how apt bitches are to "lie on" their pups; now really they don't lie on them, but as they will always lie close up against some such support as the sides of the kennel they crush their pups between their sides and the side of the kennel. Now put a strip all around the kennel about 5in. above the floor and projecting out some 4in., the bitch will lay against this, and if a pup is caught behind her it will slip under this unhurt. I very rarely lose a pup since I adopted this plan.

W. WADE.

HULTON, Pa., March 17.

A LARGE ST. BERNARD PUPPY.—Spokane Falls, Washington Ter., March 5.—*Editor Forest and Stream:* Last spring I bought from the Associated Fanciers, Philadelphia, Pa., two St. Bernard pups. The male pup (whelped May 4), after his long and arduous journey across the continent, on his receipt, June 21, weighed 12½lbs. After that he was weighed each week until he was 6 months old, and a record kept. Here is an abstract of the record of weights at intervals of about a month apart: July 26, 23½lbs.; Aug. 23, 49lbs.; Sept. 20, 70lbs.; Oct. 18, 95lbs., and on Nov. 4, at 6 months old, he weighed 109lbs. This was the last weight I had of him. At 7¾ months old he measured 28¾in. in height at the shoulder. Has any one ever seen or heard of a larger or heavier St. Bernard of the age? His markings were perfection; the colors being an exact copy of those shown in a lately published print of old Barry.—F. A. BETTIS.

BEAUFORT.—Mr. Chas. H. Mason has sold his well known pointer champion Beaufort to the Chestnut Hill Kennels, Philadelphia, Pa. We have often said that Beaufort is the best pointer that we have ever seen. His public performances, both in the field and on the bench, are well known to our readers. As a sire he is second to none in this country, the prize lists of many of our principal shows proving that the descendants of this grand dog are able to hold their own in the best of company. Presuming that the Chestnut Hill Kennels are 'going in" for pointers, we congratulate them upon the acquisition of Beaufort, and venture the prediction that with the right sort of bitches bred to him this department of their kennels will add to their enviable reputation as owners of first-class dogs.

CINCINNATI DOG SHOW.—Cincinnati, O., March 19.—The Cincinnati Sportsmen's Club, recognizing the demands of local dog fanciers and the public, has decided to hold a bench show of dogs some time in April. The public, recognizing the magnificent show given by the club in Music Hall several years ago, may feel assured that the contemplated exhibition will be a most interesting one. The prize winnings at the coming exhibition will be of great value, a good support both in entries and also in prizes having already been pledged by different clubs in the East and West. General W. B. Shattuc is president of the club, which fact alone ought to guarantee success.—C. G. NEWSBOY.

AMERICAN BRANCH OF THE O. E. M. CLUB.—*Editor Forest and Stream:* The American Branch of the Old English Mastiff Club has been organized by the election of Dr. J. F. Perry, Boston, Mass., as chairman; R. A. Craig, of St. Paul, Minn., as Treasurer; W. Wade, of Hulton, Pa., as Secretary; and Dr. J. W. Alsop, Middletown, Conn.; Dr. R. J. Aston, Orlando, Florida; James H. Lynch, Detroit, Mich.; E. H. Moore, Melrose, Mass., and A. Gerald Hull, Saratoga Springs, N. Y., as the Executive Committee. Applications for membership may be made to any of the above. —W. WADE (Hulton, Pa., March 19).

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the March number of the *American Kennel Register:*

BEAGLES.

5982. Major, Jas. Gibson.
5983. Pussie, Harmony Kennels.

CHESAPEAKE BAY DOGS.

5984. Lady Chesapeake, W. A. Wheatley.

COLLIES.

985. Annie Wildfire, L. H. Boughton.
5986. Archie, Miss C. M. Teese.
5987. Blink Bonny, J. D. Carpenter.
5988. Burley Bess, Glencoe Collie Kennels.
5989. Buttercup, Hamilton & Warner.
5990. Chieftain II., L. H. Boughton.
5991. Cloe Wildfire, L. H. Boughton.
5992. Daisy IV., B. Mooers.
5993. Dandy II., C. Carey.
5994. Dick, W. A. Seldon.
5995. Don Cæsar, T. I. Hubbard.
5996. Doncleofas, Glencoe Collie Kennels.
997. Don MacGregor, T. F. Emmons.
5998. Duke II., B. Mooers.
5999. Duke of Frederick, H. Trail
6000. Elder, Miss F. Johnston.
6001. Fidelity, Dr. W. Weightman, Jr.

6103. Nancy, L. A. Shaw.
6104. Sheila II., R. G. Shaw.

POACHED REPORTS.

NEW YORK, March 26.—*Editor Forest and Stream:* I fear I have taken much of your valuable space for my report of the Troy show, and consequently feel some reluctance in asking you for more, but the slip-shod reports which have appeared in your Chicago contemporary of late must be handled by somebody. Reporting on that excellent Gordon, Beaumont, the Chicago Letter Press, which never reports a new dog without blundering, unless it has seen a copy of FOREST AND STREAM, says: "Beaumont has a sour expression, is faulty in eye, which is too small, and faulty also in ear, which is too thick in leather, his tan is too light and his coat is very bad, he is also very throaty. Little Boy is much better in eye, ear, legs, feet, coat and general character, and was in better condition. Little Boy's only fault is, he is a little thick in the shoulders; he should have won with several points to spare." When the Letter Press sent its reporter out on the circuit there was a rumor afloat that the paper had been engaged as agent for Mrs. Winslow's Soothing Syrup for infants. The rumor was strengthened when it was discovered that the most influential men invariably owned the best dogs. (Did I hear somebody say, "Who's running for judge next year?")

Here are a few specimen bricks showing how the syrup was administered. The readers of the Letter Press were solemnly told that Mr. Cornell's setter bitch Modesta should have won over Cora of Weatheral in the champion English setter bitch class at New York. The truth is that the bitch should never have been sent to the show. She was in wretched condition and should have been ordered out of the ring. But could Modesta in her best days beat one side of Cora? No. 2. Robert le Diable should have won over Beaufort (this tickled the clique to death), not because he is a better dog, but because Beaufort had the bellyache and 'his back was bowed up to an excessive degree as if in much ain." It wasn't the dog that was in pain, but his back, and when the Broadway firm heard that Beaufort had a pain in his back they rejoiced and swore to a man that the agent for Mrs. Winslow's syrup would judge at the next show held in New York, he having conclusively demonstrated that he is a judge of pain if not of pointers.

Now for facts. The judge ordered Beaufort on to the boards, where Nick of Naso and Robert le Diable were already standing. Beau, who does not like flat-catchers, bared his teeth at Robert and expressed a desire to go for him. Tallman, seeing this, gave one of Beau's lips a squeeze, just by way of a reminder, and no sooner had he done this than the dog's elegant condition vanished from the sight of the eager spectators and all that remained for the judge to examine was a tucked-up, roach-backed dog "entirely out of shape." The funny part of the thing is that notwithstanding the appalling state of affairs the judge, who has owned and bred pointers (the agent for Mrs. Winslow's sprup never did), not only gave the prize to Beaufort, but remarked that the dog won very easily, and that the decision was never in doubt.

The misleading report on Little Boy and Beaumont should have a very soothing effect on the owner of the former, and Dr. Samuel G. Dixon will doubtless exert himself to see that a competent judge is appointed next year. His dog has only one fault, which means that he is more nearly perfect than any dog living, and Beaumont, who is certainly a better dog, is defective all over. Let us see. Beaumont beats Little Boy in muzzle, skull, eyes, ears, shoulders, legs, feet, body, stern, carriage and in coat. Little Boy is not clean below the eyes, is rather full in cheeks, has defective eyes and the wrong expression for a Gordon. His shoulders are very heavy, elbows slightly out, forelegs not quite straight, chest too wide and his coat not nearly as good as Beaumont's, neither has he the correct gait or carriage of stern as seen in Beaumont. Beaumont is lighter in color than Little Boy, but beats him everywhere else. These unreliable reports, written by men who have never owned, bred or exhibited dogs of any breed but English setters, are very expensive reading for the beginner, who naturally enough looks to the sportsman's papers for information and advice.

Catering for the judgeship is one thing. Honest and competent criticism is another. An independent critic is generally an independent judge, and only the latter can go into the judges' ring and stay there. I have seen more judges hanged through toadying to influential persons than from any other cause. The Gordon setters in this country are a seedy-looking lot, and need anybody wonder at it when breeders are told that Little Boy "has only one fault," and that Beaumont, who is his superior in almost every point, is defective all over? One is a really good dog, and if judiciously mated, will do much for the breed in this country. The other is a useful second-class dog, nothing more.

CHAS. H. MASON.

"THE DOG THAT AT THE SHADOW CAUGHT."—Salem, Mass., March 24. One of the most unusual incidents that I have ever seen, is in the shape of a brown spaniel dog's actions on Essex street this city. At first I could not make out the reason for the singular actions of this dog. He would station himself in the street by the edge stone of the side walk, and directly before the entrance of a large store. Making ready at irregular intervals and without giving tongue he would spring on to the walk apparently after something there; but what, I at first could not ascertain. One bright sunny day, however, I found out. The outer doors swing out, and when opened, throw reflections or "jack o' lanterns" on the walk. It was these the dog was so eager to catch. The animal's interest seemed and seems yet unabated. I wish I could tell him how futile his efforts are, and I also should like to know, when, if ever, he concludes to give up the chase, by what course of canine logic he convinces himself that it is something beyond his skill.—X. Y. Z.

CINCINNATI DOG SHOW.—Cincinnati, O., March 23.—*Editor Forest and Stream:* The Cincinnati Sportsmen's Club have found it impossible to get suitable quarters up to this time, in which to hold a bench show, but it has just occurred that one of the very best buildings in the most central part of the city will be vacant until after May 1 and the club at once leased the same, paying an enormous rent from now to May 1, in order to have a place to give the exhibition. The location secured is Nos. 147 and 149 West Fourth street, between Elm and Race. This building is well ventilated and well located and has capacity for 700 dogs. The show will be given April 24, 25, 26 and 27, 1888. Premium lists and entry blanks are now ready. I shall be glad to hear from my friends, who may address me care P. O. Box 718, or they will find me at my office No. 6 East Fourth street.—GEO. H. HILL, Superintendent.

NEW HAVEN DOG SHOW.—*Editor Forest and Stream:* The following gentlemen will judge at the New Haven show: Mr. Chas. H. Mason, St. Bernards, pointers, English, Irish and black and tan setters, fox-terriers, collies, King Charles and Blenheim spaniels, and miscellaneous; Mr. Jas. Watson, mastiffs, Newfoundlands, greyhounds, deerhounds, bulldogs, bull-terriers, black and tan and other terriers, and poodles; Mr. Walter D. Peck, pugs, toy terriers, Italian greyhounds and Mexican hairless; Mr. S. R. Hemingway, spaniels; Mr. N. Elmore, beagles, foxhounds and Basset hounds.—E. S. PORTER, Sec.

BLACK AND TAN SETTER SPECIAL AT NEW YORK.—Forked River, N. J., March 26.—*Editor Forest and Stream:* After going to the expense of entering my dogs and taking the special prize for the best kennel of Gordons at New York, I think I ought to have a true publication of it. I see in FOREST AND STREAM, J. K. Grau, instead of John K. Green, of Pine Grove Kennel, Forked River. Please rectify.—JOHN K. GREEN.

DISQUALIFICATION OF WARREN DISCORD.—New York, March 26. *Editor Forest and Stream:* The Bench Show Committee of the Westminster Kennel Club have disqualified Warren Discord for deafness at the late New York Show.—F. R. HITCHCOCK, Sec.

ENGLISH FIELD TRIALS.—The Kennel Club field trials will begin April 24 near Mansfield. The National Trials will be held the first week in May near Whitechurch, and the trials of the Pointer Club on May 8 and 9 near Wrexham.

A DOG SHOW IN BALTIMORE.—It is reported that Baltimore is to have a dog show this spring. It is reported that it will be under the management of Mr. Swan.

BOSTON DOG SHOW.—There are 1,054 entries for the Boston dog show.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

E. W. R., Taunton.—Feed your puppy a good deal of milk, putting a tablespoonful of lime water in each half pint. Give the following:

℞ Ferri et quin. citrat.....grs. XL.
Div. in pil. No. 12.

Give one night and morning concealed in a bit of meat.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Vim. By N. Elmore, Granby, Conn., for white, black and tan ticked beagle bitch, whelped July 2, 1887, by Bob (imported Ringwood—imported Music) out of Jenny (Flute—Collette).

Seaside Kennels. By Dr. W. F. Spring, Bridgeport, Conn., for his kennels of pointers.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Mena II.—Rock Belton. C. A. Ives's (Bridgeport, Conn.) English setter bitch Mena II. (Belthus—Daisy) to Warwick Kennels' Rock Belton (Yale Belton—Princess Lilly), March 20.

Letter—Tony Weller. C. W. Wilson's (William Penn, Pa.) beagle bitch Letter to Oakview Kennels' Tony Weller (Kino—Fly), Feb. 1.

Guiferne—Bob White. W. C. Kennerly's (White Post, Va.) pointer bitch Guiferne (Randolph's Guy—Lady Ferna) to G. H. Nixon's Bob White (Joker, Jr.—Fussie), March 10.

Polly H.—Paul Gladstone. Mt. Washington Kennels' (Pittsburgh, Pa.) English setter bitch Polly H. (Roderigo—Lit) to their Paul Gladstone (A.K.R. 5799), Feb. 13.

Dashing Novice—Paul Gladstone. Sanborn Kennels' (Pittsburgh, Pa.) English setter bitch Dashing Novice to Mt. Washington Kennels' Paul Gladstone (A.K.R. 5799), Feb. 22.

Belle—Clifford. F. Hoecker's (New York) pointer bitch Belle (Beauvoir—Dawn) to A. Quick's Clifford (Donald—Devonshire Lass), March 20.

Lady Mac—Bob White. G. H. Nixon's (Leesburgh, Va.) pointer bitch Lady Mac (Faust—Gertrude) to his Bob White (Joker, Jr.—Fussie), March 7.

Fussie—Baffler. G. H. Nixon's (Leesburg, Va.) pointer bitch Fussie (Beaufort—Maggie) to his Baffler (Joker, Jr.—Lady Mac), March 7.

Flora—Duke. G. H. Nixon's (Leesburg, Va.) pointer bitch Flora (Dr. Chamblin's dog—Leith's Belle) to his Duke (Joker, Jr.—Lady Mac), March 1.

Lassie—Elcho, Jr. J. B. Blossom's (New York) Irish setter bitch Lassie (Glencho—Sweetheart) to Dr. Wm. Jarvis's Elcho, Jr. (A. K.R. 508), March 22.

Gipsey II.—Mose. Wm. A. Washburne's (Madalin, N. Y.) bulldog bitch Gipsey II. (Boz—Gipsey) to L. Livingston's Mose (Ben—imported bitch), Feb. 17.

Carmen K.—Royal Duke. E. Kline's (Philadelphia, Pa.) Gordon setter bitch Carmen K. (A.K.R. 3970) to W. S. Hammet's Royal Duke (A.K.R. 4678), March 23.

Lonely—Diamond Spark. O. H. P. Belmont's (New York) English terrier bitch Lonely (Spring—Lady Florence) to his Diamond Spark (Diamond—Juno), Feb. 19.

Hops—King of Kent. E. Dexter's (Charlottesville, Va.) imported pointer bitch Hops (Mike—Romp) to his imported King of Kent (Prim—Kent Baby), March 16.

Belle of Piedmont—Count Noble. E. Dexter's (Charlottesville, Va.) English setter bitch Belle of Piedmont (Dashing Rover—Ranee) to B. F. Wilson's Count Noble (Count Windsom—Nora), Feb. 17.

Rance—Dashing Rover. E. Dexter's (Charlottesville, Va.) English setter bitch Rance (Gladstone—Frost) to his Dashing Rover (Dash II.—Norna), Jan. 29.

Bradford Lill—Bradford Harry. P. H. Coombs's (Bangor, Me.) Yorkshire terrier bitch Bradford Lill (A.K.R. 4121) to his Bradford Harry (Crawshaw's Bruce—Beale's Lady), March 19.

Hazel Obo—Doc. Barnes Bros.' (Philadelphia, Pa.) cocker spaniel bitch Hazel Obo (Obo II.—Althea) to American Cocker Kennels' Doc (A.K.R. 3795), Feb. 15.

Belgrave Viola—Lucifer. Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Belgrave Viola (Belgrave Joe—Viola) to their Lucifer (Splinter—Kohinoor), March 18.

Cracovienne—Dusky Trap. Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Cracovienne (Resolute—Fandango) to their Dusky Trap (Dusky Splinter—Spider), March 18.

Gretchen—Lucifer. Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Gretchen (Bacchanal—Marguerite) to their Lucifer (Splinter—Kohinoor), Feb. 17.

Rachel—Lucifer. Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Rachel (Result—Heatherbell) to their Lucifer (Splinter—Kohinoor), March 8.

Marguerite—Lucifer. Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Marguerite (Brockenhurst Spice—Daisy) to their Lucifer (Splinter—Kohinoor), March 6.

Pirouette—Dusky Trap. Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Pirouette (Resolute—Fandango) to their Dusky Trap (Dusky Splinter—Spider), March 8.

Diadem—Lucifer. Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Diadem (Dugdale Joe—Diamond Dust) to their Lucifer (Splinter—Kohinoor), March 16.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Fanny. N. Elmore's (Granby, Conn.) imported beagle bitch Fanny, March 5, six (two dogs), by his Bob (imported Ringwood—imported Music).

Chimer. Hiram Card's (Elora, Ont.) beagle bitch Chimer (A.K. R. 669), March 9, five (four dogs), by his Blue Cap (Blue Cap—Blue Bell).

Luray III. Oakview Kennels' (Philadelphia, Pa.) Irish setter bitch Luray III. (Chief—Leigh Doane), Feb. 29, twelve (nine dogs), by I. H. Roberts's Bruce (Elcho—Noreen).

Hustling Hannah. T. C. Robertson's (Hernando, Miss.) English setter bitch Hustling Hannah (Ben Hill—Zoe W.), March 20, nine (seven dogs), by Wythe Bedford's Bob Gates (Count Rapier—Bell of Hatchie).

Lopsey. Hiram Card's (Elora, Ont.) St. Bernard bitch Lopsey (Priam—Novice), March 1, thirteen (ten dogs), by R. Walder's imported Duke of Albany.

Hebe. F. B. Root's (New Haven, Conn.) cocker spaniel bitch Hebe (Hornell Silk—Belle), March 8, six, by American Cocker Kennels' Doc (A.K.R. 3795).

Fern. E. Cohoon's (Franklin, N. Y.) cocker spaniel bitch Fern (Capt. Stubbs, A.K.R. 5961—Nellie C.), March 11, five (three dogs), by E. L. Hitt's Black Harry.

Vickey. W. F. Ruiter, Jr.'s (Lawrence, Mass.) beagle bitch Vickey (Racer—Vic), March 20, four (one dog), by A. C. Krueger's Cameron's Racket (Rally—Louise).

Soudan. Chas. D. Cugle's (Hartford, Conn.) bulldog bitch Soudan (A.K.R. 5590), March 17, seven (four dogs), by his Merry Monarch (A.K.R. 5589).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Beaufort. White and liver ticked pointer dog, whelped May, 1879 (A.K.R. 694), by Chas. H. Mason, New York, to Chestnut Hill Kennels, Philadelphia, Pa.

Springboy. Orange and white pointer dog, whelped September, 1887, by Springbock out of Flirt, by Dr. W. F. Spring, Bridgeport, Conn., to Geo. R. Hicks, Holyoke, Mass.

Rex. Liver cocker spaniel dog, whelped July 25, 1887, by Harry Obo out of Maud S. II. (A.K.R. 5967), by E. Cohoon, Franklin, N. Y., to Geo. H. Carr, Hartford, Conn.

Grit. Black, white and tan foxhound dog, whelped Aug. 15, 1887, by Ring II. out of Columbine, by H. Card, Elora, Ont., to N. Tompkins, same place.

Gunner. Black and tan foxhound dog, whelped January, 1883, pedigree not given, by H. Card, Elora, Ont., to R. Scott, Crieff, Ont.

Oakview Lad. Red Irish setter dog, whelped Oct. 18, 1887, by Bruce out of Little Nell, by Oakview Kennels, Philadelphia, Pa., to F. C. Turner, Norwich, Conn.

Bruce—Leigh Doane II. whelp. Red Irish setter dog, whelped Jan. 27, 1888, by Oakview Kennels, Philadelphia, Pa., to Wm. Knebler, Jr., same place.

Bruce—Little Nell whelps. Red Irish setters, whelped Oct. 18, 1887, by Oakview Kennels, Philadelphia, Pa., a dog and bitch to Associated Fanciers, same place; a dog to J. H. Tobien, Senaca, Mo., and a bitch to J. F. C. Smith, Groton, N. Y.

PRESENTATIONS.

Bruce—Little Nell whelp. Red Irish setter dog, whelped Oct. 18, 1887, by Oakview Kennels, Philadelphia, Pa., to M. Wunder, same place.

DEATHS.

Boz. White and brindle bulldog, whelped June 13, 1881 (A.K.R. 443), owned by R. & W. Livingston, New York.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

RANGE AND GALLERY.

SPRINGFIELD, Mass.—The Smith & Wesson Revolver Club is doing good work in a quiet way. It was organized in November last, and has a capital range which is much used. Its officers are: President, J. H. Wesson; Vice-Presidents, C. H. Ladd, B. C. Harvey, Frank S. Crane; Sec'y, D. W. Ware; Treas., L. J. Harley. Financial Committee—Ira A. Harvey, Orrin E. Hodskins, Wm. B. Watts. Trustees—J. H. Wesson, Benj. C. Harvey, J. K. Davidson, D. H. Griffin, C. H. Ladd, Frank Crane, B. S. Haskins, L. J. Harley, D. W. Ware. Range Committee—Orrin E. Hodskins, Fred W. Livingston, Charles Stone. Its active membership is made up of employes of the Smith & Wesson armory, and no weapon but the S. & W. is used at the range. The club has adopted as its shooting rules those adopted by the Massachusetts Rifle Association in January last, as follows: The rules governing rifle competitions, so far as they are applicable, shall be in force in all pistol competitions. In all matches, when not otherwise mentioned, either single-shot pistols or revolvers will be permitted upon equal conditions; but if matches call for the revolver, the single-shot pistol will not be admitted unless specially mentioned. Pistols and revolvers allowed in competitions must conform to the following conditions: A—Army or navy revolver. B—Any revolver. C—Any pistol.

A.—Army or navy revolvers must be such as have been adopted by any government for the armament of its army and navy, and must conform in all respects of model, sights and ammunition used, to the service revolver of such nation.

B.—Any Revolver.—Revolvers of any caliber, maximum weight, 3lbs.; maximum length of bore, including cylinder, 10in.

C.—Single-Shot Pistols.—Any breech or muzzleloading pistol, maximum weight, 3lbs.; maximum length of bore, 10in.

Trigger-Pull.—In all matches, or in practice shooting, the minimum trigger-pull shall be 3lbs.

Sights for any Pistol or Revolvers.—The front and rear sights must be open; the notch of a rear sight, to be considered open, must be as wide at the top of the notch as at any part; no aperture or peep sights, nor any manner of covered sights, shall be permitted. Lateral sliding bars or wind gauge may be used on rear open sight, also any elevating front or rear open sight. The use of a notch for a front sight will not be permitted. Sights may be smoked or blackened in any desired manner. No device shall be worn on or over the eye, or on glasses, to secure the sight through an aperture.

Ammunition.—If factory ammunition is called for, it shall be of any make, of any established manufacturer, generally procurable in stores, and brought to the shooting point in unbroken boxes, with the label of the manufacturer intact.

Cleaning.—In any match where both pistols and revolvers are allowed, competitors may clean their arms at will, provided such cleaning does not delay the firing, which shall be at the rate of one shot per minute, or oftener during the firing of each score, except in case of accident. In such case, the time may be extended, in the discretion of the executive officer. In matches confined to revolvers, the cylinder must be fully charged, or a sufficient number of chambers charged to complete the score. Blowing into or cleaning the barrel in any way will not be permitted, except when the cylinder is completely discharged.

Loading and Firing.—No arms shall be loaded except at the firing point, the muzzle of piece being kept in the direction of the target till the arm is either discharged or unloaded. Missfires shall not count; but an accidental discharge shall, in every instance, be scored a shot.

Position.—The position shall be as follows: Standing free from any other artificial support, the pistol or revolver held in one hand only, with the arm extended free from the body, and unsupported in any way. The rear sight of the pistol, or revolver, shall not be nearer to the eye than 12in.

Targets.—The standard American target, full size, having an 8in. bull, shall be used in matches at 50yds. distance. The same target reduced to one-half size, having a 4in. bull, in matches at 30yds. distance. The same target reduced to one-quarter size, having a 2in. bull, in matches at 20yds. distance. The target reduced in the same proportion to distance in matches of a lesser range.

Marking and Scoring.—Unless otherwise specified, each competitor will have a separate target provided, and will fire his score throughout, when the target will be examined by the scorer and the score recorded. In case of any dispute as to the value of a shot, the same may be challenged as provided in shooting rules governing rifle competition.

OTTAWA, March 13.—The annual meeting of the Dominion Rifle Association, held to-day, was more thinly attended than usual owing to the snow blockade preventing most of the members from a distance from being present. Lieut.-Col. Kirkpatrick presided and Lord Lansdowne, Sir Fred. Middleton and Sir. A. P. Caron were present. As usual, the principal business consisted of passing complimentary resolutions to the patrons and officers. Governor-General Lansdowne made a practical reply to a vote for his assistance as patron. General Middleton gave some advice to the association, in acknowledging a vote of thanks to him for the interest he has taken in the society. He wished the Canadian militia would not put so much stress on marching past and saluting, but learn how to fire their rifles. He had received information from England that the detail of drill of the army was to be greatly reduced and more attention given to practical mark shooting. The battles of the future, he felt sure, would be fought at 500yds., and he would sooner have a regiment of fair shots at ranges between 200 and 400yds. than one containing no other marksmen besides a proportion of crack shots. A breeze was created in the meeting by Major Pond, Prince of Wales' Rifles, Montreal, asking for an explanation regarding the complaints against the Quebec-made cartridges. He remarked that at the annual meeting of competitors at last autumn's matches Major Perley, of the Militia Department, had denied the story told by some complaining marksmen that the cartridges are filled by little children. Major Pond read a most emphatic corroboration of the story then denied. He read some of the evidence taken before the Labor Commission at Quebec, which stated that a number of children thirteen and fourteen years of age are employed in the cartridge factory filling cartridges, and that half a dozen of these little laborers have sustained serious injuries owing to the defective nature of the apparatus used. Major Pond remarked that if the cartridges are made by children it is no wonder that they are defective. The matter dropped after the usual promise to have the matter inquired into. It was decided to notify the competitors selected to compose the Wimbledon team that they must send a reply to the secretary for the guidance of the executive committee on or before April 10, stating whether they will be prepared to join the team, and that in the event of any of the selected competitors failing to send such notice the executive committee shall be authorized to fill the vacancies. The Wimbledon team will assemble at Quebec on Thursday, June 21. The annual prize meeting will be held at Ottawa on Monday, Sept. 3 next, and following days, the prize list not to exceed $7,250 in cash.

WIMBLEDON.—The London *Echo* says: "The Wimbledon rifle meetings are hopelessly doomed, and there is no help but to go further afield. If the Duke of Cambridge could let land on building leases beyond the butts, he would soon gain an additional £2,000 a year income, and so the National Rifle Association receives what Lord Wantage describes as a crushing blow. For many years his royal highness has been drawing over £22,000 per annum from the country; we should have thought he would have shown more self-sacrificing patriotism."

SNOW WADDING.—John Rice and William Wagner, of Manhasset, L. I., quarreled recently, and the former was knocked down. Rice then went to his home and returned with a double-barreled shotgun. He leveled the gun at Wagner's head and pulled the trigger. As the gun was discharged Rice fell to the ground. The gun had exploded and shattered his left arm almost to pieces. Rice had, after loading the gun with powder, filled it up from the wad to the muzzle with snow, rammed it down, and the explosion followed.

ST. PAUL, Minn.—Lieut. A. E. Chautier, of Co. C, St. Paul, and Corpl. E. A. Faulk, of Co. A, Minneapolis, shot a 50 shot match at 200yds. on Thursday, the 22d, for the championship of Minnesota. The Hinman target was used. A movement is on foot to organize a rifle club in St. Paul, Minn. and securing a rifle range near the southern limits of the city.

HARTFORD, Conn., March 22.—The rumored sale of the Gatling patent to Great Britain has been current for some time. The statement as printed is (1) that negotiations have been pending for two years and (2) were finally settled last week through the agency of Mr. Frederick C. Penfield, who (3) is said to have sailed for Europe on the Elbe on Saturday. To this it may be said (1) that negotiations have not been pending for two years; (2) that they were not finally settled last week, and (3) that Mr. Penfield did not sail for Europe on the Elbe last Saturday, because he had already been in London for nearly a week. Mr. Penfield came to this city some six weeks ago at the request of an English capitalist, and opened negotiations with Dr. Gatling and the Gatling Gun Company. He received authority to arrange for the sale and transfer of the plant upon certain terms, and he started for London on March 3 on the steamer Fulda, arriving early last week. Nothing has been heard of him since his arrival. The scheme involves the complete absorption of the famous gun, which is so highly regarded by Englishmen because it has been their main stay so many times in South Africa and Egypt. Although an American invention, the English press and the English war correspondents have made it famous. There has been no lighting of recent years by British troops in which good reports have not been made of the "Gatlings," as they are popularly known in the Army. Dr. Gatling will continue his residence in Hartford, being retained by the new company as consulting engineer on a salary for life, he pledging himself to give to the concern any future inventions or improvements of the gun.

OWENSVILLE, Ind., March 20.—Owensville Ballard Rifle Team. Seven members met on the range to-day. The following are best scores made. Conditions off-hand. A strong shifting wind with clouds flying across the range made good shooting difficult, and scores ranged low:

J Montgomery	10	10	7	6	4	7	6	5	9	6—70
W Gentry	10	9	9	3	9	6	5	7	5	4—67
James Daugherty	8	3	6	6	4	9	7	7	8	6—65
R Spick	6	10	6	4	3	6	9	10	6	3—63
W Roberts	6	5	6	8	6	8	7	5	4	6—61
John Stone	4	6	3	10	6	5	7	9	6	4—59
John Daugherty	6	4	5	4	10	7	3	3	5	6—53

J. Montgomery won gold medal.

MONTREAL, March 26.—The challenge which it was reported had been issued by champion Bennett against a French nobleman is directed to Count Mosse, of this city. The challenge came indirectly as follows: Mr. Leach, of the Hamilton Powder Company, has the reputation of being the best pistol shot in Canada, and the Count has for some time past been anxious to test his strength. Mr. Leach objects to shooting in cold weather and promised to accommodate the Count as soon as the weather moderates a little. In the meantime Mr. Leach had written to a friend in Boston about Count Mosse's proposal, and eventually Bennett heard of them and forthwith deposited $100 to bind a match. The only difficulty is that the Count wants to use the duelling pistol, of which he possesses a magnificent pair, while Bennett's weapon is the regulation army revolver. No further arrangements have been made so far. Last fall Mr. Leach gave every facility to Mr. Bennett to make a match for $250 or upward, but the Boston man excused himself on the ground of his engagements with Chevalier Paine, and could only find it convenient to meet Leach then. Mr. Leach promises to again challenge Bennett in the spring, and will use the army revolver. It is altogether within the probabilities that both matches will be shot.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

TRI-STATE CHAMPIONSHIP SHOOT.

CINCINNATI, March 22.—The fifth shoot of the series of seven for the expert diamond climax and the amateur Tatham gold medal, open to all individual shooters in the States of Ohio, Indiana and Kentucky, was shot this afternoon on the grounds of the East End Gun Club, situated at Columbia, four miles north of this city, in weather which for disagreeableness was hardly ever equaled. It blew a gale continually, and half the time a blizzardly snow added to the other disadvantages, the intense cold being the great drawback. In spite of all this there were 44 entries. The result of the shooting proved a great surprise, especially so that in the expert class, barring Mr. J. E. Miller's score, which was not allowed by the managers, Messrs. Al Bandle and John Clemens, owing to his shells not having been loaded with the Belcher loader, which the conditions call for. Instead, he shot the Peters machine-loaded cartridge, and his handsome score of 42 was disallowed. The other experts, Taylor, "Roberts," R. O. Heikes, W. H. Jackson and invincible (?) Al Bandle came along like draught horses among thoroughbreds, the highest scores next to Miller's being 38, made by Heikes and Taylor, which, in the tie shoot-off, was won by the "Old Reliable" Taylor, Mr. A. C. Dick "Richard" did not disappoint the gentlemen who offered odds in his favor in the amateur class, he shooting his same careful and sure gait from start to finish, and that in a manner to be proud of. He has now won the amateur medal three times out of five, the first time on a score of 40, next on a score of 44 and to-day with all the disadvantages against him on a score of 42—certainly meritorious work. Girton, of Franklin, O., in the same class, pulled in second alone with 40 to his credit, and had he not allowed himself to slip up on some very nasty flights, would probably have scored a few better.

Messrs. Cole, Robinson, Joe H., Goldrick, Harris, Bing, Dad, Stuart and Ferris also did well, considering. Comparatively the shooting of the gentlemen in the expert class is hardly worthy of mention, though some good runs were made by Heikes and Taylor during the latter part of their string of 50. Miller outranked them all in that class, and acknowledging the right of the management in making the use of certain shells compulsory, it is almost a pity his score went for naught.

The poor scores made are quite excusable as it was almost the next thing to impossible to face the traps without being blown off one's feet, and there was as much regularity in the flight of the birds as there is in the frisky good feeling spring swallow. Cold! don't mention it, and no hot coffee there to trickle down one's throat to soothe and encourage you—nothing but a greedily surrounded fire in a not over-commodious club house and a very chilly bluff of snow on the outside in waiting. It was a beautiful day to test the shooter's ability with the gun as well as their constitution, and the constitution, I believe, showed up to better advantage than the ability, on an average. E. Taylor won the expert medal, but ashamedly accepted it. Shooters that prefer big wind to do their shooting in were conspicuous for their absence and if present for their silence. Al Bandle's score counted in a telegraphic match with R. E. Sheldon, the leading shot of Cleveland, O., the latter gentleman shooting at Cleveland, O., his score being telegraphed here and *vice versa*. Sheldon scored 43.

The shooting was at 50 single American clay birds, under Ohio State trap shooting rules, 5 traps, unknown angles, officially the birds scored were:

H F Robinson	34	Richard	42
*E Taylor	38	Girton	40
Dad	36	W Warwick	30
Wick	28	P Kessler	26
Jack	32	Snider	24
A W West	26	*J E Miller	42
*Roberts	30	S Harris	33
Joe H	33	F Ferris	34
T Goldrick	35	C Briggs	30
W Morwick	33	Whitney	23
Cole	36	J Schatzman	32
Stuart	36	Langdon	27
*R O Heikes	38	Bing	36
*W H Jackson	37	*Al Bandle	29
Lefever	31	Ben D'Or	22

O'Shaw	26	S R Robertson	26
F Krug	29	Wickersham	30
L S Graham	30	H E Peter	31
W O'Neil	23	E Taylor, Jr	28
B Naples	29	A Democrat	16
R Naples	20	O B Donahue	17

*Denotes expert class.

A. C. Dick (Richard) won the amateur medal for the third time.

R. O. Heikes and E. Taylor having tied for the expert diamond medal, they shot off the tie, with the following result, at 10 single birds:

Taylor	1110111111—9	Heikes	1011110101—7

J. E. Miller shot a 10lb. 10-gauge L. C. Smith and used Peters's cartridges, loaded with 4¼drs. King's quick shot No. 2 and 1¼oz. Tatham's chilled No. 8 shot. E. Taylor a 9¼lb. 10-gauge L. C. Smith, loaded with 3¾drs. L. & B. powder and 1¼oz. Pittsburgh No. 8 chilled shot. Richard a 9¼lb. 10-gauge Parker, loaded with 4¼oz. Tatham's chilled straight 8's.

Time of shooting four and a half hours. Trapper and referee, Kelly; official scorer, C. F. Weil, of Detroit, Mich.

A sweepstake at 10 single birds, entrance $1, followed and resulted:

Heikes	7	Roberts	5
Dad	7	Richard	8
Schatzman	5	Joe H	6
Warwick	5	Marwick	5
Bandle	7	Taylor	7
Goldrick	7	Briggs	2
A W West	9	Ferris	3
Jackson	6	Bling	5
Cole	9	Wick	2
Robinson	4		

Cole and West divided first money; Richard took second; Heikes in shoot off won third.

The following special telegram tells the Sheldon score at Cleveland in full:

CLEVELAND, March 22.—R. E. Sheldon's score in the telegraph shooting match with Al. Bandle is as follows, he making 43 out of a possible 50: 0011111111111111111111111111111111111111111111111111111111111—43. The wind blew directly across the range and snow fell at intervals.

A NEW YORK SHOOTING GROUND.

Editor Forest and Stream:

A few gentlemen who have found much pleasure in trap shooting, and being familiar with many of our local clubs, have noted many difficulties and hindrances in the full enjoyment of this sport, propose to form an organization to afford sportsmen of New York and vicinity every facility for enjoying trap shooting at the lowest possible cost.

It is proposed to form a stock company of 100 shares at $50 per share, to lease ground suitable for running three sets of traps, erecting a comfortable club house and grand stand, fencing etc. A desirable ground is offered within 18 minutes ride from New York, 30 minutes from City Hall, less than 100yds. from the depot, where trains stop about every 30 minutes; round trip fare 15 cents. Such a ground, thoroughly equipped with every improvement and convenience, where any gentleman could obtain shooting at small cost, either artificial targets, live birds or rifle practice, would prove very attractive to shooters and pay the stockholders well. This ground would soon become popular with experts in shooting exhibition matches, and gate receipts would be large.

All betting or gambling of any kind to be prohibited within the shooting inclosure, club house, grand stand or entrances thereto. Perfect order maintained by an efficient set of officers. The fair sex welcomed and interested in the sport, and everything done to elevate and improve the standard of this amusement.

During 1886 about 200,000 artificial flying targets other than glass balls were sold in New York city. In 1887 about 1,00,000, and in the neighborhood of 60 new clubs were formed. From present indications the sale of artificial targets in New York will probably reach 1,500,000 or 2,000,000 in 1888. This shows great increase of interest in this sport. These substitutes for live birds have now been brought to such perfection that they have clearly come to stay.

There are thousands of shotguns now owned by sportsmen in New York city. Most of these gentlemen have but little time to spend in the field, and when they go hunting they desire to be able to make a good bag of game. To obtain sufficient practice to attain this end is difficult and expensive about New York. Thousands more would own guns and shoot if they could have sufficient practice near home, to enable them to become expert shots at small cost and little waste of time.

Local clubs already formed accomplish this to some extent, but in no way to compare with a thoroughly equipped association under good business management, that could furnish shooting facilities at any time he pleased.

Many clubs as generally formed soon degenerate into a mild species of gambling, and develop cliques, often bringing this fine sport into bad repute.

But few expert matches are shot about New York, because no suitable ground is within easy reach where sufficient number of people can attend to make gate receipts an object, and many persons do not attend such exhibitions, fearing to meet with an attendance made up of sporting men instead of sportsmen.

I lay this matter before you for publication, hoping to call forth the views of your readers on the subject, and if the scheme meets with much favor shall proceed to look up parties who are willing to help put it through.

It seems to me that New York city should have a ground where such sport could be enjoyed to its fullest extent. BEDFORD.

NEW YORK, March 22.

LOS ANGELES, March 18.—Dr. Carver was defeated here to-day before a large company assembled at Agricultural Park to witness the pigeon match between him and Martinez Chick, of San Diego. The match was at 100 live birds each, 30yds. rise, 80yds. boundary, Hurlingham rules, for a purse of $500. James C. Wood was chosen referee and H. T. Payne score-keeper. Dr. Carver had only arrived from San Francisco on the morning train, and was complaining of a severe pain in his chest. Notwithstanding the injunction of his physician, he went to the score, remarking that he would shoot as long as he could, at any rate. Mr. Chick was in his usual good form. Dr. Carver used a 12-gauge Greener gun, 7½lbs. weight, shooting Carnock shell loaded with wood powder in the right barrel and black powder in the left. Mr. Chick shot a Daly gun, 10-gauge, 9½lbs., paper shells, black powder in both barrels. The match was a very fine one, and the birds a reasonably fair lot. The sportsmen were delighted with the excellent shooting, and the vast crowd that had assembled to witness it were well pleased and returned home full of complimentary expressions for both contestants and their wonderful skill:

Chick	01111	11111	11111	11111	11111	
	11110	10111	10111	11111	11111	
	11111	01111	11111	11111	11111	
	C1111	10101	11111	11101	11111—91	
Carver	10101	11110	11111	11111	11111	
	11011	11111	11111	11111	11011	
	11111	11101	11101	11111	10111	
	11111	10111	11111	11011	11011—90	

Chick killed with the second barrel 23 times; his largest run was 28. Carver killed with the second 17 times: his largest run was 19. Carver had two birds fall dead out of bounds.

Martinez Chick, who made such a capital performance, was born in San Joaquin county, Cal., on the 22d day of August, 1859. He came with his parents to Los Angeles in 1872 and resided here until 1879, since which time he has made his home in San Diego, although spending nearly as much of his time here as there. The first match that Mr. Chick ever shot was in the spring of 1885, at Agricultural Park, and against Mr. James Cheatham, of San Bernardino. The match was at 50 clay-birds each, and was won by Mr. Chick with a score of 41 to Cheatham's 31. His next match was with Mr. Crittenden Robinson, also in this city, in May, 1886, at 100 live birds, Hurlingham rules. In this Mr. Robinson defeated him with a score of 85 to Chick's 79, though Mr. Chick had 9 birds fall dead out of bounds. His third match was at San Bernardino, in April, 1887, with Mr. Gus Knight, at 100 live birds, defeating Knight by a score of 88 to 86. Mr. Chick is also the winner of the champion badge of southern California, which he wrested from twenty contestants at San Diego, with a score of 23 out of 25. Mr. Chick is a powerfully built man, carrying no superfluous flesh, enjoying perfect health, and therefore able to endure the punishment of 200 or 300 shots without the least inconvenience. The score that he made to-day is believed to be the best ever made in the State under Hurlingham rules. Thus Martinez Chick, but 28 years old, with only the experience of four matches, stands at the head of the long line of California shots with a record of 91 clean kills.

READING, Mass., March 21.—About 40 members of the several local gun clubs assembled at the range of the Reading Gun Club to-day to participate in several events. E. F. Brooks presented a pair of camel's hair blankets to the Reading Club to be given to the one who made the best score in shooting 5 blue rocks, 5 clays and 5 Peoria blackbirds. D. H. Moore was the winner of these events with a clean score. The other 17 events resulted as follows: 1. Five clays—Connell first. 2. Five Peoria blackbirds—Saugus, Killam and Davis first. 3. Five Peoria blackbirds—Moore and Connell first. 4. Five clays—D. Kirkwood first. 5. Five blue rocks—Connell first. 6. Ten clays—Adams first. 7. Ten Peoria blackbirds—Moore first. 8. Five blue rocks—Drew first. 9. Five clays—Adams first. 10. Five Peoria blackbirds—Moore and Kirkwood first. 11. Five clays—Adams first. 12. Five Peoria blackbirds—Killam, Linn and Kirkwood first. 13. Five blue rocks—Moore first. 14. Five clays—Adams first. 15. Five straightaway clays—Adams and Linn first. 16. Five clays—Linn first. 17. Five Peoria blackbirds—Moore and Drew first. The scores in the fifth, sixth and seventh events count for the Boston Gun Club prizes, the winners standing in the following order: Adams first, Moore second, Connell third, Tuttle fourth, D. Kirkwood fifth, Drew sixth, Linn and Jones seventh, Eames, Buck and Loring eighth, Saugus ninth, Willis tenth. The last and final round in the tournament for prizes will be shot on the grounds of the Boston Gun Club at Wellington.

NICHOLS VS. TREVOR.—Country Club, March 19.—There came off an exciting struggle before the traps here to-day, between crack amateurs, and it was brought about as follows: A few days ago your paper chronicled the victory of Mr. Allan Nichols over Mr. ("Lightning Harry") Trevor, the English artist and hunting man, in the match for the winter cup, at this club, and also announced his permanent retirement as a pigeon shooter, that is as "trophy defender" of his club. Mr. Nichols assured your correspondent that he had been "dragged" into the recent matches and that he earnestly desired to be permitted to enjoy the seclusion afforded by the cabin of his steam yacht. "At the same time," said he, his blue eyes smiling, "I am an American, and should my country elect me to preserve her omnipotence in the field, I should proceed to try conclusions just once again with Mr. Trevor, from across the water, solely because he is disposed to criticise the 'fairness' of something, I have not learned what, connected with our late contests." As a result the match of to-day was arranged, Mr. Nichols's friend, Ellis Livingston, offering the gold cup won by him in 1876, at Hurlingham, Eng., to the winner, *en souvenir*. The grounds of the club were picturesque, a dozen ladies on the club house veranda assisting the "artistic effect." About fifty club men were present, among them two celebrated yachting noblemen now visiting Mr. Nichols. Mr. Nichols has shot big and little game in nearly every country on the globe, and scorns "practice," but Mr. Trevor was on the ground early, with friends, exhibiting his remarkable prowness with the gun. Heavy wagers were the order of the day, and Mr. Trevor was the favorite in the betting, the reasons being Mr. Trevor's really wonderful shooting in practice, and the fact that Mr. Nichols has scarcely done any shooting lately. Five to four was laid on the Englishman's ability to win; Livingston and Winthrop, however, accepted all bets against Mr. Nichols, who had many friends, despite his lack of practice; one well-known youngster, of a contemplative turn, backed him in hundreds because he "looked a winner." An old world aristocrat was referee, while the judges were: For Mr. Nichols, Ellis Livingston; for Mr. Trevor, a cousin of Mr. Nichols's. Col. DeRosney, of Paris, a thorough sportsman. Old Brown handled the traps. Mr. Nichols's handsome setter Royal retrieved the birds. Your correspondent kept the score and Mr. Lyons "kept the watch." The conditions were nearly the same as in the previous matches, 50 birds each, 30yds. rise, Monaco (21yds.) boundary. It was stated that a private wager of $1,000 each was entered into by the contestants just before the match, but, being "sportsmen," not "sporting men," they refused to verify the report. Mr. Trevor shot with a Parker gun, Mr. Nichols used a Greener hammerless, both weighing about 8lbs. The toss was won by Mr. Nichols, who elected to shoot first, and the great match began. Appended is the score:

Allan Nichols....1111111111111111111121101112211111111110111111—48
Harold Trevor...1111011111121111111102211211211111111101212112201—46

In the evening Mr. Nichols entertained a large number of the gentlemen on his new steam yacht. He will leave about the last of April for a cruise to Europe, en route to the big game.

WELLINGTON, March 21.—The severe rain storm to-day did not prevent a large attendance at the all-day shoot of the Wellington Club, fully two score of gunners being present from the several gun clubs of New England. The events of the day were the contest for the Climax diamond badge, which was won at the last shoot by H. W. Eager, of Marlboro, and the team match for the Massachusetts Association challenge badge. F. Swift, E. T. Smith and Gilman tied with 17 each for the Climax badge, but as Gilman and Smith left the ground without shooting off the tie, Swift won it by breaking one bird. The team badge was won by the Wellington team, the conditions being 5 men to a team and 20 birds per man, 10 blue rocks and 10 clay pigeons. The Worcester team was second and the Massachusetts Rifle Association third. Following are the winners in the sweepstake matches: 1. Six blue rocks—Moore, Smith and Dickey first. 2. Six clay pigeons—Schaefer, Hall and Stanton first. 3. Six blue rocks—Wheeler first. 4. Six clay pigeons—Schaefer, Wurms and F. Swift first. 5. Six blue rocks—Dickey first. 6. Six blue rocks—Stanton first. 7. Six clay pigeons—Bond, H. Swift and Wheeler first. 8. Three pairs blue rocks—Eager, Dickey and Longley first. 9. Six blue rocks—Allen first. 10. Ten blue rocks, badge match—Schaefer first. 11. Six blue rocks—Renard, Eager and Beaudry first. 12. Six blue rocks—Snow first. 13. Six blue rocks—Wheeler, Smith and Snow first. 14. Twenty birds, sweepstake in team badge match—H. Swift first. 15. Ten clay pigeons, badge match—Renard and Weld first, Dan second, H. Swift, Dickey and Chase third, Wheeler fourth. 16. Ten blue rocks, badge match—Schaefer first, F. Swift and Gilman second, Dan H. Swift and Bill third, Eager fourth.

Following are the best scores made in the climax diamond badge contest at 10 blue rocks and 10 clay pigeons:

Eager	0010111110	1111111011—15
Wheeler	0111111011	1011011110—15
Dan	1111001101	1101111111—16

March 24.—There was a large attendance at the grounds of the Wellington Club to-day and some good scores were made in the merchandise match. In this match points were scored as follows: Shumway and Snow first, with 16; Bird and Bill second, with 15; Schaefer third, with 14; French and Moore fourth, with 13; Swift, O. B. Sanborn and Melcher fifth, with 12; Stanley and Brown sixth, with 11; Bowker, Green, Dan, Frank, Garfield, Scott and Chase seventh, with 10, and Stanton and Phelps eighth, with 9 each out of 20 birds. Eleven sweepstake matches were shot.

MINNEAPOLIS.—The fifth annual tournament of the Minneapolis Gun Club will be held on the new grounds of the club, corner of Bloomington avenue and Thirty-eighth street, May 23, 24 and 25. Open to Minnesota, Wisconsin, Iowa, Dakota and Manitoba, professionals barred. It is confidently expected that this tournament will call together the largest number of Northwestern sportsmen in the history of the club. There will be about twenty prizes for best averages to those who shoot through the three days. The first few averages will be cash. It is the design to make every average worth shooting for. The programmes will be issued about May 15. The club officers are: President, M. Whitcomb; Vice-President, E. Ensign; Treasurer, H. Krueger; Secretary, F. C. Lawrence, Box 846, Minneapolis.

LEAVENWORTH.—Record of scores made by the following members of Leavenworth Gun Club March 24, at 5 live birds:

C C Gratz.....021002—3 J W Sexton.....210022—4
G W Goff.....222012—5 F Patten.....101220—4
A C Girard.....001220—3

Goff first money.

Five Peoria blackbirds.

G W Goff.....11111—5 A Girard.....00010—1
J W Sexton.....10101—3 McCarten.....11111—5
Dunken.....00100—1 Patten.....00011—2
Gratz.....10101—3

Goff and McCarten divided money. The club will call a meeting soon to reorganize, and would like all sportsmen in the city to correspond with the secretary. Applications for membership can be mailed to J. W. Sexton, Secretary Leavenworth Gun Club.

OMAHA, March 17.—H. B. Kennedy and S. Randal shot a live bird match, 25 birds each, modified English rules, for $50 a side, at the gun club grounds this afternoon, Kennedy allowing Randal eight dead birds. The score:

Kennedy.....1111111011111011101011111—21
Randal.....1111111101111011111011111—23

After this they shot two five bird matches for $10 a side, Randal winning both.

CINCINNATI, O., March 21.—Between two hundred and sixty and three hundred spectators and shooters assembled at the Independent Gun Club grounds yesterday, March 20, to see W. E. Limberg (Wick) and Joe H. meet in a match at 50 pair of American clay birds each for $25 a side. The match was shot under National Gun Association rules, 16yds. rise, birds sprung from traps Nos. 1 and 2. After considerable outside betting, the match opened with Joe H. at the score at 2:20 o'clock, E. Taylor acting as judge for Joe H. and F. Becker for Wick, both judges agreeing upon Mr. Wm. Huntington, one of Cleveland's best shots, as referee. It would be difficult to select a more disagreeable day for shooting, the puffy, gusty wind at times amounting almost to a gale. Wick was in prime condition, as was evident from the way in which he reached for the red saucers, while Joe H. seemed to be off in his judgment and was perceptibly out of shape. Both were applaudded whenever a fine snap shot was made, but the winner depended more on his gun and judgment in calculation than in snap work, frequently breaking his birds when it seemed impossible to do so. The shooting was fast and furious, and it was found necessary to have a running mate to bring about an intermission in which to allow the guns to cool off, and Mr. Huntington was selected, and did his first shooting at American clays, making a very creditable showing at twenty-five pair. At the finish Joe H. gracefully acknowledged his defeat, and immediately challenged the winner to shoot the same race upon his return to this city in May. Wick used an L. C. Smith 10lb., 10-gauge 30in. hammer gun, and used Bardle shells loaded with 4 drams Laflin & Rand FFF powder, 1¼oz. Pittsburg chilled No. 8 shot. Joe A. a 9¼lbs. 10-gauge Parker, load used not known. Appended are the scores made:

Wick.	Joe H.
10 10 10 11 11 10 01 11 10 01	00 01 11 00 00 10 11 00 00 10
11 11 00 10 11 11 01 11 11 11	11 11 10 11 11 01 01 11 11 10
10 10 11 01 00 11 01 11 10 10	00 00 11 10 10 11 11 00 00 01
00 01 11 11 11 10 10 11 11	01 00 00 11 10 11 10 00 11 11
11 11 11 10 11 11 11 11 11 11—75	11 11 10 11 10 11 01 10 10 01—56

Time of match, 35 minutes. Longest straight run, Wick 11, Joe H. 6. Dutch doubles (pairs missed), Wick 3, Joe H. 12. Judges—For Wick, F. Becker; for Joe H., E. Taylor. Referee, W. Huntington.—C. G. NEWSBOY.

BREWER ABROAD.—John L. Brewer, the champion live pigeon trap shot, met Edward L. Norfolk, the English champion, in a match at 100 blue rock pigeons for £100 ($500) a side on Monday, March 19 at Mr. Bull's (Chippy Norton's) shooting grounds, near London. Brewer stood at 33yds., Norfolk at 30, otherwise the conditions were Hurlingham rules. The betting was in favor of Norfolk. At the start Brewer was four birds behind his opponent, but soon took the lead and won easily by a score of 65 to 59. Only 95 birds were shot at, Norfolk shooting himself out and abandoning the contest.

ABILENE, Kas.—The match between Capt. Borgardus and W. T. Irwin, of the West, having been arranged for April 12, and Abilene, Kas., being agreed upon as the meeting point, the gun club here have arranged for a tournament in connection therewith, the dates selected being April 11 and 12. Sportsmen from all parts of the State have signified their intention of being present.

"WICK"—WEST.—Cincinnati, March 24.—Capt. A. W. West, of Parkersburg, West Virginia, who some three weeks ago defeated W. E. Limberg ("Wick"), of this city, in a double bird match, obliged that gentleman with a return match yesterday, and suffered defeat, Wick scoring 36 out of his 24 pair to the Virginian's 35. The shooting took place on the old Avenue Ball Park grounds, which was already covered with a thin layer of snow as the two principals and their score of friends arrived. There was little or no wind blowing, but a heavy snow continued falling throughout the match, making the second rise quite difficult to see. The captain, at the finish of the match, challenged his opponent to another match at 50 pair birds for $50 a side, which was accepted and is to take place the later part of next month. Yesterday's scores, 24 pair American clay birds, 16yds. rise, birds thrown from traps Nos. 2 and 3, National rules governing:

A W West.....10 11 10 11 11 11 10 10 11 10 10 11
10 11 10 10 10 11 11 11 01 10 11 10—35
Wick.....10 11 00 10 10 11 01 11 11 11 10 11
11 11 11 01 10 11 11 10 01 11 11 10—36

Both used 10lb. 10-gauge L. C. Smith guns; West a hammerless.—C. G. NEWSBOY.

PERTH AMBOY, March 24.—The new Mystic Gun Club has been organized with 5 charter members and membership limited to 12, all to be under 24 years old and single; the club has adopted the blue rocks for their monthly shoots. The Mystic Gun Club is ready to meet three members under 24 years old of any club in State at flying inanimate targets; not live birds. The first shoot to-day resulted in the following scoring at 18yds. rise:

G Parnell.....1111011000111111—11 H Smith.....0111100010101111— 9
S Tuttle.....0111111010111111—12 J Hartung.....1001010010111101— 8
L Van Horn...0001101010000011— 6

RIVERTON GUN CLUB, March 20.—A live pigeon match took place this afternoon, at the Riverton Gun Club grounds, between Messrs. Dando and Downing, of the Riverton club; the conditions were 200 birds each, Riverton Gun Club rules; 5 traps, 30yds. rise, 50yds. boundary, use of both barrels, 7¾lb. guns. Mr. Dando shot in extraordinary form, making a great straight of 40 birds, and winning the match by a score of 169 to 153. The birds were not an exceptionally good lot, and Mr. Downing was unlucky in getting a majority of the hard flyers.

MONTREAL GUN CLUB.—Montreal, March 17.—*Editor Forest and Stream:* In Your issue of March 15 I notice an account of the meeting of the Montreal Gun Club. I wish, as a member of both the Montreal and Dominion gun clubs to correct the statement "that the split was between the French and English members." Such is not the case. French and English sportsmen belong to all Province of Quebec gun clubs, and both nationalities work harmoniously together to promote the interests of gun and trap.—NEUTRAL.

CARO GUN CLUB.—Caro, Mich., March 19.—At the recent meeting of the Caro Gun Club, of Caro, Mich., the following officers were elected: President, B. F. Harris; Vice-President, Norman Lester; Secretary, J. R. Mason; Captain, G. W. Smith. Directors: B. F. Nettleton, J. H. Howell, F. H. Baillie. Treasurer, W. O. Luce, Jr.

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neide. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

WESTERN CANOE ASSOCIATION.

Commodore—James Fanning Latham, Chicago, Ill.
Vice-Commodore—J. R. Bartlett, Fremont, Ohio.
Rear-Commodore—T. J. Kirkpatrick, Springfield, Ohio.
Secretary-Treasurer—Geo. A. Warder, Springfield, Ohio.
Executive Committee—H. G. Burridge, Dayton, O.; C. F. Pennewell, Cleveland, O.; C. J. Bousfield, Bay City, Mich.

The annual meet for 1888 will be held at Ballast Island, Lake Erie, July 7 to 23. Regatta begins Tuesday, July 10.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON.....} Albany, N. Y
Secretary-Treasurer: F. L. MIX.....}
Vice-Com. *Rear-Com.* *Purser.*
Central Div..R. W. Bailey.....W. R. Huntington.....J. K. Bakewell, 110 Diamond St., Pittsburgh.
Atlantic Div. Henry Stanton...A. S. Pennington, E.W. Brown, 146 B'way, N.Y.
Eastern Div...L. Q. Jones.....Geo. M. Barney...W. B. Davidson, Hartford.
N'thern Div...A. D. T. McEachen, W. G. McKendrick, S. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Central Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

ON A SHALLOW STREAM.

WHA'T! Another turn?
Well, I declare.
'T seems but a moment ago I was there:
And another snag, by Jove!
Just like the one in yonder cove.

Yes, I'm in a fix;
Stones, sand and mud,
Are struck by paddle with a thud.
D'ye see that pine on yon tall hill?
Passed it an hour ago, it's near me still.

Tho't I'd explore
'Twixt shady tree and mossy bank—
Hello, what's that you say! Crank?
Well no, but what a card—
Two turns in every other yard.

There's that canoe,
Draws but two inches, nothing more;
Sharp of prow, flat of floor;
Yet each sand and gravel bar,
Jumps to meet her with a jar.

Wait. One more push.
Steady now: There! Scra-eep;
Well, here's luck, it's deep—
Another gravel bar? You Jade!
Confound it, now I'll have to wade.

Wallace H. Johns in Trenton Times.

THE ATLANTIC DIVISION MEET.

THE committe on camp site has investigated several of the proposed locations, but it has been impossible to judge of a place when covered with snow and ice, and no selection will be made until the weather will permit a more complete survey. The most promising site thus far suggested is in Manhasset or Cow Bay, at Plum Beach, just inside of Sands Point on the north shore of Long Island. The bay will give a good sailing course, there is a hard sand beach, the village of Port Washington is three miles distant, while the distance from the Battery, New York, is but twenty-one miles, so that it is within a day's journey of Staten Island, Newark, Yonkers (via Spuyten Duyvil Creek) and Brooklyn. A visit will be made to the proposed site as soon as the snow and ice has fully disappeared. The following letters suggest other sites, but for this year at least it would not be possible to go far from New York. The beautiful waters of the Chesapeake, however, are comparatively unknown to canoeists, and we hope that the new division will be strong enough before many years to hold a large meet there or on Delaware Bay. In the meanwhile canoeists near these waters must remember that by their membership and voice in the division, if not by their presence at the meets, they can hasten the extension of the meets.

Editor Forest and Stream:

Allow me to mention the advantages of South Amboy for the meet as suggested by "Queen Bess."

Everybody has heard of Cheesequake Creek, to be sure it is not of much use, but it will float a canoe, or sink a good appropriation, and it is a good place for a camp. On each side a bluff with plenty of trees, good water, an ice house near, a mile from South Amboy, but a small station, at which two or three trains stop, is on the bank of the creek. A sandy beach along the bay about half a mile, though a small dock or float in the mouth of the creek would be better for landing, the water being shallow, the tide goes out for a considerable distance. One hour from New York by New Jersey Central or Pennsylvania R. R. Daily boat from New York to South Amboy. Staten Island R. R. to Perth Amboy, two miles across the bay. Daily propeller from New York to Baltimore through the Raritan Canal, which the men from Philadelphia and Trenton could take advantage of. The land is not cultivated upon which the camp might be held, and I feel reasonably sure that I can make arrangements for necessary permission. "Seneca" can tell you about it; he has made it his stamping ground, and has his cruiser in the water there now. If the results of the late unpleasantness disappear in time we will get some photographs which will show you the lay of the land. I will be glad to get any information which the camp site committee may desire, but would like better to have them look the place over.

PERTH AMBOY, N. J., March 18. F. W. KITCHEL.

Editor Forest and Stream:

I have read the letter of "Queen Bess" in regard to a site for the Atlantic Division meet with much interest, and would like to point her majesty to a very desirable site in the locality mentioned. At or near the mouth of the Shrewsbury River, about half way between the Highland Lights and Sandy Hook, is a very good site for the meet. There are steamboats from New York to Sandy Hook several times a day; also steamers twice a day from New York to the Highlands, close by; it is only about twenty miles from your city; and it can be easily reached from Philadelphia by the New Jersey Southern Railroad to Sandy Hook, or by the Camden & Amboy Railroad to South Amboy, and thence a short and pleasant sail across Raritan Bay. The shores of the bay, where the Shrewsbury River comes into it, afford many delightful spots, one of which is an island (locally known as Island Beach) very frequently used by canoeists from Red Bank and vicinity. The island may not be large enough, perhaps, to comfortably accommodate 200 canoeists, but the locality is worth investigating. Although I am not yet a member of the A. C. A., I am interested in the success of the Atlantic Division, and I reside on the Shrewsbury River and am familiar with the locality I speak of. I hope these facts may be taken as my apology for offering advice.

RED BANK, N. J., March 15. SHREWSBURY.

Editor Forest and Stream:

I agree with "J. A. B." on the subject of a meet on the Delaware. Not only is the point proposed at Rancocas Creek easy of access and a splendid camping site, but the influence of a division meet would be very beneficial to local clubs and canoeists.

The canoeists in and about Philadelphia need a general stirring up and a meet would do a great deal toward wakening their latent energies and the A. C. A. would undoubtedly gain many members. SQUID.

PHILADELPHIA, Pa., March 16.

Editor Forest and Stream:

In response to "J. A. B.'s" article of the 3d, in your issue of the 15th, I would say that the Washington C. C. has in prospect a meet at Mt. Vernon Springs, 14 miles below the city, the last week in May. This could be postponed if the Atlantic Division should chose to honor us with a visit at any time this summer. This spot has a fine pavilion and spring, good camping grounds, wide water for sailing, steamboat connection daily with city, adjoins Mt. Vernon (in charge of one of our club), and everything but a hotel and neighbors, could be selected, or one opposite with the same advantages, including a store, a pleasure resort, and plenty of neighbors, or any one of half a dozen other situations within a radius of 8 miles of Mt. Vernon could be selected if fresh water would suit. If salt water is wanted we must needs go about 40 miles down, where you have "a mighty wide river," sandy beaches, etc., but not so convenient to the city. Here the canoeist would have a still wider range. Canoeists will come by rail to Washington via the Pennsylvania or B. & O., or by water from Philadelphia and New York, and could go down to the camp by steamer or cruise, stopping beforehand with us at Georgetown to see a little of the capital.

A camp ground, better I ween than any near New York or Philadelphia, could be obtained at Four-Mile Run within 8 miles of Washington or Fort Foote, 5 miles, Broad Creek 6, Piscataway 9 and so on. The beauties of the upper river for paddling canoes could be enjoyed before or after the meet by those with sufficient time. Just at Washington, if you wish, Analostan Island, now leased by the Columbia Athletic Club, could doubtless be ob-

tained, but access to it is so easy that it would not be much like what we go for when we take an outing.

There is no doubt but what it would boom canoeing here mightily if the meet were held on the Potomac, and the threatened dissolution of one of our clubs here would render the boom most opportune.

The Washingtons, though, are not dissoluting to any considerable extent just yet, and if a hearty welcome can be any inducement to offer we can pledge that and keep our word to your satisfaction. J. R. L.

WASHINGTON, D. C., March 19.

The following programme has been prepared for the races, subject to future alterations and to abbreviation should it be too long:

No. 1. Paddling, Class I. (this race exempt from 1 man 1 canoe rule), ½ mile straightaway.

No. 2. Paddling, Class II. exclusively, 1 mile with turn. Record event.

No. 3. Paddling, Class III. exclusively, 1 mile with turn. Record event.

No. 4. Paddling, Class IV., 1 mile with turn. Record event.

No. 5. Paddling, Tandem, Classes III. and IV., decked sailing canoes, 1 mile with turn.

No. 6. Paddling, Upset, Classes II., III., IV., 200ft., no special appliances allowed, and the cockpit, whatever its length, must not be narrower than 16in. for 4ft. of that length. At signal every canoe must be turned completely over, righted, and with the crew inside paddled across the finishing line.

No. 7. Combined Paddling and Sailing, on the triangle, 3 miles, alternating every half mile, start paddling. Record event.

No. 8. Sailing, Novices, on the triangle, 1½ mile, open only to members who never sailed a canoe prior to Sept. 1, 1887.

No. 9. Sailing, on the triangle, 4½ miles. Record event.

No. 10. Sailing, Cruisers, on the triangle, 1½ miles. Crew must all inside, sails must be lowered and raised at second and third buoy. Dimensions of cockpit as in event No. 6 will apply, and canoe to enter this race must further have room below sufficiently large for crew to sleep in, without interference from centerboard trunk or other obstruction. Radix or Atwood boards not to constitute an obstruction. Committee reserve the right to exclude from this race any canoe which in their opinion is not a fair general cruiser.

No. 11. Sailing, Club Race, 1½ miles. Each club shall be entitled to three entries. The first canoe to cross the winning line shall count as many points as there are starters in the race, the second one less than the first, and so on to the last, which shall count one, and the aggregate of the score of the canoes starting for each club shall be the club score.

No. 12. Sailing, passenger race, on the triangle, 1½ miles, passenger to sit below and not to aid in handling the canoe.

No. 13. Sailing, consolation, 1 mile to windward or leeward and return, winners of either first or second places in either events Nos. 8, 9, 10 and 12 excluded.

No. 14. Sailing, "man overboard," 200yds. While under way, at signal to be given, half a paddle must be thrown overboard, aft out of reach, the same must be recovered and the race continued to the finishing line.

No. 15. Sailing, upset, 200yds. No special appliance allowed, and dimensions of cockpit as in event No. 6 will apply. At signal canoe to be tipped over until top of the foremast touches the water, canoe to be righted and to cross finishing line under full sail.

No. 16. Hurry-scurry, 50yds. run, 50yds. swim, and 50yds. paddle.

No. 17. Standing paddling, 200ft., centerboards must be housed.

NOTES.—1. All positions at start of paddling races shall be drawn for.

2. Races will be provided for open canoes, unclassified canoes not fitted with oars, and small boats, cruisers and canoes fitted with oars.

TUCKUPS, DUCKERS AND CANOES.

Editor Forest and Stream:

Being somewhat interested in the tuckups of the Montgomery Sailing Club, I do not want to see the article signed "Squid," in your issue of March 8, on "Amateur Boat Building," stand without a word of refutation, so far as the tuckups are concerned.

"Squid," the writer of the article in question, is well known to me, and it has been less than one year since he gave me as his judgment and opinion "that the tuckups carried more sail in proportion to the size of the boat, and in consequence faster than any boat of its size."

"Squid" now says, "The much overrated tuckups have pleaded the baby act, and ruled the canoes out."

The whole thing simply amounts to this: The tuckups objected to mixing up the races with the canoes, and wanted a separate class made, but the Gracie wished otherwise, trusting by a generous concession in the way of time allowance to beat a boat.

The expression of our oldest yachtsman that he "did not object to being beaten, but did not want to be beaten by a boat that was not in sight," covers the point. Hence the "baby act."

VERITAS.

Editor Forest and Stream:

I was considerably amused by a communication in your issue of March 5, signed "Squid," in which he speaks of a canoe 12×34 in such a way as would lead an outsider to think that such a boat can give a 15ft. tuckup all she can do to take care of. Now, as I know from experience that a tuckup can sail five miles to a canoe's two, such being the case the absurdity of such a thing, and even of racing the two boats together at all, must be apparent to all.

Now, in my opinion the boat for the Gracie to race with is the small ducker, and if one of the canoe clubs here will get up a race open to small duckers, sneakboxes, canoe yawls, etc., I would be happy to race such a boat (14×44, 72ft. sail) against the Gracie on home waters, as she has probably totally annihilated everything in the same line at Norristown. TWINESHARP.

[We cannot give space to any lengthy discussion of this subject, as the question is one of facts, which should be readily established by the records of the club's races. The statement ascribed to "Squid" assumes that a boat's speed is measured solely by her sail area, which is far from being the case; instances are frequent enough where a reduction of rig has been followed by an increase of speed. "Twinesharp" is in error in calling the Gracie a canoe, as she is a rowboat not unlike a ducker, but probably with better lines. However fast the tuckup may be, the statement that she can outsail a canoe in the proportion of five to two is absurd.]

OTTAWA C. C.—Ottawa, March 22.—At the annual meeting of the Ottawa C. C. the following officers were elected: Com., W. F. Whitcher; Captain, E. King; Sec.-Treas., F. H. Gisborne; Auditors, R. W. Baldwin and J. S. Brough; while W. M. L. Manigy, A. O. Wheeler and Henri Roy were appointed members of the Committee of Management, and W. H. Cronk, Official Measurer. The constitution of the club was revised and some small change made; for instance, the club uniform was changed from navy blue to white for full dress and gray for undress, and the colors of the club were altered from navy blue and white to royal blue and white. During our hot summer days navy blue was found to be too worm a dress. Quite a number of the members are getting new canoes, and great excitement is anticipated over the sailing races during the coming season. Last year two series of fortnightly races were held, but this year it is proposed to make the races monthly, and to fill up the intervening half holidays with club cruises, some of the married canoeists complaing that with a race every week they had not been able to take their wives out once last season. We are now talking of having club cruises once or twice a month, to which each canoeist is expected to bring a lady. It is too early to make plans for the Northern Division meet at Lake Couchiching, but we hope to have a good strong contingent there to represent the club. We are now very busy over the floating of our canoe house, the scows are built and are being put in place. The only thing we are afraid of is that we shall not have room enough for all the canoes that will require racks.—FRANCIS H. GISBORNE, Sec.-Treas. O. C. C.

CHORISTERS AS CANOEISTS.—The House of Prayer, in Newark, N. J., has a male choir of seventy voices divided into three sections; the adult branch, composed of the men of the choir; the senior branch, composed of those boys who are temporarily unable to sing through their voices changing, and the junior branch, the youngest boys. In order to keep the second division united until its members are able to resume their places in the choir, a room was hired this winter and the sixteen boys went to work to build canvas canoes, the material costing $4 per boat. Next summer the party will be taken to Lake Hopatcong in the director's boat of the Morris Canal, which is fitted up with kitchen, dining room and plenty of bunks. A cabinet organ will form part of the furniture.

A. C. A. MEMBERSHIP.—Central Division.—Isaac J. Evans and John G. Bissell, Rome, N. Y. Atlantic Division—William Walker, Newark; Charles C. Taylor, New York; George P. Douglass, Belleville, N. J.

PITTSBURGH C. C.—The Pittsburgh C. C. held their fifth annual meeting and banquet at the Hotel Duquesne on March 8, the following officers being elected for the ensuing year: Captain, Jas. K. Bakewell; Mate, G. Harton Singer; Purser, J. J. Lawrence, Jr. Notwithstanding the fact that several of our members have recently become "Benedicts" and are now enjoying the rapids of life's stream in a double canoe, very few were absent. The captain appointed a committee to make arrangements for our annual Decoration Day regatta. The question "Where shall we go to on our summer cruise?" was responded to by every one present. The Allegheny River, Lake Chautauqua and Conneaut Lake were among the places mentioned as being desirable and easily accessible. A committee was appointed to hear the voice of the club and report at a meeting to be held at the club boat house, on the first Saturday in May, when the question will finally be decided. Mr. Fred K. Fitler was elected a member of the club. Several of the members expressed their intention of attending the A. C. A. encampment. The club is now five years old and has 21 members and 24 canoes.

WESTERN CANOE ASSOCIATION.—In preparing the fourth annual book of the Western Canoe Association, the secretary-treasurer, Mr. Geo. A. Warder, has expended much labor in making a handsome and interesting pamphlet which canoeists will preserve. In addition to the constitution, by-laws, sailing rules, programme and list of members the book contains a number of good illustrations of the last meet, with portraits of the leading members of the W. C. A. and cuts of the W. C. A. sailing trophy and the Gardner cup. It also contains a history of the Cincinnati C. C., which it is proposed to follow each year by similar histories of other clubs. The present membership is 160.

CANOE BUILDING ON THE DELAWARE.—Bordentown, N. J., March 16.—*Editor Forest and Stream:* There is as fine a job of amateur canoe building in this city as one often sees. It is a Mohican No. 2 in model and size, built of inch strips ¼in. thick, not caulked, by Dr. M. S. Simpson, as a tandem to make a cruise on the Delaware River, which it successfully did. Now the owner is about to build a smaller canoe about 14×28 for single paddling. There are about 25 canoes in this city, all being built by their owners, and while some are fair models the majority are decidedly the reverse. There is not a wooden canoe in town except the one above mentioned.—L. W. W.

W. C. A. APPLICATIONS FOR MEMBERSHIP.—John Frick, New York city; Dr. James A. Henshall, Cincinnati, O.; John G. Wetzel, F. N. Aull, John Theobald, Dayton, O.; N. Longworth, Jr., Cambridge, Mass.; Julian Vallette Wright, Cincinnati, O.; Chas. Ross Reid, Springfield, O.; James B. Keogh, Chicago, Ill.; A. A. Fuller, Cleveland, O.; Harry G. Ellard, Cincinnati, O.; Irving A. Brown, Cleveland, O.; Emil Von Hasslocher, Oakland, Cal.; Edward R. Bowdish, Skaneateles, N. Y.—GEO. A. WARDER, Sec.-Treas. (March 14).

Yachting.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $5.50. Steam Machinery. By Donaldson. Price $1.50.

THE FELLING AND PRESERVATION OF TIMBER.

THE following circular has lately been issued by the Forestry Division of the Department of Agriculture, under the head of "Information to Wood Consumers, Increasing the Durability of Timber."

The subject is one in which yacht owners as well as builders are specially interested, so we reprint the circular in full, as follows:

Our people waste a large amount of timber and of labor, by lack of care for the timber after it is cut. Rotting of timbers and fence posts necessitates not only the cutting of a larger quantity of wood, but also the labor of replacing the same oftener, than if the wood could be made to last longer.

There are some rules in the handling of timber which are too often overlooked, and which should be observed by everybody who uses wood in places where it cannot be kept dry or wholly submerged.

There is also much unintelligent use of paints and other coatings, applied in the hope of preserving timber, when it should have been well known that by painting green or badly seasoned timber decay is hastened rather than prevented.

While to many it may be impossible to apply the more complicated and expensive methods of wood preservation which recommend themselves to large consumers of wood material, knowledge of the following considerations, suggested by the Chief of the Forestry Division, will aid the small consumer to handle his material to better advantage, to utilize forest products more thoroughly and intelligently, and to make them last from two to three times as long as when not observed.

DECAY OF WOOD.

1. Decay of wood is due to fermentation of the sap, induced probably by the growth of either bacteria or fungi. These organisms need for their development warmth and moisture, besides the nitrogenous substances and salts contained in solution in the sap.

To prevent the growth of these ferments, therefore, the sap in the wood must be dissolved (leeched) or dried out, and moisture be prevented from entering again.

THE MANNER OF USE INFLUENCES DURABILITY OF TIMBER.

2. Timber placed entirely under water or deep in soil (drain pipes) will practically not decay, nor is it liable to rot, when kept absolutely dry, away from the influences of humid atmosphere.

Wood generally decays in proportion to the warmth of the temperature.

Hence, on northern exposures, in cool valleys, in high elevations in northern countries, the duration of wood is longer than when placed under opposite influences.

If wood is used in contact with the ground, decay proceeds the more rapidly (beginning at the point of contact with the soil), the looser, moister and warmer the soil, and especially the greater the liability of change from dry to wet; therefore timber will last longer in heavy, always moist clay than in loose, alternately moist and dry sand or gravel, or in warm, comparatively dry lime soils.

Rooms without ventilation induce decay, producing the dry rot, which first appears in white patches, changing into brown or gray. Ventilation, drying out and isolation from moisture will cure this defect.

NATURAL FACTORS INFLUENCING DURABILITY.

3. Sound mature trees yield more durable timber than either young or very old trees. Maturity is the time when trees have ceased to grow vigorously, which is indicated by a flattening of the crown, dying out of branches in the crown, and by the change of color of the bark. Maturity may be reached, according to circumstances, by the same species, when the diameter is only a few inches or when it is as many feet. The small tree on arid soil, or overtopped by others from its birth, may be as old and older than a tree of greater dimensions growing under more favorable conditions. Of two pieces of the same kind the heavier is the more durable, although absolute weight of two different kinds of timber does not determine their relative durability.

Heart wood, as a rule, can resist deterioration longer than sap wood, because it contains less sap, but when the sap wood is well seasoned and heavier, this difference disappears.

The site has an influence on durability in so far as it influences the formation of heavy wood.

Quickly-grown hard woods with wide annual rings, and slowly-grown conifers with narrow (yet not too narrow) rings, and "tapped" pines (on the tapped side) yield, as a rule, the most durable wood, other conditions being equal.

Coniferous wood from comparatively poor soils, high altitude, and dense forest, hard woods from rich, deep warm soils and isolated position, are most durable.

The resinous substances in conifers form an element of protection against decay.

4. The following list of trees comprises most of those of common occurrence which have been found to be the most durable. Without means of determining the exact relative value of the different species, it has been possible only to give a series which in general proceeds from the most durable to less durable ones:

Eastern Range—Conifers: Red cedar, *Juniperus virginiana*, L.; white cedar, *Chamaecyparis sphæroidea*, Spach.; arbor-vitæ, *Thuya occidentalis*, L.; bald cypress, *Taxodium distichum*, Rich.; long-leaved pine, *Pinus palustris*, Miller; red pine, *Pinus resinosa*, Ait.; Cuban pine, *Pinus cubensis*, Griseb.; short-leaved pine, *Pinus mitis*, Michx.

Broad-leaved trees: White oak, *Quercus alba*, L.; post oak, *Quercus obtusiloba*, Michx.; basket oak, *Quercus michauxii*, Nutt.; burr oak, *Quercus macrocarpa*, Michx.; chestnut oak, *Quercus prinus*, L.; live oak, *Quercus virens*, Ait.; osage orange, *Maclura aurantiaca*, Nutt.; hardy catalpa, *Catalpa speciosa*, Warder; black locust, *Robinia pseudacacia*, L.; honey locust, *Gleditschia triacanthos*, L.; red mulberry, *Morus rubra*, L.; chestnut, *Castanea vulgaris*, var. *Americana*, A. D. C.

Rocky Mountain Region—Red cedar, *Juniperus virginiana*, L.; pinyon pine, *Pinus edulis*, Engelm.; foxtail pine, *Pinus balfouriana*, Murray; Douglas spruce, *Pseudotsuga douglasii*, Carr.; western larch, *Larix occidentalis*, Nutt.; burr oak, *Quercus macrocarpa*, Michx.

Pacific Slope—Yew, *Taxus brevifolia*, Nutt.; redwood, *Sequoia sempervirens*, Endlicher; Lawson's cypress, *Chamaecyparis lawsoniana*, Parl.; canoe cedar, *Thuya gigantea*, Nutt.; Douglas spruce, *Pseudotsuga douglasii*, Carr.; western larch, *Larix occidentalis*, Nutt.; live oak, *Quercus chrysolepis*, Liebm.; post oak, *Quercus garryana*, Dougl.

TIME OF FELLING.

5. With proper after-treatment of the wood the time of felling seems not to affect its durability. Early winter felling (December) should have the preference, because less fermentable sap is then in the trees, and the timber will season with less care, more slowly and more evenly, and before the temperature is warm enough for fermentation to set in.

If the wood is cut "in the sap" it is more liable to fermentation and to the attacks of insects, and more care is necessary in seasoning; for the rapid seasoning, due to the warm dry atmosphere, produces an outer seasoned coat which envelopes an unseasoned interior liable to decay. When cut in the leaf it is advantageous to let the trees lie full length until the leaves are thoroughly withered (two or three weeks), before cutting to size. With conifers this is good practice at any season, and if it can be done, all winter-felled trees should be left lying to leaf out in spring, by which most of the sap is worked out and evaporated.

TREATMENT AFTER FELLING.

6. Always remove the bark from felled timber to aid seasoning but not from the standing tree.

Never allow the log to lie directly on the moist soil.

If winter-felled, shape the timber to size within two weeks after felling and leave it placed on blocks—not upon the soil—in the forest, or if shaped at home place in a dry, airy—not windy—position away from the sun and rain.

If dried too rapidly, wood warps and splits, the cracks collect water and the timber is then easily attacked and destroyed by rot.

With large logs, checking may be prevented by coating the ends with some fatty or oily substance mixed with brick dust, or covering with a piece of linen, cloth, or even paper, or by simply shading them to lessen evaporation; cracks on the sides may be filled in with tow or cotton.

When piling timber, place laths or sticks of uniform size at uniform distances under each log, or post, or tie.

Sufficiently thorough seasoning for most purposes is obtained in twelve to eighteen months, while for special work, according to the size, from two to ten years is required.

The best method of obtaining proper seasoning without costly apparatus in shorter time, is to immerse the prepared timber in water, from one to three weeks, to dissolve the fermentable matter nearest the surface. This is best done in running water; if such is not at hand, a bath may be substituted, the water of which needs frequent change. Timber so treated, like raft timber, will season more quickly and is known to be more durable.

If practicable the application of boiling water or steam is an advantage in leeching out the sap.

COATINGS TO KEEP OUT MOISTURE.

7. Never apply paint or any other coating to green or unseasoned timber.

If the wood was not well dried or seasoned, the coat will only hasten decay.

Good coatings consist of oily or resinous substances which make a smooth coat, capable of being uniformly applied; they must cover every part, must not crack, and possess a certain amount of plasticity after drying.

Coal tar, with or without sand or plaster or pitch, especially if mixed with oil of turpentine and applied hot (thus penetrating more deeply) answers best. A mixture of three parts coal tar and one part clean unsalted grease, to prevent the tar from drying until it has had time to fill the minute pores, is recommended. One barrel of coal tar ($3 to $4 per barrel) will cover 300 posts. Wood tar is not serviceable, because it does not dry.

Oil paints are next in value. Boiled linseed oil or any other drying vegetable—not animal—oils, are used with lead or any other body [like pulverized charcoal] to give substance. Immersion in crude petroleum is also recommended.

Charring of those parts which come into contact with the ground can be considered only as an imperfect preservative, unless a considerable layer of charcoal is formed, and if it is not carefully done the effect is often detrimental, as the process both weakens the timber and produces cracks, thus exposing the interior to ferments.

Lastly, in communities where durable timber is scarce it will pay to establish a plant for impregnating timber with antiseptics by the more costly processes described in Forestry Bulletin No. 1.

NORMAN J. COLMAN, Commissioner of Agriculture.

NEW YORK Y. C.—At the meeting on March 22 the new classification was finally adopted. The letter from the Y. R. A. concerning the new deed of gift was read and placed on file. The sum of $3,000 was appropriated for a fall regatta, open only to club and foreign yachts, in the event of no international race. Five members were elected.

EXCEPTIONS WHICH MAKE THE RULE.

Editor Forest and Stream:

A few weeks ago the London *Field* made the startling discovery that the centerboard was "a powerful machine," destined to drive deep keel craft out of existence. This announcement has been modified in the *Field* of March 10, to the considerable extent of excepting "small yachts," the wily *Field* placing no particular definition upon "small," leaving the limit open up to 90ft., should the future render such interpretation politic. So far, the c. b. agitation in England has not got beyond some desultory newspaper talk, the quality of which can be judged from the *Field's* ludicrous proposition to have c. b. casing wide enough to get at the board for scrubbing, and a quack rule for prescribing areas of midship section. There are a few open c. b. boats of the gig style building for the Clyde, just as they always have been built. They represent no change of sentiment in respect to regular yachts. Fife is, however, putting up a decked yacht with a small c. b., this craft being intended for cruising on certain shoal rivers. Unless there are some new developments, we are likely to hear the last of the c. b. in England very soon. Just now this subject, thrashed bare in America a hundred times over, strikes the London *Field* as a new topic available for filling up the "dry season." The *Field* is not able to add one iota to the information already possessed concerning board and keel, unless it be to mix things up by reproducing scraps of gossip obtained from Lieut. Henn and riding afresh its skin friction hobby. AMERICAN YACHTSMAN.

FACTS AGAINST WIND.

Editor Forest and Stream:

As an example of the prejudiced and superficial manner in which the daily press of New York deals with yachting matters, let me cite the *Tribune*, which in a recent labored article bolstering up the centerboard, avers that large keels are not being built. Even the *Tribune* cannot deny that among small craft the keel has become the favorite institution, because such denial would be absurd upon the face. It will be information for the *Tribune* to learn that the two largest yachts built this season are the keel schooners Yampa and Alert and that Mr. Burgess has an order for another large keel craft for Col. Cochrane. Furthermore, the new schooners Marguerite and Com. Canfield's, although supplied with small boards, are so much nearer the keel that the boards are not worth bragging about. The big schooner Palmer has also been altered to a keel. New York papers might learn something about yachting if they followed the example set by the Boston *Globe* and substituted knowledge for wind. NEW YORKER.

PORTLAND Y. C.—The annual meeting was held on March 7, the following officers being elected: Com., C. W. Bray; Vice-Com., Geo. C. Owen; Fleet Capt., R. W. Miller; Sec'y, Chas. D. Smith; Treas., C. F. A. Weber; Meas., Jos. H. Dyer; Fleet Surg., Walter Woodman; Trustees, Com. (ex-off.) K. D. Atwood, John P. Thomas, Wm. Senter, Jr.; Regatta Com., Com. (ex-off.) H. R. Virgin, P. R. Stevens, H. E. Duncan, R. Samuel Rand; Membership Com., T. Hall Chase, C. J. Farrington, Edw. H. York, Secretary (ex-off.); House Com., Chas. E. Rolfe, Jas. C. Fox. The annual change of the regatta will take place June 16, at 10 o'clock A. M. The annual cruise will begin June 30, ending July 4. The club is prospering and interest in yachting is active. The membership is increasing, and this year will bring the addition of some new boats. The flagship will be the Vira, formerly enrolled in this club, but for several years past of Salem. She will have new main and topmasts, and be cutter rigged. Work has already begun on several of the boats, and some of them will be in commission early in April. The centerboard sloop Elaine, owned in Massachusetts but hauled up on Cape Elizabeth, is undergoing important alterations. She will be raised several inches and have an overhanging stern.

IROQUOIS.—Mr. Coolidge's schooner left New York on March 10 at 11 A. M. with a fresh S.E. breeze, increasing until on the following day (Sunday) at 8 A. M. the mainsail was reefed and jib stowed. The weather grew worse through the day, until at 11 P. M. a gale was blowing from S.E., but a few minutes later it went round to N.W., blowing still harder. Through the night the yacht was hove to under maintrysail, and on Monday a drag was thrown out and oil used, being pumped, two spoonfuls at a time, from the forward closet, 15 gallons being used on Monday and Tuesday. The hawser of the drag parted after being in use but a short time. It was not until 3 P. M. on Tuesday that the yacht could resume her voyage under maintrysail, setting foretrysail and jib a little later. During Wednesday the yacht was under trysails and double-reefed forestaysail, running very fast. At 6:20 P. M. on March 16 she anchored in the Savannah River. All on board speak in the highest terms of the yacht's behavior during the most severe gale known in years. Iroquois is but 80ft. l.w.l. and was designed by Mr. A. Cary Smith.

CEDAR POINT Y. C.—Saugatuck, Conn., March 26.—At the annual meeting of the Cedar Point Y. C. the following officers were elected for the ensuing year: Com., Francis Burritt; Vice-Com., J. H. Jennings; Sec., Edwin Thorne, Jr.; Treas., P. G. Sanford. Membership Committee, L. K. Young, J. H. Jennings, E. S. Wheeler. Regatta Committee, R. H. Wheeler, Fred Hurlbut, A. S. Cram. The opening regatta of this club will be held on Decoration day. Com. Burritt has matched his new boat Professional, 21ft. 6in. w.l., against Mr. Hitchcocks' Rival, 21ft. w.l., for $200 a side, the race to be sailed on or about June 7 off Bridgeport, Conn. Professional, by Webber of New Rochelle, is now about completed. Rival is being built by Thatcher of New Haven, she will be sailed by Capt. Ed. Sturtevant, of Bridgeport, and Webber will handle Professional. A close race is anticipated as both boats are very complete, both in construction and design.—JUDGE.

WIZARD—VIVID MATCH.—The match at Larchmont on May 30 will be sailed under the following conditions: The race to be under the direction of the Regatta Committee of the Larchmont Y. C., and governed by its sailing rules and regulations upon all points not otherwise specified in the agreement. The yachts to be sailed by amateurs, except that each yacht shall be allowed to carry and use its regular crew. Besides the captain each yacht shall be allowed to carry one man for every five feet of length over all or fraction thereof. The course shall be from Larchmont harbor to and around a stakeboat anchored in Hempstead harbor (course, S. S. E.), thence to and around a stakeboat anchored one half mile S. W. ¼ W. of Stamford Lighthouse (course N. E. ¼ E.), and returning over the same course to Larchmont harbor.

NEW BRITISH YACHTS.—The new yacht for Capt. Davenport, a cruising cutter from Mr. Clayton's design, was launched at Fay's yard, Southampton, on March 14, being christened Tambourine. She is 71ft. on deck, 51ft. l. w. l., 11ft. 7in. beam, 8ft. draft. She has a main cabin and ladies' cabin, the fittings being of white pine, with teak styles and rails and black mouldings. On March 10 was launched at Woolston, Southampton, by Oswald, Mordaunt & Co. a ketch rigged steam fishing vessel for Mr. F. W. L. Popham. She is 134ft. long, 20ft. 6in. beam and 10ft. 9in. hold, with cylinders 12½, 19 and 31½×24, with Joy's valve gear. The working pressure is 158 lbs. She left the ways with steam up and started at once on her trial trip. Her name is Remus.

PATTERSON'S "YACHTSMAN'S GUIDE."—The latest addition to the yachtsman's library is a new and greatly enlarged edition of the "Yachtsman's Guide," by Capt. Howard Patterson, the well-known head of the Navigation school in New York. Capt. Paterson's reputation both as a skilled navigator and as an instructor of practical navigation is a sufficient guarantee of the value of his new book, and in the portion devoted to navigation he covers the subject most completely, and in a clear and simple style that may be understood by all. Starting with the instruments used in navigation, the learner is introduced to the simpler problems; and when these are made plain, the more intricate are taken up, the principles involved being clearly shown in each case. The third part of the book deals with rules of the road, etc.; the fourth section with knotting, splicing, rigging and the handling of a yacht; the book concluding with a very complete vocabulary of nautical terms, besides much other useful matter.

CORONET.—On March 22, at 11:20 A. M., the schooner Coronet, Mr. R. T. Bush, hauled out from Pier 8, East River, New York, where she has fitted out. Her gun was fired, colors run up, and she started on a long voyage to San Diego, Cal. There her owner and his family will join her for a cruise to China and Japan, and perhaps around to New York again. Coronet is in charge of Capt. Crosby, who sailed her in the ocean race last year. With him as a passenger is Dr. Frank Abbott, of Brooklyn. Coronet carries ten men before the mast. She was last reported at 1:30 P. M. off the Highlands in a heavy snowstorm.

A NEW CENTERBOARD.—A centerboard has lately been devised in England in which two arms are used, similar to those in a parallel ruler, to support the board, the latter is hung by the two arms from the top of the trunk, and raised by a pendant, the board carrying aft as it rises. The trunk of course must be well aft. A similar plan was tried for canoes some 5 years since by Mr. W. P. Stephens, the object in that case being to keep the trunk far forward and allow the board to drop aft, but it was never put into actual use.

SMITH'S PRESERVATIVE COATINGS.—Now that the time has come for fitting out, yacht owners and skippers will find it to their advantage to try the preservative coatings made by Edward Smith & Co., New York. The coatings are made in two grades for outside work; spar undercoat, for filling the raw wood, and spar coating, a hard, brilliant and elastic varnish for all woodwork exposed to the weather. The firm also makes several grades of varnish for inside work in yachts.

THE FISHERMAN'S RACE.—Vice-Com. J. M. Forbes, E. Y. C., has been selected as referee for the race of April 5, and he has named Mr. Geo. H. Richards to act as judge for the Boston boats, and Mr. Henry Hovey for the Gloucester craft. A subscription is being raised in Boston and Gloucester for a sum to be divided among the crews of each boat which should start. The four entries thus far, the Phillips, Roulette, McManus and Merritt, have put up the final deposit of $75 each.

WHIM.—This schooner, owned by Mr. W. G. Brokaw, sailed from New York on March 9 for Norfolk, where her owner and friends were to join her and cruise to Florida. No news was heard of her at Norfolk and some anxiety was felt about her, but she has at last been reported safe at Barnegat, where she arrived on March 16. It is reported that she went ashore and her crew was taken off by the Life Saving Service, the yacht drifting out to sea, but coming in again with the tide, the crew regaining her and sailing for Norfolk.

LAKE ONTARIO.—A correspondent writes that Rochester gentlemen have bought the celebrated 10-ton cutter Madge, and that ten new cutters will be added to the fleet on Lake Ontario. At Oakville, Chisholm's little 18ft. cutter has been planked. She is pronounced a beauty by all who have seen her. There is much interest in the small classes and prizes for the encouragement of singlehand craft will be a feature of the coming season. Mr. Chisholm has named his cutter Erchless, after the family mansion.

VOLUNTEER.—Capt. Haff was in Boston last week, and under his supervision Volunteer was scraped on the bottom and covered with two coats of red lead, over which two coats of the cement used on Thistle and Galatea will be laid. The bottom was allowed to rust all winter to remove the scale, and now will be in a better condition than ever before to hold the paint. Gen. Paine has not yet made any plans for the season, and it is not certain that Volunteer will fit out.

CENTERBOARDS IN LARGE YACHTS.—The Boston *Globe* bears testimony as to the waste of room caused by the centerboard case, even in large yachts, as follows: "Putting the centerboard of the Burgess schooner Marguerite below the cabin floor makes a wonderful improvement in her cabin room over that of the Mayflower or Puritan." Even though the plan should not be successful, it is unlikely that the owner will cut up his fine cabins by a big trunk of the old style.

GREAT HEAD.—Mr. J. N. Colby, the builder, has completed a shop 60×40ft. at Great Head, and is now busy with new work and repairs for the fleet of the Great Head Y. C. He is building a cutter for Messrs. Wm. Wyman and Edward Cook, to be 31ft. 9in. l.w.l., 10ft. 2in. beam, and 7ft. hold, to draw 5ft. 6in. Her keel will carry 3,000lbs. of iron. Many of the yachts of the Great Head are being altered, the ballast being stowed lower.

ROCHESTER Y. C.—This growing and enterprising club is increasing its fleet by several new additions, the latest being the Scotch cutter Madge that the Boston cutter Majel, the latter 25ft. l.w.l. and 9ft. 9in. beam, built by Lawley & Son. The handsome little Velnette, built last year by Williams, has created a demand for similar craft, while the older yachts of the club are at the same time being improved and rebuilt.

NEWBURGH.—At Marvel & Co.'s yard the cutter Bedouin is hauled out, and near her is the small Burgess cutter built in 1885 for Mr. Rogers. The steam yachts Glide, Adela and Dashaway are also hauled out. The firm have commenced the construction of two steel ferryboats to be propelled by a screw at each end, the first of the kind to be tried about New York. Both will have triple expansion engines.

NEW HAVEN Y. C.—Officers, 1888: Com., C. Cooper Clark; Vice Com., H. A. Seymour; Rear Com., D. H. Warner; Sec., James H. Parish; Treas., George E. Dudley; Meas., Frank H. Andrews; Fleet Sur., W. W. Hawkes, M. D.; Trustees, C. W. Scranton and C. M. Peck; Regatta Committee, E. S. Perry, L. A. Elliot, L. L. Morgan, R. R. Hopkins, E. P. Avery, George E. Dudley and S. H. Read.

PROVINCETOWN Y. C.—Officers, 1888: Com., Thomas Lowe; Vice-Com., A. W. Cushman; Fleet Captain, Wm. Roberts; Sec. and Treas., J. A. Reed. Trustees—G. H. Holmes, A. R. Hannum, J. H. Dyer. Standing Committee—George W. Holbrook, E. O. Snow, John E. Freeman. Regatta Committee—G. H. Holmes, J. H. Dyer, J. H. Hopkins, E. O. Snow, F. E. Williams.

GALATEA.—The latest reports from Lieut. Henn state that he will be detained at home this summer by a suit against the builders of Galatea for the faulty casting of her lead, but will sail next fall for the Windward Islands and Florida, coming to New York a year from now. Meanwhile he is building a centerboard boat 18ft. long, for fishing.

CYTHERA.—Nothing has yet been heard of the yawl Cythera since she was spoken off Barnegat on March 11, shortly after leaving New York. She was bound for Jamaica, with her owner, Mr. W. A. W. Stewart and Mr. C. Smith Lee, owner of Oriva, and her regular sailing master, Capt. Phipps, with a crew of six besides cook and steward. Mr. Stewart had partly intended to call at Bermuda first, but the yacht has not yet been reported from there. It is probable that she has been driven out of her course by the severe gale, and will be heard from soon in some West Indian port. As the cable service is poor at best in these islands, there is no cause for alarm in her not being reported.

THE BOSTON YACHT AGENCY.—We have received from Messrs. Borden & Clark, of the Boston Yacht Agency, their new list of yachts for sale, comprising crafts of all sizes and prices. The firm is also connected with W. K. Pryor & Co., builders, in South Boston, and is the agent for New England of Mansfield's patent hollow spars.

ANOTHER SCHOONER.—Mr. Hugh Cochrane, owner of Tioga, schr., has ordered a new yacht from Mr. Burgess, a schooner of 75ft. l.w.l., 19ft. beam and 12ft. draft, a "fast cruiser" with lead keel. She will be built by Wm. McKie, of East Boston, who is now at work on Mr. Fabyan's steamer. She is to be completed by July.

SACHEM.—The alterations to Sachem's keel comprise the cutting away of 3ft. 6in. of wood keel forward and 12ft. aft, the spaces being filled with lead; 1½ tons forward and 5½ tons aft, making, according to the best reports, a total of 45 tons.

ATLANTA.—Steam yacht, Mr. Jay Gould, arrived at Fernandina last week and left her owner, sailing again for New York, where she arrived on March 23. She is now in the Erie Basin and will lie there until she refits for the summer.

SEAWANHAKA Y. C.—The club house was crowded on Saturday night by members and their guests, to listen to a musical entertainment by amateurs of the club.

YAMPA.—Mr. C. W. Chapin's schooner arrived off Staten Island on March 23, from Florida. She will fit out at once for a trip to England, with her owner and friends on board.

CHANGES OF OWNERSHIP.—Ethel, sloop, has been sold by Mr. Merrill, who has bought the sloop Gracie G. from Mr. E. P. Pride, of Newburyport.

RESOLUTE, schr., Mr. C. A. Postley, has had her name changed to Ramona. She will have a new stern and new decorations in cabin.

HESPER—Pilot boat, No. 5, of Boston, will have 4ft. on main boom and a longer bowsprit, with a new suit of canvas for the big spars.

THISTLE.—*Land and Water*, of March 17, denies in Mr. Watson's name the report that Mr. Coats has bought Thistle.

MONTAUK, sch., Mr. J. E. Brooks, sailed from Charleston, S. C., for New York on March 22.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

SYLVAN, N. Y.—The flags may be 12×18in.

F. P. B., Boston.—There is no agency or similar firm in the United States.

J. M. D., Boston, Mass.—Turk is by imported Rajah and out of imported Brenda.

G. C. J.—The oil implied is linseed oil, raw and boiled. We have no further information about "Seneca's" muslin boots.

F. U. R., Appleton, Wis.—We do not recommend nor use the powder you mention, suspecting that it may be dangerous.

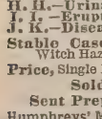
ADMIRAL, Philadelphia, Pa.—Several sizes and styles of yacht stoves are kept in stock by New York stove dealers. You can probably obtain them through a Philadelphia dealer.

X. O. X., Brunswick, Me.—1. Thirteen is a large litter, but not remarkably so, as you will see by consulting our kennel notes. 2. Bailey's Tom is by Stockton's Dash and out of White's Fly.

C. M., Lewiston, Pa.—1. Is the Lyman sight used by rifle clubs in their matches? 2. Is it a peep sight? Ans. 1. Not extensively; it is rather a hunting sight. 2. It is one variety of peep sight.

CONSTANT READER, Newark.—It is difficult to see what there was to protect against. The Our Own Club was unfortunate in not taking better care of their guns and the referee's decision seems to be the only just and correct one.

G. M. S., Greenfield, Mass.—These rifles carry as far as game can be shot, penetrate sufficient to kill and hold just where the shooter's skill can put them. They are entirely first-class, and their cheapness is only that of all classes of firearms just now.



W. C. D., New York.—1. Is the .32-40 Winchester cartridge too heavy for such game as rabbits, foxes, woodchuck, etc.? 2. Will it kill a deer under ordinary circumstances? 3. Is the single-shot Winchester rifle as reliable and as good as the repeater for this kind of shooting? Ans. 1. No. 2. Yes. 3. Yes.

E. W., Utica, Mont.—Will you please answer me a few questions about Alaska? Can I go there and trap and hunt any place that I want to? Ans. You can hunt and trap anywhere except on lands covered by the lease of the Alaska Commercial Company; in other words, anywhere except on the Pribiloff Islands and waters adjacent thereto.

J. W., New Lisbon, Ohio.—The Indians make furs of skins by pinning them out to dry, fleshing thoroughly, breaking the inner fibre with a scraper after they are dry, and then rubbing in brains with a great deal of elbow grease. Skins are most easily prepared by soaking in alum water. When quite dry, damp slightly, and scrape inner surface to render it pliable. Guns of 16 and 18 bore are lighter, require less charge and will kill as far as a 10 or 12 bore, but will not cover as big a surface.

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout-streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy, Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passen and Ticket Agent, N. P. R. R., St. Paul, Minn.—*Adv.*

The Audubon Magazine BOUND.

Volume I. of the Audubon Magazine, bound in cloth with gilt stamp, is now ready.

It is illustrated by numerous reproductions of our most familiar birds from Audubon's plates, and by many wood cuts.

The articles from the pens of some of our first ornithologists are entertaining and accurate, and the lessons taught by them are of value to all. It constitutes a most valuable work on the natural history and the economic importance of our birds.

The Volume of 288 pages is sold for $1.00.

Yacht and Boat Builders, etc.

Steam Yachts and Launches;

THEIR

MACHINERY & MANAGEMENT.

A Review of the Steam Engine as Applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc., Etc. With 96 Illustrations

By C. P. KUNHARDT.

CONTENTS:—Theory of the Steam Engine; Boiler Efficiency; The Engine and Its Parts; The Screw; Laws Applicable to Steam Yachts; Extracts from Lloyd's Rules; Racing Steam Yachts; Management and Care of Machinery; Principal Types of Yacht Machinery; The Design of Hulls; Addenda: Tables; Etc.

SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice. —*From Author's Preface.*

Yachts and Canoes For Sale.

BY ORDER OF THE MORTGAGEES.

MESSRS. COX & KING ARE FAVORED with instructions to sell by auction at their offices, 5 Suffolk street, Pall Mall, London, on Wednesday, April 11, 1888, at 3 o'clock precisely, the very desirable and first-class cruising steam yacht **OSSIAN, of 147 Tons Y. M.**, together with all her very complete and valuable outfit, including spars, sails, boats, anchors and chain cables, steam windlass, cabin furniture and all usual and necessary stores. The vessel is in the very best possible condition in all respects and very amply found; has recently been entirely refitted and the accommodation most conveniently arranged, including spacious deck saloon. Is an extremely powerful vessel for her tonnage, and especially suitable for foreign cruising and to make the passage across the Atlantic, and therefore well worth the attention of any American yachtsman desirous of obtaining a steam vessel of about 150 tons yacht measurement. Plans, particulars, photographs and conditions of sale may be obtained from the auctioneers as above. Telegraphic address, "DERAT, LONDON."
Scott's Code Used.

Cruising Yacht for Hire or Sale.

The owner of a cruising yacht, 47ft. long, 14ft. beam, 6ft. draft (with centerboard up), perfectly fitted out for the accommodation and comfort of 4 to 6 persons in the cabin and 3 men in forecastle, pat. W.C., and all modern improvements, will hire or sell for a reasonable price, important business engagements preventing him from leaving the city. The yacht was specially built of the best material for comfort and safety during the winter of 1886, under owner's personal supervision, and is suited for excursions in the Gulf of St. Lawrence. Arrangements will be made to afford all the sea trout and all other fishing required; salmon may be included. This is an opportunity seldom offered. Address Post Office Box 1081, Quebec City, Canada.

Yachts and Canoes For Sale.

FOR SALE.—FIRST CLASS NEW FLUSH-decked iron steam yacht, 130ft. long, handsomely fitted, schooner rigged; speed 17 miles per hour. Steam vessel circular. SAMUEL HOLMES, 120 Front st., New York. feb9,3mo

THE YACHT CLUB ARGENTINO IS INTERested in small centerboard yachts up to about 40ft. long, to follow up what has already been ordered. Builders so disposed can send photographs, plans and specifications to the President, Yacht Club Argentino, 10 Bolsa, Buenos Ayres, South America.

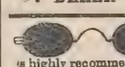
GOLD MEDAL, PARIS, 1878.



BAKER'S

Breakfast Cocoa.

Warranted *absolutely pure Cocoa*, from which the excess of Oil has been removed. It has *three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup*. It is delicious, nourishing, strengthening, easily digested, and admirably adapted for invalids as well as for persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

EYESIGHT BY MAIL. Our method of fitting persons who cannot see a good optician is highly recommended by oculists and physicians. Send 4c in stamps to QUEEN & CO., Opticians, 924 Chestnut St., Phila.

Wanted.

WANTED.

A competent judge to judge the races at the meeting of the American Coursing Club, to be held at Great Bend, Kan., Oct. 17 to 22, 1888. Please communicate (furnishing references as to competency, etc.) with FRANK K. DOAN, Sec., 1210 Olive st., St. Louis, Mo. mch29,1mo

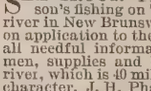
For Sale.

Trout Farm For Sale.

A farm of 325 acres in Hampshire County, Mass., five miles from Amherst and 1½ miles from nearest railroad station. Has three ponds of some 4 acres, well stocked with trout, and contains and controls 2 miles of the finest trout brooks in the State. Game, preserved for several years, is abundant, and shooting excellent; 250 acres are covered with heavy timber of chestnut, pine, hemlock and yellow pine. The improvements consist of a pretty cottage of 11 rooms, suitably furnished, piazzas, a good barn and outhouses, icehouse; a noble spring of cold, pure water is carried through the house and barn. The buildings are in perfect repair. The land is 720 to 900ft. above tide water. Extensive and fine views on and from it. Cool and healthy and will make a delightful residence, independent of its fishing and shooting advantages. Apply to

mch22,3t WALCOTT HAMLIN, Amherst, Mass.

For Sale--Spruce Cottage



This cottage is 18×24, two stories high and gable roof, 3 rooms below, 4 rooms and hall above, besides attic, a wide porch on one side and both ends, rough kitchen in rear; built last September and well painted outside. The lot contains one acre, a beautiful wooded point commanding a fine view of STAR LAKE, a sheet of water whose shores are a succession of deep bays and long, sharp points, its waters clear, deep and cold, and containing both brook trout and landlocked salmon (well stocked, up to 4lbs. weight. The ground adjoins those of a large hotel, and the location is but one mile from the C. & A. R.R. in the town of Fine, St. Lawrence Co., N. Y. Sold because the owner cannot find time to occupy it. Price, $1,200. Address J. H. RUSHTON, Canton, N. Y.

A FEW SHARES IN THE RENOUS SALmon Club for sale. The Renous River and branches afford about 75 miles of salmon fishing. The club's lease covers about 20 lakes and 40 brooks in addition, and as they contain quantities of large sea and brook trout, the fishing is good from the time the ice leaves until the season closes. This is the most accessible and least expensive salmon fishing to be had. Maps, etc., can be seen at Thos. J. Conroy's, 65 Fulton street, Abbey & Imbrie, 18 Vesey street, and for fuller details address E. HURTZIG, 351 West 123d street, or FRED. D. STOREY, Supreme Court, New York.

Salmon Pools for Rent

About 12 miles finest salmon fishing on Restigouche River; can be divided. Lock Box 35, Savannah, Ga.

ANSWERS TO CORRESPONDENTS.

PROTECT THE PARK.

ALL READERS who are interested in the protection of the Yellowstone National Park are invited to co-operate with this journal in the endeavor to secure needed legislation. Petitions will be sent to all who will undertake to have them signed and forwarded to Washington.

THE PARK BILL IN THE HOUSE.

ON Thursday last the Yellowstone Park bill came up in the Senate and passed that body without one dissenting voice. This is the third time that this bill, or one of the same character, has received the stamp of approval by the United States Senate. Three times this body has put itself on record as being in favor of the proper care of the Yellowstone National Park, of the conservancy of its forests, the protection of the water supply of the arid Northwest, and the establishment of a government which shall afford protection to the persons and property of those who may visit this national pleasure ground. Twice such a bill has failed to receive the attention of the House of Representatives, not because there was any active opposition to it, but because it had to meet there what was worse than opposition, a dull apathy, an utter lack of interest, a hopeless indifference which was as deadly to it as the fiercest hostility could have been. Twice it has lain neglected in committee, and the gavel has fallen at the end of the session without an opportunity being made for the House of Representatives to record its will upon the question whether the people's park shall be preserved by the people for the people.

If the bill can be brought before the House, and a vote can be taken on it, there is little doubt what the result will be. The practical men in Congress will not be slow to see the necessity of protecting the Park and the wonders which it contains. When the question is brought before them, they will realize the importance of saving from destruction the forests which clothe its rugged mountainsides, of enlarging it so that the streams upon which more than 600,000 square miles of territory depend for water may continue to pour out over the plains these waters without which the farmer cannot grow his crops. They will understand that the reservation must have some form of government, some machinery of justice, so that visitors to this beautiful region may feel as safe there as in any other quarter of our broad domain. If the bill comes to a vote in the House, we have little doubt as to its passage.

The provisions of the bill, as it stands to-day, are as follows: The northern and western boundaries of the Park are made to coincide with those of Wyoming, thus cutting off a narrow strip of territory on the north and west; the southern boundary is made the forty-fourth parallel, and the eastern boundary the meridian of 109° 30'. This adds to the Park an area of about 2,000 square miles of territory which is utterly valueless for farming, for grazing, for mining, or indeed for any other purpose than that of a forest preserve. Within this added area are numerous large lakes and streams, the sources of important affluents of the Yellowstone and Snake rivers, and the continuance of this water supply will be insured by the preservation of the forests about the head of the streams. The bill provides for the administration of justice within the Park, and to the end that offenses may be punished, a resident magistrate is empowered to try all violations of the rules established by the Secretary of the Interior, while indictable offenses are to be tried in the Territorial courts. Roads and bridges are to be under the charge of an officer of the Engineers, who must reside in the Park for at least three months in the year. The force for the protection of the Park is to remain as at present—a body of troops, whose commander is under instructions of the Secretary of the Interior. This commander is authorized to employ five scouts to assist his men.

Such in brief are the provisions of the bill which has gone to the House for action. It reaches that body in ample time to be brought up and voted on before an adjournment takes place. There is no good reason why it should be smothered in committee, or neglected until it is too late for action to be taken. It is no longer a bill without friends. Day by day and year by year since the subject of preservation of this National Reservation began to be agitated, the interest in the Park has been growing. Each year more and more wise and influential people have visited it, appreciate its value, and take a patriotic pride in it. The people feel deeply about this Park, and this sentiment is making an impression on Congress.

It is true that the bill is one which has in it no politics, that no one who interests himself in it can hope for any material gain, but the measure is so purely one for the benefit of the whole people that each man who votes for it may be sure that his action will be appreciated by the public at large.

The passage of this bill by the Senate renders the forwarding of petitions to Senators unnecessary. Every effort should be made, however, to arouse members of the House of Representatives to a comprehension of the general interest which is taken in the measure.

RATTLESNAKE BITE AND ITS ANTIDOTE.

THE horror of snakes is older than the Jewish faith, and most people yield to this fear. It is not uncommon to see men whose courage is undoubted tremble and grow pale at the sight of the most harmless snake. The danger from snake bite is not one that can be faced nor one that can be avoided. The old saying about the "snake in the grass," something that may be stepped upon and that injures without giving warning, tells the story of horror and detestation.

Quite different from the fear of serpents merely as such is the more reasonable terror with which most people regard the snakes' bite. Deaths from snake venom are no doubt much less frequent in this country than deaths by lightning stroke, yet we venture to say that for one person who fears that his life may be ended by the latter, there are one hundred who dread the serpent's fang.

Of the chemistry of snake poisoning little or nothing is known. The treatment of subjects inoculated by this venom has been up to the present time wholly a matter of experiment with antidotes, and it must be said that, until now, none of the antidotes have proved unvaryingly efficacious. For two hundred years, since first these experiments began to be made, we have remained without an antidote for snake venom. De Lacerda's claims to have discovered in permanganate of potash an antidote for the bite of the venomous South American serpent *Bothrops* was at first generally accepted, for his assertions were so positive that it was impossible to doubt his good faith. Subsequent developments, however, have induced the belief that the permanganate of potash remedy is valueless.

India is a country abounding in venomous snakes, and offers favorable opportunities for experiment. No antidote is known there for the bite of the most poisonous serpents, and in spite of rewards offered by the Government for their destruction, something like thirty thousand persons die annually of snake bite. Alcohol and ammonia are the remedies generally relied on as palliatives, and very good results have been secured by lancing the wound and applying a heavy poultice of stale but still moist cowdung, the action of which is perhaps due to the generation of ammonia; but there is no instance on record of a person recovering from the sting of a healthy full-grown cobra.

Within a few months Dr. H. C. Yarrow has carried on a series of experiments with the North American rattlesnakes, and believes that he has discovered an unfailing antidote for the poison of this terrible reptile. Dr. Yarrow, as is well known, is Curator of Reptiles in the National Museum, and is also a trained physician of eminence in his profession.

We shall shortly commence the publication of a series of papers by this gentleman, in which a detailed account of these experiments will be given. His method will be explained in full, and an account given of all the substances tried as antidotes, with the results of each. The subject is one of such general interest, and may have such a vital bearing on the future of every man, woman and child, that we anticipate for them a wide circle of readers outside of those who ordinarily see the FOREST AND STREAM. The importance of Dr. Yarrow's experiments can hardly be overestimated.

IF THE FACTS with regard to the Steuben county (N.Y.) game bill are exactly stated, this bill requires looking after. We have not seen a copy of the proposed act, but from the statement of the Secretary of the Hornell Fish and Game Protective Association, we conclude that, by its provisions, prosecutions in the case of violation of the game law are discretionary with the District Attorney, and that, even in the case of conviction, the Supervisors have the power to remove the penalty which the court may have inflicted. In other words, the game laws for the territory covered by this bill are to be abolished. The enactment of such a law would be a most serious blow to the cause of game protection in New York State, and it is difficult to believe that the Legislature will pass such an act. There is no reason why Steuben county should be thrown open to pot-hunters, except perhaps that this element is unusually strong there, and is backed up by weak-kneed officials, who care more for their continuance in office than they do for performing their sworn duty. We are anxious to obtain a copy of the bill referred to.

THE OPENING DAY FOR TROUT.—Monday last was the legal opening of the trout season in New York. The waters of Long Island were about the only ones free from ice, and so available for fishing. The morning opened with a fog, which about 8 o'clock was dispelled by a chilly wind, when the sun came out and made the day more agreeable than the promise of early morning. We noticed many rods in the stations of the railroad at Long Island City and Brooklyn on Saturday night, and the conductors on the different branches say that many more went down the next day. The Nissequogue River, on the north shore, was well covered with rods, as was also Massapequa Lake, on the south side. From the meagre reports which we have been able to gather, no great number of fish were taken as compared with former years. We shall give a more extended notice of the opening next week.

THE story of a buffalo hunt printed in another column is interesting. It gives us a picture of the eagerness with which these animals were pursued during the last years of their occurrence on the Platte River, not by skin-hunters only who hunted for gain, but by meat-hunters as well.

THE ROCK CLIMBERS.

XV.—BLOOD ON THE SNOW.

THE Rock Climbers sat at the foot of a great morainal ridge and ate their lunch. They did not remain long, however, for the air was cool, and their garments were damp with perspiration from their morning's exertion. Resuming their loads they started again to clamber further up the glacier. The tracks that they had followed led up the ice before them over the soft, new snow, and with the glass could be seen to turn up a side cañon and disappear behind a rocky point clothed with low spruces, which ran out from the mountainside. In mountain climbing it is usually safe to follow game trails, for the game always picks out the easiest way to go up or down the slope, and besides it is easier to walk along a trail than over the rough rocks. Acting on this idea, which is familiar to every mountaineer, the men followed the direction of these tracks, which they several times crossed. They were very fresh, seemingly not having been made an hour before. Jack and Yo differed as to the animal that had made them, the former believing them goats, while Yo was quite positive that two sheep had passed along.

The men had come quite near to the rocky point about which the tracks passed, and were walking along up the snow incline, when Appekunny, who was further to the left, suddenly stopped and called out: "*Siya*! look at that ram!" His eyes were fixed on the point, but neither Yo nor Jack could see from their point of view anything that warranted excitement. Quickly stepping to Appekunny's side, however, there came into view as fine a bighorn as it is often given one to see. Standing there on the white snow, outlined against the sky so that every detail of form was distinctly seen, with his head thrown back as he gazed more in curiosity than alarm at the three strange creatures that approached him, he was a picture of unconscious grace, beauty and wildness. At Appekunny's first word Yo had loaded his rifle, and as the ram appeared he said, "How far, Jack?" "About 200," was the reply, and Yo dropping on one knee, fired. The animal was standing half quartering toward them in such a position that his head and neck were in line with his shoulders, and a shot through the shoulder would pierce either heart or lungs. The rifle was therefore aimed at the neck just below the throat to allow for the drop of the ball. The smoke hung for an instant, and when the rifle was lowered the animal had disappeared. "Did any one see where the ball struck," asked the shooter. "Not I," said Appekunny. "Nor I," said Jack, "but," he continued, "I thought he turned kind of awkward, as though he was hit." "Well," said Yo, "let's go up there, anyhow."

They hurried up the slope, and before they had gone far a cheer came from Jack, who was in the lead. "Hurrah, Yo. Blood on the snow, and lots of it." Yes, sure enough, they could see even at that distance that the pure white mantle of snow was splashed with great blotches of red blood. The ram was evidently hard hit. The dogs, which had been smelling excitedly about since the shot had been fired, were now cheered on in the hope that they might catch the animal if he were clambering up the rocks, and bay him, so that another shot might be had; and after a moment they took the trail and disappeared around the point, and two or three moments later their fierce barkings told that they had overtaken the ram. The men followed at their best pace, Jack and Appekunny running around the point, while Yo allowed his impetuosity to get the better of his judgment, and clambered directly up the rocky ledge toward the place where the dogs were evidently holding the animal. After a hasty scramble up the cliff, he found himself breathless among the spruces above it, but here he had to plunge through drifted snow up to his waist for some distance, and by that time all sounds of conflict had ceased. After a hard struggle he reached the bare rocks beyond, and there found a bloody trail where the game had passed along. Two hundred yards ahead of him were his companions, looking along the mountainside beyond them, and as they saw the belated rifleman approaching, they sat down to wait for him.

"Have you seen anything of him?" asked Yo as he came up.

"No," replied Jack, "but the dogs followed the trail as far as that point of rocks over there, and he evidently turned down the hill."

"He is our meat, I guess then," said Yo, "and if he keeps on bleeding like this he certainly cannot go far. We can't go after him and then come back here, and I have not got through with this glacier yet. Suppose you take my rifle, Jack, and follow the trail, and get the sheep. Appekunny and I will go back and see some more of the ice, and when we get through will come down and join you. What do you say?"

"That will suit me," answered Jack, "hand her over."

The rifle and half a dozen cartridges having been given him he started along the trail, and was soon seen working his way diagonally down the mountain over the rough precipices. Yo and Appekunny now turned back to the glacier, and as they went, saw everywhere evidences that the sheep was severely wounded. In the edge of the snow near the spruce were the tracks where the dogs had bayed it, and it had run backward and forward. The blood seemed to flow from it not by drops, but in a constant stream, and additional evidence that the wound was vital—if such evidence was needed—was furnished by the fact that the blood flowed from the forward part of the body. Through the side cañon, the two men walked down over this tributary of the ice river to the comb of the main lower ice, and out nearly to the middle of the glacier. Before them, and on either hand, it lay spread out far and wide, but behind them, or west, the cliff and the steeply inclined mass of ice cut off the view. They could see far down the valley of Swift Current into the flat at the foot of the lower St. Mary's Lake, where their camp had been, but in every other direction except the east the view was cut off by naked snow-patched walls of rocks whose summits were eroded into curious points and pinnacles. A little to the south of west, nestled high up above them in a little hollow of a tremendous rock wall, lay a vast mass of sky-blue ice, reminding them of a time when the thickness of the glacier upon which they then stood was so much greater than at present that it covered even the towering peaks and walls which now form the summits of these mountains. Venturing close to the cliff over which the upper ice is slowly flowing to join the lower mass, the two men looked down into a seemingly bottomless abyss, where the ice had melted next to the rock, but they did not care to venture too close to this on the hard, slippery snow, for without ropes the outlook for one who might fall into this crevice would be rather dismal.

The sky had become overcast and the winds had begun to howl among the peaks, and there was every prospect that a heavy snowstorm was at hand. Moreover, it was growing late and Yo and Appekunny must hunt up Jack before starting for camp. So, after having exposed a few plates, they took their way along the mountainside in the direction which their comrade had followed.

Meantime Jack had followed the bloody trail along the mountainside, which at a little distance looked absolutely vertical and impassable, but along which an active climber could readily work his way. The trail tended constantly down the hill and was as plain as ever. Now and then on passing over a bank of snow, it would be seen that the quarry was growing weaker and staggering in its gait, and once or twice it had stumbled and fallen and slid along on its side over the snow, leaving a broad smear of crimson on its otherwise unsullied whiteness. The little dog Babbette had accompanied him, and after he had gone more than a mile he rounded a point of rock and came upon the sheep which was lying down with lowered head, and in front of it stood Babbette licking its nose in very friendly fashion. Jack, who wanted to give her some training in hunting, ordered her to attack it, which she promptly did, nipping its heels and barking, and the animal rose to its feet, staggered a few steps, fell over a precipice into a snowbank at its base, walked out of that to another cliff over which it fell, and when Jack got to it again, a little later, it was lying in the snow, dead.

Yo and Appekunny had kept along the mountain until they reached the descending blood trail, and then keeping a sharp lookout for Jack, presently saw him standing by a fire in a little valley below them. The fire was a pretty good sign that he had some meat, and the two men began to feel hungry. When they had worked their way down to within a few hundred yards of him, zigzagging this way and that over the steep ledges, Yo hailed him and he came up the steep to meet them.

"Well, Yo," said he, "you've killed the best piece of meat in the mountains."

"I hope you have put some of it on the fire then," was the reply.

"That's what the fire is there for," said Jack, "Come see the ram."

A short distance away, near the edge of the snowbank out of which Jack, with infinite labor, had dragged him, lay the animal. He was indeed a beauty. Five years old, his horns were not very large but were perfectly symmetrical and unbroken; his coat was perfection, thick, smooth and glossy, dark brown with its pure white rump patch. He was short of limb, strong of back, sturdy and stout, plump and round as a bull elk in early September, in fact, a picture such as one seldom has an opportunity to look at.

The work of preparing him for transportation to camp was undertaken at once, and while that was being done a few ribs of the deliciously fat meat were roasted over the fire. It was manifestly impossible to take the meat down the mountain that night, and the next day must be devoted to that task. The animal was so heavy that if all three men had been unencumbered with other loads they could not have carried him down, for it was estimated that partially dressed he would weigh from 250 to 300lbs. Jack indeed, as the stoutest man of the three, did start with the forequarters cut off close to the shoulders, but he staggered under this weight only about 50yds. and then dropped the load, and taking off the forelegs and shoulder blades came along with those.

When they started to return to camp it was down the side of the mountain which bounds the valley on the north, for it seemed as if along these ledges an easier way of descent might be found than over the precipice at the foot of the glacier. They had gone but a little way when they passed a ravine in which lay a long snowbank, hollowed out beneath, and into this snow cave Jack went to look for a drink of water. Presently he called to Yo, who was waiting for him, and asked him to come in. Yo entered, and found himself in a most beautiful ice grotto. The snowbank was evidently very old, and the rushing waters of spring had tunneled under it while it had melted from above, so that a heavy roof of ice stretched across the ravine from side to side. The grotto was eight or ten feet from floor to roof, thirty feet wide, and perhaps a hundred long, and a drift of snow which had blown in from the opening at its upper end lay in the bottom of the ravine. The roof seemed not to be more than eight or ten inches thick and admitted the light freely. It was beautiful sky-blue, and had melted from below so as to form a curious pattern of squares, the angles where these squares met being lower than any other parts of the roof, and from each of these points hung, as pendants, clear drops of water. This pattern is like what is called in architecture fanned vaulting or fanned pendentives, and its effect was very lovely.

Leaving this interesting spot, the two men hurried on to overtake Appekunny, who was striding along before them. They made their way down the mountain without much difficulty, only two or three bad ledges being encountered on the way. In the snowbanks which they were constantly crossing, the fresh tracks of goats were often seen, but it was so late that the travelers paid no attention to anything except the picking their way along the ledges. The sun had long hidden itself behind the western peaks, and before they reached the level of the valley it was quite dark. Notwithstanding this, they made good time through the timber, and at length reaching the camp, threw down their loads with a sigh of relief.

And presently, when the fire was blazing and the fat sheep meat sputtering in the pan and the coffeepot steaming on the warm ashes, they talked over the incidents of the day, and all agreed that a wonderful amount of enjoyment and interest had been compressed into the hours that had elapsed since their start that morning. Yo.

The Sportsman Tourist.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

MY ONLY BUFFALO HUNT.

IN the year 1872 came my only opportunity to hunt buffalo. It was even then very evident that they were fast passing away, and we were obliged to go 100 miles further for meat that year than did the hunters of the year before. The latter part of June was selected for the start, for, although we would be obliged to dry or jerk our meat on the hunting grounds, all reports from the game country agreed that the buffalo were steadily moving westward, and should we wait until fall the game would be beyond our reach. The hunting ground selected was the country lying between the Republican and Solomon rivers, to the westward of a line running south from old Fort Kearney.

Our party consisted of four men, with two teams of one span of horses each. M. and his son, E., a young man of some twenty years, were with one team, while Y. and I drove another. All were tenderfeet, except Y., who had been a night herder with a wagon train on the plains for years. Through the lack of saddle animals all the hunting had to be done on foot. M. and E. brought smallbored muzzleloaders, in which they appeared to have great confidence. Y. carried a Spencer carbine, with 40 rounds of ammunition, while I was armed with a Gallagher carbine, .56-cal., using 40grs. of powder. These were the best arms obtainable, and the choice of the most utterly worthless gun in America seemed to lie between the Spencer and the Gallagher. The point-blank range of the Gallagher was 100yds, and, while at 50yds. it would sling its bullet a foot above the center of the target, at 150yds. the ball dropped a foot or more below. It was, therefore, necessary to get, if possible within just 100yds. of the game. The Spencer appeared to have a somewhat flatter trajectory, judging from the few times during the targeting of the carbines when we found means of ascertaining which way the balls really went, but as its bullets did not seem to be at all partial to any particular direction, all were well satisfied when at the close of the hunt its 40 rounds of ammunition had actually killed two buffalo without crippling a single hunter.

Our road ran westward until at a point on the Platte River a few miles west of Fort Kearney, it turned south toward the Republican River, distant some fifty miles, where we forded the stream and camped on its southern bank. The hot weather obliged us to travel slowly, and the one hundred and fifty miles of the journey consumed a week's time. After leaving the Platte River, the road entered the sandhills, and as the country looked well for hunting, E. and I started to hunt together, on a line parallel with the course of the slow-moving wagons, in the hope of finding an antelope.

After an hour's tramp over the sand a fine buck antelope was sighted feeding quietly in a little hollow surrounded by sandhills, and we proceeded to stalk him as quietly as possible. A low sandhill to the leeward of the unsuspecting quarry covered our advance until within 100yds. While still 300yds. distant from our contemplated victim, the eager boy stopped, and in a hoarse whisper asked, "How are we going to get that antelope to the wagon after we have killed him?" "We will not have any trouble in carrying him," I replied, for I had been there before. We crept to the top of the sandhill, cocked our guns and slowly raised our heads above the

grass to get a standing shot at the sharp-eyed rascal. A red streak speeding over the opposite sandhill rewarded our eager gaze, and having vainly sent a couple of bullets in chase of the flying brute we shouldered our guns and marched dejectedly back to the wagons. The antelope in this part of the country had been much hunted and had long ago been educated beyond the point of paying any attention to flags, lures, etc., further than to fly like the wind in the opposite direction at the first sight of them, and had taught a crest-fallen hunter about my size that the sharpest-eyed brute that ever wore hair is the well-hunted antelope of the plains. I have on many occasions caught first sight of them on ground favorable for stalking, but never yet have I been able to creep up and deliver my fire without being caught by that gaze that seems to sweep the horizon without an effort.

About half way between the Platte and Republican rivers, we saw our first buffalo. A band of half a dozen bulls, chased by a mounted hunter, crossed our trail half a mile in front of the wagons, and although we tried hard to head them off, we failed to secure one. A few miles further on we met a hunting party starting from the range, and leading behind their wagon a horse that had evidently been used for running buffalo, and whose breast was ripped open in a most horrible manner, a long slit commencing between the forelegs and running up to the bottom of the neck. We inquired the cause of the horse's wound and were told that it was caused by the collar of the harness: the unlucky hunter being evidently unwilling to confess his failure to stop the charge of an infuriated buffalo bull, with the breast of his untrained horse.

Nearing the Republican River, we met a man driving a pony team, and inquired of him where the main herd of buffalo was. He replied, "Cross the river at the first ford you can find, go out on the hills to the south and the whole world is black!"

Eagerly we passed on, forded the shallow stream that ran swiftly over its wide bed of sand, and gaining the south bank of the river drove toward a grove of cottonwoods a mile above, to find fuel necessary for camp use. As we turned the horses' heads up stream, a large bull buffalo appeared, walking rapidly from a ravine in the low hills to our left, across the bottom land to the river. The day was fearfully hot and the great brute was manifestly eager for water. Catching sight of the approaching wagons, he stopped to look, but apparently reassured by the slowness of our approach he again walked swiftly on. He was now less than half a mile distant, and while Y., who had seen such sights a thousand times, coolly continued the advance, driving the leading team, the other team was left to follow the wagon in front, while three excited tenderfeet snatched their guns from the wagons, and crept along close behind the leading wagon, watching with beating hearts the advance of the mighty bull. He was very uneasy, and again he stopped and gazed a few seconds at his advancing foes, and once again his thirst overcame his fears, and with stately step and head held high in air, the kingly brute came on. His course was diagonally across the bottom land down the stream, and we neared each other rapidly. It seemed impossible for him now to escape us, and at a low signal we ran swiftly forward in front of the wagons to get squarely across the path of his return to the hills. Quickly as though on a pivot he turned, and for the first time in our lives we saw the speed of a thoroughly frightened buffalo, as he dashed across the level ground, still far in advance, and in spite of our useless bullets gained the hills unscathed.

The whole western sky was now rapidly filling with angry-looking clouds, and as the sun sank to the horizon, the darkness came on quickly. Reaching the camp ground, we had only time, after a hurried supper, to put things to rights and fasten the wagon covers more securely (for we had no tent), when it grew dark and the storm burst upon us. Nearly all night the storm raged. Rain fell in sheets, while the almost incessant flashes of lightning illuminated the wild scene. The cowering horses, arching their backs to the falling rain, turned away from the coming blast, and the great cottonwoods writhed and twisted as they wrestled with the gale, and the hunters drew the damp blankets closer around their ears and wished for the day. With the darkness of night the storm passed away, and the morning sun shone brightly on the water-soaked plain.

All our plans for the hunt were now changed. Heretofore we had planned to lie in ambush for the thirsty buffalo as they came down from the hot plains to drink; but now, when every ravine ran full of water and every old buffalo wallow was a brimming cistern, it was very evident that if we were to secure buffalo meat sufficient to load our wagons, we must climb the hills for it. M. and E. accordingly climbed the hills to the southeast, G. remained to take care of camp, and I, shouldering the formidable Gallagher, wandered southward.

Following up the deep ravine or valley for a couple of miles, straggling buffalo began to appear on the hills, and a herd of several hundred came in sight on the divide to the right, and a band equally large soon showed up on the divide to the left. This began to look like business, and I stopped to plan an approach to the strange game, of whose habits I knew nothing, when I saw two large bulls leave the herd on the right and walk down the hill, as though intending to cross the valley to the herd on my left. Here was my opportunity. They would evidently cross the ravine half a mile in front of me, yet as they were nearly a mile distant I would have plenty of time to run forward under cover of the bank, and secrete myself in front of them. Hurrying forward, I took position where I thought they would cross, and not without considerable anxiety, awaited their approach.

There was no chance of escaping the possible charge of a wounded bull should he sight me, nor could the oldest man in America tell where the Gallagher would carom on the buffalo, should he be either more or less than 100yds. distant. After a long time, and when I began to hope that they had turned back, they suddenly appeared in the ravine 200yds. above me. One was the hardest looking "mossback"—a term applied to the very old bulls which were late in shedding their old coat of hair—I have ever seen, while the other was a splendid specimen. Full grown, glossy black, fat and round, I determined as he stepped quickly across the bottom of the ravine and began climbing the opposite hill to get him if possible. It was useless to fire at that distance, so observing that they were keeping on the crest of a hogback or ridge that rose between two small ravines, tributary to the main one, I crept forward into the little ravine running parallel with their line of march, and as they slowly climbed to the high plateau above, vainly tried to get a fair shot at the big black fellow without being seen by them. The black one walked in front, while the old mossback, whose wrinkled hide had apparently shed the snows of sixty winters, and whose races with the ponies of many a Pawnee and Ogallalla, long since dead, had stiffened his rheumatic old knees, crept wearily after him, as though in search of a good place to lie down and die. Near the head of the ravine they stopped, and for an hour I waited for the old skeleton to walk on and give me a shot at the other, which stood just beyond him, and at which I could not shoot without exposing myself, which I dreaded to do with the wretched gun I carried. Finally I grew weary of waiting and determined to start him. Raising up, I judged the distance at 100yds. (it afterward proved to be about 50) and fired.

Tom Hood, describing the sudden release of boys from the school-room, says:

> "There were some that ran and some that leapt
> Like troutlets in a pool!"

Not a boy of all the class, however, could have skipped with this suddenly rejuvenated animal. The man who would "caper with him for a thousand mark" would be badly left, indeed. He seemed to rise up on his hindfeet and pirouette with the agility of a Fanny Ellsler, while he looked hungrily around for the man who had trod on the tail of his coat: and had an observer been convenient a solitary horseman might have been seen on foot, with hair uprising and an old Gallagher in his hand, as he sped down the ravine, looking eagerly for a chance to crawl into a prairie dog hole or climb up among the top limbs of a sage bush. The buffalo had evidently been hit up in the hump, with the result of making him fighting mad. When my heart had gone down in my body and I was enabled to draw air into my lungs again, I found that they had both run on and joined the herd on the divide, and on trying to crawl within gunshot once more some stragglers caught sight of me and gave the alarm, when the whole herd ran southward out of sight. The firing and the panic among them had alarmed the others far away on the west side of the valley, and they all moved off southward.

Slowly and quite crestfallen I tramped back to camp. M. and E. coming in, reported having killed a buffalo at the first fire; but this proved to be a wounded one, and unfit to eat. Wounded buffalo were to be found everywhere. The settlers along the frontier came with all known weapons in search of meat, and buffalo were shot with anything that would burn powder. Skin-hunters had been on the ground ahead of us, as the stripped carcasses proved, but we did not meet any. In fact, the land stank with rotting buffalo, as the breeze many times testified when not a carcass was in sight.

Around the camp-fire that night the situation was discussed at length. Y., who did not care to hunt, as it was old sport to him, and as he knew his gun was worthless, kindly volunteered to haul meat to camp and let us tenderfeet do the hunting. In fact he killed only two buffalo on the trip. E., the boy, was a gentlemanly fellow, and although eager to hunt expressed his willingness to do whatever the others wished. M., whom we had for some time observed, was not averse to letting us know that he thought Y. and myself very small potatoes as hunters, now volunteered the statement that E. and himself would have to do the killing. This was gall and wormwood to me, and although nothing was said in reply I inwardly vowed that the morning light would see the beginning of an effort to kill buffalo, the best I was capable of making.

In the morning E. expressed a wish to hunt with me, but excusing my elf I sallied forth alone. M. and E. hunted together to the southwest, while Y. still kept the camp. A mile or two from camp I saw a very large antelope feeding just at the brink of a ravine half a mile in front, and as he for a wonder had not seen me, I ran down into the ravine, and followed it up until opposite him, then crawled to the top of the bank, laid off my cap, and peered carefully over the crest of the hill and saw him lying down, 100yds. distant, looking backward over his right shoulder at me. I had never yet killed an antelope, and taking very careful aim, fired. The ball struck just behind the shoulder, passed forward between the shoulder blade and ribs into his neck, and passing parallel with the windpipe, clipped three of the ridge-like projections on the side of the windpipe, and stopped in the flesh of the neck. Jumping to his feet he ran rapidly for 50yds., and I thought him unhurt, when, trying to draw his breath and the blood running into his lungs, he lowered his head to the ground, and the wheezing sound of his breathing gave notice of a hit. Still, he ran on over the hill. Following on, I jumped him again, shot him through the paunch as he ran, jumped him still again and shot him through the heart, when he ran 150yds., and was not done struggling when I ran up. The hardest lived animal I ever saw, for be it remembered the gun was .56-cal. This was a lucky beginning of the day's hunt, and dressing him, I hurried on after buffalo. A herd soon appearing, I crawled up, and being careful of distance, succeeded in killing a noble bull, and repeated the operation twice more during the day. Feeling jubilant at my success, I returned to camp, and had just told Y. the story of my good luck when the others returned.

"What luck?" said M. "The boy has got three buffalo and an antelope," replied G., before I could speak. "What luck did you have?" he continued. "We have shot eight," replied M. My heart sank, for I had hoped to equal his score, and had worked hard for it. Not until I felt thoroughly humbled did we learn that they had shot at eight buffalo, and succeeded in killing only one, which proved to be a wounded one, and E. afterward told me it smelled so badly that they did not go within thirty yards of it. Naturally enough, I felt better, and as M. soon afterward began telling, in a very modified tone of voice, of his ability to dry meat properly, and of his willingness to let E. and me kill the meat, while G. hauled it in, I began wondering what had happened to him during the day to frighten him into giving up the hunt without killing a single buffalo. He never shot at another buffalo from that day to this. Peace again reigned in Warsaw, for I was perfectly willing to hunt with E., who was a very pleasant companion; and though he hunted alone the following day, while I piloted G. to the dead animals, yet during the three succeeding days we were side by side, and he was only prevented from accompanying me the last day by the fact that his feet were too badly blistered to go.

Next morning G. took the team, and with nothing in the wagon box save a five-gallon keg of drinking water, we set out for the dead buffalo. We drove up the hill and out on the great plateau stretching southward, and driving slowly along over the smooth prairie, making but little noise, had just reached the crest of a low ridge, when right in front, within 300yds., appeared a herd of a hundred or more buffalo, bulls, cows and calves. Away they went; and seeing that the ground was smooth in front, G. put whip to the horses, which seemed to enter instantly into the spirit of the chase and sprang forward at a full run, while the wagon bounded over the turf, causing us to cling tightly to the spring seat, and the water-keg bounded and rattled from side to side of the wagon box, making a fearful racket, as we slowly gained on the flying herd. Coming within 75yds., G. threw the horses on their haunches in his hurry to stop them, and just as soon as I dared, overboard I went, Gallagher in hand. A big bull was sighted in rear of the crowd, but instead of falling at the report of the gun he sped on more swiftly than before. Another cartridge was quickly inserted and the gun elevated and fired at the herd, now huddled together in one solid mass. A fine young bull was seen to stagger a few steps and fall, shot through the heart.

On rushed the herd, now thoroughly frightened, and as we hurried on after them we fairly shouted in triumph, as we saw that right in front of them ran a ravine which we could see at a point beyond, was at least 40ft. deep. The ravines in this light subsoil, torn out by the deluging rains that occasionally fall on the plains, were commonly broken off at the edges just as steep as soil could hang, and as the buffalo were sweeping on like a tornado, with little time to look before they leaped, I felt sure that our hunt was ended, the meat supply assured, and only regretted the unnecessary slaughter sure to follow as the fated herd plunged down the steep. I would not have thanked any man to insure us fifty head of dead or crippled buffalo. Over they went, 300yds. ahead of us, and we slackened our pace to a walk and began planning how to get the meat of the slaughtered herd up the nearly perpendicular walls of the ravine. When within 200yds. of the brink, to our amazement a buffalo appeared clambering up the face of the other wall of the ravine, at a point that we afterward found taxed the climbing powers of a footman. Another and another came bobbing up, and we drew up the horses, utterly dumbfounded, to see that every one, even to the calves, had made the plunge in safety.

This, to me, was one of the most noteworthy things that ever came under my observation. Many times afterward we saw buffalo tracks on the slight projections of the walls of these deep gullies, in places where we could only stop and stare. The shape of the limbs, too, seemed utterly to forbid it. As the bulls at this season of the year were fatter than the cows, a fact which was apparent at a glance, we very naturally chose them for beef, and as, like all tenderfeet, we were ambitious to kill the largest specimen to be found, it followed that nearly all we killed were large bulls. Yet, when standing over the body of my first buffalo, and noticing the extreme slenderness of the legs just above the hoof, I then and there began to measure each and every one we killed for meat, besides large ones found dead—when they did not smell too badly. I found only one whose foreleg I failed to span with the middle finger and thumb of one hand. The size and weight of the animal would seem to necessitate a leg as strong as steel for the downhill plunges the buffalo can safely make.

A word of explanation may here be necessary, even at the risk of making this article too long, in order to show why we were enabled to outrun a flying herd of buffalo with a two-horse wagon.

The buffalo is—or was—a strange animal, and in some respects closely resembles the pig. One of his peculiarities cropped out of this race. Had there been not more than a dozen animals they would doubtless have outrun us with ease, but the stupid brutes in the front and center of the herd seemed to lose fear with the consciousness that others were between them and their enemies, and galloped steadily forward without hurry, while the thoroughly frightened ones in the rear, unable to force their way forward through the mass of their fellows, ran around the herd to the front, only to drop quickly into the steady pace of the leaders and gallop doggedly on, until they once more found themselves in the rear of the procession, ready to repeat the roundabout race again.

Leaving the herd that had fairly gained their freedom, we took the hams of the young bull and drove on. A mile further on we saw, half a mile in front of us, four large bulls, two of which were lying down, and the others standing, and all, as it afterward proved, fast asleep in the warm sunshine. Although we had no intention of running them, yet as they were directly in our course, naturally enough we were anxious for a shot. As we slowly approached, driving at a gentle walk over the smooth ground, carpeted with buffalo grass, we saw that they were asleep, and actually drove within 25yds. before the one standing nearest us, hearing a slight noise, opened his little pig-like eyes, and from under their heavy curtain of black hair, for an instant stared stupidly at the strange apparition. The glance of indifference, quickly changing to wonderment and abject terror, was positively ludicrous. Away they went. Two balls failed to check the speed of the fattest, and they disappeared beyond a rise of ground half a mile away.

Plenty of meat in camp that night caused general rejoicing, and from that time all were kept busy. I found E. a splendid comrade, a true hunter, a good shot, and fully able and willing to do his part. The night of the 3d of July E. and I bivouacked on the range about five miles from camp, in order to be near buffalo early in the morning, and were awakened on the morning of the ever-memorable Fourth of July by the howling of the buffalo wolves.

Seventeen head of buffalo were killed (not counting cripples), of which Y. killed two, E. five, and ten fell to my Gallagher. The hot weather was the worst drawback to an otherwise pleasant trip, but a goodly quantity of dried meat was loaded in the wagons when we left the range. Some peculiarities of the extinct bison of America may be worth recording, for the sake of those readers of FOREST AND STREAM who have never seen him "on his native heath."

Although we went on the range horrified at the wasteful methods of the buffalo hunters and fully resolved to save all the meat of those we killed, the cutting up of one animal convinced us that although the tough mass of bones, sinews, muscle and gristle forming the shoulders of the buffalo, would unquestionably make as hot soup as any other meat, all the flesh we had any use for was found in the hams and loins. This was superb.

When on the move they seemed to dread the valleys and to expect their foes there. They would often rush madly down a gentle slope and for a few jumps up the opposite hill, but not meeting with trouble would quickly drop into a walk, and before the top of the hill was gained would be moping along as though their foes were entirely forgotten. Again, while they did not seem to care which way they ran, once in a while they appeared to insist, pig-like, on one particular direction for their rush, and we were soon agreed in conceding to them the right of way. While looking at him broadside the buffalo appeared the most ungainly animal, yet when turning to face the hunter the great bull fronted him squarely and raised his massive head high in the air, majesty itself seemed to envelop him and his resemblance to a colossal black lion was perfect. He was, on the whole, a stupid brute. It appeared to us that any true sportsman must soon tire of their slaughter, and we questioned their being more difficult or dangerous to kill than Texas cattle. They are gone, and it is well to remember that however perfectly adapted to their surroundings and fitted for the use of the savage Indian, their peculiarities, notably their stupidity and intractability, completely unfitted them for the changed conditions of life on the range since its occupation by the civilized race. ORIN BELKNAP.

Natural History.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

NOTES ON THE ENGLISH SPARROW.

(*Passer domesticus.*)

THE marvelous rapidity with which the English sparrow has multiplied and is multiplying on this continent, its evident capability of spreading still further and the probability of its eventually occupying the whole of agricultural America to the exclusion of many beneficial species of native birds, combined with the reiterated and increasing clamor of complaints against the species, have at length induced several of the State Departments of Agriculture in America, first, to accept the fact that this bird is a tremendous power in the agricultural economy of the country; second, to follow with the question, is it a power for good or for evil?

It is worthy of notice that there are still many persons who deny that the sparrow can ever make its influence felt in this country in any economic direction. For the benefit of these I will briefly refer to the depredations of the species in England, where not only the cities, but also the villages and barnyards are populous with sparrows; and in the south of England the farmers are compelled to expend considerable sums annually to keep down the hordes of these marauders, for the experience of centuries has taught the farmer that the sparrow is an unmitigated nuisance. I myself have seen acres and acres of grain fields in southern England that have been so thoroughly devastated by sparrows that they were not worth the cutting. All investigations that have ever been conducted in England have, so far as I can learn, resulted in a verdict most unequivocally damnatory of the sparrow; and yet, in the face of this, private persons and corporations, swayed not by facts, but by the same foolish sentiment which prompted the introduction of the Scottish thistle to Van Dieman's Land, have introduced and encouraged this pest in this, the greatest of agricultural countries. What wonder that the English farmer stared in blank amazement when first he heard of it, or that he failed to account for the action except on the assumption that America had been visited by a wave of temporary insanity.

It has been often argued that, so far as we Canadians are concerned, the sparrow can never give us much trouble, as the climatic and other conditions are sufficient to prevent its increasing to the same extent as in England. But unfortunately the facts are sufficient to entirely dispel this illusion. The first time that I saw the sparrow in Toronto was, I think, in 1874, when a single pair was observed. Since then it has gone on increasing until now, the natural sources of maintenance are taxed to the utmost, and each successive brood as it attains maturity is compelled to migrate to some distant locality where the struggle for life is less severe. This process of multiplication and migration has gone on yearly, each of our large cities being centers of supply, until now every town and nearly every village in Ontario is thoroughly stocked with sparrows, and when this occupation is complete they will unquestionably spread over the intervening farm lands.

The severity of the winter was confidently pointed out as an efficient check, but there is every evidence to prove that the sparrow can live as far northward as wheat can be grown with success. At Bracebridge and Gravenhurst the species has long been established, and at North Bay, Lake Nipissing, which I visited in January, 1887, I found the English sparrow in full force and possession. In response to a request for information, Mr. John Bourk sends the following interesting note:

"From all I can learn the English sparrow came here, North Bay, during the winter of 1885 6. I think the first of them came in grain cars from the East. The first I noticed were in a car at the station, and only two of them. They must have bred here, as they are increasing or have increased during the past summer. There has been a flock of about one hundred around our yard all winter, and as you know, it has been extremely cold. I missed them for about two weeks in the latter part of February, but they returned the first part of March. They lived on hayseeds and pickings from manure piles during the winter. I have not noticed what they live on in the summer, nor where they nest. They are at Mattawa and very numerous at Pembroke. They have been at the latter place, I think, for five years. I have never known them to die from cold. They seem to be as hardy as the snowbird."

This, together with the facts that the sparrow is each year occupying more exclusively the regions between the centers and the advance posts, and that it is dispossessing our native birds, should leave no doubt in any candid mind that ultimately agricultural Canada will be as completely over-run by the English sparrow as is agricultural England at the present time. For if the other birds of England, which have been subjected to the same long severe process of specialization, are unable to hold their own against the invader, much less can our native species, which have been but recently brought into contact with civilization and its attendant hardships.

Since none but actual personal observations are desired in this connection, I pass over a multitude of hearsay cases and state what I have seen of the sparrow's encroachments.

The only native species which I myself have seen dispossessed by the invader are pewee (*Sayornis phœbe*), chipping sparrow (*Spizella socialis*), white-breasted swallow (*Tachycineta bicolor*), house wren (*Troglodytes ædon*), robin (*Merula migratoria*) and bluebird (*Sialia sialis*). The aggression has never, so far as I have seen, taken the form of actual onslaught, except in the case of a pair of white-breasted swallows which were forcibly dispossessed of their completed nest in a pole house. More usually the native bird is merely "crowded out" through its inability to compete with the more highly specialized sparrow in the struggle for existence. On the other hand, although several native species of predatory birds (as falcons, hawks, shrikes, etc.) are reported as preying on the sparrow, I have never seen any but the pigeon falcon (*Falco columbarius*) and the sparrow hawk (*F. sparverius*) actually engaged in the work of destruction, and as these birds seldom enter or live about the large towns their influence as a check is at present but trifling.

From a fuller working out of the lines of argument sketched, if not from the facts herein stated, I think that it will be admitted that the species under consideration will very soon make itself felt as an economic power in the country if it has not already done so. It then lies with us to decide, Is it a power for good or for ill? Is it boon or bane?

Passing over the unanimous and strongly adverse verdict of the agricultural interest in Britain and in other European countries, and the overwhelming body of condemnatory evidence of our own market gardeners and fruit growers, as well as naturalists, I will add my own observations.

First—We have abundant and conclusive evidence that our own birds, as a whole, are eminently beneficial to agriculture, and we have further proof that these birds are retreating before the sparrow, which, of itself, should be sufficient to condemn the invader unless it can be shown that it is even more beneficial than the native birds.

Second—But, on the contrary, as above stated, in England, where the species has already attained the position it is rapidly approaching in Ontario, the havoc it makes in the grain fields is something past belief, and in the aggregate constitutes a heavy tax on the already hard-pressed farmers of that country.

From my own observation the sparrow is pre-eminently a grain eater, though, as will be seen from the appended tabular statement, it varies its diet in the springtime with buds, in the early summer with insects—some of them noxious—and in the late summer with fruit and grasshoppers. The taste for grasshoppers, however, seems to be almost, if not wholly, confined to the young fledglings. When in the nest they are fed, I believe, entirely on insect food, so that after having flown they continue to subsist on the same for a time, ultimately becoming as granivorous as their parents.

The following list of gizzard contents is, on the whole, the most favorable to the species of any I have seen; this may be accounted for by the fact that all the birds were shot in the suburbs of Toronto, in localities at considerable distances from any grain fields, so that a miscellaneous and consequently a creditable diet was inevitable. For the identification of the gizzard contents throughout and for other assistance, I am indebted to the kindness of Dr. Wm. Brodie, of Toronto.

I affix also an estimate made by the above gentleman of the economic value of the gizzard dissections. It is understood that ten points are allowed for each, and when the dissection presented neither good nor bad features, it was entered as 5 on each side. Whenever the grain found had evidently been taken from manure, it was entered as a good feature, for no harm was done, and viewed as a scavenger the bird was beneficial. The fact, however, that the question of appetite alone is on trial, may make many, like myself, dissent from such a valuation. In many other particulars my opinions differ from those of my friend, but I make no alterations, as he alone is responsible for the two columns of "points."

YEAR	DATE.	SEX.	CONTENTS OF GIZZARD.	POINTS. For	POINTS. Ag.	REMARKS.
1884	Mar. 24.	.....	Flock of a dozen devouring buds of the soft maple	4	6	Not actually dissected but carefully watched.—W. B.
1884	Mar. 25.	.....	Flock engaged as above	4	6	Same remark applies.
1884	April 7.	.....	Flock engaged as above	4	6	Same remark applies.
1887	April 8.	♂ ad..	Unrecognizable mass of vegetable matter	5	5	
1887	April 8.	♀ ad..	Nothing but sand	5	5	Within a week of laying. Throat showed a dusky streak.
1887	April 8.	♂ ad..	Seeds of some boraginaceous plant and the usual mass of vegetable matter	10	0	
1887	April 16	♂ ad..	A mass of broken down vegetable matter	5	5	
1887	April 16	♂ ad..	Nothing but gravel	5	5	Sexual organs fully developed.
1887	April 16	♀ ad..	A mass of grain, vegetable matter, egg shells and road pickings	4	6	
1887	April 18	♂ ad..	The same, with particles of wheat	4	6	Sexual organs fully developed.
1887	April 18	♀ ad..	One entire oat, particles of wheat and some gravel	4	6	Sexual organs hardly showing any signs of enlargement.
1887	April 19	♂ ad..	One entire oat, a mass of vegetable matter, including wheat and some sharp gravel	4	6	
1887	April 19	♀ ad..	A mass of vegetable matter, including wheat particles and gravel	4	6	
1880	April 23	.....	Buds of trees and broken grain, evidently the refuse of horses	4	6	
1880	April 23	.....	Flower buds of soft maple	4	6	
1884	April 23	.....	Seeds of Chenopodium, oats, elderberries, seeds of Amaranthus, larvæ (about ¾in. long) of a geometrid moth and fragments of Coleoptera	10 0 5 10 10 5	0 10 5 0 0 5	This represents the combined contents of 20 gizards, all from the same flock.—W. B.
1887	April 24	♀ ad..	One oat and a large mass of buds with sharp gravel	6	10	
1887	April 25	♂ ad..	One oat and a mass of vegetable matter	3	7	
1887	April 25	♀ ad..	Unrecognizable vegetable mass and sand	5	5	
1887	April 25	♂ ad..	The same	5	5	
1887	April 25	♂ ad..	The broken claw of a large Coleoptera, egg shells and sand	5	5	
1887	April 28	.....	Broken grain	5	5	
1887	May 3..	♀ ad..	About 10 grains of oats, besides egg shells and sand	0	10	
1881	May 7.	.....	Buds and oats	0	10	
1881	May 14..	.....	Broken oats, buds and tender blades of grass	0	10	
1880	May 17..	.....	Broken grain and buds	0	10	
1885	May....	♀	Four measuring worms (*Geometridæ*)	10	0	One of a large flock similarly feeding.
1880	June 2.	.....	Broken grain, flowering buds and Coleoptera	4 0 5	6 10 5	
1885	July 18.	♂ yg..	Fragments of oats and clover seeds	0	10	
1885	July 29.	♂ yg..	Seeds of timothy and other grasses	0	10	Just beginning to show black throat patch.
1885	July 29.	♀ yg..	Fragments of Coleoptera and of brick	5	5	This and the preceding, though both evidently birds of this year, show a remarkable development of the sexual organs, suggesting the possibility of their breeding this season.
1885	July 30.	♂	Vegetable remains, gravel and fragments of brick	5	5	
1885	July 30.	♂	Same as last, plus fruit	0	10	
1885	July 30.	♂	Oats, unripe grass seeds and gravel	0	10	
1885	July 30.	♀	Buds	0	10	
1885	July 31.	♂	Wheat and other seeds	0	10	Evidently breeding still.
1885	Aug. 1.	♀	Mass of buds and fragments of grain	0	10	About to lay.
1885	Aug. 1.	♂ yg..	Young grasshoppers	10	0	
1885	Aug. 1.	♂	A mass of broken Indian corn	5	5	
1885	Aug. 1.	♀	Seeds of *Carex polygonum convolvulus* and five young grasshoppers	6 10 10	4 0 0	
1885	Aug. 1.	♂ yg..	Three grasshoppers	10	0	New feather on chin just showing black.
1885	Aug. 4.	♂ yg..	One grasshopper and some Indian corn	10	0	In first plumage, mottled on rump.
1885	Aug. 4.	♂ yg..	Nothing but gravel	5	5	Apparently a nestling.
1885	Aug. 5.	? yg..	Tender grass shoots and grasshoppers	8	2	Corn, probably from manure, on account of season.
1885	Aug. 5.	? yg..	The same	8	2	
1885	Aug. 6.	♀	Three or four grains of wheat and some sand	0	10	
1885	Aug. 7.	♂ yg..	Grass shoots and fragments of seeds	4	6	
1885	Aug. 8.	♂ yg..	Grass shoots and grasshoppers	8	2	
1885	Aug. 8.	? yg..	Sand, grass and broken cereals	0	10	
1885	Aug. 8.	♀	Broken grain and fragments of egg shells of barn fowl	4	6	Containing one egg ready to be laid, and several less fully developed.
1885	Aug. 9.	♀	Wheat, grass blades, buds and gravel	0	10	Throat with faint dusky patch.
1835	Aug. 11.	♂ yg..	Indian corn, wheat and other seeds	2	8	
1885	Aug. 15.	♀	Oats, *Carex* and other seeds	2	8	
1888	Aug. 15.	♀	Remains of a grasshopper and some gravel	10	0	
1885	Aug. 15.	♂ yg..	Grass seeds, gravel and seeds of *Carex*	2	8	Just getting the black chin patch; no sign of sexual activity.
1885	Aug. 15.	♀	Currants, buds, grass shoots and gravel	0	10	
1885	Aug. 17.	♀	Grass shoots and gravel	4	6	Adult, yet apparently of a this year's brood.
1885	Aug. 17.	♀	Buds, coal, glass and egg shells of barn fowl	4	6	
1885	Aug. 17.	♀	Broken corn, wheat and oats (horse refuse)	10	0	
1885	Aug. 17.	♀	The same	10	0	
1885	Aug. 18.	♂	Grasshoppers and seeds of *Carex*	10	0	
1885	Aug. 19.	♀	Seeds of *Carex*, grass shoots and broken grain (horse refuse)	9	1	In extreme of moulting.
1885	Aug. 19.	♀	Broken grain (horse refuse), corn, grass shoots and shells of barn fowl eggs	8	2	
1885	Aug. 20.	Ad....	Broken oats (pickings from horse manure) and fragments of grasshoppers	10	0	
1835	Aug. 20.	Ad....	The same	10	0	Shot in St. Matthew's ward in the city.
1885	Aug. 20.	Ad....	The same	10	0

This gives a total of 120 dissections, in 47 of which were found insects, making 39 per cent. of the sparrows insectivorous, and, estimated in points according to Dr. Brodie's valuation, gives 795 for and 534 against; majority in favor of *Passer domesticus*, 261.

Toronto, Ont. Ernest E. Thompson.

The Audubon Monument.—Circulars have reached us issued by the committee of the American Ornithologists' Union and of the Linnean Society of New York, appointed to solicit subscriptions for the proposed Audubon monument. The members of the A. O. U. Committee are Messrs. Geo. Bird Grinnell, G. B. Sennett and Wm. Dutcher, of that appointed by the Linnean Society Messrs. L. S. Foster, C. S. Allen, M.D., and J. Nathan Dwight, Jr. The committee of the Linnean Society circular says: "We are largely indebted to Audubon for the present lofty standard of American natural history, his name has given inspiration to many, and the grandeur of his achievements in this department of science has produced a line of successors of which America is, and may well be, proud. Genius knows no national bounds, great men are cosmopolitan; in honoring Audubon, the American Frenchman, the hunter-naturalist, the artist-ornithologist, the indefatigable and ardent lover of nature and depictor of her manifold beauties, we feel that all the world will heartily commend the project and rejoice at its successful conclusion." The circular of the A. O. U. Committee says: "It is true that America's painter-naturalist has left behind him in his great work a monument more enduring than stone or brass, but it is fitting that America should show her appreciation of one of her greatest sons by the erection of a tribute which shall honor the living not less than the dead, the present not less than the past, and shall tell to each one who visits his tomb that Americans are not unmindful of their great dead." Subscriptions may be sent to any member of either committee.

Dr. Emil Bessels.—The death of Dr. Emil Bessels at the early age of 42 years, is announced in the Washington papers. Dr. Bessels was well known as the naturalist of several Arctic exploring parties. He was with the ill-fated Polaris expedition, and discovered that a tide from the north meets one from the south, near Cape Frazer, in Smith Sound, thereby proving Greenland to be an island. The later discoveries of the Greely party proved that he was correct in opposing the theory of an open Polar sea, and also the views of Nares, that the sea north of Grinnell Land is covered with impenetrable ice every year. As chief of the scientific corps of the Polaris expedition he did much valuable work, and spent two winters in Smith Sound, which impaired his constitution, as has been the case with most of those who have endured Arctic winters.

Early Plover.—March 25.—At about 2 o'clock P. M. to-day, within 50yds. of Spuyten Duyvil Station, I saw on some ice a plover. I got within 30yds. of it and it rose and flew over an open piece of water, and piped out two notes twice, which sounded like "You know." A man saw him, and showed the early bird to a couple of his friends. Is this not uncommon for this kind of bird to be here so early, and prefer ice to mud, as there was plenty of the latter in the Harlem River, opposite the workings of the new canal near Kingsbridge?—F. Bilinge.

Value of some Hawks.—Englewood, N. J., March 17.—*Editor Forest and Stream:* In your issue of the 15th inst. a correspondent requests "any of your readers who are practical field sportsmen," if they "have any regard for his opinions," to slay, to extermination, four species of hawks which he considers as specially destructive to our most beautiful and beneficial birds. It may interest your correspondent to know that the slate colored hawk, as a species, does not exist, and that the rough-legged hawk is one of the most thoroughly useful and indestructive of our rapacious birds, almost always preying upon mice and such humble quarry. To quote from Audubon: "The greatest feat I have seen it perform was scrambling at the edge of the water to secure a lethargic frog." Your correspondent's "opinions" are eviden ly not above criticism. Now, would it not be better that he should leave the investigation of this question to those who are competent to pursue it with accuracy and justice, rather than to disseminate his incorrect opinions, and to aid in strengthening an ignorant and unjust prejudice, on account of which much precious and useful life is destroyed?—E. M. Evans.

An Early Yellow Rail.—Gaylordsville, Conn., March 26.—On Saturday, March 24, there was picked up on the bank of the Housatonic River, in this place, a yellow-breasted rail. It was alive when found, but in an exhausted condition, and died in a few hours after being taken into the house. I think it a very rare bird in this section, and a remarkable occurrence, when the time of the year and the temperature are considered. The thermometer that morning stood at 10 .—E. H. Austin.

How the Birds Wintered.—Perth Amboy, N. J., March 30.—I have another letter from Virginia, this time from Nottoway county, some fifty miles west of Richmond. In it the writer says: "I can tell you some good news; we have had no snows this winter to kill the birds in the covey, and it has been a cold day for the pot-hunters, too. I am very proud of it. The blizzard did not reach us. The day it snowed so hard in New York, it was clear, cold and windy here."—J. L. K.

Calling the Pigs.—Some one has made a study of the different pig calls in different sections of the country; and says that in Pennsylvania the farmer calls "Pig-pig, pig, pig-gie, pig-gie;" in North Carolina he shouts "Pig-eye, pig-eye," dwelling on the "eye;" the Hoosier whoops "Whoo-ee, whoo-ee," and the hogs answer gladly; the Buckeye calls "Soo-soo, soo, soo, soo-o;" the Blue Grass pork raiser shouts "Poo-hee, poo-hee," and the Dakota man brings his hogs with a whistle.—*Ex.*

Coming of the Birds.—Hartford, Conn., March 31.—*Editor Forest and Stream:* Spring seems to have at least reached Hartford. While on a tramp to-day I saw meadow larks, robins, crow blackbirds, bluebirds, yellow hammers, wood thrushes, cedar birds (?) and an English snipe, besides hawks, bluejays, crows, etc. Is it not rather early for snipe in Connecticut?—J. B. B.

Game Bag and Gun.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the Forest and Stream's *petition blanks. They are sent free.*

SHOOTING ON SHINNECOCK BAY.

The early part of August, 1886, found me at Foster's house, Good Ground, L. I. This was the third season I had spent in that neighborhood, and I consider it as good a place as can be found convenient to New York for any one who may wish to go after snipe and likes solid comfort, the facilities for sailing and bathing are first-class, but the fellow who goes down there and thinks he is going to make a big bag of snipe will get left.

Intending to go out early the next morning, I retired early, but before doing so laid all my duffle out so as to have no trouble in finding things when I got up. At 3:45 A. M. I was seated in the stern of a catboat with a grip on the tiller, tacking over to the opposite shore of the bay to a place called "The Hole in the Wall." This is a name given it by the natives, as it is a breach in the narrow strip of sand which divides the ocean from the bay. After a sail of about half an hour, the boat grated on the sand, I let the sail down, dropped the anchor overboard and waded ashore with my gun, dragging the box containing the decoys after me. It did not take very long to put the decoys out, set the box in the center of a little patch of bunch grass and fill it with dry sea-weed and then get into it and await the result of all these preparations.

By this time it was about half past four, and the birds had begun to move. The faint peep of the ox-eye could be heard in the distance, but as I had not come out for ox-eyes I paid little attention to it. As time went by I thought that perhaps I had had all my pains for nothing, but still it was quite a treat to lie in the box and watch the change of scene as the sun commenced to flush the east with a pink glow. The breeze had died out, and as I lay there I heard a cock crow about one and a half miles off, the sound coming over the water faint but distinct, but just then I heard the clear call of the brant bird, and looking off to my right pretty sharply saw that it was making straight for me, and as it sailed just outside of the decoys I cut loose at it at about forty-five yards, and had the pleasure of seeing it drop.

The shooting was slow, but I was very much amused looking at the little ox-eyes which ran sometimes within ten feet of me, while they were feeding in the pools. Although they are a very small bird I shot some and found them to be very fat, so I made up my mind that as there was nothing better I might as well enjoy myself shooting them, and it was great sport, as they are swift flyers, and shooting at single birds it took some pretty lively shooting to get them. Later on in the day I shot at a robin snipe and wounded it so that it could not fly, but as it ran along the sand it attracted the attention of a large meadow hawk, and he circled over it for some time, but always out of gunshot range.

About eleven o'clock I gathered in the decoys, pulled up the anchor, hoisted sail and had a quiet sail, and finally made for the house. When I tied up at the dock I found I had about fifteen large snipe, including large yellowlegs, robin snipe and dowitchers, two brant birds and about twenty ox-eyes. The birds were cooked next day for dinner, and I found the ox-eyes to be fine eating, although small.

This little sketch represents only one of the many pleasant days I spent at this place. Robin Snipe.

CONNECTICUT GAME PROTECTION.

Editor Forest and Stream:

Your recent editorial on systems of game protection will bear several readings. The Connecticut system is one that should not be copied by any other State that wishes to be within a gunshot of the present age.

Our laws provide that the selectmen shall appoint two or more game wardens, and the writer was unfortunate enough to be appointed one for Hartford. Our law provides that game wardens "shall be paid the same as grand jurors in criminal cases." I have just looked up the law relating to the pay of grand jurors. They get the magnificent salary of $2.50 per day for actual work, and your readers may judge of the vast army who seek such a position. The selectmen of other towns have been asked to appoint game wardens, but they seem to fear that it will cost the town something. I have never known our game laws to work automatically nor by talk unless backed up with good earnest endeavor.

As an example of the interest taken by sportsmen in enforcing the game laws, let me cite a case. I had the pleasure of writing one of the incorporators of a game protective association in a neighboring county, asking him or his association to prosecute an offender in his county. The "game protector" replied that he "was too busy." However, the party who violated the law was fined, and without any help from the association. Without egotism, I may express the belief that no other game warden has secured a conviction during the past year. I am under deep obligations to Hon. Geo. P. McLean, Hon. Samuel F. Jones (our noted criminal lawyer), Messrs. D. A. Markam, Lucius F. Robinson, Sidney E. Clarke, all of the legal fraternity, and the police department of this city; C. C. Goodrich, Gen Agt. Hartford & New York Transportation Co.; C. S. Davidson, Supt. N. Y., N. H. & H. R. R.; C. H. Platt, Supt. N. Y. & N. E. R. R. Co.; Mr. Rawson of Adams Express Co., the Middlesex Association for the Protection of Fish and Game, and the Waterbury Game and Fish Club.

The city of Hartford has no game club, but the writer would be pleased to hear from any one interested in the subject of forming a club with members from each town for the protection of game and fish. Such a club should be formed not to talk but to act. There should be one person at least in every town that should have sufficient backbone to enroll himself in such a club and to do his utmost to see that the laws are obeyed. The trout season opens April 1, and the netters and "liners" will be at their work, and "what are you going to do about it?" Gentlemen, honest, earnest sportsmen of Connecticut, who have any interest whatever in the preservation of game and fish, let us hear from you. A. C. Collins.

Hartford, Conn., March 19.

RIFLES OF DIFFERENT KINDS.

Editor Forest and Stream:

My interest in the rifle commenced at the age of eight years, when the teacher explained to a class of which I was a member, the manner and effect of the peculiar boring of that arm. The first one I ever saw was of the Minie pattern, and the statement that its killing range exceeded the distance between our house and that of our next neighbor (500yds.) filled me with something akin to awe. It never occurred to me that few could hit anything with it at that range. A little later a friend who always allowed me the free use of his goods and chattels, came into possession of a flint-lock rifle, 30in. barrel, and carrying a ball running about 20 to the pound. It enjoyed the distinction of having killed the first man in the great 1853 riot in St. John.

We used it a great deal at the target, but I think never got out of it the best work of which it was capable, for a 20-gauge shot gun I then owned could stay in with it easily over a 50yds. range. Then I picked up a muzzle-loading rifle musket carrying a large conical, hollow-butted bullet, which was sent home naked. The theory (thrown in with gun) was that during the passage of the bullet through the barrel the gas expanded the hollow butt, thereby causing it to take hold of the grooves. It may be true, but I am suspicious. This gun was used exclusively at marks, and never excited any particular admiration on account of its accuracy. During a part of the season of '74 I used my first breechloader, a finely sighted .32 rimfire Frank Wesson, which, on account of its lightness and poor marksman behind it, never got a chance to do its best. It was succeeded by an army Snider-Enfield, the action of which is like that of the Springfield, and this gun still occupies a place in our battery. Its most objectionable features are excessive length and a point-blank of 125yds.

In the place where my father lives, it has always been a common habit of the dogs to get together and go on sheep-killing expeditions. In June, 1870, I spent a week hunting down a band, and enjoyed it better than hoeing potatoes. The advent of the Snider made it much more difficult for the dogs; for we were often able to calculate distance by the width of lots and so direct a telling fire at long range. After we commenced the use of explosive bullets, a few shots would scatter them. They did not fancy being within range of a missile that kicked up such a racket, throwing dirt and splinters around, if it did no worse, and so sought safety in individual flight. I have since in turn made the acquaintance of the Remington-Hepburn, Ballard, Martini-Henry, and Stevens. My experience with rifles leads me to the conclusion that between them, it is largely a choice of breech actions. Any of the above mentioned barrels will do good work; and each individual make offers a wide field for choice as to caliber or cartridge. On my list of single-shot actions, I place the Martini first, and the Remington-Hepburn next. I think I would like the Winchester single-shot, but have never used it. All these years I had been slowly imbibing a prejudice against the repeater. Every word to its discredit, in these columns, was greedily swallowed; while its praises were calmly dismissed with the remark, "I have seen it jam"— based merely on observation.

I spent last summer and fall in northern Maine. There the rifle is the favorite weapon, and there are five repeaters to every single-shot. Before the open season I participated in two matches, in each of which all contestants used the same gun; in one a .38 Winchester, and the other a .44 Kennedy. Though I never heard the accuracy of these weapons questioned, so strong was my prejudice that it was a source of surprise that my shooting was much the same as if I had used my favorite Stevens, with open sights at the same range. When a young man offered to exchange a new .38 Winchester for my old shotgun, I accepted, not because I was converted, but because I got more market value than I gave. Meeting Jimmy Henderson the next morning, his first words were, "So you have Frank B.'s rifle?" "Yes." "He says he could do nothing with it on account of the jamming of the breech action. "Very likely; a repeater is equal to nearly any deviltry you can mention." At the first opportunity I took the gun and a belt of reloaded cartridges —part of the legacy that came with it—and sought a secluded spot for a test. Sure enough, the second cartridge jammed. After backing it out through the spring cover, an examination showed it to be badly swelled from the base to the smallest part of the bottle neck; and a search revealed four more of the same stamp in the belt. Soon there came another jam, and this time it was a cartridge with a bullet so poorly seated that when the head was hard against the rear of the carrier the point of the bullet was still in the magazine. I found that one-third of the remainder were like this, and fired them by inserting through the mortise, using the gun as a single shot. With factory or carefully reloaded ammunition I have never had any trouble.

A great deal of the difficulty with reloaded cartridges arises from the use of too much powder. The 40gr. charge of the Winchester Co. holds more than can be safely put in a .38 shell without a liberal allowance for leakage, and in seating the bullets the cartidge swells. The shell should be tapped to settle the powder as much as possible before inserting the bullet, after which it is placed in the reloader, the handles of which are then brought together, or as nearly as would be possible were there no cartridge in the chamber.

The Henderson Bros., of Forest, Me., who hunted with me, were about to give an order for a new rifle. The performance of mine and one of the same model loaned them by Capt. Pitts induced them to send for a .38 Winchester 26in. barrel. In answer to my freely expressed opinions as to the desirability of more powder and lead they said: "If they could place the bullet in the right place (something they are in the habit of doing) they could kill any animal found in Maine; that the ammunition was cheap, and the '73 model had a much better shaped stock than some later models, while the price charged for any alteration from standard was exorbitant." It is a puzzle to me why some makers adopt as a standard a pattern of stock that will not fit one man in five.

My prejudice against the repeater is overcome. If some people make fools of themselves by working it like a Gatling I do not consider it anything against the gun. It increases my coolness immensely to know that I have several shots behind the one I am about to deliver, and this makes the first one more liable to be a "finisher."

I always disliked a loaded gun around camp on the score of liability to accidental discharge. But I put a half dozen cartridges in the magazine of the repeater, and turn the button of the lever. Then it is safe as a stick; but in event of it being suddenly needed, I can throw a cartridge into the barrel while you would be cocking a single-loader. For deer, bear, etc., I think I would choose a .45-85 to 90 repeater, if I could find one with any perceptible drop of stock. In Maine, the .38 appears to be the favorite caliber. For open sights I prefer the clover leaf rear and German silver bead front to any that I have used; but dislike the "step ladder" commonly used to elevate the rear sight. I have a Stevens Expert, mounted with peep and open rear sights, and Beach combined front. For distances less than the point blank we have learned to use the Beach pin-head with the open rear, and find it very effective. With the tang peep, and Beach front, we can do good target work in the proper light, but for hunting they are nearly useless. My experience with the Lyman is confined to a few shots from a Winchester mounted with it, owned by a gentleman of Houlton, Me. I intend to put one on my Winchester.

In choosing a hunting rifle, I would advise the novice to get as much knowledge as possible of the leading standard patterns, and then rely on his own common sense. He should not be wholly influenced by the experiences of any one man. For though these be related in the best of faith, he might find it difficult to make his subsequently acquired knowledge square with them. Some years since, in an article written for a Maine newspaper by a well known contributor to FOREST AND STREAM, a new magazine rifle was recommended as the best in America, "having been used by the writer in competition with the Winchester, Sharp, and Ballard." I afterward knew it as a clumsy concern, carrying a light charge. It often jammed so badly with its own factory ammuuition that it was necessary to cut off the point of the bullet with a chisel to liberate the mechanism; and it has since disappeared from the market. L. I. FLOWER.

QUEENS COUNTY, N. B.

Editor Forest and Stream:

Much has been, and still will be said about the respective merits of different rifles. The .44-40 Winchester, model 1873, comes in for its full share of obloquy. I have hunted on the plains and in the mountains west of the Missouri River for fifteen years. During the years 1872 and 1873 I was hunting buffalo in western Kansas with a 14lb. Sharps .50-120. I have used nearly all the best arms of large caliber manufactured in the United States, but have successively cast each aside in favor of the .44-40 Winchester, model 1873, 26in. barrel.

Other guns will rank higher as target guns, having greater penetration, etc., but as an all-round reliable sporting gun I do not think it has any equal. It is of light weight, can be conveniently carried in a scabbard under the leg on horseback, can be handled quickly, and is always loaded. I use this gun with the Lyman front sight, and the Rocky Mountain rear sight filed down nearly level with the notch.

I would almost as soon think of hunting without a gun as without my horse. With me the aid and companionship of this dumb friend increases the pleasure of hunting four-fold. Not that my firing is done from his back, for it is impossible to take accurate sight from the saddle. In the buffalo days I used occasionally to accompany a hunting party of Indians on one of their round-ups. When a herd was discovered a detour was made until the herd was surrounded, when the party contracted the circle until the great brutes were within less than 100yds., when the firing began and many were killed with the short light guns held within a few inches of their shoulders. But this slaughter soon revolted one and can not be considered sportsmanlike. Neither among the deer, antelope nor elk—now our principal game—could it be practiced with the same success. Finding the game on horseback is a pleasure in itself, and by taking advantage of the inequalities of the surrounding country, the approach can generally be successfully made to within shooting distance. Then dismount, throw your long bridle rein over your horse's head, draw your gun from its place of repose, send forth its death-dealing messengers, and, when your game has retreated out of range or disappeared over the adjacent ridge, mount and follow. If they be deer or antelope they will not run a great distance from one on horseback before they will stop to see whether or not they are pursued, when the same tactics can be repeated. When the hunter's ardor is satisfied his trusty horse is at hand to bear the result of his day's sport to camp.

If your horse is not a hunting horse, and is afraid of the report of a gun, extra care should be taken. Tie a few feet of rope to your bridle rein. When you dismount take a few turns around a sage bush, not tying the rope. This can be quickly disengaged when ready to mount. Practice shooting from the horse's back and his fear of the report will soon disappear.

In this style of hunting one of the heavier guns would be unwieldy, as much of the hunters' success depends on the celerity of his movements.

Arms have been brought to such a state of perfection that a person of steady nerves and a quick eye can take almost any rifle of modern manufacture and so please himself with its practical results that he will straight way proclaim it to be the gun *par excellence* even though he may not be familiar with other guns.

In this country where the game retreats in the fall to the sage bush and cañons of the desert, and is each year breaking up into smaller and smaller herds, I think my mode of hunting will be generally adopted.

Probably seventy-five per cent. of our game is shot running. Much of a hunter's success depends upon his judgment of distance. This he can only ascertain at times by firing several shots. A herd of antelope running from a hunter can often be turned and brought within range by firing beyond and raising the dust in front of them. Twenty-five per cent. of the hunter's ammunition can be used successfully in this manner.

These facts all speak in favor of the lighter and magazine gun with which I have killed two antelope at one shot, shooting broadside through both of them.

SULPHUR, Wyo.

YELLOWSTONE PARK PETITION.

WE present this week another list of names in favor of the bill to protect the Yellowstone Park, which is now before the House of Representatives. We hear from Washington that these petitions are being sent in to many Senators and Representatives, and they are sure to have their effect. Below we give one or two letters referring to the interest felt in this subject by the people at large.

LIST OF SIGNATURES TO THE PETITION FOR THE PROTECTION OF THE YELLOWSTONE NATIONAL PARK.

New York State.

Hon. O. L. Barbour.
Wm. May Rockes.
Chas. F. Fish.
Hon. A. Bockes.

Editor Forest and Stream:

I cut out the resolutions printed in FOREST AND STREAM of March 8, pasted them on a sheet of legal cap, and started out for signers. In an hour I had the sheet filled with the best names in the city, and forwarded it to our representative in Congress, the Hon. Wm. H. Crain. I must confess that I was greatly surprised at the general interest in the subject manifested by our citizens. I had hitherto imagined that it was principally sportsmen who were interested in the welfare of the Park, but I found the banker, the merchant, the lawyer, the editor, the politician, in fact, men of all classes whose opinions are of any value, all strongly in favor of protecting and preserving the Park. Our M. C. is himself a thorough sportsman and a good shot, and a good fellow withal, and will, I have no doubt, give his aid and influence to the measure. GUADALUPE.

VICTORIA, Texas, March 28.

Editor Forest and Stream:

I am glad you are making an effort to have the National Park preserved. I visited it a year ago, and want to see it faithfully protected by the Government. It is the grandest spot in the world. Send me a blank for signatures and put my name down immediately.

J. W. M.

OSKALOOSA, Iowa, March. 28.

ADIRONDACK DEER.

Editor Forest and Stream:

An article is going the rounds of country papers, which, on the authority of Warren Humes, an old-time hunter, places the whole number of deer in the Adirondacks at 60,000, and further says that the number is increasing.

Mr. Humes ought to be able to guess pretty well on the number left, as few men in northern New York have killed more in the days gone by, or, if stories are to be credited, killed them more wantonly. It is but justice, however, to say that of late years these same stories place him on the side of protection.

To call the total area inhabited by deer in the Adirondacks 6,000 square miles is a liberal estimate. This would give ten deer to each square mile—one to each lot of sixty-four acres. The inhabitants of the forest, like the human inhabitants of the earth, are not evenly distributed on the surface. It would probably be safe to say that if this whole 6,000 square miles was laid out into sixty-four-acre lots and numbered, fully one-half would be uninhabited by deer. This would give one deer for each thirty-two acre lot of the remainder.

Deer are ever active, yet we may travel miles and miles on blazed line or forest path without seeing a sign.

Let us go to what might be called their cities and towns—when they are at home. Let us take a trip along some river in June, when deer are tame and come to water to feed and get away from the flies. I have in mind a stretch of about ten miles on the Oswegatchie below Cranberry Lake—famous for its hunting and fishing twenty years ago. We might call this their main street, where all the stores and saloons were located, and where nearly all the inhabitants were likely to come from—say a distance of one mile on each side. Let us suppose that enough came from beyond that limit to make good any within the limit that did not come, and we have on the basis of 60,000 evenly distributed 200 deer that should water every twenty-four hours on that ten miles of stream. Let me ask the old time hunters if they think there was ever within the last twenty years (I might say fifty) a single twenty-four hours when 200 different deer came to that or any other ten miles of river. If we place it that only one-half the territory is inhabited it makes the number that ought to be there 400 instead of 200.

Great Scott! Four hundred deer coming to water on ten miles of river in a single twenty-four hours—forty to every mile, one every eight rods. And this is now; it isn't twenty years ago. Let us go hunting. With a good Winchester one could easily drop a deer at 80 rods. Anchor the boat, shoot up stream and down, and kill twenty deer in twenty-four without paddling a foot. Who would be a pot-hunter!

But, Mr. Editor, I have a scheme that is better than this. The Government does not know what to do with the surplus. Let them improve the wilderness. Let it be laid out into streets, or rather canals. As the State believes in free canals, it might assist in the work. Run these canals through on parallel lines two miles apart. This will cover all the ground. Mark stations half a mile apart, and allow our weathy clubs to lease them. Then let them (the clubs) appoint a day for a grand hunt. They might practice for a day or two at a pigeon shoot given by the New York State Society for the Protection of Fish and Game just to get their nerves steady, so as to avoid an attack of buck fever.

Such a hunt would be a thing long to be remembered, and would be a more suitable celebration of the final extinction of deer in the Adirondacks than to see the last poor starving doe pulled down by dogs to furnish "mountain mutton" for some summer hotel in June, 189—.

J. H. R.

THE FIRST SNIPE.—Oakdale, L. I., March 31.—*Editor Forest and Stream:* I bagged the first pair of English snipe to-day, all I saw. I covered the same ground yesterday; there were none there. I was in hopes the quail had come through the late storm all right, but was surprised while crossing a grass lot to-day with the dogs on my way to the meadow, to see them pick up two dead quail. The birds were very fat, and in fine condition, their crops being full of corn and seeds. It is surprising how the little fellows find so much to eat in the winter. —ALFRED A. FRASER.

FROM AND TO CORRESPONDENTS.

NEW YORK, March 16.—*Editor Forest and Stream:* In March 15 issue of FOREST AND STREAM, I noticed a paragraph from "C. F. U.," Princeton College. I can give him information for Minnesota. Chisago Lakes, situated 28 miles from St. Paul, and about same distance from Duluth, will afford him and companions excellent fishing, duck shooting and small game; probably a chance deer. The whole country thereabouts belongs to a private party who does not object to gentlemen shooting there. In 1884, when I was there, orders were given to one Walmark and assistants to preserve game and fish. A young man named Tripp is the best guide in vicinity, but any of the game keepers are good guides. Camping facilities are excellent—there are no hotels there. For further particulars, address C. D. B., P. O. Box 865, New York city. I can give them any information of places from St. Paul to Montana.—C. D. B.

CHICAGO, Ill., March 25.—*Editor Forest and Stream:* Starting from Duluth, the Princeton College party may go south on the C., St. P., M. & O. Railroad to Gordon Station, Wis., near which are several lakes where muskalonge, black bass, wall-eyed pike and pickerel may be taken in sufficient numbers and of such size as to please any reasonable man. Several streams in the neighborhood, among them the famous Brulé, also afford good trout fishing. Deer are abundant, ruffed grouse reasonably plentiful, and a black bear may be met with. East on the line of the Northern Pacific, within 25 to 60 miles of Duluth, several good trout streams may be reached. Guides and helpers can be hired at $1.50 to $2.50 a day, and boats at about 50 cents a day.—G. O. SHIELDS.

ORANGEBURG, S. C., March 9.—*Editor Forest and Stream:* If your correspondent "G. F. P.," in FOREST AND STREAM, Feb. 23, from Washington, D. C., will correspond with T. L. Smith, Middlepen P. O., S. C., he will get the information wanted.—L. S. C.

INFORMATION WANTED.—New Petersburg, O., March 17.—*Editor Forest and Stream:* Can you inform me where in Pennsylvania or West Virginia I could go for a week or so and kill some bear? If you do not, would you be so kind as to insert a query in your paper to that effect, and it will be reciprocated.—W. R. L. D., M.D.

[Will the Princeton campers kindly send us their address?]

STOCKING GAME GROUNDS.

Editor Forest and Stream:

Friend "Ortyx" desires results of experience in stocking with quail and grouse. Judging from the rest of his communication, he has quail most on his mind. Although I have had no experience in stocking with game birds, and consider my humble self not fit to give advice, I may venture to state what I am thinking about this subject, which greatly interests me, as I have to do my hunting near home, like "Ortyx."

I conscientiously read every line of FOREST AND STREAM, keep my eyes open on game matters generally, and have come to the conclusion that it is almost useless to try to stock with quail in this northern latitude. It has been attempted many times, resulting almost invariably in failure, as poor Bob White is not able to stand our snows.

Quail are an uncertain quantity at best with us. Good numbers have frequently been seen during the early part of any winter, but not a brood could be found in the same vicinity the summer following. At other times coveys would be started where none had been noticed for several seasons. Surely they are not even moderately plenty.

Ruffed grouse, on the contrary, care naught for snow and cold, and are able to hold their own. They can be found every season in the same covers, and are fairly plenty in this neighborhood in spite of numerous market hunters, quite respectable men otherwise, capital shots with excellent dogs, but hunting every fall for a month or two without interruption, and selling their birds to meet expenses and wages. If "Ortyx" and his friends will give their grouse full attention in the way of protection against snares and vermin, and shortbill woodcock hunters, and will leave a reasonable number of birds for breeding out of every covey, they will soon find a decided improvement in their numbers. If, however, "much shooting has led to the natural result," as "Ortyx" says, it is safe to say that stocking will be useless, as "much shooting will lead to the same natural result."

In conclusion I will offer a question which has occurred to me quite often, viz.: Why should not the Chinese pheasant, introduced into Oregon so successfully, be a good game bird in Massachusetts? There would certainly be no more risk in introducing Chinese pheasants here than Virginia quail. WORCESTER COUNTY, Mass.

A CRUST IN MAINE.—The latest reports from Maine indicate that there has been a very strong crust, and the fears are great that the moose and deer have suffered badly. The Commissioners are handicapped for the want of money, and very little is being done toward the enforcement of the game laws. But attention is being called to the defect in the law, that was sprung upon the last Legislature, and there is not a doubt that the trouble will be remedied next winter. The leading papers in the State have called attention to the defect, and altogether the best of public sentiment seems to be in the right direction after all. The lumbermen are now all out of the woods, and the moose and deer are again safe as far as the lumbermen are concerned.—SPECIAL.

THE FIRST WOODCOCK.—Cranford, N. J., March 27.—*Editor Forest and Stream:* This evening, at 6:30, driving home from the depot, I saw the first woodcock I have run across this spring. One crossed the road flying just ahead of the horses, the other a little further on, one was humped up in the ditch alongside of the road, and scarcely moved as I went by, so I got out to investigate, thinking it might be hurt. It let me get within five feet of it, when it got up and dropped over into the field lively, as they are wont to do.—F. M. BENNETT.

STEUBEN COUNTY (N. Y.) GAME LAW BILL.—There is a bill in the hands of a committee in the Assembly, which if passed would make the duties of the District Attorney of Steuben county, N. Y., a non-compulsory one in all suits brought in the name of the people for game or fish violations. Should this bill become a law what a snap the market hunter or fisher, or the violators in general would have; they could violate the laws at will, and if complained of they could carry it to a higher court and that would end ninety-nine out of every hundred cases. What person would bring suit, employ and pay his own counsel, and the people get the benefit. Should any person have the sand to follow violators into high court and succeed in convicting them, the supervisors could meet and order the District Attorney to satisfy the judgment and the guilty go unpunished. This sounds silly, don't it? But it is a fact that the supervisors have done so; no later than last fall or the early winter the supervisors of Steuben county ordered the District Attorney to satisfy a judgment against a Mr. Nicholson of $263. The guilty went unpunished, the complainant got nothing and the people pay tax to settle the costs. From this case sprang the bill referred to. Mr. J. W. Near, ex-district attorney, is the father of the bill. He went personally before the supervisors, and by his representation and declarations holding that the laws for protection of game were a farce, succeeded in enlisting sympathy, hence the canceling of Nicholson judgment and the bill in the Legislature. Mr. Near, the ex-district attorney, has always expressed himself unfriendly to the cause, and for this reason he met with defeat at the last election for district attorney. Should this bill become a law he will have accomplished his satisfaction of getting even with his opposition and a law in force to suit his purpose. We appeal to any and all who are in favor of protection to assist us in the defeat of this bill.—S. H. BROWN, Sec'y Hornell Gun and Game Protective Association (Hornellsville, N. Y.)

ZINC FOR GUN BARRELS.—Jersey City Heights.—*Editor Forest and Stream:* I see in your issue of Jan. 2 that "Splasher" made tests with zinc, but not in gun barrels, and I am sorry that he did not, so as to see what results he would have had. I read "Austin's" article, which was in FOREST AND STREAM, June 9, 1887, and was very much interested to see it. I have tried according to "Austin's" plan with the strips of zinc, but it did not work satisfactorily. Ten days after I had put the zinc in I found all spots outside and a few inside, but after cleaning found it was like fine emery dust. Then I took the same piece of strips again and soldered on both sides small pieces of zinc, something as the nails are put on a telegraph pole, and placed this again in the gun barrels. After leaving it unseen for several weeks all spots disappeared where the small pieces were, only where the empty spaces were there was rust to be seen. So I started to experiment too, as "Austin" and "Splasher" did, and succeeded. I took zinc, and made two strips about 10ft. long and made them into tubes something like the springs in a roller shade and 1-16in. apart between every turn. The outside I cleaned bright, and heated it and coated it with cod liver oil. In the inside of the tube I placed a steel rod about as thick as a lead pencil, and kept in the center. After using my gun, I cleaned it with vinegar and oil (shoemaker's) and placed the zinc in it again, and since that time never found rust in my gun barrels. The zinc I used is as thick as cardboard, and 1in. wide. I hope to see others experiment in the same way. I was very much interested from the beginning, and was experimenting and found the above the best so far. I hope to see "Austin" and "Splasher" continue their experiments and let the readers of FOREST AND STREAM know if they had better results.—THE WISE GAME.

GAME AND FISH IN MAINE.—Damariscotta.—Deer are getting quite plentiful here. There have been three shot in this neighborhood this fall, and lots have been seen. The gunners here regard the game and fish laws quite well and do not go gunning and fishing in close time. If any one wants good black bass fishing we have it, and ruffed grouse and woodcock are quite plenty. We have lots of lakes, but only one has been stocked with black bass for any length of time. I stocked a small lake five years ago with black bass and they are doing well. I shall stock a larger lake in the spring with landlocked salmon. I got them from Game and Fish Commissioner Stanley. Three other men and myself built a cottage on an island in the Damariscotta Lake last summer. This lake is well stocked with black bass. Take the K. & H. R. R. from here to Musconcurs Bay. There is a small steamer that runs to head of lake, eight miles distant. The man that runs the steamer keeps a hotel at the head of the lake, where any one will get used in first-class shape. Our cottage is four miles from the hotel. The lake is twelve miles long and three miles wide. No finer place in the State for any one that wants to build a summer cottage, and land is cheap. If any one wants information and will write for it I will be pleased to give it.—W. N. CHILDS.

RAILROAD REGULATIONS.—The Maine Central Railroad Company has issued the following circular:

PORTLAND, Me., March 17, 1888.—*To Employees:* The lines now operated by this company probably lead to more hunting and fishing resorts than any in the country, and a large volume of travel results therefrom. It seems necessary, then, that some rules be established regulating the transportation of such articles and supplies as are incident to sportsmen. And hereafter gun and rod cases or boxes of sportsman's supplies may be checked or carried in cars same as other baggage. Guns not cased cannot be carried, except by baggage masters in baggage cars, free of charge and at owners' risk. Dogs will be carried in baggage cars free of charge and at owners' risk. Dogs, if crated, may be checked same as other baggage. Boxes of fish and other game may also be checked during time when transportation of same is not prohibited by law and provided there is not more in quantity for each person than the law allows, and that owners accompany same, subject in all cases as to weight to established rules for transportation of baggage. Baggagemen may accept a personal fee for care of dogs and game when tendered them, but are not permitted to ask for such.—F. E. BOOTHBY, General Passenger and Ticket Agent. Approved: PAYSON TUCKER, General Manager.

A summary of the Maine game and fish laws accompanies the above.

BIRDS IN VIRGINIA.—Berryville, Va.—*Editor Forest and Stream:* We had fairly good shooting last fall, and have had a mild winter and little or no snow, and our birds have wintered well. If the breeding season shall favor us, we will have good shooting the coming season. —OLD PRO.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

A PISCATORIAL ROUND-UP.—II.

THE morning following our arrival was fine, and we did not linger at the breakfast table. One haul of the minnow seine supplied our bait buckets with small perch, chubs and a few crayfish. Mr. Byington and Steele started up and across the bay to fish and spy out the water, while Mr. Cleveland and I, with Joe, went up the bay in the direction of Northport for plain fishing. A point made out into the water with indications of rock bottom, and while I got out a sounding line Cleveland put out a bait, and in a second he was playing a 3-pound black bass of the real old fighting stock. The water was scant 12ft., with a bottom of boulders. As soon as I was baited I had a bite and lost the fish, and this I did five times in succession, while Cleveland was taking bass after bass as rapidly as was polite. I had tied a few hooks of a new pattern to test them in bass fishing with bait, and though they are a perfect hook for a fly, the point is so inclined toward the shank that on this occasion, at least, the bait fish choked the hook and I could not hook my bass. At the fifth failure I changed to an O'Shaughnessy hook, and peace reigned in Warsaw. To be perfectly candid, I had not the greatest faith that we would have the very best fishing, as I feared it might be rather late in the season; but here the fish were in shoal water, and as plentiful and as full of fight as the most exacting bass fisher could wish. Almost at the outset of our actual fishing we were placed in a quandary. The bass seized our baits with a dash almost as soon as they were placed in the water, and a half hour of this work sufficed to tell us that we had no means of disposing of the fish we would have taken pleasure in catching. They were all large fish, and in little more than an hour's time we had in the boat seven bass averaging 3lbs. each, and had returned to the water uninjured at least an equal number. We could not eat more than we had killed (Byington would also kill some bass, for he took two into the boat before he was out of our sight), and we had no wish to continue fishing with the sole object of giving as many bass as possible a sore mouth as a reminder of our visit, so we returned to the yacht.

Charley expressed regret that we had not brought in all the bass we caught, as the men were hoping to have the surplus fish to salt down for family use the coming winter. We were told that it would be an hour before dinner could be served, and C. proposed that we fish from the deck of the yacht until dinner was ready and see how many bass we could catch in the time. We fished rather more than an hour, because in five minutes after we began Joe, Charley and Eugene were on deck with landing nets, and the dinner preparations were forgotten. I am afraid that two men whose hair (what there is of it) is streaked with gray, performed on that deck very like two boys in a spirited contest, each trying to excel the other. If I now go to Cleveland in a penitent mood at the thought of the slaughter on that day, I find him thoroughly hardened, and always with the same reply: "I'll give one hundred dollars spot cash for another whack at that same fishing for an even hour."

We finished the contest with twelve bass each, and each bass of the twenty-four was not far from 3lbs. in weight. They went as high as 4lbs. and as low as 2¾lbs. Cleveland began fishing with a new split-bamboo bait-rod of 10oz., supposed to be worth $25, and finished with a split-bamboo thing worth 25 cents. My rod was like his in size and weight, but by a different maker, and it came out as good as it went in. There were several leaders and hooks and things missing, but one of the men started after dinner for Deseronto for a barrel and a sack of salt.

Byington did not return to dinner, and after that meal Cleveland and I resumed fishing from the deck of the yacht, but in a more dignified, leisurely manner. We had a number of callers in the afternoon from the neighboring farms, including both sexes, and we entertained them with the best the cabin afforded. The yacht and its furnishings interested the ladies, and the men thought it quite an extensive outfit for pleasure alone. All were curious to see the large bass taken with our light tackle, and we were only too willing to gratify them. While the guests were seated on deck and we fished we exchanged a little information regarding our respective homes. My good old grandmother once told me to endeavor to learn at least one new thing each day of my life, and that afternoon I learned several new things, which made up for misfires on previous days. Across the bay we could see a church spire and were told it was on the Mohawk Indian reservation, which consisted of "two concessions and a broken front," but I do not yet know how big the reservation is. I learned that Houston, Texas, was the Hub of the Universe and the balance of the United States a suburb; that the sun rose earlier, shone brighter and set later in Texas than any other part of the known globe. I learned that it was the width of a certain number of acres to Northport, which was almost as confusing as the "broken front." I learned that one of the poles of the earth was in Harris county, Texas, and the other up in the Pan Handle. I learned that in Canada a pike-perch, or a wall-eyed pike, was a pickerel, and I learned that tame ducks were worth but twenty-five cents each when dressed and delivered to all cooks; chickens twenty-five cents, and butter, milk and eggs correspondlingly low in price. The most expensive article we struck was kerosene and coal oil, and in this we did not invest.

Byington came in from his day's fishing with twenty bass, and Cleveland and I had forty-five, or a total of sixty-five for the two skiffs. After an elaborate supper, drift wood was thrown on the fire, and by its light the men dressed and salted the bass that were left after reserving a pair for breakfast. The roaring fire, around which we sat or lounged and smoked, was an institution that we supported generously. There was drift wood in abundance, except in one place, where we purchased a couple of cords of dry wood piled near the dock to which we made fast. For the second night we went to our farmer friend's to sleep, and in the night were awakened by the howling of the wind, which seemed to indicate a check to our pleasant weather. In the morning the clouds were piled up dark and forbidding in the north. It was cold, and the wind was blowing half a gale. When we went down to the water we found that the men had had to get up in the night and warp the yacht around inside the arm of the dock, which was much easier to do than to get her out again, as it proved. While breakfast was being prepared we caught a few bass from the dock, but the wind was too keen to fish with comfort. After breakfast it was decided to move up the bay nearer to Belville, to a more sheltered dock that Byington had discovered the day before. It was thought to be but three or four miles, and Byington and Cleveland determined to walk and I determined to ride, provided the yacht did not blow ashore on the rocks. The yacht's bow was warped out from behind the pier and an anchor carried out into the bay, and then it was as much as ever that she swung clear of the rocks as she rounded. She was kedged out (I think that is the proper term, but I am not an "old sea dog," and depend for a revision of my nautical phrases upon Mr. Cleveland, who is not present at this writing, although when he reads the letter he may wish that he had been. The mill of the newspaper contributor grinds exceeding slow, but "it gets there all the same") into the bay and the sail hoisted with double reef, and with one rail under we made for the new port, which was Gilman's dock.

In the afternoon we fished in comparative comfort, catching twenty-eight bass equal in size to those we caught below; the fish were everywhere, on rocks, on gravel and in the grass. In starting out in the skiff it drifted inshore before Joe got his oars in hand, and we put out our hooks and caught bass close inshore in 8ft. of water. All of our fishing, except in one instance, was done in water less than 15ft. deep. While we were fishing in the afternoon two of the men went out and killed some teal, black ducks and plover, and we bought some pike-perch of a net fisherman for our supper. That night C. and I slept at Mr. Gilman's. When we were shown to our room, after being entertained in the parlor, late though it was, with music by the young ladies in the family, I noticed that there was an open door leading from it to another room evidently, but did not even look into it. Cleveland was the last into bed, and I asked him, as he put out the lamp, if he had left matches on the bureau, and he said he had. I awakened thinking it must be morning, but the room was in total darkness, not a ray of light from any source. I thought I could go straight to the bureau and light the lamp, but when I found the bureau I could not find the matches. I tried to find the chair on which I had placed my clothes, and walked carfully toward the supposed spot, sawing the air before me, behind me and all around me with both arms to prevent a possible collision between my nose and something. I was thinking it was a very long room, when suddenly Cleveland's snoring ceased and I was conscious of a more modest, more refined breathing, that could not be called a snore, and which was in front of me, while I was almost positive that Cleveland was behind me. I turned round to make sure, and that did the business; I was lost. Of one thing I was dead sure: I was out of my room, but where? If I had been suddenly transplanted to the middle of the Dark Continent instead of trying to see in the darkest room on earth since the Christian era, I could not have been more completely lost and extinguished. All that I could see was with my prophetic eye, and before and around me were open trap doors; an angry father with a shotgun loaded with buckshot; stairs without any guard, that went down instead of up, and a dog about 48in. at the shoulder, labeled "dangerous." I did not have a single thing to give, except my night shirt, and I would have given that if Cleveland had snored once more in a way that I have kicked against many a time. I was cold, and getting colder. I called to Cleveland as loudly as I dared while haunted by the fear of disturbing that other breathing, which I could hear only too plainly, and which combined with my simple, unaffected dress prevented me from shouting fire at the top of my lungs. An inch at a time I shivered forward, and finally to my great relief my hand touched a wall; slowly I felt along it and came to a door and put my head in and listened. That was the sanctuary. My well-loved friend was again getting in his work with a snort and a gurgle of strangulation; but for once it was inexpressibly sweet and charmed me as never the Lurlei enchanted the Rhine boatmen with her voice. I entered the room and feeling round the wall came to a chair with some clothes, which I went through, finding a match box which I knew to be a gold one of Cleveland's, and which never contained a match. Continuing my search I found my own clothes and match box, lighted a lamp, discovered that I had been wandering in an unoccupied room, then took a pillow and fell upon that sleeping pilgrim and smote him hip and thigh. Then I went to bed, without looking at my watch, and left a lamp burning.

The day that followed the night was warm and the wind was not so emphatic, and we caught twenty-one bass in the forenoon, and the men killed more ducks. As several articles were running low in the larder, and it being Saturday, Cleveland and I in the afternoon went with Joe in the skiff under sail to Deseronto for supplies, mail and telegrams. On our way down the bay we anchored at the scene of our fishing the first day, and caught eleven bass. We had a rattling sail in the skiff, having to go ashore once to let out the water that had washed over the gunwale, and reached Deseronto at dusk. We went to the Empress Hotel, which I think is the only hotel, but of this I am not sure, and found the proprietor, Wm. Jamieson, who had himself just arrived from Hay Bay with a lot of ducks, one of those clever men anxious to do everything in his power to aid a fellow sportsman. Breakfast bacon in Deseronto was about the price of the same article elsewhere, but lamb chops, just the loins cut up, were ten cents per pound, so if a man could eat nineteen chops for supper it would be a cheap meal.

The settlement of Deseronto is on a branch of the Grand Trunk R. R., and was created by the lumber trade, which is its principal industry. A sportsman to get to the waters that we fished should go by rail to Deseronto or Belleville, and with a skiff visit the waters between. Since our visit Mr. Jamieson has purchased a farm quite near the scene of our first day's fishing, and he writes me that anglers will be accommodated at the farmhouse. After sleeping at Deseronto we had a head wind, and a fairly stiff one, in which to return to the yacht, but the return was accomplished in a leisurely manner by the middle of the afternoon. During our absence Mr. Byington had made a considerable contribution of bass to the salting barrel and the men had added more ducks to our larder. Mr. Jamieson had insisted upon dividing his ducks with us until we told him that we had a supply.

Monday morning the two fishing skiffs with a lunch started for new water, fishing above Northport, which is on the south shore, and opposite Belleville, which is on the north shore. A steamer runs from Kingston to Deseronto, Northport and Belleville, and an angler can avail himself of it if he prefers the water to rail in getting to the places that we fished. I do not know what Belleville furnishes in the way of fishing boats, but a boatman and skiff can be taken on the steamer from Clayton or Cape Vincent to Kingston, and from Kingston to Deseronto, Northport or Belleville. The waters that we fished Monday were new to us all, but it did not require more than ordinary judgment, gained from previous experience in bass fishing, in the selection of fishing places for us to catch over ninety bass. The chief requisites were to put down an anchor and cast a baited hook into the water. Soon after noon it began to rain, but it was a mild, inoffensive sort of shower which did not interfere materially with the biting of the bass. Returning toward the yacht we fished at several points which indicated rock on gravel bottom, and while moving from one such place to another and with his bait dragging on the surface, Mr. Cleveland caught the largest bass of the trip, 4¾lbs. Bass of 4¼lbs. had been so often taken by the party that we expected to touch the 5lbs. notch before we returned home, but were perfectly satisfied when we did not. That evening when we reached the yacht we built such a large fire that if the rain continued I made no mention of it in my journal.

We had many visitors to the Zaidee and to our campfire, and one old gentleman, Mr. Rantz, was very amusing. He could not quite understand how a boat of the size of our yacht could be a mere instrument of pleasure without at the same time being the cause of scandalous extravagance and waste, and it was evident that the old gentleman was a little bilious or soured, and that he did not consider his lot a happy one. He had to work, and work hard, and had no time for any such idleness as was exemplified by our party. As politely and as gently as possible I told him that there were people on board who probably worked harder in one month than he did in six full moons; and that, from necessity, having condensed into nine months the work of a year, they had earned a vacation of three months in which to rest and recuperate tired brains and bodies. As for myself, that I was haunted by remorse because I had not killed a man—a bosom friend—who had knifed me when I was down; and could I till a farm, shear sheep (if they would stand it), water hens and drive pigs to pasture, it would not appease the constant gnawing in my breast; so what was pleasure or toil to me! The old gentleman wished the particulars of the ought-to-have-been tragedy, and I told him that I had been a corporal in the crusade against the vile habit of chewing tobacco in public, and that when I thought I had fought a good fight and was in the line of promotion, I was talking with a young and beautiful woman with whom I was but slightly acquainted, and had turned from her, but not out of her hearing, when this man, and friend, came up, and in a stage whisper like a diseased fog horn said, "If you will cease the filthy habit of chewing tobacco I will give you an interest in my stock ranch in Texas." The lady never again spoke to me.

Another matter found lodgment in the esophagus of Mr. Rantz. He thought the game laws were framed solely for the convenience of the rich. He did not care much for fishing, in fact never fished, nor would he accept fresh fish from us, but at the only season he could fish the law said he must not. When the law did permit fishing, a lot of fishermen from the cities or somewhere came in a big sloop with a crew of men and fishing tackle such as he had never seen, and in a week caught more fish than he could catch in a month, if he fished. For his part he should catch fish whenever he wanted them to eat; that was what the Lord put them in the water for, and there was no sense in making laws as to when and when not to catch what belonged to the people.

I asked him if he kept chickens, ducks, turkeys, pigs and cattle, and he said he did. I asked if he killed his poultry when they were laying eggs, or his pigs, sheep and cattle when they were nursing their young. He said no, that any fool knew that these animals were not in condition to eat as human food at such a time, and any farmer who practiced such fool business would find himself a town charge in short order. I told him that the fish until reduced to possession by the catching belonged to the Dominion or State, and that the Dominion or State, like a wise and prudent farmer, threw around its stock of fish the safeguard of the game laws, instead of fences, stables, locks and watchdogs, only and simply to protect it during the time of laying eggs and raising young; that the laws were founded upon a proper regard for the increase of the fish and justice to all law-abiding people; that without such laws a bountiful nature would be robbed, pillaged and outraged by the ignorant, the malicious and those who have not the fear of the Lord before their eyes. If I can read a man's thoughts from the expression of his face, Mr. Rantz thought I was crazy.

GLENS FALLS, N. Y. A. N. CHENEY.

"HARRY" PRICHARD.—The many friends of Henry Prichard, better known as "Harry," will regret to learn that he died of pneumonia at his home in Brooklyn, on Sunday, March 25. He was well known as one of the most expert fly-fishermen about New York, as well as an extraordinary caster of the fly in tournaments. In 1882 he won the prize for single-handed casting with what was then considered the unprecedented distance of 91 feet, with a 10ft. 3in. rod weighing eight ounces, and this cast was not exceeded until 1885. Mr. Prichard was born in Wales in 1827, and was consequently 61 years old. He came to this country in 1845 and worked as a newspaper carrier. In 1860 he started in business making fishing rods, in partnership with his brother Thomas, in Fulton street, New York. He was a good mechanic and obtained several patents on fishing tackle, but his generosity kept him always poor. His skill in repairing rods brought him much of the work left at various fishing tackle houses. He was buried in Cypress Hills Cemetery on Friday.

THE MAINE OPENING.

THE trout season is opened in this State, though not under very favorable auspices. The weather on Monday, the first legal day of the season, opened with a snowstorm, fol owed by a very disagreeable rain. This prevented several devotees of the rod and line from "going down to the Cape," and they will wait till the weather is warmer. But Sunday was a most charming day, and the temptation to take down the rod, which had reposed all winter, was very strong. In fact it was too strong for several sportsmen in the vicinity of Worcester. Hiring a team, they drove several miles to their favorite stream. But there is a general statute against fishing on Sunday. Some of those who intended to try the trout in the same stream, as soon as it could legally and decently be done, informed the officers of the law, and the dispatches to the morning paper said that there were five arrests for fishing on Sunday. Later dispatches say that on Monday the sportsmen were brought into court, where they plead guilty and were fined a merely nominal sum each. Public sentiment, in favor of the Sunday law is not strong enough for the protection of fish and game.

Ice in the Maine lakes must be remarkably thin, if all reports are true. The latest from the Upper Dam, Androscoggin Lakes, say that Richardson Lake is open from the mouth of the river, along the shore, nearly down to the Narrows, and that the Narrows are nearly all open. This is something very unusual, if true, and it would indicate a very early departure of the ice from the Androscoggin lakes, and an early opening of the trout season. The idea that the lake is thus open has set several fishermen crazy to be on the ground, though the law in Maine is not really off till the first of May. But there is a special law which permits inhabitants of the State to take trout after the first of March for their own use at their own homes. This form of the law will doubtless let in a good deal of early fishing from these open spots in the lakes. Such fishing is a disaster and never should have been permitted. In one sense it is nearly as bad as fishing from the spawning bed, or from fishways. The trout, which have been shut from the light all winter by the thick covering of ice, immediately seek these open spots to feed. Hence they fall an easy prey to the live minnow and the trolling hook which these early fishermen employ. They sometimes succeed in taking enormous quantities of trout, only to be wasted.

Alas for such public sentiment as shall prevent any man from taking only such quantities of trout as are needed for his table! The advantages that these fishermen, who want all the trout there are, get over the reasonable sportsman, who takes his vacation late and is satisfied with a few trout on the fly, are so great that the reasonable man is sorely tempted sometimes to wish that there were no laws nor attempts toward protection; then all could go in and take a hand in the trout while they lasted. But sober, second thought soon separates the fly-fisherman from the trout butcher. If killing fish were all, then a charge of dynamite would be sufficient to bring about all the trout in any pool to the surface, where they could easily be gathered in by any covetous fisherman. But such sportsmen should at once go on a whaling voyage or two. There the cutting up of mighty whales would be likely to give them their fill of the fish business.

But there is something new on the way for these trolling fishermen. Experiments are being made in the direction of keeping minnows in hermetically sealed cans, and keeping them alive too. I understand that they have already been kept alive for seven days, and that experiments are still in progress toward keeping them much longer. To keep them seven days, even, is an achievement to the trolling fisherman. That length of time would permit of almost any transportation, and the fisherman can be sure of his live minnows as soon as he reaches the fishing grounds. SPECIAL.

THE CASTALIA TROUT STREAM.

Editor Forest and Stream:

In Sandusky last week, I fortunately made the acquaintance of Mr. B. F. Ferris, secretary and founder of the Cold Creek Sporting Club Co. With the usual courtesy and hospitality of the angler, he invited me to visit the famous Castalia stream, six miles distant. Although it was just dinner hour, yet like every true angler, I'd rather see and catch a trout than eat at any time. With the thermometer at 28°, and six inches of snow on the ground, we started out for the drive to Castalia. The wonderful river (it is worthy of that name) takes its rise in the middle of a large pond where it flows forth from the ground in volume sufficient to run two or three grist mills. Indeed, until within the last few months, it was so employed. But little surface water enters the stream. The temperature is quite constant the year round, running from 45 to 48; it was 48 when I tried it, as before stated, with an air temperature of 28°. As we reached the covered wood bridge crossing the stream a pistol shot from its source, we looked down between the crevices of the boards into the clear waters below. I said to Mr. Ferris that I had the eye of a hawk for brook trout in water, and believed I would spy the first one, even in waters with which he was most familiar. The result proved my statement to be correct, because the first trout observed was lying almost motionless in water about four feet deep; a magnificent specimen fully 18 inches long, which would weigh about three and one-quarter pounds.

Mr. Ferris desired to get out his rod and line and try for him, but I protested that this magnificent fish should be left for others to look upon, and as a propagator of his species. The stream at this point was about 30 feet wide, and would average two feet in depth. This will give you a correct idea of the enormous flow of the spring. There is no elevation in the vicinity over 100 feet above the level of Lake Erie. One theory respecting the source is that it comes from Lake Superior. We followed on down the brook about half a mile to the club houses. A fire of soft coal was soon burning in the cozy sitting room. Mr. Ferris opened his locker, took out a splendid split-bamboo rod, with gold-plated reel, oil silk line, leader, and selected an assortment of flies, and handed it to me for use. This rod was a recent present to Mr. Ferris from his friends in the club. I never before attempted to catch trout in any civilized country with six inches of snow on the ground, and ice forming on the line so rapidly that it was constantly freezing to the tip. We saw thousands of trout in the water, but with the low temperature of course few cared to rise. We spent but little time as it was necessary to return to Sandusky before night. However, one magnificent specimen, most brilliantly colored, weighing ¾lb., was taken.

This is one of the most prosperous angling clubs in the country. The original shares were $15. An offer has been recently made of $700 for a share. The club has invested about $30,000 with a membership number of 65, which consists of professional men, merchants and manufacturers in Sandusky, Cleveland, Columbus, Cincinnati, Toledo and a few other places. It is officered as follows: J. C. Jollinger, President; G. W. Bills, Vice-President; B. F. Ferris, Secretary, and William Melville, Treasurer.

A great additional interest to me was found in the tameness of the many birds which were seen along the banks; English snipe, kildeer, plover, robins, blackbirds, sparrows, phœbe birds. One of the phœbe birds was extremely anxious to "take in" a little brown gnat which I was casting. Indeed, I had to exercise a good deal of skill to avoid hooking the pretty little creature. This vicinity is noted for English snipe, quail, partridge and woodcock. Sandusky Bay and the marshes near by abound in ducks in the spring and fall. Not far away is the finest black bass, rock bass and yellow perch fishing in the world. The superintendent, Andrew Englert, is a Bavarian by birth and a typical gamekeeper. His father and brother are foresters and gamekeepers in Germany. He is a very successful fishculturist, breeding many thousand trout eggs in the club's hatching house.

I am not sure whether the famous record made by twenty-one gentlemen, a part of them members of this club, on black bass, has ever appeared in your columns. I certainly have not noticed it, although a constant reader since the very first issue of the FOREST AND STREAM. 3,900 pounds of black bass were taken by these gentlemen in one day's fishing, I believe fish ranging from ½lb to 4lbs. What a magnificent country we have for fishing and game! The laws which are being steadily enacted; the growth in the public sentiment in favor of preservation and protection; the friendly co-operation between the farmer and the owners of streams, ponds and lakes, and the shooting and angling fraternity; the constant introduction of new and valuable game and fish from foreign lands, indicate golden days in the near future for these sports of field and flood.

I sincerely trust the time is not far distant when every man, woman and child in the land will have an opportunity of catching fish and shooting game within an hour's walk of their respective homes.

DETROIT, Mich., March 25. GEO. SHEPARD PAGE.

LAKE CHAMPLAIN.—St. Albans Bay, Vt.—Canada has at length fallen into line; the Canadian authorities have decided to grant no licenses this spring for net fishing in Missisquoi Bay, the principal spawning ground for the wall-eyed pike. Thus a stop is put to that sort of fishing throughout Lake Champlain, as the New York and Vermont laws already prohibit it. Last spring the Canadian authorities granted licenses to seines only; no licenses were granted for pound or other nets—the curse of any fishing waters. Hon. H. Brainerd, Fish Commissioner of Vermont for the past six years, has been very active and earnest in his endeavor to secure protection against netters to the game fish of Lake Champlain, and the excellent fishing we have had with hook and line is in great part due to the protection given by law. We can now be assured that the fishing in the Great Back Bay will continue to be good, and keep up its record as being the best of northern fishing waters. It is the natural home of the small-mouthed bass. Large numbers were caught last season weighing from 4 to 5½lbs. each, and the catches were large in number as well as in size, as can be verified by hundreds of your readers who fished for them in its waters. High water always insures us splendid bass fishing, and the great depth of snow on the borders of Lake Champlain will this year give us high water. The fishing—opening of season, June 1—is always good. Great Back Bay, of Lake Champlain, is having quite a boom now, for its superb fishing and camping grounds.—H. L. S.

SUNAPEE TROUT.—Washington, March 22.—*Editor Forest and Stream:* I will not venture to intrude my individual opinion into the Sunapee trout discussion, but beg to refer to Dr. Günther, the most astute ichthyologist who has yet appeared, where he says: "As with other animals, the more certain kinds of fishes are brought under domestication, the more readily do they interbreed with other allied species. It is characteristic of hybrids that their characters are very variable, the degrees of affinity to one or the other of the parents being inconstant, and as these hybrids are known readily to breed with either of the parent race, the variations of form, structure and color are infinite." These remarks were incidental to an observed very marked frequency of hybridism in the salmon family. I wish those interested in the subject of ichthyology would learn to study Dr. Günther more. What he says is an apparent indorsement of the views of Dr. Quackenbos of the New York Academy of Medicine. It seems to me that Messrs. Quackenbos and Webber have given together a very intelligent solution of the Sunapee trout problem. Doubtless this hybrid carries marked characteristics of *S. oquassa*, as stated by Dr. Bean.—CHARLES HALLOCK.

TACKLE.—Casselton, D. T., March 27.—In your issue of March 22, "P. L.", and "Skillback" give testimony in regard to the automatic reel, but neither touches upon a point of interest to many anglers; viz., can they be used in minnow casting? If they, or any one else who has used them, will testify upon that point, they will settle what, to many, is a vexed question.—H. P. U.

NEW YORK FISH LAWS.

ALBANY, March 24.—The great rush of bills on Monday, the 19th, and Tuesday, the 20th, made it impossible to give more than a brief outline of several important ones which were introduced at the time. We give below a very much more full and satisfactory description of those bills:

Assemblyman Cromwell's bill for the protection of the planted oyster beds located in the State of New York provides that any person or persons not the lawful occupant or owner of a planted oyster bed in the waters of the State who shall take or catch or use any implement for taking or catching any shellfish from such lawfully occupied and planted oyster bed without the permission of its owner or occupant, shall upon conviction be deemed guilty of a misdemeanor, and shall be punished by a fine of not less than $50 nor more than $1,000, or by imprisonment for not less than six months nor more than one year, or both. In addition to the present duties of the State Oyster Protector, as provided in Chapter 300 Laws of 1888, it shall be his duty to guard the planted oyster beds of the State and enforce the provisions of this act, and his salary is hereby increased to $2,000 per year, and he shall be allowed his traveling and incidental expenses, the hire of a patrol boat or boats, and of two assistants to be appointed by the Commissioners of Fisheries, in all not to exceed $7,000 per year. The sum of $6,000 is hereby appropriated out of any money in the treasury in addition to the item of $1,000 for salary of said protector now in the Appropriation Bill. All acts and parts of acts inconsistent with this act are hereby repealed. This act shall take effect on the first day of June, 1888.

Assemblyman Savery has introduced a bill which prohibits the catching of bullheads, eels, suckers, sunfish and perch with any device from May 1 to June 15 from a point one mile above the free bridge over the Seneca River (the boundary between Cayuga and Seneca counties) for a distance of nine miles down the stream to the Mosquito Point bridge. The object is to protect those fish while spawning. It is further provided that at any time of the year, aside from the above, shall no fish be taken with any other device than hook and line. The above named fish, however, may be netted for, but there is a penalty for keeping or selling or giving away any other kind.

Assemblyman Fort's bill amends Section 21 of Chapter 534 of the Laws of 1873 by adding the following to its provisions in regard to Lake George: "Nor shall any person expose for sale or have in his or her possession any bullhead caught or killed in the waters of Lake George or in the waters of the inlets or creeks emptying into the same between the first day of April and the first day of July in any year.

Mr. Cromwell's bill amends sections 7 and 9 of chapter 584 of the laws of 1887, so as (in section 7) to authorize the Commissioner of Fisheries to appoint and employ an engineer at a salary not to exceed $2,500, and a clerk at a salary not to exceed $1,500, which compensations and the necessary expenses for carrying out the provisions of this act shall be paid by the Treasurer upon the warrant of the Comptroller upon vouchers to be approved by the Commissioners. Said clerk shall give bonds to be approved by the Comptroller in the sum of $5,000. Section 9 is amended so that this act shall not apply to nor be held to affect in any way lands under water owned or held under colonial patents or legislative grants by any town or towns, person or persons, in the counties of Suffolk, Queens, Kings and Richmond. Lands under the waters of Gardiners and Peconic Bays ceded by the State to the county of Suffolk pursuant to chapter 385 of the laws of 1885, or lands in the county of Westchester. The law amended by this bill is known as the shellfish protection act. The bill itself comes from the Commissioners of Fisheries, and it has been referred to the Committee on Ways and Means.

Assemblyman Fuller's bill relates only to Chenango county. It makes the brook trout season from April 1 to Aug. 1. No kind of fish may be caught after the 15th of January until the 1st of May, except as above.

Fishculture.

Address all communications to the Forest and Stream Pub. Co.

Every person who it sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

THE MENHADEN QUESTION.

DURING the late severe snow storm the committee of the National Rod and Reel Association appointed to take action on the resolution introduced by Mr. Francis Endicott, to protest against the injury done to the fisheries by the capture of menhaden for oil and guano, met March 19 and listened to the arguments of those who favor restricting the capture of menhaden, as they had previously given ear to those interested in the oil and guano business. Capt. Wm. P. Dunning made the following address:

MENHADEN VS. HAND-LINE FISHERMEN.

Mr. Chairman—When your committee was formed for the investigation of the effect of the present methods of menhaden seining in the inshore waters of our coast; on the destruction or dispersement of food fishes, and on the alleged injury or destruction of the inshore hand-line fishing industry, it was reasonable to suppose that all parties therein concerned or in any way honestly or fairly interested, would have equal chance to present their claims, and that a fair hearing with equal publicity would be granted and provided. The menhaden fishermen, in their full force, were permitted to occupy an entire sitting of your committee on the first day. They presented their side of the case in the fullest manner, presented all the statements that could be conjured up, in an attempt to fortify their claim to be permitted to pursue their labors unmolested by any legislation of restraint. All that could be said was listened to and published to the world as the menhaden fishermen's claim against any legislative interference, and in defense of their present methods. Since that time, and until to-day, no opportunity has been given to those who do not credit the statements of the menhaden fishermen as being wholly Gospel truth, to bear testimony against their statements, nor to plead for another industry of equal, if not greater importance; an industry in which hundreds of the poor of our sea coast line to one of the menhaden fishing men, are vitally interested.

The inshore hand-line fishing industry was a useful, profitable, and much needed pursuit, long before menhaden fishing, as at present conducted, was dreamed of. At that time when menhaden were a necessary adjunct to this pursuit the menhaden furnished the bait necessary to the catching of the other food fish, they furnished the chum that baited the ground to which the food fish were enticed thereby; and where the thousands of inshore hand-line fishermen could ply their vocation, earning a living for themselves and their families, and furnishing a necessary, cheap, and much needed food for many a poor family which were nearly dependent on it. Now this is all changed; the menhaden men with their hundreds of steamers equipped with all the appliances which the ingenuity of man can invent, with purse nets long enough to compass the globe, and with trained men in fleet boats to surround every school of menhaden that they can discover along our whole coast, from Maine to the Carolinas, scoop them up and carry them away to immense oil factories to be made into oil and fertilizers to line the pockets of a monopoly, instead of allowing them to contribute to the subsistance of mankind, as the Lord intended they should in the great economy of his wisdom and goodness to his finite beings.

To all this the menhaden men make answer: "We are in no wise to blame, we do not diminish the menhaden in the least, though we may scoop up, as we do, hundreds of billions and carry them away annually, this is nothing; it leaves just as many behind. 'Man is not a factor,' in either the productiveness or the scarcity of the ocean fishes. Has not Professor Huxley so determined long ago? Then now, or by what reason do you charge us with a diminution of menhaden, or assert that by our profitable pursuits they are driven from off our coast."

Abstruse science is not always infallible, and it sometimes suffers by contact with practical experience and the intelligent application of the relations between cause and effect, and in this instance it is greatly deficient. If the doctrine be true, why spend money by the thousands to restock exhausted rivers, bays and streams that have been denuded by the cupidity of man, despite the doctrine of Huxley? Why appoint fish commissioners by States, and by the United

States to investigate and try to replenish exhausted fisheries? Why do all this if Huxley be correct? The proposition is absurd; experience disproves it. Nearly every nation on the globe, at least all the civilized ones, who have fishery interests, have sooner or later had to extend the protective sway over those interests. Hardly one is to be found that is not protected, and statistics show how lively an interest governments have taken in trying to save to man this much-needed food, intended for his happiness and welfare.

Some instances of how man may injure fishing interests may not be out of place. I will cite one: The sea fisheries of the Irish coast, in 1846, employed twenty thousand vessels and one hundred thousand men; in 1875 it was reduced to six thousand vessels and to fifteen thousand men. Other facts of equally startling character could be cited, showing that man's cupidity, if unrestrained, would despoil nature of her beauty and loveliness, and, if necessary, deprive the people of the earth of their needed subsistance in order to line its pockets with gold.

The menhaden fishermen are charged by the denizens of our coast, including the inshore hand-line fishermen, with destroying their industry and depriving them of food by driving from our coast, its bays, rivers, creeks and waters the menhaden which used to throng these waters in vast numbers, affording a plentiful supply of food for the food fish, thus influencing them to stay along the shores, furnishing the best of bait to fish with, and rendering the inshore hand-line fishing industry profitable and useful.

The menhaden fishermen answer: "That is not true, it is impossible. Huxley says man is not a factor, and besides, the bluefish which you say used to furnish your shores with 'chum,' in the great destruction of the menhaden, making the inshore waters of the coast one wholesale baited fishing ground, do not feed on menhaden, nor do they care for them, they seek other food; and therefore if we do drive away the menhaden it in no wise interferes with your fishing interests." Now to this subterfuge we will apply the experience and the observation of disinterested and intelligent men. The menhaden fishing along our coasts amounted to but very little, and its influence on the quantities of fish that used annually to visit the coast and was practically unobservable, until after 1866. Before that, for bait, for manure, and for oil, a little, all of which was insignificant, as compared to the present extended and destructive pursuit. The discovery of a process, by which the oil could be rendered valuable and marketable, stimulated the erection of immense factories for this purpose, the first large one being built at Boothbay, in Maine, in 1864. After that the interest increased rapidly, it led to the construction of larger factories and of steamers, and continued to grow until it became the vast consolidated monopoly you now behold sweeping the coasts from Maine to the Carolinas, from the earliest time in the spring when the waters of our coasts begin to get sufficiently warm to induce the menhaden to visit them, striking the first school to be found and repeating the attack on every other school, either capturing them or breaking them up and driving them from the coast, preventing those which they do not capture from visiting the inshore waters to spawn, and driving them to sea into the jaws of their larger and fiercer of predaceous enemies, the whale, the shark, the sword fish, the tunny, the bonito, etc., which do not visit our inshore waters. To such an extent is this done that the inshore waters of our coasts from New Jersey to Maine are practically denuded of the menhaden, and where once we could find myriads of them, to-day there are none, not even enough for bait.

For the causes for this result Prof. Baird instituted inquiries in 1874. He formulated questions applying to the then condition of things and sent them to everybody who was supposed to be possessed of powers of observation, of intelligence or experience, including the menhaden fishermen, and asked for answers to categorical questions. To these he received seventy-eight answers, in whole or in part. To the tenth question, which was practically that which we are now considering, namely, "Does the use of nets, seines, etc., as now used in catching menhaden, tend to drive them from our shore, their usual feeding grounds, spawning grounds, etc." Thirty of the persons answering said "it does drive them away." Sixteen said "they did not think it did," about twenty said "they did not know," and among the thirty were some of the most prominent of the menhaden fishermen.

If time would permit, and poverty did not prevent, you could have a thousand men of observation and experience to testify to these conclusions.

It has been my province to have been an amateur fisherman along our coast waters in the pursuit of the striped bass for the past thirty years for much of the fishing season, and while the menhaden men were permitted to make their experience the basis of their testimony in their own interest, I think I am entitled, not in my own interest, but in the interest of a suffering and deserving class of poor and needy fishermen, to add my observation and experience in favor of the oppressed as against the strong and the monopolist.

That the present practices of the menhaden fishermen do denude our coast and its inshore waters of menhaden and drive them away is as true, if not truer, than the statement of an eminent menhaden man that "bluefish did not feed on menhaden; and that menhaden was not the food of the bluefish as such." Thirty years ago, and down consecutively to 1869, there was no scarcity of menhaden or any perceptible diminutions of their numbers, and the bays, rivers and creeks all along our coast from this to Maine, were full of them every year. Menhaden for bait were easily to be had at any point. Other food fishes which always follow in the wake of the menhaden were also abundant and plenty, and there was no perceptible diminution of the food fishes until the decline of the menhaden. Both declined together until the coast is nearly denuded of all of them, and, to those who have disinterestedly observed, the reason is entirely apparent. The food is gone and the food fishes are gone. Subsistence is the common instinct of nature. Man stays not in the desert if he can get out, the instinct of the fish is no less sharp than in man.

The destruction of menhaden along our inshore coast waters when they were permitted to visit them as they used to do in such vast quantities, was simply immense. Millions upon millions were slaughtered daily by the bluefish, being simply killed, not devoured but permitted to sink to the bottom, furnishing abundant food for all the food fishes including the lobster, which used to swarm in those waters in almost inexhaustible numbers, and which never became scarce until the menhaden disappeared from those shores. The reason is obvious. The remedy is equally obvious. Man is a despoiler and must be restrained.

That the evils of this menhaden fishing are not in the least exaggerated, or its disastrous consequences to the inshore handline fisherman in no sense overdrawn, is evidenced from the fact that in the towns of Bristol and Bremen, in Maine, it became such a grievance to the coast fisherman that it produced a riot, and oil factories were burned up and destroyed as a consequence. The states of Maine and Massachusetts have been invoked repeatedly for protection, and have passed such laws as they could on the subject, but having no means of enforcing them, little or no good has resulted, and it remains to be seen whether Congress with its sovreign power will do anything to properly protect its defenseless, but deserving citizens.

In the above plea Capt. Dunning overlooks the fact that the first meeting of the committee was especially set apart for hearing the views of the menhaden fishermen and not for the purposes of argument with them. We have never been furnished with the complete notes of their arguments, which, in a spirit of fairness to all, we would have been glad to print.

At a meeting of the National Rod and Reel Association held in the laboratory of Commissioner Blackford on Saturday last, the special committee on the menhaden question reported favorably on the resolution of Mr. Endicott: "That a committee be appointed to draw up the protest of this Association against the catching of menhaden, by steamers and other vessels, except under such restrictions as will prevent the destruction of food fishes." The report was accepted and the Association voted to appoint such committee. This committee was not appointed, however, before the meeting adjourned. Capt. Dunning introduced a much stronger resolution, which called out considerable debate and was lost when voted on.

RAISING DIAMOND-BACK TERRAPIN.—A correspondent wants information on this subject, and we would be glad to publish any facts connected with it. We have read newspaper accounts of "terrapin farms," but they were of doubtful origin. We know that when penned up the terrapin loses flesh and does not bring a good price, but beyond this we know of no one who has made a business of cultivating the animal, and in fact have inclined to class the stories referred to with the marvelous "frog farm" which turns up in the daily press every year, but always in a different locality.

The Kennel.

Every person who is sufficiently interested in the National Park to do his share toward securing protection for it, is invited to send for one of the FOREST AND STREAM'S *petition blanks. They are sent free.*

FIXTURES.

DOG SHOWS.

April 3 to 6.—Fourth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.
April 17 to 20.—Fourth Annual Show of the New Haven Kennel Club, New Haven, Conn. E. Sheffield Porter, Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6104**.

BOSTON DOG SHOW.

BOSTON, Mass., April 3, 1888.

The fourth annual dog show of the New England Kennel Club commenced to-day under favorable auspices. There are 1054 dogs entered and the absentees are few. The weather has been delightful and the building has been thronged with visitors. The quality in many of the classes is fully up to the average of last year, and in some it is superior. The St. Bernards especially are a wonderfully fine collection. The judging began at 11 o'clock and has progressed rather slowly, several classes not being judged at dark. The arrangements are very similar to those of last year, and the management under Tallman is all that could be asked. Following is a list of the awards so far as made to-day:

AWARDS.

MASTIFFS.—CHAMPION—*Dog:* E. H. Moore's Ilford Caution. *Bitch:* G. & H. R. Crowell's Lady Clare.—OPEN—*Dogs:* 1st and 3d, E. H. Moore's Ilford Coroner and Crown Prince; 2d, Wyoming Kennels' Sea Foam. Very high com., T. C. Gram's Benjamin Franklin and C. H. Morgan's Thor. High com., City Point Kennels' Major. *Bitches:* 1st, 2d and very high com., E. H. Moore's Duchess, Lady Beatrice and Lady Florence; 3d, J. Cole's Linden Duchess. High com., C. E. Shaw's Annette. Com., J. A. Wagg's Gip II.—PUPPIES—*Dogs:* 1st, E. E. Moore's Crown Prince; 2d, C. H. Morgan's Bruce; 3d, City Point Kennels' Lord Raglan II. Very high com., W. M. De Blois's Ilford Prince. High com., T. J. Dunn's Buff of Killingly. *Bitches:* 1st, withheld; 2d and 3d, City Point Kennels' Mollie and Lady Care.

ST. BERNARDS.—ROUGH-COATED—CHAMPION—*Dog:* Hospice Kennels' Otho. *Bitch:* E. H. Moore's Miranda.—OPEN—*Dogs:* 1st, Contoocook Kennels' Castlehorn II.; equal 2d, Dr. G. Walton's Scotch Bonivard II. and J. C. Copeman's Vesp II.; 3d, C. G. Wheelock's Everest. Very high com., J. H. White's Merchant Prince II., G. S. F. Edwards's The Baron, Galaxy Kennels' Roland Byron and Tasso, Hospice Kennels' Alpine Chief and E. H. Moore's Merchant Prince. High com., J. Marshall's Tantallon, J. P. Barnard, Jr.'s Beacon, Galaxy Kennels' Bayard III., Marcus and Dante, Heathfield Kennels' Rip Van Winkle and Hospice Kennels' Alvier. Com., G. Sheppard's Barnard, Mrs. J. P. Barnard, Jr.'s Prince and Waquoit Kennels' Alp. *Bitches:* 1st, Hospice Kennels' Gemma; equal 2d, Mrs. A. H. Hughes's Lady Alice and E. H. Moore's Recluse; 3d, J. Marshall's Lady Florie. Very high com., Galaxy Kennels' Una. High com., A. H. Aldrich's Bernice VI., Galaxy Kennels' Clytie, Elmwood Kennels' Kron and F. Kimball's Lakme. Com., H. B. Dean's Empress, Waquoit Kennels' Libtick, E. H. Moore's Nevina and C. G. Wheelock's Eloise.—PUPPIES—*Dogs:* 1st, Hospice Kennels' Alpine Chief; 2d, E. H. Moore's Melrose Prince; 3d and very high com., Galaxy Kennels' Prince Leo and Prince Bayard. Reserve, F. A. Shaw's Bayard. Very high com., Wyoming Kennels' Phillimmon, Jr. High com., F. Kimball's Vindex. Com., W. Housman, Jr.'s Brutus and Leo. *Bitches:* 1st and 2d, Galaxy Kennels' Princess Gilder and Princess Alma; 3d, very high com. and com., J. P. Barnard, Jr.'s Alice, Marion and Nan. Very high com., H. D. Cogswell's Bula, F. Kimball's Crysa and Hospice Kennels' Alpine Maid. High com., Mt. Hood Kennels' Rilla and F. A. Shaw's Lady Prince. Com., E. A. Muller's Juliet and J. W. Page's Neva.

ST. BERNARDS.—SMOOTH-COATED.—CHAMPION—*Dog:* Hospice Kennels' Hector. *Bitch:* Mrs. Albert Reuter's Lelia. Reserve, Hospice Kennels' Daphne.—OPEN—*Dogs:* 1st, J. Mortimer's Petrarch; 2d, Hospice Kennels' Wotan; 3d, G. P. Wiggin's Winchester. High com., L. J. Guiney's Phillips. *Bitches:* 1st, J. Keevan's Apollona; 2d, Monastery Kennels' Myrtle; 3d, R. Barry's Gip. Very high com., J. W. Dunlop's Thisbe.—PUPPIES—*Dogs:* 1st, T. Sander's Duke of Brunswick; 2d, withheld. Very high com., A. Miller's Mettlehorn and Forest City Kennels' Ned. *Bitches:* 1st, Monastery Kennels' Myrtle; 2d, J. H. Ling's Alpine Queen. Very high com., C. H. Fisher' Posie.

GREAT DANES.—Prizes withheld.

NEWFOUNDLANDS.—*Dogs:* 1st, Associated Fanciers' Miro; 2d, J. Conway's Carlo II.; 3d, withheld. High com., W. C. Searle's Roger and C. Reinhart's Bruno II. *Bitches:* 1st, E. H. Morris's New York Lass; 2d and 3d, withheld.

DEERHOUNDS.—CHAMPION—*Dog:* J. E. Thayer's Chieftain. *Bitch:* J. E. Thayer's Wanda.—OPEN—*Dogs:* 1st and 2d, J. E. Thayer's Highland Laddie and Duncan; 3d, Geo. S. Page's Dunrobin. *Bitches:* 1st, 2d and 3d, J. E. Thayer's Theodora, Highland Lassie and Thora. High com., Geo. S. Page's Olga.—PUPPIES—*Dogs:* 1st, F. L. Morrill's Robin Hood. *Bitches:* Absent.

GREYHOUNDS.—CHAMPION—*Dog:* H. W. Huntington's Balkis. *Bitch:* H. W. Huntington's Lancashire Witch.—OPEN—*Dogs.* 1st, H. W. Clark's Royce; 2d, Mrs. Ida M. Simpson's Peacock; 3d, A. D. Claflin's Midnight. Very high com., G. C. Taylor's Milo. High com., Dr. W. B. Foster's Statesman. Com., J. Golding's Scott. *Bitches:* 1st, H. W. Huntington's Cassandra; 2d, H. W. Clark's Widow in Weeds; 3d, withheld. PUPPIES—*Dogs:* 1st, L. H. Broome's Highland Laddie; 2d, G. C. Taylor's Milo. *Bitches:* 1st, L. H. Broome's Highland Lassie; 2d, K. Junor's Straying Away.

POINTERS.—LARGE.—CHAMPION—*Dog:* Chestnut Hill Kennels' Beaufort. *Bitch:* Absent.—OPEN—*Dogs:* 1st, Tell Kennels' Nick of Tell; 2d, Clifton Kennels' Sachem; 3d, J. H. Winslow's Bang. Very high com., Tell Kennels' William Tell. High com. and com., F. F. Harris's Colly and Slasher. *Bitches:* 1st, H. L. Rice's Bell Randolph; 2d, Clifton Kennels' Rosa Crofteth; 3d, Barnes Bros.'s Devonshire Countess. Very high com., F. F. Harris's Portland Lilly. High com., J. P. Barnard, Jr.'s Fly. Com., E. H. Morris's Devon Nell.—SMALL—CHAMPION—*Dog:* J. R. Daniels's Donald. *Bitch:* Clifton Kennels' Juno S.—OPEN—*Dogs:* 1st, S. W. Pentz's Brake; 2d, Don Quixote Kennels' Don Quixote; 3d, Clifton Kennels' Naso Boy. Very high com., S. S. Bank's Neb B. High com., Bayard Thayer's Rapid Bang. Com., J. L. Heard's Skip and Fred Willrath's Jessy Bang Bang. *Bitches:* 1st, F. F. Harris's Bonanza; 2d, G. W. Waite's Jam; 3d, G. W. Lovell's Belle of Maine. Very high com., F. F. Harris's Ethel. High com., J. H. Winslow's Brunette. Com., Tell Kennels' Daisy.—PUPPIES—*Dogs:* 1st, C. F. Jordan's Tam O'Shanter; 2d, F. F. Harris's Black Crook; 3d, J. R. Daniels's Donald Faust. Very high com., J. N. Taylor's Josh. *Bitches:* 1st, H. F. Littlefield's Bessie; 2d, F. F. Harris's White Fawn; 3d, O. T. Warren's Clytie.

ENGLISH SETTERS.—CHAMPION—*Dog:* C. F. Crawford's Royal Albert. *Bitch:* F. Windholz's Cora of Wetheral.—OPEN—*Dogs:* 1st, J. S. Hudson's Dad Wilson; 2d, A. M. Tucker's Gus Bondhu; 3d, L. Gardner's Roger. Very high com., high com. and com., Lakeville Kennels' Leroy, Draco and Rock Bondhu. High com., Cohannet Kennels' Phil Warwick. Com., J. E. Fuller's Premier Lad, A. J. Heith's Cap and Cohannet Kennels' Royal Kent. *Bitches:* 1st, C. F. Crawford's Blue Nell; 2d and 3d, E. W. Darkie's Haphazzard and Saddlebags. Very high com., L. Gardner's Ivy, C. H. Jones's Lou Gladstone and A. P. Gardner's Madonna. High com., Lakeville Kennels' Snowflake, F. D. Freeman's Queen and G. J. Lewis's Eudora. Com., A. M. Tucker's Lou Gladstone and C. F. Crawford's Foreman's Lass.—PUPPIES—*Dogs:* 1st, Shawmut Kennels' Bow Bondhu; 2d, J. E. Evelith's Royal Victor; 3d, E. J. Dunphy's Dan. *Bitches:* 1st, F. D. Freeman's Queen; 2d, E. H. Morris's New York Beauty; 3d, G. J. Chandler's Gypsey Queen.

IRISH SETTERS.—CHAMPION—*Dog:* No entry. *Bitch:* C. T. Thompson's Molly Bawn.—OPEN—*Dogs:* 1st, Fort Orange Kennels' Kenwood; 2d, C. Roedenburg's Chip; 3d, W. H. Warren's Trojan Rory O'More. Very high com., J. Grosvenor's Banker, H. M. Delapole's Bishop, E. Maher's Larry S. and W. D. Marren's Faugh-a-Ballagh. High com., P. H. Clarsey's Jack and L. P. Langworthy's Sandstone. Com., Dr. E. D. Hooker's Dash. *Bitches:* 1st, Dr. C. E. Nichols's Molly; 2d and 3d, J. J. Scanlon's Lulu II. and Hazelnut III. Very high com., C. Velton's Lou III., E. E. Clapp's Sheilah and C. W. Roedenberg's Nora V. High com., A. P. Knight's Music, Dr. E. C. Kirk's Berna, Associated Fanciers' Lady Fawn and Claire-Reeta Kennels' Madcap. PUPPIES—*Dogs:* 1st, J. A. Farrell's King Pin; 2d, A. E. Payson's Don; 3d, E. F. Bachelder's Prince Ko-Ko. High com., H. W. Carr's Larrie D. and W. H. Ripley's Jim, Jr. *Bitches:* 1st and 2d, Fort Orange Kennels' Flora and Jennie; 3d, C. F. Kennerson's Maggie. High com., W. H. Phillip's Jennie and J. H. West's Cora.

DACHSHUNDE.—*Dogs:* 1st, witheld; 2d, G. Utz's Oto; 3d, withheld. High com., H. S. Blake's Boniface. *Bitches:* 1st and 2d, Karl Klocke's Lena L. and Bergina K.; 3d, J. E. Thayer's Judy.

COLLIES.—CHAMPION—*Dog:* Chestnut Hill Kennels' Dublin Scot. *Bitch:* Chestnut Hill Kennels' Flurry II.—OPEN—*Dogs:* 1st and 2d, Chestnut Hill Kennels' Strephon and Roslyn; 3d, G. A. Fletcher's Scotson. Very high com., J. A. Cartaw's Scotland Yet and Rutland Jock, and A. R. Kyle's Royal Monarch. High com., Hornpipe Collie Kennels' Hornpipe Bruce. Com., A. Fletcher's Rutledge and E. Bradford's Collie. *Bitches:* 1st, 3d and very high com., Chestnut Hill Kennels' Flurry III, Spoiled Miss and Miss Tempest; 2d, Jas. Watson's Glen Rosa. Very high com., G. W. Mullett's Highland Belle, Dr. W. A. Hitchcock's Flora and Associated Fanciers' Clifton Maid. High com., G. A. Fletcher's Sweet Royal. Com., G. A. Smith's Rutland Maid and R. Worthington Jr's. Glen. PUPPIES—*Dogs:* 1st, Chestnut Hill Kennels' Roslyn; 2d, A. R. Kyle's Royal Monarch; 3d, Hornpipe Collie Kennels' Hornpipe Hero. Very high com., J. A. Carlaw's Ettrick Shepherd. *Bitches:* 1st, Hornpipe Kennels' Hornpipe Bessie; 2d, Jas. Watson's Glen Rosa; 3d, Chestnut Hill Kennels' Miss Tempest. High com., A. R. Kyle's Hebe of Nessel Town. SMOOTH-COATED—*Dog:* 1st, Chestnut Hill Kennels' Spot. *Bitches:* 1st, Chestnut Hill Kennels' Lady Bird; 2d, withheld.

POODLES.—*Dogs:* 1st, G. Von L. Meyer's Friday; 2d, H. H. Hunnewell's Cocoa; 3d, withheld. *Bitches:* 1st, withheld; 2d, Dr. J. N. Borland's Dinah.

BULLDOGS.—CHAMPION—*Dogs:* 1st, J. E. Thayer's Robinson Crusoe. Reserve, Grassmere Kennels' Tippoo. *Bitches:* 1st, J. E. Thayer's Britomartis. Reserve, Grassmere Kennels' Rhodora.—OPEN—LARGE—*Dogs:* 1st, R. S. Porter's Lion; 2d, J. P. Barnard, Jr.'s The Moor; 3d, J. E. Thayer's Ouasiwodo. Very high com., Mrs. Wm. Borrowscale's Smile. *Bitches:* 1st, Grassmere Kennels' Josephine.—SMALL—*Dogs:* 1st, W. Appleton's King Cole, Jr. *Bitches:* 1st, withheld; 2d, Grassmere Kennels' Juanita; 3d, Tiet Kennel's Atossa.—PUPPIES—*Dogs:* No entries. *Bitches:* 1st, A. G. Worthen's Sappho.

BULL-TERRIERS.—CHAMPION—*Dog:* F. F. Dole's Jubilee; Reserve, W. W. Browne's Silver. *Bitch:* F. F. Dole's Maggie May.—OPEN—LARGE—*Dogs:* 1st, J. S. Morritt's Young Country; 2d, J. W. Newman's Young Royal Prince; 3d, withheld. High com., J. W. Newman's Royal Dandy. *Bitches:* 1st, C. A. Stevens' Royal Rose; 2d, H. W. Holmes' Marguerita; 3d, G. House's Duchess of York. Very high com., J. P. & W. W. Gray's Countess.—SMALL—*Dogs:* 1st, F. F. Dole's Rusher; 2d, Rockdale Kennel's Banjo; 3d, withheld. Com., W. Burke's Spider. *Bitches:* Prizes withheld.—PUPPIES—*Dogs:* 1st, W. C. Hook's Royal Hermit; 2d, Mrs. W. C. Hook's Royal Scorpion; 3d, withheld. *Bitches:* 1st, F. F. Dole's Starlight; 2d and 3d, withheld. High com. and com., J. W. Newman's Pearl Royal and Lillie.

FOX-TERRIERS.—CHAMPION—*Dog:* J. E. Thayer's Belgrave Primrose. *Bitch:* J. E. Thayer's Richmond Olive.—OPEN—*Dogs:* 1st, 2d, 3d and very high com., J. E. Thayer's Raby Mixer, Reckoner, Luke and Raby Jack. High com., T. M. Aldrich's Dandy. Com., Miss A. L. Cushing's Racket and A. Gross, Jr.'s Grip. *Bitches:* 1st, 2d, 3d, and very high com., J. E. Thayer's Richmond Dazzle, Meersbrook Nan, Pluck and Fraulein Mixture. Very high com., J. H. Shepherd's Venetian Nettle.—PUPPIES—*Dogs:* 1st, 2d and 3d, J. E. Thayer's Raby Chance, Richmond Apollo and Richmond Jart. *Bitches:* 1st, 2d and 3d, J. E. Thayer's Venetiana, Princess and Olivette. Very high com., J. H. Shephard's Venetian Nettle. High com., Rockdale Kennels' Nettle III.—WIRE-HAIRED—1st, G. Bell's Braxton Tantrum.—PUPPIES—*Dogs:* 1st, J. E. Thayer's Rat Trap. *Bitches:* 1st, G. Bell's Morceau.

SCOTCH TERRIERS.—*Dogs:* 1st, J. H. Naylor's Lowrie Dunbar. *Bitches:* 1st, J. H. Naylor's Rosie; 2d, G. Sanderson's Perth.

IRISH TERRIERS.—*Dogs:* 1st, J. F. McFadden's Dennis; 2d, W. Scully's Evictor; 3d, Chestnut Hill Kennels' Breda Jim. Very high com., W. E. Morris's Garryowen. High com., T. Wise, Jr.'s Badger Boy. *Bitches:* 1st, Chestnut Hill Kennel's Breda Tiny; 2d, W. Scully's Poppy III.; equal 3d, W. E. Morris's Shiela and T. Wise, Jr.'s Gipsy Girl. High com., R. G. Shaw's Shiela II.—PUPPIES—*Dogs:* 1st, T. Wise, Jr.'s Dan; 2d, R. A. Lawrence's Bob; 3d, H. S. Hannewell's Garryowen II. *Bitches:* 1st, withheld; 2d, R. A. Lawrence's Loulu.

DANDIE DINMONT TERRIERS.—*Dogs:* 1st, J. H. Naylor's Border Clinker. *Bitches:* 1st and 3d, J. H. Naylor's Pansy and Pride of Leader; 2d, G. Bell's Lady Wallace.

BEDLINGTON TERRIERS.—*Dogs:* 1st, W. S. Jackson's Tynesider II. *Bitches:* 1st, W. S. Jackson's Domino; 2d and 3d, withheld.

BLACK AND TAN TERRIERS.—1st and 2d, J. F. Campbell's Vortex and Desdemona; 3d, R. Stackney's Sir Wallace.

SKYE TERRIERS.—*Dogs:* 1st, W. P. Sanderson's Jim; 2d, Dr. M. H. Cryer's Gladstone's Boy; 3d, E. M. Oldham's Claymore. Very high com., G. Sanderson's Scotty. *Bitches:* 1st, F. P. Kirby's Susie; 2d, W. P. Sanderson's Bessie. High com., G. Sanderson's Meg.

YORKSHIRE TERRIERS.—OVER 7LBS.—*Dogs:* 1st, P. H. Coomb's Bradford Harry; 2d and very high com., P. Cassidy's Yorkshire Ben and Roger; equal 3d, P. Gough's Sandy and Morris & Donohue's Jingo. High com., C. N. Symond's Harry. *Bitches:* 1st, J. P. Campbell's Dolly; 2d and 3d, C. N. Symond's Flora and Floss. Com., Morris & Donohue's Nellie.

PUGS.—CHAMPION—*Dog:* Dr. M. H. Cryer's Max. *Bitch:* Dr. M. H. Cryer's Bessie.—OPEN—*Dogs:* 1st and reserve, Dr. M. H. Cryer's Dude and Othello; 2d and very high com., Forest City Kennels' Santa Claus and Sam; 3d, J. H. Shepherd's Sir George. Very high com., G. W. Fisher's Tom Thumb. High com., Mrs. J. H. Bufford's Boots and G. L. Priest's Billie. Com., J. B. Gould's Darn.

IMPROPER USE OF A PREFIX.

Editor Forest and Stream:

In Forest and Stream for March 22, under "Names Claimed," was a claim for the name Ilford Sohrab. In the February issue of the *American Kennel Register* was an entry of Ilford Rex. Both of the dogs were from the same breeder—being, in fact, litter brothers. As a mastiff breeder I feel compelled to enter a protest against the use of the prefix "Ilford" in such a case as this. There is no doubt that the party using it has no idea of any impropriety in so doing, but there is more than impropriety, as it is apt to be misleading.

In England the prefix Ilford is the registered property of Mr. Richard Cook, and can only be used in that country for dogs of his breeding and ownership, and therefore, as Mr. Cook has sent, and probably will continue to send, many mastiffs to this country, it certainly is an act of discourtesy, whether intentional or not, for any one in this country to use what is practically equivalent to a trade-mark.

If the American Kennel Club acted up to its pretensions, this is merely one of the many things that require official action, and that it neglects. In the absence of any rules it appears to me that reputable kennel papers, and particularly the *American Kennel Register*, should refuse to admit to their pages any form of nomenclature that is apt to mislead. A very large proportion of the breeders of England, and many in this country, either use the name of their kennel or their place of residence as a prefix or suffix. This custom is an admirable one, as it enables a breeder to know at once from whence a given dog came, and as most pedigrees of valuable dogs trace back to England, the indiscriminate use of English kennel names in this country should be stopped before it becomes a serious evil.

The only pretext that can be adduced for the use of the Ilford prefix with the two dogs above referred to is the fact that the grandsire on the dam's side was Ilford Cromwell. One of the rules governing registration in the *A.K.R.* is as follows:

"No name will be registered of a nature to mislead, such as Gladstone II., or Gladstone, Jr., for a setter not a descendant of that well known dog."

In the cases above referred to only one-sixth of the blood comes from Ilford. The preponderating blood is purely "local" and therefore the word "misleading" is equally appropos in this case, as in the rule just quoted.

I hope the party making use of the prefix, above referred to, will not take offense at what I have written regarding his action, as none is intended. There are several methods in use relating to canine nomenclature that should be remedied, of which the above case is a sample, and it is to be hoped that if ever we get a decent organization in place of the present moribund A. K. C. that such abuses will be checked. Wacouta.

St. Paul, Minn., March 26.

THE CROWNING OUTRAGE.

"Whom the Gods would destroy, they first make mad."

Editor Forest and Stream:

Trite the above certainly is, but is it not as true as ever? And does not the "American Kennel Club, sir!" demonstrate to us, that the Gods have at last given it up? Many have been the disgraces it has suffered and many the stupidities it has enacted, but the disgraceful tyranny of the expulsion of Mr. Watson was never before equalled; Beaufort—Patti was simply cowardly compliance with a demand which the A. K. C. soon delivered itself from; "construction" was a still-born child of schemers; and general stupidity is the natural fruit of an association. But just consider what the expulsion of Mr. Watson was—for in plain English, expulsion was the exact size of it. It was not alleged that Mr. Watson was objectionable on grounds of personal conduct, that he was not fitted to associate with the gentlemen of the A. K. C.; that he was connected with any improper acts, or that he was hostile to the club itself, his fitness for a delegate is confessed by the A.K.C. which has accepted nearly every suggestion he made; in fact, nearly every improvement in dog show administration that I can recall, emanated from the very man that the A. K. C. expelled from its executive committee! Now I challenge any man, not acquainted with the facts, to imagine why such a man should be or could be expelled; every cause is excluded from consideration, and the inquirer is forced to give it up as unsolvable; tell him that it was done as a balm to the wounded feelings of the secretary of the club, and he will ask if you take him for a fool; suggest as another reason, that the "fired" party did not approve of one branch of work that the club had undertaken, and outside the club meetings, ridiculed this work, and he will say: "Oh! I see; the purpose of the club is this work, and that is all it exists for." But tell him that this work is only a subsidiary one, taken up long after the delegate was elected, and he will scratch his head and ask if Luna is the divinity of this club? Yet boil it down, and has not the "American Kennel Club, sir!" laid it down, that the stud book is the work of the club, and that to oppose its sovereign behest in this, is treason most foul?

Then what is the precedent the A. K. C. established here? Reasonably applied it just means, that if a delegate opposes the decision of the majority, even outside its sacred cloisters, he may be expelled! What a pity this precious doctrine was not announced when Mr. Peshall dared kick at the Beaufort—Patti M. business? Why was he not expelled for differing from the majority?

Why was Chas. Sumner allowed to remain in Congress after daring to publicly denounce the fugitive slave law? Why was Lamar still honored, after presenting the instructions of the Legislature on the silver bill and announcing that he would vote as his conscience and judgment dictated? Why was Thad Stevens "Old Thad" to every man, woman and child in his district, when he never bowed the knee to anybody in anything? Simply because mankind always have, and always will honor manliness. Will it be said for one moment, that such a doctrine as expelling a man for sticking to what he thinks is best, is encouraging manliness? Surely, the Gods not only afflict with madness, but with blindness when so manly a man as Mr. Peshall, fathers such boot-licking slavery as this.

To completely understand the situation, remember that Mr. Watson's war on the stud book, and its editor, was never carried on in the meetings of the A. K. C.; there could be no pretense that he made himself obnoxious in meetings by offensively presenting his objections to the rag baby of the A. K. C., or in any way hindered its work when in regular session, but he dared to make fun of the secretary and oppose the official stud book of the A. K. C. in the paper of which he was kennel editor.

Then who is the A. K. C.? Whom does it represent? Outside of the New England, New Haven, New Jersey and Philadelphia clubs I do not know one that fairly represents any considerable body of dog owners in the district it is supposed to represent. Of the organization of the W. K. C. I know nothing. All I do know is, that its metropolitan location enables it to give the most paying show in the country; I know nothing as to who compose the Providence, Milwaukee or Detroit clubs, and therefore exclude them from consideration. But of the other clubs, is there one that is not practically a club of one or two men? Do the doggy men of its bailiwick really belong to the club or take any interest in it, or even know there is such a thing as the A. K. C.? Then again, the A. K. C. is supposed to be a club of dog show clubs. Well, when will Hartford or Providence give another show? Will Detroit, St. Paul, Pittsburgh, or Milwaukee give one this year? So where is the representative character of the club? Take an instance; Mr. Collins is the Hartford Kennel Club (very good timber to make a club of, too). He gets tired of the drag and pulls out. Pete thinks he sees a chance, he rakes together the embers of the club, gets himself appointed president and delegate to the A. K. C., and masquerades as a whole kennel club, and as such wields as much power in the A. K. C. as all the New Jersey or Philadelphia clubs.

Then where is the A. K. C.? Its office is 44 Broadway, New York. The office of the Westminster Kennel Club is also 44 Broadway. The office of Mr. Percy C. Ohl, the Thoroughbred Dog Exchange, is 44 Broadway, and the office of Mr. Thos. H. Terry, a member of the W. K. C. show committee and a distinguished breeder of collies, is also 44 Broadway. All in two small dark rooms, are the offices of the ruling light of American dog shows, lumped in with one dog show, one dog dealer and one dog breeder. There was a dog paper there until it died. Granted that the dealer and breeder are of the best character, is it to be supposed that all could be so long crowded together in one room, doing their business side by side and not grow together so that outsiders have but secondary consideration? In plain English, haven't they already got to be a ring? Somebody will ask (as Mr. Cugle asks "Porcupine") "Why keep on hammering at these trifling failings of the A. K. C.? It is easy to find fault, the faults are but trivial after all, many of them (such as 'construction') are old," etc., etc. Why, just because the A. K. C. never improves, it repeats every folly and disgrace it ever perpetrated, and it never punishes one wrong committed by anybody in its ring. No greater disgrace than "construction" was ever perpetrated in doggy affairs, it was a deliberate attempt to nullify the plain requirements of the law for private ends, no defense of it was ever offered, yet right now, at the very meeting that expelled Mr. Watson, the "constructor" appears as a delegate, without any protest, and I doubt not, voted for the expulsion!

The earnest representations of Messrs. Morgan, Porter, Greene, Niven, etc., that the exhibitor deserved protection at the hands of the A. K. C., were treated with derision, and nothing but the lash, applied by "Porcupine," Mr. Mason, Forest and Stream, etc., has ever moved it one inch toward right courses. Are we to constitute the pillory a permanent instution in American doggy affairs? W. Wade.

Hulton, Pa. March 27.

PROPOSED POINTER CLUB.

Editor Forest and Stream:

Why cannot a pointer club be formed? The American English Beagle Club have within the past few years accomplished great good in getting a uniform type of the little hound. I certainly see no objection in having a pointer club for the same laudable purpose, viz., type. Can this be accomplished by any other means than measurements? I should think this plan the best, as it works very nicely with beagles.

The Beagle, Collie, Mastiff, Fox-Terrier, St. Bernard and Spaniel clubs are in a position to do lots of good, and some of them have already shown very flattering results. As many of our pointer judges have widely differing opinions regarding the merits of pointers, it would seem an excellent idea to follow the example of the Beagle, Spaniel and Collie clubs, and have breeders of pointers to judge their favorites. Let every pointer breeder, exhibitor or owner speak up, and express his opinion and let us establish a pointer club on about the same basis as other specialty clubs who have demonstrated their good deeds.

I have tabulated the following table from Mr. G. Thorpe-Bartram's excellent article on pointers in "British Dogs."

It would have given me more pleasure to have had some data relating to our specimens, such as Beaufort, Robert le Diable, Fritz, Graphic, Donald, Tammany, Lad of Bow, Bracket, Naso of Kippen, Nick of Naso, Bang-Bang, and other well-known prize winners.

Name of Dog.	Owner.	Age.	Weight.	Height at shoulder.	Length from nose to set-on of tail.	Length of tail.	Girth of chest.	Girth of loin.	Girth of head.	Girth of forearm.	Length of head from occiput to tip of nose.	Girth of muzzle midway between eyes and tip of nose.

Average girth of loin.....21 6-18in.
Average girth of head.....15 12-18in.
Average girth of forearm.....8 1-18in.
Average length of head from occiput to tip of nose.....8 16-18in.
Average girth of muzzle midway between eyes and tip of nose.....9 5-18in.

Pointer breeders, exhibitors, owners and lovers of this dog, express your ideas regarding the formation of a pointer club. Let the same be formed "free for all" to join. With the main point in view—type. Let some standard be adopted and the dogs judged by it. A. C. Collins.

Hartford, Conn.

CINCINNATI BENCH SHOW.—Cincinnati, March 30. On account of the large amount of work necessary to be done by the printers in publishing the catalogue, exhibitors are urgently requested to make their entries at as early a date as possible. The club finds it necessary to give notice that no entry will be accepted which does not reach the superintendent before 5 P. M. April 17. The club has contracted with the Spratts Patent (America) Limited, to bench and feed the dogs. Many valuable special prizes have been offered. Local sportsmen and the general public are taking great interest in the matter and I have no doubt whatever that the exhibition will prove a great success. The building in which the show will de held is in the very best part of the city.—George H. Hill, Supt., 6 East Fourth street. The premium list of this show contains 88 classes, divided as follows: Pointers 7, English setters 5, Gordons 4, Irish setters 5, mastiffs 4, St. Bernards rough 4, smooth 4, Newfoundlands 1, Irish water spaniels 4, field spaniels 2, cockers 3, greyhounds 4, deerhounds 3, foxhounds 5, beagles 3, bassets 1, dachshunde 1, collies 5, fox-terriers, black and tan, Skye, Yorkshire, Scotch, Dandie Dinmont, Irish and Bedlington terriers 1 each, bulldogs and Great Danes 1 each, pugs 4, toy terriers, King Charles spaniels, poodles and Italians greyhounds 1 each, miscellaneous 2. The prizes in almost all the classes are $10 for the first and $5 for the second prize, with ribbons for the puppies. The judges have not all been appointed as yet, but Major J. M. Taylor will judge pointers, setters, foxhounds and beagles.

CURE FOR WORMS.—The interest in fine sporting dogs seems to increase in this vicinity. Quite a number of gentlemen, and a few ladies, are extensively engaged in breeding setters, spaniels, beagles etc., from the best stock obtainable. The greatest difficulty we have in raising puppies in this latitude is the distemper, and the past winter was the only one I have known for several years without some loss from this loathsome disease. I will give my brother breeders my method of dispelling worms from dogs young or old. It is simply to keep a few raw carrots within their reach and they will soon learn to gnaw them, and the result will be not only death to the worms but a sleek shining coat on the dog. Should be pleased to see a communication regarding the training of beagles in your columns, also, notes as to the best weight or size for a beagle for running rabbits.—A. L. Leigh.

COLLIE CLUB STAKES FOR 1889.—Following is a list of the stakes announced by the Collie Club of America for 1889: Third collie sweepstakes for puppies of 1888: Collie Club trophy for American bred collie owned by club member; president's cup for best collie owned by club member; the futurity stakes, a sweepstakes for litters of 1888: produce stakes, for members only, and the stud dog stakes, open to all. Also collie breeders' special prize offered by Mr. Geo. A. Fletcher, Milton, Mass., of $25 for the best dog puppy and $25 for the best bitch puppy whelped during the year 1888, sired by his dog Scotson, to be awarded at a show in the spring of 1889, to be hereafter announced. Entry blanks containing full particulars may be obtained of the secretary, J. D. Shotwell, Rahway, N. J.

MEMNON'S PEDIGREE.—*Editor Forest and Stream:* I am advised that the pedigreee of my greyhound Memnon as given is all wrong. I cannot understand where the former owner, Mr. Smith, obtained this pedigree. I have in my possession a letter from Messrs. Charles Bros., Neaith, Wales, from whom Memnon was imported, also an article by Barumite in *Bell's Life*, which gives it as follows: Memnon, by Caliph and out of Polly. Caliph, by Improve (Patent—Cordelia) and out of Charming May (King Death—Chloe). The statement of two such authorities proves beyond doubt that this is the correct pedigree. Will you kindly make the correction.—H. W. Huntington.
